This Section confined its efforts to shipbuilding, aeroplane and munition centers. It made surveys of conditions and afterward drew up recommendations upon minimum standards for entertainment and athletic features of social life, together with proper municipal or state regulations. This complete program of recreation, deemed especially necessary in view of the tension of war work, covers separately industrial plant and industrial community requirements. It was prepared by experienced social workers after conferring with representatives of federal departments concerned.

WELFARE EXHIBIT.

The Welfare and Safety Exhibit loaned by the Welfare Department of The National Civic Federation has been installed in the rooms of the Committee on Labor, Council of National Defense Building, at Washington, for the period of the war. It includes illuminated views, literature, posters and photographs illustrating the best practices to provide healthful work places, a pleasant social environment, and comfortable homes initiated voluntarily by employers.

STAFF PARTICIPATION.

By action of the Executive Council of The National Civic Federation, the services of its Chairman, Ralph M. Easley, and of the Director of its Welfare Department, Gertrude Beeks Easley, were tendered to the Committee on Labor and they became respectively Assistant to Mr. Gompers and Secretary of his Executive Committee. They have spent an average of three days a week in Washington, their expenses being borne by the Federation.

APPRECIATION EXPRESSED.

The estimate of the value of the Federation's cooperation was given by Mr. Gompers in his first report to the Council of National Defense for Congress, as follows:

> "The Committee on Labor could not have accomplished what it has done, had not The

National Civic Federation been in existence and extended patriotic service through its Welfare, Compensation, Mediation and other departments. Officials of The National Civic Federation have given their time since the first of April, 1917, and are continuing to do so. It also donated a clerical staff, paying its living and traveling expenses for the months pending the organization of the official clerical force."

GERMAN PROPAGANDA INTERPRETED.

So much for the concrete services rendered the Committee on Labor, but prior to our entrance into the war the Federation had contributed much material looking to the formation of a right, public sentiment. Decisive analyses of events and of agitation by anti-American movements, and adequate presentation to the people of such findings pointing to the ulterior purposes of active destructive forces, naturally became lines of endeavor of The National Civic Federation during the world war and at no time was its influence greater.

Primarily, the organization is an educational institution. The public service which it has been able to render, particularly since the United States entered the war, largely because its membership brings into close range all the elements of national life, has been demonstrated by the effect upon the common mind of its educational pronouncements persistently set forth in the press.

To furnish a proper interpretation and understanding of the bewildering efforts to undermine the morale of the people, various brochures have been circulated, completely exposing attempts to unsettle industrial, political and economic conditions.

The utilization of the Federation's years of experience with industrial subjects in conjunction with problems growing out of the war almost immediately made it one of the strongest defense forces in combating the insistent fire of the enemy aimed, through various destructive agencies, at our industrial institutions and movements.

The issuance of articles exposing the pro-German use of the pacifist, I. W. W. and socialist traitors, has been as continuous as have been the constant efforts of German agents thus to weaken the fortification of our national liberty.

One of the first publications of the Federation, a pamphlet on "Socialism and War," clearly explained the intrigues of the Socialist Party and showed that its opposition to the war was not on humanitarian grounds but for revolutionary purposes: that is, the socialists opposed armament because they do not want to have that obstacle to overcome when undertaking to confiscate the property of the world and take over the governments. This presentment was convincing to the most skeptical, because it was a collation of statements of purpose made by socialist organs and authorities, and was therefore incontrovertible.

No other agency than the Civic Federation was equipped to bring such facts to public attention. This setting forth of their anti-war attitude, which carried with it the explanation that the socialists welcomed the efforts of the belligerents to "bleed each other to exhaustion so that the coming social revolution may have an easier job," led the war series of educational bulletins which have helped to mould sound public opinion.

Others, equally valuable, dealt with and exploded the proposals of the Karl Marxian socialists for the "government ownership of all means of production, distribution and land"; and the oft-repeated assertion that in the "division of the products of modern industry, the lion's share goes to capital." One exposed the traitorous socialist effort to strengthen the German peace offensive through the much vaunted Stockholm International Socialist Conference. Another laid bare the relation of the German war party and German Exchequer to the various peace movements in the United States and to food riots in a number of our large cities during the unemployment period of the war. It brought out Germany's methods of bolstering certain enfeebled newspapers and magazines; indicated how the Kaiser's agents had stimulated Bolshevism and used I. W. W. and anarchist movements to foment internal dissension here; and disclosed the scheme to launch by pacifist-socialists, through certain "intellectual" channels, the so-called British labor program—i. e. state socialism. The Federation showed, by the use of German original documents, the deception practiced concerning welfare conditions of the workers, which gave the general impression that Germany was a social paradise, while the real situation showed an underpaid, overworked body of wage earners, extreme poverty, miserable slums and congested tenements such as are unknown in America, utterly inadequate social insurance benefits, a farcical farm loan system, an unwarranted claim to leadership in world invention and a backwardness in art and literature, her achievements being based on the robbery of the inventions and discoveries of other nations.

All these statements of facts concerning Germany's conduct of the propaganda portion of her military program and her misrepresentation as to supreme beneficial social amenities served to strengthen our national conviction relative to Teuton trickery.

Articles were published showing the loyal position of labor as represented by the American Federation of Labor and the railway brotherhoods, and dispelling the idea that the socialist and I. W. W. movements, numerically speaking, were sufficiently large to be indicative of the attitude of this country's workers in relation to the war.

The National Civic Federation is a recognized obstacle to the culmination of the plans of the Socialist Party in the United States. In fact, the danger threatened the socialist cause by the employer and employee combination of the Federation is recognized beyond the boundary lines of our own country. In fact, six years ago, at the International Socialist Congress in Vienna, the Federation was frequently attacked and an effort was made to bar out delegates from the American Federation of Labor because they were members of the "hated capitalistic combination, The National Civic Federation." After a two days' battle on the matter, the French delegates outvoted the Germans and the A. F. of L. delegates were seated.

In furthering its educational work, questions having a critical bearing upon national action were discussed at open meetings. "What is adequate preparedness for national defense?" was taken up, and when resident enemy aliens became a menace there was considered "What, if any, should be the changes in our policy and legislation to meet the new immigration conditions at the close of the war?" This is still a vital matter.

EFFORT TO DISRUPT LABOR.

Special sources of information revealed to the Civic Federation early in the world conflict, effort to stir up industrial strife on the docks, in ordnance and light arms factories and other munition-making centers. The mechanism of the Federation and particularly the composition of its Executive Committee, with one-third labor, made it possible to make effective use of this information. President Gompers of the American Federation of Labor left no stone unturned to assist in bringing to the attention of the Federal authorities those efforts to interfere with our neutral rights in the manufacture of war supplies for the Allies' governments, by discrediting and disrupting the labor movement in the United States. He and the leaders of the international and national unions, especially concerned in the manufacture of war products, have courageously met this effort to purchase and corrupt labor. Also, their voices have been lifted in protest to correct erroneous interpretation of propaganda designed to confuse the general public.

The four labor delegates sent to the United States by Premier Lloyd George at the request of Samuel Gompers, Chairman of the Committee on Labor of the Council of National Defense in May, 1917, that we might have the benefit of their experience under war conditions, and the munitions expert of the Balfour Commission were conducted to various large cities under the auspices of the American Federation of Labor and The National Civic Federation, the latter arranging for their entertainment and public appearance in all instances, exclusive of labor gatherings. These gentlemen—Right Hon. C. W. Bowerman, of the British House of Commons and British Trade Union Congress; Hon. James H. Thomas, Member of Parliament and of the Union of Railwaymen; Joseph Davies, Secretariat of the Prime Minister, and H. W. Garrod of the Ministry of Munitions, as well as Judge Maurice Sheldon Amos — materially assisted in indicating why we are fighting and the effort which America would have to make to preserve her liberty.

Other foreign labor officials have been brought before the public in a similar way. A second Commission, composed of Messrs. Charles Duncan, M.P., Secretary General Workers' Union; W. A. Appleton, Secretary General Federated Trades Union; Joshua Butterworth, Member Associated Shipwrights' Society; William Mosses, Member Pattern Makers' Union, and Crawford Vaughan, former Premier South Australia, which toured the country under the auspices of the American Federation of Labor, was given a farewell luncheon by The National Civic Federation, March 16, 1918.

At this luncheon there was made a complete expose of the schemes undertaken in this country by the so-called group of intellectuals and sentimentalists who were trying to defeat the program of the American Labor movement through advocacy of a so-called British labor program, which is in fact, as before pointed out, nothing more nor less than Karl Marx socialism. A resolution was adopted, calling for the formation, in the countries of the Allies, of organizations of employers and employees to cooperate with The National Civic Federation in promoting collective bargaining and other recognized propositions that are accepted by both sides as practical methods for reducing industrial strife to a minimum.

THE LEAGUE FOR NATIONAL UNITY.

The League for National Unity was organized in Washington, D. C., September 12, 1917, by The National Civic Federation, as a special branch to take up war policies. It is composed of representatives of the various elements that make up American national life—labor, agriculture, manufacturing, commerce, banking, the church, the bar, women's and teachers' organizations, and the respective heads of the Democratic and Republican National Committees. The formation of the new organization was welcomed by President Wilson in an address delivered at the White House October 8, 1917, to the executive committee, in which he emphasized the need of team play by the forces of American thought and opinion and endorsed the specific work which the League proposed to undertake.

The purpose of the League, as stated in its by-laws, is "to create a medium through which loyal Americans of all classes, sections, creeds and parties can give expression to the fundamental purpose of the United States to carry on to a successful conclusion this new war for the

Shadow Huns and Others

By T. EVERETT HARRÉ

The German propaganda, instituted by Dr. Bernhard Dernburg and secretly directed by an American ex-clergyman in the pay of the Kaiser, aimed to achieve certain specific results. The purpose was to deflect the blame of starting the great war from Germany by ascribing the causes to certain historic wrongs—the isolation of Germany by Russia, France and Great Britain and efforts to hinder the economic development of the Fatherland, chiefly by Great Britain; to prevent the shipment of arms and ammunition to the Allies, to the military advantage of Germany; to prevent America from going to war with Germany over the U-boat issue. Once war had been declared, Germany's chief concern was to render our part negligible by the creation of anti-war sentiment, by promoting resistance to the draft, by social and labor unrest with fomenting strikes in mines, munition plants and other war industries. In this the Socialist party, the I. W. W. and mushroom pacifist organizations were utilized.

THE GERMAN GAME.

As the war continued and German prospects of victory waned, Germany's chief hope of obtaining a satisfactory peace lay in creating, if possible, disunity among the Allies. Nothing would have better served Germany's sinister purposes than the destruction of international morale, of full cooperation and mutual confidence between the Government of the United States and the Allied governments. Of course, no such pro-German propaganda no loyal Americans could have taken part. In propaganda designed to destroy amity between us and the nations associated with us in the war few level-headed Americans could have been deceived. Any effort to create suspicion of the Allies, to sow seeds of distrust, to impose the belief that the Allied Governments were in the hands of hypocrites, liars and intriguers would have seemed patent shadow-Hun propaganda. But were not some Americans deceived into believing this? Were not certain highly intellectual 'moulders of public opinion'' somehow inveigled into becoming instruments of this very propaganda?

With victory achieved and German militarism crushed, what interpretation shall be put upon the efforts of men of supposedly superior minds to bring about a peace of negotiation and compromise, upon endeavors calculated to estrange America from the Allied nations on part of men representing themselves as speaking for those high in the Government? What explanation is there for any systematic campaign designed to cast doubt upon the motives and ideals of the nations which for four years spent their blood and substance in resisting Germany?

OBLIQUE INTERPRETATION.

One might find a ready explanation for such efforts on part of outright pro-Germans, professional anti-English Irish agitators and that breed of ''Internationalists'' who know no country and are capable of loyalty and devotion to no high cause. Lacking even the sinister and cunning cleverness of Mr. Viereck's disruptable *Fatherland,* the low wit of Jeremiah O'Leary's *Bull,* and the malignant vigor of John Devoy's *Gaelic American,* the *New Republic* makes a claim to attention on a platform of unparalleled and presumptious pretense. ''During the months just ahead you will need an alert, authoritative, fearless interpreter — something more than the casual reports of the daily press. This the *New Republic* can be to you.'' So ran an advertisement, published on November 25, 1918, soliciting three-months' subscriptions at $1 per. In the New York daily newspapers of November 1, while the Supreme War Council was in session at Versailles, it appealed to readers to subscribe ''in order that you may clearly understand the President's policies.'' It would be assumed that a magazine asking for public confidence on the ground that it occupied the peculiar and favored position of semi-officially interpreting the Administration would not misrepresent the President or misinterpret his statements, that above all things it would not be party to playing any German game, that, being edited by gentlemen, it would not present the President in the embarrassing role of being compelled, in dealing with the heads of the Allied governments, to deal with crooks and knaves. In the first year of the war Germany sought to eliminate France from the conflict through an inside propaganda designed to estrange the French from the British. In this advertisement for subscribers at the time the armistice terms were being formulated at Versailles, the *New Republic* published the following:

''Soon or late, the peace conference will gather. * * * What spirit will wield the gavel there? Will it be the high idealism in which the war began for us? Or will it be the old and sinister philosophy which for generations has patched the peace of Europe and never made it secure? If the diplomats should begin once more their ancient game of chess with peoples as pawns, the game of military supremacies, selfish alliances, balances of power, strategic frontiers and economic barriers—it would be the supreme tragedy of history.'' The advertisement went on to say it was for ''American civilian opinion'' to ''say whether the President's program shall prevail.'' This brings up the pertinent question as to who in the Allied councils, in the opinion of the *New Republic,* would have been opposed to Mr. Wilson's program? What parties at the peace conference were accused by implication of possibly forcing ''the old and sinister philosophy''?

With a peace of victory now assured, with the United States and the Allies unanimously agreed upon such a program as will guarantee security from future German militarism, light upon the purport of this singular announcement may be afforded by reference to the *New Republic's* pronouncements in the past. This organ of Bolshevism, in its issue of August 10, declared, ''the President's Siberian policy gives evidence of divided counsels.'' With its usual air of authority, commenting on intervention in Russia, which it had opposed, it announced that ''the President has been subjected to tremendous pressure not only from partisans of intervention at home but from the Governments of our Allies.'' In other words, the President against his better judgment was forced to comply to the desires of self-seeking Allied statesmen.

CONCERN FOR GERMANY.

Just as it was solicitous about leaving the German-subsidized Bolshevik autocracy in absolute power in Russia, the *New Republic* was frankly concerned about the sort of peace terms which the victorious Allies might impose upon Germany. This solicitude was shared by Mr. O. G. Villard's *Nation,* a weekly sublimated version of the New York *Dail Call.* The *New Republic,* like *The Nation,* staunchly supported the Russian Bolsheviki, and the British Labor Party in its program for peace discussions—over and above the head of the Allied Governments—with radical laborites from the Central Powers. To the American public this organ sought to picture labor in England—represented by Arthur Henderson—as being opposed to the British Government in its war aims. ''Any tendency to 'defeatism' which exists in the British and French labor parties,'' declared the *New Republic* of August 10, ''arises from a fear that some of the Allied Governments will prolong the war unnecessarily and make impossible a desirable peace by insisting on excessively drastic terms or by subordinating political to military victory.'' The *New Republic* implied the hope that an unconciliatory peace policy, such as might be adopted by the Allied governments, would be rejected by the labor parties of England and France. In the same issue it interpreted a speech by Mr. Lloyd George as indicating ''a genuine diversity of outlook between Mr. Lloyd George and Mr. Wilson.'' While ''nursing'' the idea of Allied disunity, the *New Republic* showed a contrasting concern for Germany. ''With the right kind of peace, Germany ought to get her share, but not more than her share'' of raw materials after the war. ''A purely punitive policy, designed to treat Germany the more harshly the more completely she is forced to acknowledge military defeat would encounter in America not perhaps active opposition, but all the doubts and delays that characterize the negative side of American policy.''

The *New Republic,* of August 17, volunteered the opinion that ''a German peace offensive is still possible, and even probable this fall.'' It predicted that the answer ''will not consist, as so many Americans seem to think, in refusing all parleys until the Allied armies cross the Rhine.'' However, there followed the familiar suggestion of disunity among the Allies:

ALLIED "ECONOMIC PRETENSIONS."

''It is notorious that they are still very far from being politically united.'' And something like a veiled threat followed: ''Germany may not be able to take advantage of their latent disunion during the coming fall, but she will be able to do so sooner or later.'' For, when the military advantage passed to the armies of the Allies, it was up to them satisfactorily ''to give a joint political definition of the victory for which they are continuing to fight. The refusal to do so would offer the Germans their best remaining chance of cashing in a considerable measure of ultimate success.'' In view of the *New Republic's* announcement as to what might be expected of the labor groups of England and France, did it intend to intimate that labor in those countries would revolt against their governments for refusing to give to Germany an obliging peace?

President Wilson's speech in the Metropolitan Opera House in New York, on the night of Sept. 27, was interpreted by the *New Republic,* of October 5, as ''a warning to the statesmen both in friendly and in enemy countries.'' The sort of peace conference which Mr. Wilson proposed, according to the *New Republic,* ''will not work to collect damages and divide territories.'' Did a vast gulf, therefore, exist between Mr. Wilson and the men at the helm of the Allied governments?

''Practically all the regular European and American statesmen, with rare exceptions such as Lord Grey, while they may not be opposed to the formation of an international league, measure the value of the coming settlement, not in terms of a permanent international structure built purposely to provide a habitation for the

spirit of justice and fair play, but in terms of the satisfaction of specific territorial and economic pretensions or grievances."

"Specific territorial and economic pretensions or grievances" referred, no doubt, to the alleged imperialistic aims of the Allied Governments. It would be interesting to know where, in the opinion of the *New Republic,* the demand for "compensation by Germany for all damage done to the civilian population of the Allies and their property by the aggression of Germany by land, by sea and from the air" become "terms of the satisfaction of specific territorial and economic pretensions or grievances." The *New Republic* dwelt upon the phrase, "if the Allies insist upon a dictated peace." "Now they have gained 'the assurance of complete victory,' they (the Allies) are bound to declare by what agencies and acts they propose to translate the victory of power into the victory of justice," said the *New Republic.* Was justice extraneous to the cause of the Allies, a foreign quality which had been brought into their councils and policies by outside agencies? Why was it necessary to "translate" their victory into a different kind?

HAILING THE HUNS.

The *New Republic* cordially greeted the various German and Austrian peace bids and advocated peace by negotiation. Admitting that an armistice could be granted only on condition of "the evacuation of all occupied territory and such further military precautions as would prevent the Germans in the event of a rupture of negotiations from improving their military position in the meantime, it declared that the part of the bid offering negotiations on the basis of Mr. Wilson's fourteen points could not "be so summarily dismissed." "It would be a mistake," the *New Republic* of October 12th went on to say, "to reject it without discussion. * * * If discussion is rejected, the Germans will be united upon resistance to the end and the Allies will be divided by disaffection on part of the labor groups of France and Great Britain." Was this a warning of active treason on part of British and French labor in the interest of a peace invited and desired by Germany? Did the *New Republic* view any such possible treason with disfavor? Emphasizing by implication that the undemocratic war aims of the Allies might hinder peace, the *New Republic* contrastingly presented the concessions of the Central Powers as removing "many of the obstacles to an agreement which hitherto have been properly considered most formidable. * * * American public opinion should recognize how many and howformidable are the obstacles to a satisfactory peace, which the present attitude of the Central Powers has removed." Mr. Wilson was represented by the *New Republic* as having attempted "to democratize the Allied war aims." A refusal on part of the Allies to discuss peace would cause the Germans to "screw themselves to resist until the end, and their resistance will be prolonged and intensified by the knowledge that their enemies, while they proclaim the principles which should determine a just settlement, refuse to discuss or act on their own principles." The *New Republic* in a previous issue had accused the men at the helm of the Allied Governments of entertaining a peace settlement "in terms of the satisfaction of specific territorial and economic pretensions or grievances."

The *New Republic* evidently had not looked forward to such a military victory over Germany as would remove the menace of her future power to make war. The Allies had supposedly done their worst, or their best; the war, presumably, had ended in a final tie. "Nothing can be done to Germany as the result of still more complete victory which will absolutely prevent her from coming back, and upon the treatment which she receives hereafter depends whether she will come back as a disturber of the peace or as one of its guarantors."

Is there not something familiar about the argument that Germany was so strong as to be invincible, and that she could not be finally crushed?

THE HARD-HEARTED ALLIES.

"The Allies have an opportunity of obtaining from their victory a Germany with which they can live or a Germany with which they cannot live. The way to get a Germany with which they can live is to strengthen the better element in Germany by treating it with more consideration than they do the worse element." One seeks for an equal concern that "consideration" be secured toward martyred Belgium, Serbia and France. But, then, was France not fighting for "revenge"?

"The German nation has stripped itself of all its pride and in effect prostrated itself on the ground before its conquerors. * * * Its rulers are submitting to these voluntary humiliations in the expectation either of obtaining a tolerable peace or, failing that, of securing an intense and universal popular determination among the German people to fight until the end in order to save their nation from being exterminated." What did the *New Republic* or the German rulers consider a "tolerable peace"? What were the "voluntary humiliations" of Germany? The offer to get out of Belgium?

The terms of peace agreed upon by the Supreme War Council at Versailles, as a matter of fact, were interpreted by the *New Republic* as a "triumph" of President Wilson's principles over the would-be policy of the Allies. "The immense body of punitive sentiment throughout the Allied world," said this sheet of November 9, "has been held in check by President Wilson's diplomacy." Commenting on this misrepresentation of the President and the heads of the Allied Governments, the New York *Globe* said: "It is implied that the President forced an unwelcome dose down the throat of Lloyd George and Clemenceau. This is, of course, highly insulting and is calculated to destroy the mutual confidence which must exist if there are to be institutions of peace. Dishonor," said the *Globe,* "was attributed to President Wilson by those who pretend to speak in his name."

While the *New Republic* wilfully sought to make it appear that the Allied powers were forced practically against their will to agree to peace terms more just than they were inclined themselves to give, the *Nation,* edited by Oswald Garrison Villard, apparently did not see in the terms any "defeat" of the "imperialistic aims" which have been chronically ascribed to the Allies by the *New Republic,* the *Nation,* the *American Review of Reviews,* the New York *Evening Post,* the New York *Daily Call,* Max Eastman's *Liberator* and George Sylvester Viereck's scrubby *Fatherland.* The prospect of a complete victory over Germany obviously did not thrill Mr. Villard's pulse.

A GAME OF GRAB, SAYS VILLARD.

"Now that the war is nearly over," Mr. Villard fretted in the *Nation* of November 9, "and the Allied statesmen see victory within grasp, they are largely ceasing to talk about ideals, and are getting down to the practical business of remaking the map. The indications are that most of them want to remake it on the old basis of seizing all that they can get, and letting their confederates have what is necessary to pacify them. * * * Doubtless it is necessary to be 'practical,' but if the war has been fought for this sort of thing, we ought to cease here and now to talk humbug like self-determination, the rights of small nations, no annexations, no punitive indemnities, and all the other principles which, originating in Russia, have yet come to be identified with the name of President Wilson; for a settlement of this sort would make them plain humbug, no more, no less."

Mr. Villard, who attributes all the high principles enumerated to those German agents, Lenine and Trotzky, has distinguished himself as a pacifist. Mr. Villard didn't approve of America's going to war. A review of the New York *Evening Post,* under Mr. Villard's management, and of the *Nation* reveals a very curious anxiety regarding the peace that should be imposed upon Germany. Was it possible Mr. Villard was more solicitous about getting "magnanimous" terms for Germany than about securing reparation from Germany for wrongs committed? This might not be surprising on the part of a man who told the New York public months ago, in answer to a question, that he would not resist the invasion of America, and who, when asked if he "would resist the violation of American women," declined to answer "because the meeting was breaking up and it would take a good deal of time to go into it fully." Mr. Villard's methods of helping to preserve national unity during the period that America was at war were very unlike those employed by the majority of American editors. Mr. Villard disparaged the aims of the Allies and extolled the Bolsheviki who had surrendered Russia to Germany. Mr. Villard, like the *New Republic,* hailed every Teutonic peace offensive and advocated peace by negotiation and compromise. He implied that if peace was delayed it would be delayed by the greed of England.

"DIPLOMATS AND SPOILS."

Mr. Villard has pretended to a very lofty, condescending intellectualism, an exalted impartialism far removed from the passions of the crowd. On part of less intellects this pose merely indicates a neuter mentality, anaemia of the blood and soul. It represents generally a type of mind of which neither apostles nor heroes are made. It was among cold-blooded academic "intellectuals" that Germany found her chief defenders and tools—college pundits, caponized "uplifters," radical sophomores, pacifist clergymen, "the weak sister" class. Many were the kind who probably would not have resisted the violation of American women, and who saw no reason for our going to war over the killing by German submarines of helpless women and children. Naturally, it has been this spiritless breed who of late have been whining about showing mercy and magnanimity to Germany.

Mr. Villard, like the mental adolescents of the *New Republic,* construed President Wilson's Liberty Loan speech as revealing differences between himself and the Allied statesmen. Mr. Villard read into the speech "a warning to the Allied imperialists as to the enemy." In one breath Mr. Villard classed Sonnino, Lord Milner, Mr. Balfour and Lord Northcliffe with the Prussian and Austrian Junkers. He averred that Mr. Wilson's speech came "at the very moment that diplomats of the old type are beginning to parcel out the spoils." To Mr. Villard the speech gave "the Germans assurance that their fate is to be settled not by revenge but by justice."

And what, pray, was this declaration in essence? That the wicked Allies were not bent upon justice? So far as the whole war was concerned, Mr. Villard, in commenting on Mr. Wilson's speech, confessed: "Not that we can agree with him that the war is now or ever was a people's war." With American boys fighting and dying, what kind of war was it?

OLD-FASHIONED GERMAN HONESTY.

While he impugned the sincerity and honesty of the motives of the Allied Governments, Mr. Villard right off accepted Germany's words on their face value. Despite the scrapping and ruthless breaking of solemn covenants, despite the Brest-Litovsk treaty, Mr. Villard clung to the legend of German honesty. He considered the German reply of October 20th as "unusually

clear-cut and straightforward." That reply, he wrote in the *Nation* of October 26th, "seems as complete, as straightforward, and as final as any one who desires to be fair could possibly ask." With Germany manfully and squarely accepting Mr. Wilson's terms, Mr. Villard declared "peace is plainly within our grasp." If, however, we did not jump at the noble German assurances and make peace, "the war," he said, "will degenerate into one of revenge, and the German people, conscious of having made truly reasonable replies to the demands of President Wilson will be fortified to a determined resistance upon their own boundaries."

"On to Berlin" was a popular slogan in the Liberty Loan campaigns. The idea seemed to appeal to all virile Americans. But not so with Mr. Villard. "Must we batter our way to Berlin at frightful cost if Berlin comes to us, and upon its knees?" he wrote. "Shall we recklessly cast aside the opportunity to do the work of healing * * * and all for the sake of taking a bloody revenge on a people misled and mistaught by their militaristic rulers?" Did Mr. Villard forget that the "good German people" gave themselves up to a holiday of rejoicing over the sinking of the Lusitania? The *Outlook*, in a recent issue, recalled Mr. Villard's own opinion of the sinking of that ill-fated vessel. In the New York *Evening Post*, of May 10, 1915, of which Mr. Villard was at the time the controlling owner, there appeared on the first page a despatch from Washington regarding the destruction of the Lusitania, signed by Mr. Villard himself. In that despatch he made the statement:

"Had the submarine given thirty minutes' warning to the crew and passengers of the Cunarder, the exploit would have gone down in history as one of the most brilliant in the annals of naval warfare."

Upon which the *Outlook* commented: "Every man who did not spring to his feet in protest against the unwarned and cruel drowning of the women and children on the Lusitania was at heart pro-German and cannot complain if he is forever suspect."

U. S. AS BAD AS GERMANY?

Mr. Villard went to grave lengths in championing peace such as Germany was willing to make. He went so far, indeed, as to charge that the arbitrary power which may plunge a country into war, which President Wilson demanded be taken from the German autocracy, has been exercised by the President of the United States himself. In the *Nation* of October 19th, Mr. Villard confessed his "disappointment at the lack of generosity and of definiteness" in President Wilson's second reply to Germany. Commenting on the President's demands regarding the autocratic German Government, Mr. Villard said: "What does this mean? * * * How much of an interference in the inner concerns of Germany is actually intended? * * * As to arbitrary power which may plunge a country into war. That power exists in every nation. Mr. Wilson used it at Vera Cruz; England has seen it exercised on numerous occasions."

With this tense anxiety about "interference in the inner concerns of Germany," with all this nervous apprehension as to what the Allies might demand of Germany, Mr. Villard pleaded for "magnanimity and generosity." Is the governing mind of the *Nation* so negative as not to remember the "magnanimity and generosity" displayed by the Huns in Belgium, northern France and Serbia?

"It is now plain," wrote Mr. Villard in his paper of October 12th, in regard to the German peace offer, "that the President can have peace the moment he wishes it. * * * To us it seems as if the hour had come for the United States and the Allies to lay down the precise conditions, lest the Entente be placed in a false position and the cause of democracy within Germany—a cause which has taken an amazing step forward in a week—be hindered and not aided." Mr. Villard's implied suspicion of the Allies was in marked contrast to his spontaneous confidence in Germany. Mr. Wilson's statement that we could not come to terms with the German rulers was, according to Mr. Villard, "out of line with earlier assurances that we do not wish to interfere in the domestic concerns of the Central Powers." And he pleaded:

"It is unthinkable to us that, with an honorable, just and wise peace so clearly at hand, the noble cause of the Allies should be allowed to degenerate into a war merely of revenge."

Germany, you see, had offered to make "an honorable, just and wise peace." Her word was beyond question, her penitence beyond doubt, her political regeneration beyond suspicion! Therefore, if peace was not made it would have been because the Allies were bent upon revenge.

A SWEET SOUL SNEERS.

A citizen and patriot of such high standing in the community as Mr. Villard would not, of course, hold up to derision and ridicule the institutions of his own country. The pacific Mr. Villard—note his solicitous attitude regarding Germany—has been all sweetness and gentleness. However, how shall we explain what seems like a bitter sneer, like a pen-knife jab of sarcasm, in the following in the *Nation* of November 2:

"The news from Germany that there is henceforth to be a responsible Ministry in the Reichstag will make many Americans feel a keen sense of envy. We may not come to that for a long while, if ever."

The *Nation* of November 16 will remain a curiosity in American journalism, a sort of unconscious pathological record, a disquieting thing when examined as an American editorial expression on the outcome of the war. Austria and Germany had accepted the Allies' armistice terms. The Huns were to be bereft of military power, with necessary safeguards set up against possible Hun treachery. In this complete victory, the fulfillment of the hopes of a suffering world, the peoples of the Allied nations rejoiced. Oswald Garrison Villard seemed to bewail "the drastic terms of the armistice—drastic enough to take the wind out of the sails of the unconditional-surrender shouters, howling for a march to Berlin." Mr. Villard interpolates a "dark side" to the past year of military achievements. "The dark sides has to do with the illiberal forces in the Government, and lately, its Russian policy." He goes on to say:

"Undoubtedly the most sinister feature of the armistice terms granted to Austria-Hungary is that giving to the Allies the right to conduct the government of any portions of the Dual Monarchy in which their troops may find themselves."

TWO HEARTS THAT BEAT AS ONE.

Why is this feature "sinister?" Are the Allies not to be trusted? Are they liars and hypocrites who sneakingly betrayed Austria into a trap which would enable them to make their predatory way into that country and subjugate it by setting up an alien government? Mr. Villard is concerned lest the Allies put down revolutionary movements. "This, of course," he complains, "runs entirely counter to Mr. Wilson's principle of self-determination and his avowals that we are not in Europe to interfere in the domestic concerns of any country."

Rose Pastor Stokes, the rampant pro-Bolshevik who is under sentence for violating the espionage act, declaring that she had lost faith in President Wilson, in a speech in New York, called the terms of the armistice "infamous terms of interference with the free peoples of Germany."

Mr. Villard quotes an editorial from the New York *Evening Sun*, in which it is said:

"Obviously it is not to the interest of the world at large that the reconstruction of the German State and the substitution of democratic rule for autocracy should be permitted to degenerate into a reign of terror and a regime of ruin. There may remain no choice to the Allies save to pacify the country and turn it over to a sobered and stable popular government inspired by the judgment of the citizens, not by the passions of the mob."

This suggestion of helping to establish real democracy in Germany, in case anarchy was unleashed, provoked Mr. Villard to the pronouncement:

"Nothing could be worse for Germany or civilization than any such course as is herein suggested."

Is the peaceful Mr. Villard a disciple of Judge Lynch? Does he infer that wild mob riot would be best for Germany and for civilization? The pacifist paradoxically welcomes revolution.

"It may turn out after all we owe to Trotzky and Lenine and their propaganda a large share of the credit of pulling the German Colossus to earth. In our minds the probability of extreme revolutionary movements has loomed large for months past—not only in Germany, but in Austria and Italy as well. The world is surely in for a cycle of extreme radicalism."

"PRUSSIANISM IN WASHINGTON."

The abdication of the Kaiser and the surrender by Germany of its autocracy was not due, we learn from the *Nation*, to the Allies' victory. "The infectious example of Russia, close at hand, told. So we see the almost incredible spectacle of the Kaiser unhorsed, not by fiat of the Allies, but by the most despised of his political parties, the Socialists." Was Mr. Villard so unacquainted with current history as not to know the German Socialists supported the war until even the German autocracy realized their cause was lost?

America and the Allies had defeated and brought to terms the haughty military autocracy which had abrogated treaties, devastated Belgium and wrought the killing of more than ten million human beings. The Kaiser had abdicated. Was it a victory of right over wrong? Had the ideals which many of us cherished achieved final and complete triumph in the crushing of Prussian militarism? "The Kaiser is but the vilest flower of a system, and it is the system and the spirit which underlie it that must go. The battle against Prussian militarism is not yet won. Its first bloody phase is, thank God, at an end. But if this war has proved anything, it is that the spirit of Prussianism exists everywhere, in Paris, in London, in Rome—very strongly—and in Washington. Only in Moscow is it wholly crushed to earth."

Therefore, we engaged in this war as a nation of either hypocrites or deluded and deceived helots. We sent our soldier boys to die in combatting an evil which flourished right within our midst — yea, which was seated high in Washington. Englishmen, Frenchmen, Italians bled for four years in fighting a bogie, under the direction of masters as baleful as the German masters, indeed, themselves defending a system as aggressive and oppressive as the German system which had precipitated the war. Heroes and martyrs? We were Pharisees. We saw the mote in the Germans' eyes, and not in our own eyes. The whole war, then, this so-called fight to make the world safe for democracy was a burlesque; the agony, the shedding of blood a comedy that might have been staged in hell. And as for our victory over Germany, when Germany signed "a humiliating armistice on the enemy's terms"—what was it? In what did the world rejoice? For what did the glad bells of every city and hamlet ring on November 11? A

EXECUTIVE COUNCIL

V. EVERIT MACY President.
SAMUEL GOMPERS Vice-President.
CHARLES S. BARRETT Vice-President.
NICHOLAS F. BRADY Treasurer.
RALPH M. EASLEY Chairman Executive Council.
JOHN HAYS HAMMOND Chairman Department Regulation of Industrial Corporations.
WILLIAM JAY SCHIEFFELIN Chairman Committee on National Defense.
LOUIS A. COOLIDGE Chairman Welfare Department.
MISS MAUDE WETMORE Chairman Woman's Department.
LOUIS B. SCHRAM Chairman Industrial Accidents Prevention Department.
A. J. PORTER Chairman Minimum Wage Commission.
AUGUST BELMONT Chairman Workmen's Compensation Department.
WARREN S. STONE Chairman Social Insurance Department.
EMERSON McMILLIN Chairman Department Regulation of Public Utilities.
GEORGE W. PERKINS Chairman Department on Profit Sharing.
ALTON B. PARKER Chairman Department on Reform in Legal Procedure.
JEREMIAH W. JENKS Chairman Department on Industrial Mediation.
TALCOTT WILLIAMS Chairman Industrial Economics Department.
WILLIAM R. WILLCOX Chairman Department on Pensions.
D. L. CEASE Secretary The National Civic Federation.
GERTRUDE BEEKS EASLEY Secretary Executive Council.

Executive Committee

On the part of the Public:

WILLIAM HOWARD TAFT New Haven, Conn.
JAMES GIBBONS Cardinal, Baltimore, Md.
FRANKLIN MacVEAGH (former Secretary of the Treasury), Washington, D. C.
ELIHU ROOT (former United States Senator), New York City.
ANDREW CARNEGIE (Philanthropist), New York City.
ROBERT BACON (former Ambassador to France) New York City.
NICHOLAS MURRAY BUTLER (President Columbia University), New York City.
CHARLES MAYER (War Charities), New York City.
FRANCIS LYNDE STETSON (Attorney), New York City.
MARCUS M. MARKS (former President Borough of Manhattan), New York City.
WHEELER P. BLOODGOOD (Attorney), Milwaukee, Wis.
THEODORE MARBURG (Political Economist), Baltimore, Md.
FREDERICK L. HOFFMAN LL. D. (Statistician), Newark, N. J.
BENJAMIN IDE WHEELER (President University of California), Berkeley, Cal.

On the part of Employers:

NICHOLAS F. BRADY (President New York Edison Co.), New York City.
TIMOTHY E. BYRNES (France and Canada Steamship Corporation), New York City.
LOUIS A. COOLIDGE (Treasurer United Shoe Machinery Corporation), Boston, Mass.
GEORGE B. CORTELYOU (President Consolidated Gas Co.), New York City.
HENRY P. DAVISON (J. P. Morgan & Co.), New York City.
T. COLEMAN du PONT (Chairman Executive Committee Equitable Office Building Corporation), New York City.
OTTO M. EIDLITZ (Building Trades Employers' Association), New York City.
HALEY FISKE (Vice-President Metropolitan Life Insurance Co.), New York City.
SAMUEL MATHER (Pickands, Mather & Co.), Cleveland, Ohio.
H. E. MILES (President Racine-Sattley Co.), Racine, Wis.
OGDEN L. MILLS (Director International Paper Co.), New York City.
GEORGE M. REYNOLDS (President Continental and Commercial National Bank), Chicago, Ill.
A. H. SMITH (Regional Director of Railroads, Eastern Region), New York City.
FRANK TRUMBULL (Chairman Board of Directors, Chesapeake & Ohio Railway), New York City.
THEODORE N. VAIL (President American Telephone and Telegraph Co.), New York City.
HARRIS WEINSTOCK (Weinstock-Nichols Co.), San Francisco, Cal.

On the part of Wage Earners:

JOHN R. ALPINE (General President United Association Plumbers and Steam Fitters, U. S. and Canada), Chicago, Ill.
JAMES DUNCAN (President Granite Cutters' International Association of America), Quincy, Mass.
JOHN GOLDEN (President United Textile Workers of America), New York City.
SAMUEL GOMPERS (President American Federation of Labor), Washington, D. C.
TIMOTHY HEALY (President International Brotherhood of Stationary Firemen), New York City.
W. G. LEE (President Brotherhood Railroad Trainmen), Cleveland, Ohio.
WILLIAM D. MAHON (President Amalgamated Association of Street Railway Employes of America), Detroit, Mich.
T. V. O'CONNOR (President International Longshoremen's Association), Buffalo, N. Y.
H. B. PERHAM (President Order of Railroad Telegraphers), St. Louis, Mo.
TIMOTHY SHEA (Acting President Brotherhood of Locomotive Firemen and Enginemen), Cleveland, Ohio.
WARREN S. STONE (Grand Chief International Brotherhood of Locomotive Engineers), Cleveland, Ohio.
DAVID J. TOBIN (President International Brotherhood of Teamsters), Indianapolis, Ind.
JOHN F. TOBIN (General President Boot and Shoe Workers' Union), Boston, Mass.
JOSEPH F. VALENTINE (President International Molders' Union of North America), Cincinnati, Ohio.
MATTHEW WOLL (President International Photo Engravers Union), Chicago, Ill.

AND MEMBERS OF EXECUTIVE COUNCIL.

NOTICE

THE NATIONAL CIVIC FEDERATION REVIEW *will deal with the issues of paramount importance arising in the period of reconstruction, and seeks to bring to the solution of these great problems the co-operation of the constructive and humanitarian forces of the nation. It will also throw light upon the sinister forces seeking to undermine our institutions.*

Non-members receiving this and subsequent SAMPLE *copies of the* REVIEW *are assured that no bill will be rendered therefor.*

The Blessings and Dangers of Peace. The President of the United States will soon take a seat at that historic council table at which will be settled the momentous terms for reestablishing peace. The world has gone through the trial of the most terrible war in the history of the race—a war unparalleled in scientific savagery, in bloodshed and agony. Yet out of the mortal suffering, to all who have made sacrifices for the ideals of freedom at stake, to the whole earth, should come commensurate blessings. The long oppressed spirit of many races and nations is already glowing. Humanity, through suffering, has undergone a spiritual purging. To the dealings of men with men, as of nation with nation, will be brought a keener spirit of justice, of conciliation and amity, of fraternal understanding and loving-kindness.

In America the great mass of people, regardless of condition, putting aside personal advantage, joined as one in the supreme task of winning the war. Leaders of industry, finance and commerce forsook their callings and gave their services to the Government. American labor, organized and unorganized, putting aside minor differences and agreeing to the settlement of disputes by arbitration, by and large took a stand loyally to back the war to the end. In the free-hearted, spontaneous subscriptions to the Liberty Loans and the giving to works of amelioration and healing, we beheld such an outburst of eager self sacrifice and warm generosity as lighted the common way through the dark days of war. The rich man gave his thousands and the widow her mite. It was an unloosing of purse strings and the springs of the human heart.

On the other side, in the trenches, our men faced death with a glory in their eyes. Fighting together for the ideal of equality, freedom and fraternity, class distinctions based on the mere possession of money, of birth or of education, gave way to the real democracy which attests the worth of men by their humanity, their love of their fellows, their willingness to die for a cause that is just. Our boys were baptized in the fire of that Americanism which holds our great heritage more precious than life, and when they come back they will still be ready to fight on, if fighting be needed, that "government of the people, by the people, for the people shall not perish from the earth."

With the war over, grave problems of readjustment, of repairing the ruin of war, challenge us. Shall not the spirit which was born out of the self-sacrifice and travail of the war be translated into a practical humanitarianism, a co-operative working together permanently to the common weal? It will be, and the world will be a better world, unless the sinister foes of peace and of good will are allowed to triumph.

They are at work now, here and abroad, seeking to undo all that has been won. They have come out clamorously in the open, preaching doctrines of hate and discord; they are at work in secret, plotting assassination, sabotage and revolution. They are taking advantage of the very problems which the war has produced—problems which only peaceful co-operation can solve—to foment social unrest. They threaten that the whirlwind which wrecked Russia will sweep the world.

In the surrender of Germany, America and the Allies won a victory over organized military might, over the most formidable autocratic power the world has ever seen. As that tyranny went down, another tyranny has arisen. It is the tyranny of ignorance and inhumanity, prejudice and persecution, of mob malice and savagery, of the worst human passions incited and played upon for their own advantage by artful demagogues. Shall the terrible struggle of the war against armed autocracy end only in universal mob chaos? Shall we have given our best blood to dethrone one Caesar only to let bigoted and brutish despots, such as Trotzky and Lenine, extend a bloody rule over us? Shall we have peace or social war? Shall we have good will among men, or a reign of hate? Shall the dark forces of disintegration and anarchy be permitted to undo all that was achieved out of the agony of the war and turn into dead sea fruit the very blessings of peace?

Or shall we not, quickened through the war to higher concepts of duty, work so together for the general good that these evil winds will die away? Shall we not continue in such a spirit of conciliatory cooperation, such unity of purpose and ideals in the work of readjustment and reconstruction as will render inert forces which would take advantage of the difficulties of these disturbed and unsettled times? The task of the readjustment of industry, of labor and of society to the normal conditions of peace are formidable—yet the task will be done as the work of war was done, and we shall have made steps ahead. Of the future, not ignoring present dangers, we have hope. For, as never before, the world rises with a new spirit to meet the problems and trials of a new day.

"The War after the War." "All Socialists," announced Victor Berger at a meeting of the Chicago branches of the Socialist Party, on November 17, 1918, "are pro-Bolshevists today." This is the same Berger who as long ago as 1909, in his organ, the *Social Democratic Herald,* declared in favor of "a violent and bloody revolution" and advised each of the Socialist voters and workingmen to provide themselves with "a good rifle and the necessary rounds of ammunition in his home and be prepared to back up his ballot with bullets if necessary." It is the same Berger that is under four indictments for seditious propaganda, and boasts of them. Is it a coincidence that the very Socialist party leaders who were of aid and comfort to Germany during the war should now simultaneously in many places here come forward as the promoters of Bolshevism?

The great pretense upon which the Bolsheviki agitated and shot their way into power was that they would give Russia "bread and peace." No sooner were they in control of governmental force than they quickly revealed that it was not peace they wanted but a world-wide war of

ass against class. To buy immunity for their ar of extermination in Russia itself, they made shameful peace with the Germans who, in fact, ere their backers. Then their campaign of errorization and slaughter of what they called ıe Russian "bourgeoisie" started and has since rown in bitter intensity.

Uninformed people in America and other ountries may fondly imagine that these events ı far-away Russia do not threaten their safety nd institutions. A greater mistake could not e made.

Having achieved what they consider success ı Russia the Bolsheviki and their organs (no pposition newspapers being allowed) began ıreatening that they "would carry the class war ıto every country in the world." This notifiıtion should have been taken seriously, but it as not. For years Socialists and the I. W. W. ave been preaching the class war. They had ıe design but lacked the means. The Bolsheiki have the financial resources, and the Social-t Party spokesmen and their followers in the nited States are now boldly avowing themlves Bolshevists.

How many of our people here know that the olsheviki have control of 800,000,000 rubles in old which is part of what they found in the ussian treasury as a reserve when they seized ower? But this is by no means all. They ound also 800,000,000 francs in gold which had een transferred from Rumania before the Revlution. In addition, they have confiscated imense sums in private funds and have appropriated great quantities of jewels and other aluables.

This constitutes a campaign fund for instigatıg the class war wherever they can. They are sing it effectively. "Lenine is flooding the candinavian countries with propaganda ıoney," cables Bassett Digby, the Stockholm orrespondent of the *New York Globe* and the *hicago Daily News.* "The Bolsheviki have ıeir own printing works near Berne and 10,-00,000 rubles are admitted to have been placed ı the Swiss Bank to the credit of their propaanda," cables Julian Grande, the Berne corespondent of the *New York Times.* In Engınd, Italy, France and other countries the olshevik movement has suddenly sprung into idespread activity and shows signs of being ell financed. "We are feverishly awaiting the ve of the Western European Revolution," reently exulted *The Red Army,* a Bolshevist Mosw daily newspaper.

What of America? Many of the Bolshevist aders—and the most powerful—are men who ent back from here to Russia in 1917. No obrvant person can have failed to notice the sysematic outbreak of Bolshevist agitation here. xpensively manufactured magazines have sudenly made their appearance. *The Class Struggle,* published in Brooklyn, every line of which a Bolshevist incitement or distortion, is an ıstance. Book after book is being run off the resses. "We know," says *The Red Army,* "the ord democracy is associated with the word reublic only to cheat the people." The book riters promptly take their cue. "There is a *ar beneath the war,*" insists Walter E. Weyl ı his recently issued book, "The End of the ar," in concluding which he says: "It will e a wider conflict than that which now rages the great world war], and the alignment will be y classes and interests rather than by nations."

From Montreal comes this Associated Press espatch: "Lumber camps in Canada are ver able hotbeds of Bolshevik and I. W. W. propaanda, according to the Rev. Thomas Joplin, eld secretary of the Shanteymen's Christian ssociation, who has just returned from a tour f the camps. He declares thousands of inflamatory pamphlets have been distributed in the mps urging the workers, most of them forgners, to resist all authority, 'by dynamite if ecessary.'"

"We have sent out in all directions the call of the international workers' revolution," triumphantly announces Lenine in a signed statement.

These are only a few signs of a brewing menace. All of the forces of civilization that do not want an unleashing of armed anarchy will do well to reflect upon their meaning and hasten to act.

Bolo Pasha Diplomacy. It is a common practice of advertisers in general to exaggerate, misrepresent and deliberately "fake" when describing their wares. If these wares consist of stoves, corsets or chewing gum, little harm is done, because the public has learned to discount such statements. In the case of newspapers, magazines and other periodicals, however, which seek to shape public opinion, such misrepresentation presents a different aspect. An illustration of the latter is found in the case of a pretentious weekly journal which is just now making an appeal for an increased circulation. Among the inducements presented as to why the benighted public should send in $5 subscriptions, is the following:

> For four years it (this paper) has developed and consistently advocated the principles for which we finally entered the war. It was one of the first journals in America to urge that we go in for the sake of these principles, and it insisted that the war must go on until Germany was defeated and a League of Nations made possible.

If there were even a semblance of truth in this statement, that would be something; but when one reads such analyses of this journal's editorial course—or various courses, rather—as that published by William English Walling, under the title "Highbrow Hearstism", and that by T. Everett Harré, in this issue of the REVIEW, the claim made by the paper becomes farcical in the extreme. In fact, if it were a matter of any moment, it might be characterized as an attempt to obtain money under false pretenses.

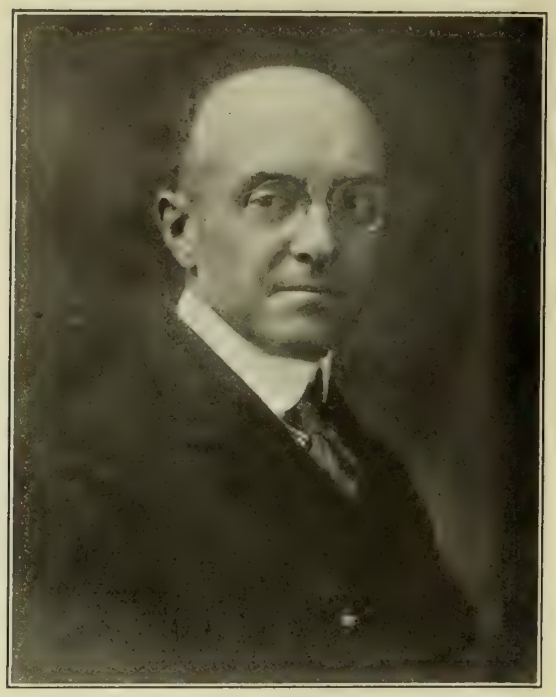
One editorial alone taken from the columns of this journal, which is claiming to have so "consistently advocated the principles for which we finally entered the war * * * and insisted that the war must go on until Germany was defeated and a League of Nations made possible," will serve to illustrate the above statement. This editorial appeared in the issue of May 19, 1917, just six weeks after we entered the war—and reads as follows (the italics are ours):

> If Russia is not prevented from drifting out, a military decision becomes impossible except on one condition. There can be no victory over Germany except as a consequence of as complete an organization of the fighting power of the United States as that which has taken place in France and Great Britain. Germany could then leave a mere retaining force in the East and concentrate all reserves of guns, ammunition and men on the Western line. The result for this summer and the next would at best be a hideously expensive stalemate. The deadlock could be broken only by the dispatch of a huge American army to Europe—*one so large that it could not be recruited, equipped and trained until the summer of 1919. Even then it might be impossible to transport it to Europe.* In that case, instead of preparing to enlist and discipline a million conscripts, we ought to be planning a draft of all able-bodied men between twenty and forty, and training camps for at least four million soldiers. Instead of providing for financing a two years' war, and levying $1,750,000,000 in taxation, we ought to look forward to three or four years of fighting, to casualties of several millions, to a revenue from taxation of $4,000,000,000 a year, to an ultimate national debt of not far from $40,000,000,000, and to a general condition of extreme famine in all the basic supplies of food and materials. *It is an appalling outlook, and it will go ill with the men responsible for the government which brings consequences of this kind upon the American people. The result would almost certainly be a revolution in America far more bloody and drastic than the revolution in Russia. A war conducted until 1920 on the scale required by a military decision might bring peace with victory, but it would also bring victory with suicide.*
>
> As long as Russia continues in its existing state of mind, the war certainly cannot be won by armies and now that the United States is going to exert all its resources in ship-building, it almost certainly cannot be won by submarines. *The final victory must be won by diplomacy.*

The difference between the spirit and purpose of this editorial and the defeatist propaganda for which Bolo Pacha was shot is not discernible to the naked eye.

It might also be of interest to note that the writer of this defeatist editorial and the advocate of "victory by diplomacy," is at present in France, representing the government of the United States in this work of "diplomacy."

Real Labor Speaks. The recent Pan-American Labor Conference at Laredo, Texas, was a notable achievement for the American Federation of Labor, which organized and brought it together. The United States, Mexico and five Central American Republics were represented. Samuel Gompers declared that it is the aim of the American labor movement to bring about the best possible fraternal, cooperative and sympathetic agreement of the working people of all American countries. Plans were developed for the formation of a Pan-American Federation of Labor.



The resolutions show what the American labor movement considers as fundamental to the vital importance of all wage earners. They are:

> "That in law and in practice the principle shall be recognized that the labor of a human being is not a commodity or article of commerce.
>
> "Industrial servitude shall not exist except as a punishment for crime, whereof the party shall have been duly convicted.
>
> "The right of free association, free assemblage, free speech and free press shall not be abridged, that the seamen of the merchant marine shall be guaranteed the right of leaving their vessels when the same are in safe harbor.
>
> "No article or commodity shall be shipped or delivered in international commerce in the production of which children under the age of 16 years have been employed or permitted to work.
>
> "It shall be declared that the basic work day in industry and commerce shall not exceed eight hours a day.
>
> "Trial by jury should be established."

This is a sterling constructive policy. It is in marked contrast to the destructive Bolshevist theories that highbrow and lowbrow publications are trying to make popular—theories which have already produced such bloody chaos in Russia. It is a relief to turn from the airy speculations of the professionalist leaders of the so-called British Labor Party to the sane, practical program of the American Federation of Labor.

Seeds of Suspicion. Is there no significance in the fact that the journals which promulgated "defeatism," by implying that Germany was invincible, and which advocated a peace by negotiation and compromise, more recently have concentrated their efforts toward sowing seeds of suspicion and distrust regarding the war aims of the Allied governments? Why the attempt to implant in the minds of the American people a belief that the aims of Lloyd George and Clemenceau were opposed to the peace principles enunciated by President Wilson? Why the insidious and persistent suggestion that "divided counsels" exist? What purpose was back of the propaganda which pictured America as alone being guided by unselfish motives and high ideals and which presented our associates in the Allied governments as being far from above suspicion?

Leaders in the Fight Against the Enemy Within

HON. JOHN LORD O'BRIAN

HON. JOHN LORD O'BRIAN.

WHEN the United States entered the war the Government was confronted by a problem such as it had never been required to deal with before—the problem of rooting out and defeating the complicated and intrenched system of German espionage and propaganda.

Germany's spy system was an efficient instrument even before the Franco-Prussian war. During more than forty years afterwards the most cunning and subtle brains of Germany, experts in psychology and highly trained specialists, were devoted to the perfection of a spy system whose ramifications were universal, and to a baffling system of propaganda extending into every country of the globe. When America entered the war we had to combat not only the armies of the foe abroad, but an army of foes at home. Germany had intensively developed during nearly three years agencies for insidious propaganda and an organization of spies for purposes of espionage and destruction. We confronted an internal situation of the gravest danger, such as none of the Allied nations had to deal with when they were forced to war. Not the least difficult of our problems was that of dealing with a vast population of alien enemies and of citizens whose sympathies, because of birth or racial extraction, had been with the Central powers.

What happened in the United States is an answer to the Teuton argument about the inefficiency of democracies. During the period that we have been at war, better order has been preserved in this country than in any nation at war. At the beginning, naturally, there were fears of widespread outrages and sabotage on the part of German agents and sympathizers. Yet within a few months after the declaration of war, the United States established laws and agencies which have been so effective that German plots and German espionage came to almost nothing. German propaganda was practically exterminated.

For a large part of what has been accomplished recognition is due to John Lord O'Brian who, in October, 1917, was asked by Attorney General Gregory to take charge of the war work of the Department of Justice. What Mr. O'Brian has done is not generally appreciated, for he has worked quietly and has avoided publicity. It is not known to the country at large that the whole scheme for the registration and internment of enemy aliens was devised by Mr. O'Brian. Whenever an enemy alien was proved dangerous to the country and to the successful prosecution of the law, he has without fear or favor recommended his internment. On the other hand, he has consistently refused to intern Germans or Austrians who he believed would abide conscientiously by the law. Under these regulations thousands of German and Austrian aliens have been so subjected to Federal control that the sum total of anti-American activities has been surprisingly small. Mr. O'Brian helped to prepare the Sabotage Act and Passport Act, and to him, perhaps more than to anyone, credit is due for the system of protecting the sea coast, water fronts and army and naval bases.

Mr. O'Brian's policy toward free speech has been liberal; yet whenever he found that free speech was used merely as subterfuge for wilful attempts to interfere with the conduct of the war, he has recommended that action be taken. The Department of Justice has never prosecuted organizations nor taken the stand that membership in organizations implied disloyalty.

German propaganda aiming to nullify our part in the war was most rife in December, 1917, and January, 1918. It took the form of interpreting the war as a capitalistic war and sought to foment resistance to the draft. That was effectively and vigorously suppressed. As in the cases of the *Masses*, of Victor Berger and Rose Pastor Stokes, prosecutions were conducted under Mr. O'Brian's jurisdiction. Religious pacifism came next. The Italian Government complained that Pastor Russell's pacifist literature was being sent into Italy from Greece and that an anti-war sermon by John Haynes Holmes was dropped by Austrian aviators into the ranks of the Italian armies. Mr. O'Brian took charge of the prosecution of the "Russellites," with the result that Rutherford, the leader, and others were convicted. Mr. O'Brian found an insidious form of propaganda conducted among the negroes of New York and the far south. The suppression of this, as well as the more familiar anti-British propaganda, was under Mr. O'Brian's supervision. Part of Mr. O'Brian's work was the enforcement of the provision of the draft act and the routing out and detection of slackers. This is a military act which depends upon the civil branch of the government for its enforcement. The efficiency of the act was mainly due to the intense activities of the Department of Justice.

Mr. O'Brian has been a life-long Republican. He began the practice of law in Buffalo, and soon won distinction because of his extraordinary powers and keen intellect. After serving several terms in the State Assembly he was appointed United States District Attorney by President Roosevelt. In this capacity he won many legal triumphs, notably in the prosecution of the railroad companies and the Standard Oil Company for violating the Anti-Rebate law. Mr. O'Brian's incumbency of the office of United States Attorney did not come to an end until some time after the commencement of President Wilson's first administration in 1913. Attorney General Gregory thus came to entertain a high regard for his ability as a prosecutor and retained him as special counsel to prosecute the "Coal Trust," and later as special counsel for the government in the prosecution of Franz von Rintelen, the German agent and spy.

ALFRED L. BECKER

ALFRED L. BECKER.

To deal with the problem of German espio age and propaganda the State Legislature New York on May 21, 1917, passed the Pea and Safety act, under which the State Atto ney General enjoys the unusual powers of bei able to subpoena witnesses and compel them give testimony under oath. This is a pow not possessed by any branch of the Federal go ernment charged with investigating espiona and propaganda.

Under this law Attorney General Lewis a his Deputy in immediate charge of the admin tration of the peace and safety act, Alfred Becker, obtained the proofs necessary to co vict Bolo Pasha in France, and bring about execution as a traitor. The steps of Joseph Ca laux, former Premier of France, through Bra and Argentine were retraced and the swo story of his machinations with Count von Lu burg, German Minister to the Argentine, w furnished to the French Government. The pro of how the representatives of Germany forc a pro-Ally subject of the Sultan of Turkey, S lih Gourdji, out of Constantinople because sought to tell the truth through a news agen which he controlled, was made a matter of re ord. The secret methods of the German prop ganda office in the Wilhelmstrasse have be laid bare in a deposition showing how t Kaiser's chief censor, Roediger, spread throu the United States, more than a year before it a tually happened, the report that the Kaiser w about to be overthrown, with the intent of pa alyzing America's military effort. The sord story of how the representative of the Germ Red Cross, Dr. Bernhard Dernburg, organiz the forces which attempted to corrupt pub opinion in the United States and keep our cou try out of the war, was set forth in sworn c positions published for the education of t American people in the ways of the Teuto mind.

To no one belongs so much recognition f these noteworthy achievements as to Deputy A torney General Alfred L. Becker, who was plac in charge of investigations under the peace a safety act. Mr. Becker has said that the corr principle of investigation of German plots is "follow the money trail." The discovery

Leaders in the Fight Against the Enemy Within

the sources of the 10,000,000 francs with which Bolo Pasha bought a controlling interest in the Paris *Journal* for the purposes of defeatist propaganda is an illustration of the application of this principle of investigation.

Having determined to help to expose so far as might be possible the whole series of plots of Ambassador von Bernstorff and his associates, Mr. Becker obtained from the banks where the German embassy had accounts every available record showing the recipients of embassy funds. One of the first fruits of this investigation was the proof that the New York *Evening Mail* had been bought with money furnished by the German government. For more than a year the Department of Justice had suspected that Edward A. Rumely bought the *Mail*, late in May, 1915, with German money, but the proof was lacking. Within a day after Mr. Becker obtained the records of the New York banks, he had traced $1,700,000 from the bank accounts of the embassy through intermediaries to Edward A. Rumely. The arrest and indictment of Rumely and his attorney soon followed.

Through Mr. Becker's investigation of German embassy expenditures he obtained conclusive evidence of the plot of Dr. Albert, the Commercial Agent of the Embassy, and William Wilke of Buffalo, to corner the stoneware market of America so as to cripple the manufacture of explosives, in mixing which such pottery must be used. He found the proof of the enormous expenditures through Dr. Hugo Schweitzer for buying up nearly all the carbolic acid in the country with a similar motive. He discovered Dr. Albert's plan, partly carried out, of monopolizing all the available shipping space for several months after the end of the war so that Germany would be able to dictate the conditions upon which she would buy foodstuffs in the United States. He showed how George Sylvester Viereck, one of the most slippery of German propagandists, received $100,000 and more from the embassy for issuing a propaganda weekly, *The Fatherland,* and publishing a whole series of books cunningly written so as to set forth in disguise the German argument. Mr. Becker uncovered the activities of Dr. William Bayard Hale, and exposed him as the secret director of Hun propaganda. The whole ugly nest of German agents was routed out and rendered incapable of future harm by fearless nation-wide publicity.

Only a part of Mr. Becker's discoveries have been published. With a grasp of the situation gained from nearly two years of study, Mr. Becker is continuing investigations, which, now that the war is won, may do much toward preventing Germany from winning the commercial war that is to come.

SOLICITOR WILLIAM H. LAMAR.

DURING the first days of the war the mails of the country were flooded with tons of propaganda matter, books, newspapers, magazines, pamphlets and circulars, the purpose of which was to create in every way obstruction to the prosecution of the war. It was a comparatively easy matter to apprehend demagogues who openly preached resistance to the war and otherwise violated the espionage act. But it was a difficult problem to detect and clear the mails of printed matter, much of it adroitly handled and subtly disguised by the writers in an attempt to evade criminal liability.

At the very beginning of the war it was evident that there existed an organized effort to create anti-war sentiment, and that this wide-

SOLICITOR WM. H. LAMAR

spread campaign was but the outgrowth of the German propaganda begun here in 1914. The stamping out of disloyalty and sedition, as it worked through the channels of the Post Office, was in charge of William H. Lamar, Solicitor of the Department.

The Post Office Department did not at first have an organization capable of coping with the problem. But after the declaration of war Solicitor Lamar, working in close touch with the Postmaster General, promptly recruited corps of attorneys, translators and readers, and took measures to secure the full cooperation of the entire Post Office Department, including officials, postmasters, clerks and carriers. They were made fully acquainted with the provisions of the statutes, and were instructed to examine matter deposited in the mails for objectionable material. Whenever such matter was found clearly to be in violation of the law, it was at once ruled out of the mails. But whenever there was doubt the matter was held and submitted to the Solicitor for instructions.

Solicitor Lamar was confronted with the problem of detecting pro-German propaganda under many disguises. Opposition to the war was based in some quarters on specious religious ground. Socialists opposed the war as a capitalistic war. To the ultra-Irish it was made to appear that America was fighting for the British King; to the ultra-Protestant the assertion was made that we fought for Italian Catholicism; other religious groups were told that we were helping in a fight against all religion by assisting French atheism. Anti-Japanese propaganda, which took the form of a demand that the white races stop bleeding themselves to death lest the yellow races dominate the earth, formed no inconsiderable part of the insidious campaign. After the passage of the Espionage Act and the Trading with the Enemy Act action was taken against various publications, and in every case brought before the courts the Government was sustained. Among the papers which Solicitor Lamar found had violated the Espionage Act was Tom Watson's paper in Georgia and Victor Berger's *Milwaukee Leader.* William Voss Lloyd, a candidate on the Socialist ticket in Chicago, had put out literature endorsing the St. Louis platform of the Socialist Party. The Post Office declared this matter unmailable, and the Socialists went before Judge Landis to secure an injunction to prevent the Postmaster from holding the mail. Judge Landis decreed in favor of the Government.

Whenever they got into trouble the noisy Socialists made a great clamor about the Constitution guaranteeing freedom of speech, and contended that it was unconstitutional for Congress to pass any act limiting the expression of honest convictions. Solicitor Lamar's answer, which has been sustained by the courts, is that the use of the mails is a privilege, and not a right, and that Congress had absolute right to determine what should, or should not, be carried through the mails.

Those who sought to obstruct the war employed various devious and deceptive methods. The I. W. W. and International Socialists sent literature through the mails opposing the war, and some defended their infractions with the argument that they only consistently pursued policies advocated long before the war. Solicitor Lamar replied that this is a question for debate, but not for consideration in applying the law. "A Mormon," he said, "cannot continue the practice of polygamy on the ground that it was recognized and permitted as a religious custom or tenet for many years before it was outlawed." When the statute was applied, these efforts were found to work along the well-defined plan of playing the German game.

Under the Trading With the Enemy Act, which tended to reinforce the Espionage Act, foreign language newspapers were compelled to file translations of all matter bearing on the war or the governments engaged in war against Germany with the Post Office Department before or at the time of publication. Where papers were of such a character that they might be freed of the requirements, permits subject to revocation were given. As the plan of handling the foreign language press worked out, disloyal papers lost advertising and subscribers and a number went out of business.

Today the amount of disloyal literature going through the mails is negligible. Solicitor Lamar, to whom this great achievement is principally due, entered the Postal Department in 1894 and served in various capacities until 1906, when he became an Assistant Attorney in the Department of Justice assigned to the defense of suits against the United States in the Court of Claims. On the incoming of the first Wilson Administration he was appointed Assistant Attorney General for the Post Office Department, the title of which office has been changed to Solicitor.

ANNOUNCEMENT.

In the next issue of THE NATIONAL CIVIC FEDERATION REVIEW will appear:

"Bolshevik 'Industrial Government,'" by Gustavus Myers, which shows how Bolshevism worked out in practice, as told by men who saw the demoralization of industry and terrorization by wholesale massacres in Russia first hand.

"Shadow Huns and Others," by T. Everett Harré, a continuation of the article begun in this number.

"Works of the War Labor Board"—a study of the Governmental agencies dealing with relations of employers and employees under war conditions, showing phases which it would be valuable to continue in times of peace.

"Social Insurance"—an article dealing with the present status of the efforts in this country to secure compulsory State health insurance and labor's attitude toward it. Is it practical and desirable?

"The Pan-American Labor Conference," by Chester M. Wright, an account of the notable conference held at Laredo, Texas.

The British Labor Party's Program

A SCHEME FOR REVOLUTIONARY SOCIALISM PROMOTED UNDER THE GUISE OF SOCIAL REFORM

By RALPH M. EASLEY

After reading the proposed British Labor Program, one is possessed of two dominant ideas: First, that it is a very cleverly written political document designed to replace the Conservative and Liberal Parties of England with a Socialistic Party, and therefore deals principally with British questions, having little if any bearing upon problems in the United States. It contains much criticism of the "lack" of sufficient industrial legislation in England and where they have satisfactory legislation, of a "lack" of its proper administration. There is also much space devoted to a discussion of democratic self-government in the "Britannic Alliance" and the proposed "Imperial Federation."

The second outstanding idea is that its constructive proposals are largely a rehash of the resolutions adopted at international socialist congresses, the various socialist platforms and the pronouncements of the socialist leaders of all countries during the past twenty years.

By a barrage of glittering generalities, its authors seek to disguise the fact that its program is state socialism, pure and simple. But a little scrutiny soon discloses scattered through the document such tell-tale phrases as these:

> "The individualist system of capitalist production, based on the private ownership and competitive administration of land and capital * * * will receive its death-blow. And the Labor Party refuses absolutely to believe that the British people will permanently tolerate any reconstruction * * * involved in the abandonment of British industry to * * * separate private employers. * * * What the Labor Party looks to is a genuinely scientific reorganization of the nation's industry * * * on the basis of the common ownership of the means of production; the equitable sharing of the proceeds among all who participate in any capacity and only among these, and the adoption, in particular services and occupations, of those systems and methods of administration and control that may be found, in practice, best to promote the public interest."

Then it goes on:

> "The Labor Party stands not merely for the principle of the common ownership of the nation's land, to be applied as suitable opportunities occur, but also, specifically, for the immediate nationalization of railways, mines and the production of electrical power."

In other words, the state is to take over and operate all the farms, factories, mills, mines, stores, banks, street railways, steam railways, mercantile marine, gas and electric light utilities —in fact, all the productive industries and means of distribution, which is Marxian socialism without any disguises. The definition of socialism, which many loose writers like to say consists of fifty-seven varieties, was officially defined by Morris Hillquit, before the Industrial Relations Commission, in the following concise language:

> "Stated in more concrete terms, the socialist program requires the public or collective ownership and operation of the principal instruments and agencies for the production and distribution of wealth — the land, mines, railroads, steamboats, telegraph and telephone lines, mills, factories and modern machinery.
>
> "This is the main program, and the ultimate aim of the whole socialist movement and the political creed of all socialists. It is the unfailing test of socialist adherence, and admits of no limitation, extension or variation. Whover accepts this program is a socialist; whoever does not, is not."

This socialist British labor program is headed "Labor and a New Social Order" and the opening paragraph is under the title of "The End of a Civilization." The latter phrase is based upon an alleged utterance of Count Okuma, of Japan, at the darkest hour of the war—to wit: "Watching the present conflict from the other side of the globe, it is nothing less than the death of European civilization."

The report goes on to state: "We of the Labor Party can so far agree in this estimate as to recognize, in the present world catastrophe, if not the death, in Europe, of civilization itself, at any rate the culmination and collapse of a distinctive industrial civilization, which the workers will not seek to reconstruct." In other words, industrially speaking, whatever is, is wrong, and the present industrial system, under which such tremendous progress has been made during the last fifty or one hundred years, is to be scrap-heaped and we are to begin all over again with a new dream, which is exactly what they are now trying out in Russia. They have overturned all of their institutions and have begun at the bottom, and seem to be going lower. That is to say, the drafters of this report, the "three tailors of Tooley Street," Messrs. Webb, Henderson and MacDonald, the latter being the Morris Hillquit of England, assume that civilization has already passed away and that it is up to them to create a new world. This appalling task, however, does not feaze them and they go ahead and construct it overnight with a paste-pot and a pair of scissors from the political-socialist libraries.

The report deals with many stock industrial subjects over which there has been much controversy for decades, such as a national minimum wage, compulsory unemployment insurance, compulsory housing reform, health insurance, labor exchanges, etc., and to which there is contributed not a single new idea. There is also discussion of what is to happen at the close of the war when the millions of men and women in the factories are demobilized and the millions of boys return from the front.

This part of their report is interesting but it contains not an idea that has not been discussed in this country almost since our entry into the war. They have come to a conclusion, however, on the matter, and that is that the government must see that every soldier gets back his job or gets another one just as good, and that at the same time every woman who has taken a soldier's job must keep hers or get another one just as good—some task!

On the unemployment proposition, they have nothing but the old socialist program of the government's building of residences, public buildings, roads, afforestation, the reclamation of lands, building of "light railways," "unification and reorganization of railway and canal systems" and the "development and better equipment of our ports and harbors," etc., etc.

All of the foregoing questions, and many others, were made the subject of careful study by all the experts in this country, at the beginning of the war in 1914, when the panic of that winter threw millions out of work. Not to go into these questions in detail but to refer to one—that of unemployment—it was soon discovered that wars and panics do not come on schedule time, giving a year's notice. Therefore, Governments—Federal, State or Municipal—could not have the money ready, the plans ready, or the material ready to do all the building that is proposed by these dreamers, until long after the emergency had passed. It was pointed out, for instance, that the several million needle trade workers of New York, Chicago, Boston and Cleveland would not make much headway in building houses or railroads. These Russian Jews, which most of them are, with their women and their children, are not carpenters nor bricklayers nor trench-diggers, nor could they become such overnight. Neither would they get very far with "afforestation". True, that is a high-sounding word; but when we realize that it would mean that the men and women in these industrial centers throughout the country who are thrown out of work during a depression would have to be transported to localities somewhere in the South or West, where they would have to build homes, pull out the stumps, clear up the debris and make over the soil before they could cultivate even a garden, let alone a farm—when we realize this, the seductiveness of the enterprise, as well as its practicability as an emergency employment relief measure, vanishes.

Again, it was found that the establishing of employment exchanges, which proposition bulks large in all socialist programs, did not meet the situation, for they could not produce the only thing wanted,—jobs. With five men for every job, no employer needed an agency to provide him with workers—they were at the gates. While in good times no skilled workers would apply to agencies for jobs.

Another of the proposed panaceas in the Henderson, Webb, MacDonald program is the "democratic control of industry." They slide along very gently and avoid defining just what they mean, for the reason that for the time being, democratic control of industry is going a little lame, in view of the Lenine and Trotzky experiments. Democratization of Industry means that the workers in a given plant shall themselves take over and run it, under an indefinite number of committees, sub-committes and sub-sub-committees. This certainly would be democratization of industry as well as its complete destruction.

This same idea of democratic control of a shop that has proven so destructive in Russia finds its counterpart in England in a scheme called the Shop Steward System, which means that in every shop, as in Russia, there shall be committees of the workers who shall undertake to deal with the employers on all matters pertaining to the production and distribution of the work of the factory. This system in England has worked out so badly that it is finally being denounced for what it is—Bolshevism, pure and simple. Upon his return from Europe, Charles Edward Russell, a loyal socialist, in an interview published in the *New York Times* of Sunday, September 29, said in regard to this movement:

> "Very much akin to syndicalism, the shop steward movement takes its name from the fact that, in many of the industries in England, men engaged in various lines of industries form themselves into shop units, and elect a chairman known as the shop steward, who tells the manager what shall be done for the workers and determines the conditions of labor in his particular shop. Thus, in a munition factory, the men engaged

in making the noses of shells would organize in their particular shop, elect a shop steward, and leave him to act as their intermediary in all demands upon their employers. The various shop stewards in a factory also assemble and form a council of shop stewards for that particular factory, which also has its chairman, and which devotes itself to the task of seeing that the manager or employers afford the workingmen the desired conditions of employment.

"Curiously enough, the shop steward movement pays no attention to trade union affiliations, even though the great majority of the workers are members of trade unions. It is a development entirely independent of trade unions and marks a new epoch in English industrialism. The shop steward movement in England makes it appear that in certain contingencies after the war, or even before the end of the war, the allied countries may have a form of Bolshevism to deal with. As yet the shop steward movement in England has acquired no political flavor. The British Labor Party is more or less afraid to touch it. It is generally feared that once the shop stewards are brought into the party they will soon take dominant control of the whole organization."

In a recent number of the *Survey*, the unofficial organ of the charity workers in this country, which, strange to say, has largely degenerated into a socialist-Bolshevist publication, there was published a supplement on the subject of shop control, written by one C. G. Renold, an "English employer"; this article, when examined, shows that by this system it is proposed, practically, that the employees shall vote on everything that is done in the factory, from top to bottom. Of course, Mr. Renold admits that he has not tried it in his own shop. Evidently he wants his competitors to take it up and smash themselves on the various wheels that his program would set in motion. This idea is "democracy run mad" and means, as before stated, the dislocation and destruction of all industry. Mrs. Pankhurst stated recently that when she was in Russia, she found that the Bolsheviki had even applied the "democratic principle" to the hospitals, whereby the patients would vote upon whether or not they would obey the orders of the doctors, adopting from the army the idea of having the soldiers decide when they would obey orders from their officers.

That the socialists understand what is involved in all of these schemes clearly appears in the speeches made by Scott Nearing in his campaign for Congress at the recent election in New York City. He would say to his audiences: "Yes, you people have political democracy. You are allowed a voice in the election of the President, the Congress and all officials. But industrial democracy you have not. Who selects the foreman in the shop? The autocratic employer. Until you select your own shop boss you have no industrial democracy."

When one goes over carefully this program of the Socialist Labor Party in Great Britain, one wonders why anybody in this country with a thimbleful of brains should take it seriously. But when one considers still further, the conclusion might be reached that it is just that type of person who have been taking it seriously —the highbrow editors of pacifist-socialist magazines, I. W. W. admirers and their backers, and the preachers and college professors who were appealing for $50,000 to keep Haywood and his band of outlaws out of jail.

Under the title of "A Revolution in National Finance," an elaborate scheme of taxation is proposed, by which, among other things, all the wealth of the country is to be conscripted at the close of the war to pay the entire debt, wrecking every industry in the country. This certainly is sufficiently revolutionary to warm the cockles of even that pair of precious hearts carried around by Lenine and Trotzky; and it also bears striking resemblance to the ebullitions of the Amos Pinchots, Max Eastman & Co., Ltd., and others of similar calibre in this country.

Another nice revolutionary proposal is the confiscation "for the benefit of all" of every income beyond a reasonable "standard of life", which reasonable standard would, of course, be what is considered reasonable by the proletariat political committees that would run the government under this interesting scheme—and, of course, what they might consider reasonable would be a little bit more than they were in the habit of getting, themselves. To most of them, twenty-five hundred dollars would be a great income.

A campaign is being launched in this country by the *New York Daily Call*, by its weekly edition, the *New Republic*, by the *New Republic's* evening edition, the *New York Evening Post* (under the Oswald Villard management), and by all the other socialist and Bolshevist papers in the country, in support of this British Labor Program. Recently, the National Economic League, which has branches in some twenty-five cities, sent to all its members copies of the supplement to the *New Republic* containing the program, and, strangely enough, some me who might be supposed to be immune from such teachings indicated a friendly attitude toward it. Upon inquiry, however, it was found that these gentlemen in most cases had not read the report but had heard it interpreted by socialist sympathizers.

The labor movement of America has a program but it is not based upon state socialism because the practical hard-headed leaders of the American Labor movement know that Utopias are only for the millennium, and they want some of the good things of life while they and their children are on earth. They do not want the State to take over the factories, the mills, the mines and the farms, because that would take from them all initiative and independence and make them government employees to be ruled by political bureaucracies. They much prefer to have their industries in the hands of private owners, where their economic power will enable them to deal directly on matters of wages, hours and working conditions. They do not want any profit-sharing nor any partnership schemes. They do not want to share in the responsibility of running the business, despite the claims of many "broad humanitarians" who are trying to "bridge the industrial chasm" by superficial schemes to give the workers "a compelling voice in conducting the industry." They know that if they once accept a share in conducting the business, they must also share in the responsibilities for failures and hence will be expected voluntarily to reduce their wages. They are willing for the employers to own the plants and to earn sufficient profits to pay interest, rent, overhead charges, taxes and to pay them a just wage for reasonable hours of labor with proper shop conditions—and a just wage means one that will give not only the necessities of life but a share in the luxuries and sufficient leisure to enjoy them. In order to secure the just wage and reasonable hours and conditions of labor referred to, they demand the right of collective bargaining, which right has been granted to them through an agreement jointly worked out in the National War Labor Board by representatives of the employers of the country and organized labor, and covering unorganized workers as well as organized labor. The provisions of that agreement, officially promulgated by President Wilson, were heralded as the Magna Charta of American industry; but our intellectual promoters of the British Labor program, as well as the Bolsheviki of all shades and degrees, will have none of this sane and practical method of dealing with the questions arising between employers and employees. It is the moon for them!

War Activities of The National Civic Federation

(*Continued from page 6*)

independence of America, the preservation of Democratic institutions and the vindication of the basic principles of humanity."

The League is presided over by Theodore N. Vail. The Honorary Chairmen are: James Gibbons, Cardinal, and Frank Mason North, D.D., President Federal Council, Churches of Christ in America. Other officers are: Vice Chairman, Samuel Gompers, President American Federation of Labor, and Charles S. Barrett, President Farmers' Educational and Cooperative Union of America; Chairman Literary Bureau, Talcott Williams, Director School of Journalism, Columbia University; Chairman Next of Kin Division, Wheeler P. Bloodgood, Member Executive Council, Wisconsin Loyalty Legion; Treasurer, Otto H. Kahn; Director, Ralph M. Easley, Chairman Executive Council, The National Civic Federation; and Secretary, D. L. Cease, Editor *The Railroad Trainman.*

One of the first efforts of the League was the issuing of an Appeal to the Voters of the United States to Support the Government by electing a War-Till-Victory Congress in November, 1918. It originated the slogan "A Congress 100 Per Cent American" and called attention to the difficulties encountered by President Lincoln in 1862 when fourteen out of eighteen Congressmen in Ohio were elected on an anti-war platform, and it showed that President Wilson would be obliged to combat the pacifists, socialists and pro-Germans just as bitterly as Lincoln had to fight the Copperheads.

A suggested test for loyalty was widely distributed. It follows:

> "That candidate, in or out of Congress, or that citizen can be regarded as loyal who since the declaration of war has by word and act unreservedly supported and will support the Government in the vigorous prosecution of the war to a complete and decisive victory, and who has not attempted to destroy allied unity and effort by attacks upon nations fighting with us against a common enemy."

It issued a declaration signed by its officers and executive committee condemning a premature peace and pledging its support of continued war until a military victory is achieved and the autocratic power of the Imperial German Government is broken.

One of its functions has been to spread accurate information on questions arising from the war and to correct misleading statements and erroneous impressions calculated, whether intentionally or not, to disturb that united purpose and harmonious cooperation between all loyal Americans which, while eminently desirable at all times, are absolutely necessary in war times.

The Next of Kin Division, composed of relatives of boys in the military and naval service, was organized to supplement efforts of the government and civilian agencies. The intense patriotism of fathers and mothers organized into a virile force is one of the agencies helping to stamp out disloyal elements in various communities.

What significance is there in the fact that the same journals which defended the Bolshevik leaders who surrendered Russia to Germany have advocated Bolshevism here? Is it more than coincidence that while they sought to create discord and division between America and the Allies they engaged at the same time in seeking to foment internal social discord and strife?

The Forces of Disorder

By RALPH M. EASLEY

THE visit of Mr. Gompers and his associates to Great Britain, France and Italy last September was for the announced purpose of attempting to harmonize the war policy differences between the labor movement of those countries and the America labor movement—which differences, while directly political and economic, indirectly affects the military status.

Not the least difficulty in the situation arose from the fact that in Italy and France the socialists dominate the labor movement almost wholly, whereas in England, while the real trade union movement, like the labor movement in this country, is thoroughly anti-socialist, it is handicapped by a noisy lot of professional political socialists, who, up to the present time, through a heterogeneous federation of the so-called "hand and brain workers," have assumed to speak for labor. Through the "brain workers'" clause, the Bernard Shaws, the Sidney Webbs, the Philip Snowdens, and the Ramsey MacDonalds are allowed a controlling voice, although Sidney Webb and Bernard Shaw represent the Fabian Society, which has only 2,000 members, and Ramsey MacDonald, the Morris Hillquit of England, represents the Independent Labor Party, which is the real Socialist Party, and has only 50,000 members.

In this country, thanks to the virility and sanity of the American labor movement, the political socialists and the "brain workers"—that is, the Hillquits, the Bergers, the editors of *Solidarity, The New Republic, The New York Daily Call, The Masses, The Survey, The Blast, The Public, The Nation* and other organs of pacifism, pro-Germanism, socialism, I. W. W.'ism and all other unwholesome "isms" have not been permitted to participate in the slightest degree in the control of the American movement. Hence, the leaders of the American Federation of Labor are *anathema;* also they are "reactionary"; and "old fogy"; Samuel Gompers* is "intellectually and spiritually decrepit"; "the leaders have no vision": they want "only better wages, hours and living conditions"; they do not stand for revolution—the overturning of everything that is and the substitution of everything that isn't, *a la* Lenine and Trotzky, Arthur Ransome, Raymond Robbins, the editors of *Novy Mir,* the *Volks Zeitung* and some others who were publically advocating the recognition of the Soviet Government in Russia until the President gave them a smashing blow in the face through his Russian proclamation. Since that event they have been singing their little songs only at dinner tables and private parties and encouraging underground Soviet propaganda.

The group of "brain-working" socialists who do not like the way in which the labor movement is conducted in this country and whose only relation to it, in so far as it has any relation, is that of an incubus, never did a day's work in their lives, other than that performed by "their jaws and their pens." Some of them edit papers and all are skilled in the gentle art of extracting dollars from the idle and brainless rich of both sexes, who think that in "giving up" to these professional "panhandlers," they are really helping the "under dog,"** when, in fact, they are only helping the fleas which infest the "under dog." For instance, these rich sentimentalists give freely of their money to help the I. W. W. in its attempt to accomplish its boasted purpose of disrupting the American labor movement—the American Federation of Labor and the Railway Brotherhoods. In time of strikes, such of those of the Silk Workers in Paterson, the Textile Workers in Lawrence and the Garment Workers in New York, it is nothing for these people to contribute thousands of dollars to the I. W. W. leaders—of course, incidentally getting their names and pictures into the papers. Some of the "professionals" referred to are young statesmen, nearly all of whom came with-in the first draft age period, but none of whom apparently went nearer to the front than certain "bomb-proof jobs" in Washington.

Now, while these fomenters of Bolshevism in this country are numerically unimportant, their vociferousness, as well as their persistence and cunning, make it incumbent upon those who believe in the ideals and policies of the trade union movement, and in the determination to fight the war to a victorious conclusion, to be on the alert.

But the rich sentimentalists have no monopoly in this surrender to socialist blanishments, as is shown by the equal facility with which they have gone among the business and professional classes and, to use their own slang, "made monkeys" of them. For instance, socialists can be found tucked away on many of the editorial and reportorial staffs of the important newspapers of the country, and also well represented on the contributing staffs of our magazines.***

In the colleges they are running rampant; they are not tucked away but are standing out in the open. The president of one of the largest universities in the country told the writer within the last few weeks that they were openly teaching Bolshevism in the class-rooms and that the trustees were powerless to stop it. For them to expel such a professor would be to make him a martyr, thanks to the success of the spurious socialist propaganda in favor of "academic freedom of speech." One university finally did expel a couple of them, and so outraged was a third, who should have been kicked out at the same time, that he resigned, expecting the public clamor to force him back; but the public clamor at that particular moment was not in the mood for functioning in that direction, and the trustees accepted his resignation with thanks and without any signs of offense on the part of the public. For years this particular professor had been publicly declaring that the framers of our Constitution, the signers of the Declaration of Independence—in fact, all the great names of that period which the masses had been taught to revere—were practically grafters and governed in their public actions by none but mercenary motives. He now holds a much better paid job as the head of a reform organization, his salary coming from supposedly hard-headed business men.

One of the most arrant frauds "put over" under the name of education is the so-called Intercollegiate Socialist Society which, under the guise of "promoting intelligent interest in socialism among college men and women" is nothing but a straight out socialist propaganda organization. Every member of its executive committee is a socialist and in a list of some fifty

---

*Mr. Gompers at a recent meeting, referring to his position on socialism, made the following clear statement, which certainly does not have the ring of "intellectual and spiritual decrepitude":

"I want to make my position clearly understood. I don't want any man or woman to believe that I am unwilling to go to the full limit of the ideals of democracy and justice. The only limit to my activities is the practical application of the highest ideals, and if the high ideals do not and cannot conform to practical application, to that degree I will either discard them or wait for a better time. My intense desire—and I think I interpret the American labor movement accurately when I say this—my intense desire is to establish the very best possible conditions for the masses of our country and the masses of every other country on the face of the globe. We realize that its achievement is a matter of development and not of cataclysmic eruption, and we must not imagine that a transaction from infancy to full-grown manhood, from peasantry and slavery, can be transformed overnight into a full-fledged co-operative commonwealth. And, in passing, I don't want any one to infer for a moment that I am committed to a co-operative commonwealth. I believe in democracy, in justice, in fair dealing and opportunity for the development of the best that is in the human, and to make for a social conscience and for social justice and the attainment of the best conditions consistent with the intellectual development of the people of our country. I offer that thought to Russia as well. To think that Russia from her condition of impoverished peasantry, with little industry, can be transformed from a subjugated people into a condition where the highest concepts, the highest ideals of human justice, of human relations, can be established by mere proclamation, is idle—is impotent—must be impotent and ineffective. Just as Germany, with her imperialist Government, undertook to prepare the military arm of her Government for world conquest, she suborned and she propagated this idea among the German workers as represented by the socialists of that country, that internationalism, international brotherhood, should be the dominating cries and watchwords of the world's affairs; and while Germany and German socialism undertook to chloroform the people of the other countries of the world in perverting the ideals of internationalism and of human brotherhood in all the countries of the world, the idea of nationalism and of Germanism was impregnated in the minds of the people of Germany—so much so that many of us were infected with this beautiful thought and ideal of internationalism and many of them carried along with them until long after the time when that ideal had been dispelled."

**At a recent meeting Mrs. Pankhurst, referring to the Bolshevist situation in England and this country, said:

"We have Bolshevism in England, we have it in Great Britain, and we have it in France, and in every one of the European allied countries, and because some of us are quite conscious of that fact and have been working against it since 1914 on the whole front, as we call it—because I believe that is going to be the last attack of the Germans—because we are working against it in Great Britain, I came here hoping to be able to confer with the people who realize the dangers of this Bolshevism. I have been here since June, and that has been long enough to find that Bolshevism is at work here, and I think the most dangerous place where it is working—perhaps there are two dangerous places: It is hard at work among sentimental sympathizers with labor, people who had no experience with labor, who never worked themselves, who have discovered labor during this war. They did not know it existed. And these are often very rich people, very kind people, very honest people, and they are giving their money to promote and help Bolshevism in the press and in organizations everywhere. That is one thing. The other danger: It is among the workers—Bolshevism in the factories and workshops, and the coming in of untrained, untried, unorganized people into industry."

***J. G. Phelps Stokes, in an article in the *New York Times,* commented on this strange situation as follows:

"Only yesterday," he said, "I was told by a prominent New York editor that he had among his personal friends as many as twenty socialistic editors of daily and weekly magazines, whose publications are not socialistic but whose personal opinions are unqualifiedly so. It is easy to observe the influence of their opinions on the matter which they publish. Many of our leading magazines, especially, are advocating socialism in a veiled way. Nearly all the literature of criticism, of so-called 'exposure', is really socialistic in degree.

"It is true of journalistic leaders elsewhere in the country. They are not all socialists, but more and more they are expressing socialistic sympathies to socialists and doing what they can to admit socialistic articles and arguments into their columns. And the most successful magazines are those which oftenest print analyses of modern conditions by men who are, in fact, true socialists. The most widely read medical journal in America is edited by socialists."

llege professors, given out as endorsers of the jects of the society, the names are mostly Gerans, pacifists and recognized socialists or nearcialists who are on the way to join the Socialist arty.

Among the preachers and church organizaons also will be found nests of socialist pacifists. one large church convocation, a clergyman enly praised the I. W. W.'s, and especially aywood. So far as is known to the writer, his ngregation has not, up to date, repudiated ther himself or his utterance. Among the ethods of many of these socialist preachers is e promotion of so-called "open forum" meetgs in their churches, where the socialists, I. W. W.ites and pacifists are permitted to exploit emselves to the full. One of these churches is tempting, octopus-like, to expand its forum to ke in all the other forums, which undertaking naturally hailed with glee by the revolutiones of all types, grades and colors.*

But one of the greatest fields for socialist and acifist propaganda is what is called the charity orld—the social settlements, charity organizaons and eleemosynary institutions in general roughout the country. It is asserted that twoirds of the workers in these fields are socialists nd pacfists, many of them being pro-German. n fact, there is a special group of prominent en and women of German birth or ancestry in e social reform work in this country whose mpathies were decidedly pro-German up to the me we entered the war suggesting the uestion, how thoroughly were they converted vernight, and, if really converted, are they safe eople to place in important positions, whether governmental departments or in civilian rganizations?

As to the numerical importance of these forces f disorder in this country, a few figures may ot be amiss. The dues-paying members of the ocialist Party—the only socialists who have any oice in the organization—are less than 75,000.* he year they got 900,000 votes, they had only 50,000 dues-paying members, showing, as exlained in their official bulletins, that 750,000 isgruntled republicans, democrats, populists nd "what nots" voted with them as a protest, ho would have been just as willing to vote for he Salvation Army if it had put up a ticket. hey will always have the following of the disruntled who will vote their tickets, but the total ocialist vote, when compared with that of the ntire country, is so insignificant that one wonlers why they are seriously discussed. At the rimary registration in New York City last pring, where 2,300,000 men and women of all arties registered, announcing their party afiliations, the men and women who declared they ould vote for the socialist ticket, including, as ointed out in the *Appeal to Reason*, by William . Ghent, former secretary to Congressman erger, "Kaiserite" Germans, Sein Feiners and acifists, were only 87,000. That number, as gainst 2,300,000, is less than four per cent—ardly worthy of consideration. Out of some ,000 members of state legislatures, they have a otal of less than 20, while in Congress, the only lace where any of their national ideas could ructify, they have no members in the Senate, nd only one out of the 432 members in the House, and he has just been badly beaten for reelection,**—truly not a matter greatly to disturb the American people. While here and there they have a member or two in a city council, their relative importance is absolutely nil. In certain communities filled with foreign-born socialists, they have frequently elected an entire city council, but the incumbents so mismanaged affairs that they were kicked out at the next election.***

But if these people amount to so little, how is it that there is so much made of them? In the first place, a noisy minority can always get a hearing, because they invariably denounce somebody or something, and that gets headlines. John Spargo, in an article in the *New York Tribune* of August 22, 1918, referring to the greater noise made by minorities, said, in speaking of the pacifists in the ranks of the British workers:

> "Of course, there are some pacifists among the British workers. It would be foolish to deny that fact. They are, however, not very numerous. As is the custom with aggressive minorities, they make a great deal of noise, out of all proportion to their numerical strength or importance, and the noise misleads a good many people on both sides of the Atlantic. England is a land where such minority groups have always been able to play this game with particular success. I know, because I have played the game!"

But another reason why they get such attention is explained in the statement previously made—that they are "tucked away" in all the newspaper offices. Men who have left the Socialist Party since the United States entered the war and men who are still in the party but are against the German-socialist organizations, have referred to this very situation and have asked why it was that the daily papers throughout the country would allow these socialists thus to work their schemes. These men are always looking for an opportunity to "slip something over" for the socialists; as Mr. Stokes says, they make headlines for them; they get in interviews with them, and so forth. But there is no use in bewailing the fact that, as advertisers, they have succeeded in making themselves a factor to be dealt with. It was from the so-called "intellectual socialists" that sprang the forces which finally debauched and destroyed Russia, seized Italy and France by the throat a year ago, started a campaign in England, and are now at work in the United States. We not only have to meet them today, but, as the days go on, the various German peace offensives will reveal themselves through these elements.****

But now the war is over and with all the intriguing of the German agents in this country and in the countries of the Allies, and some of these agents are in high places, an armistice was forced which meant unconditional surrender for Germany. But, does that end the matter and are we free to relax our efforts in thwarting the treasonable schemes of the innumerable groups of pacifists, socialists and Huns, set to going by Bernstorff and his disreputable gang?

Mr. George Creel, than whom no man has been more loyal to American ideals and who is better equipped to know the inside of the German game than any other individual, said in a speech Saturday night, November 16:

> "Never at any time since the outbreak of the European war has German propaganda been busier in the United States than it is at the present moment. The German propagandists, women as well as men, are working overtime in an effort to create for themselves an undeserved sympathy in America." (He referred to the message to Mrs. Wilson a few days ago as an example of the kind of propaganda the wireless from Nauen is now flashing across the Atlantic into the United States.)
>
> "Even the women of Germany have joined in the propaganda which is set in motion for our benefit," said Mr. Creel, "and these women, who never grieved for a single moment when the Lusitania with her innocent men, women, and children was torpedoed, who never lifted their voice in protest when the babies of Belgium were slaughtered at the breasts of their mothers, who had no word of pity for poor, outraged Serbia, or the horribly mistreated people of northern France, are now flashing their cry to America for sympathy and for help, while the male propagandists are holding out their hands dripping with blood and begging for mercy. Think of it, a nation protesting against an armistice the purpose of which is to keep them from fighting, and protesting at a time when their pockets are full of stolen property. The damnable cant of Germany is trying to poison the mind of the world at this late day."

The "damnable cant" is showing itself on every side. The pacifists, the pro-German socialists and the Huns of every type are, as Mr. Kahn says, "sneaking out" with suggestions not only looking to the creation of sympathy for women and children in Germany but also with suggestions provocative of friction between our Government and those of our Allies. And, as they become bolder, they will again begin suggesting that "broadly speaking" there are many things we must settle also with England; and that in some instances, Germany was more sinned against than sinning; and even the famous or infamous "Two Thousand Questions" may again be put into circulation.

What is being done to cope with this new situation? First, the government agencies are all alert. John Lord O'Brian, special assistant to United States Attorney General Gregory, in charge of the war activities of the Department of Justice, has just issued a warning against relaxation of vigilance against enemy aliens and pro-Germans generally. "There is still

*At this particular church on Sunday evening, November 17, 1918, an avowed agent of the Bolshevist regime, Albert Thys Williams, made such a defense of Lenine, Trotsky & Co. that a resolution was adopted, it is stated in the press, "by an overwhelming majority, demanding that the United States troops be taken out of Siberia and that the policy of "no intervention' be strictly adhered to." No protest was made by the pastor or any of the trustees of the church against this disloyal performance, although there are representative business men on that board.

**25,000 of which are Russian Jews, 15,000 Germans, 10,000 Austrians, 15,000 other foreign nationalities and possibly 10,000 claim to be Americans.

***With almost unlimited money for use in the Congressional campaign just closed, every socialist candidate was overwhelmingly beaten, except in the case of Berger of Wisconsin who was openly supported by the Kaiserite Germans in a district which could well be dubbed "Little Germany." He is under indictment for seditious utterances and doubtless will be "playing checkers with his nose" about the time the next Congress convenes; if not, it is inconceivable that any American Congress will seat such a shameless and notorious representative of Potsdam.

****Mr. Otto H. Kahn, who recently returned from Paris, in referring to the pacifist-German propaganda that would confront us this winter, said:

"I was in Paris during the two weeks which were probably the darkest weeks of the war, the week beginning May 27th, when the Germans broke through at Chemin Des Dames, when there were twelve aeroplane bombardments in fourteen days, and thirteen long-range bombardments in thirteen days, when it seemed, at the time when the Germans had come within forty miles of Paris, that they might, and it was feared they would, reach Paris, or at least come within bombarding distance of Paris, and when the people of Paris, high and low, asked, and asked in great anxiety, 'What is going to happen if the Germans do get to Paris?' Will the French people stand it? Can they stand it? Can flesh and blood stand it? It is their very heart. It is much more to them than the capital of other countries is to their people. Incidentally it is their railroad center, and it is the greatest center for their war industries. What will happen? And during those two weeks, when true Frenchmen were in doubt and grief and anxiety, you could see and you could feel Bolshevism slink out of its holes and corners everywhere, and how it grew and fed upon the fear that this war might not be won, and if it was not to be won, hadn't we better do this and this now. You could see and feel it. It was everywhere. And you could see again, when this marvelous thing happened, when fifty thousand Americans were thrown in at Chateau-Thierry and rushed forwards through the retreating French, without battle order, without system, without any particular command, rushed forward, rushing like wild Indians, shouting, 'Where are the damn demons! Get them and stop them!' and turned the tide, and the French turned around and fought with them and beat the Germans to a standstill and saved Paris. I saw again how Bolshevism slunk back into its hole and corner, and it has not been heard of since."

danger,'' he said, ''from this quarter, for the defeat of Germany in the field does not mean that the malevolent minds of Teuton sympathizers here have necessarily changed.''

But what can the loyal Americans do to help the Government at this time? Many of these pro-German agents work their sinister programs in ways that cannot be reached by governmental bureaus. As a concrete method for assisting in counteracting the propaganda and other schemes of the Huns, Mr. Wheeler P. Bloodgood, Chairman of the Next of Kin Legion, has proposed the following resolution for adoption by his organization and it is now under consideration.

> ''Resolved, That it is the duty of the fathers and mothers of sons in the military or naval service of the United States to use every possible effort to discover and have removed from positions of authority or importance in this country every pacifist, every anti-war socialist and every Hun, whether in governmental departments, in the pulpit, the colleges, the public schools, the press, the charity organizations, or any civilian body supported by public subscription; and not to contribute to the payment of the salary of any man or woman who comes within this category.''

Mr. Bloodgood explains: ''In connection with this proposed resolution, the word 'pacifist' is not meant to refer to those members of peace societies who, prior to 1914, were seeking to prevent future wars. Various elements, however, now posing as pacifists were then most vociferous in preaching war. True, it was a class war they urged, but war it was nevertheless, and meant all the indescribable horrors and bloody massacres that we are now seeing enacted in Petrograd and Moscow. But the pacifist of today is the man or woman who treacherously intrigued to bring about a 'negotiated peace,' or who speaks of the war as a 'capitalistic war,' or 'an imperialistic war,' or 'an unrighteous war,' or who in governmental positions, social settlements or churches, or in any place, continually emphasizes the terrible loss of life and the horrible aspects of the war, without explicit reference to Germany's responsibility therefor.''

According to Mr. Bloodgood's explanation, by ''anti-war socialist'' is meant a member of the Socialist Party in the United States, which is under the domination of Germany, and their German appendages, the I. W. W.'s, the defenders of Bolshevism, and the anarchists. From the Socialist Party many leading American socialists have withdrawn and are patriotically standing for the prosecution of the war to a victorious conclusion.

By the word ''Huns'' is meant pro-German Germans and Austrians, anti-English Irish, and the pro-Germans in our midst coming from neutral countries, as well as all Germans and Austrians here, naturalized or unnaturalized, who, before our entrance into the war, lent themselves to the Bernstorff intrigues against the honor and integrity of this country. These include lawyers, bankers, college professors, preachers and editors. They are the people, in high positions, whose insidious influence during the coming months must be vigorously combatted. They are the ones who will come ''sneaking out of corners with suggestions'' of consideration for peace terms favorable to Germany that will reach us in every possible form. It is just as important to have these disloyal Germans catalogued for our information after the war as it was during the war, for having entered into traitorous relations with representatives of the German Government during the war they can never be trusted afterwards and should be sent out of the country on the declaration of peace. The men and women in high places who cooperated with the Bernstorffs, the Erich von Zwiedineks, the von Papens, the Boy-Eds, the Dr. Alberts, the Pavenstadts, the Hans Tauschers, von Rintelens

(Continued on page 19)

Future Relations of United States and Poland

CHARLES MAYER

In the era of peace before us, among the great rewards for the sacrifices and bloodshed of the war, will be the fulfillment of the aspirations and ideals of long oppressed and subjected peoples. Kings have fallen from their thrones, and great and small nations which have groaned under the yoke of autocracy will be made free. In the new world Poland, long misruled and exploited by Austria, Germany and Russia, will occupy a notable place among the nations. For many years this dream of an independent Poland, which seemed to many an impossible dream, was cherished in the heart of one of the world's greatest artists, who will figure in the pages of history as one of the world's greatest patriots—Mr. Ignace J. Paderewski. Devoting his thoughts and his wealth to this cause Mr. Paderewski's dreams are now to be realized.

The consummation of any ideal—and at that the ideal of a whole people—is an inspiring thing. And it is cause for heart-glowing that America, which entered the war for ideals, was able so powerfully to help the Poles. Toward the success of this cause no individual American did more than Mr. Charles Mayer, of Washington, D. C. At a time when the Polish movement encountered all sorts of difficulties, he associated himself with Mr. Paderewski and helped to promote the movement which resulted in the raising of more than $10,000,000 in America. Mr. Mayer's enthusiasm for what many people long considered a ''lost cause,'' antedated the outbreak of the European war.

During the Russo-Japanese war Mr. Mayer was called to Russia to act in an advisory capacity to the Russian government in the rehabilitation of State-controlled industries in the empire. The program included not only the development of manufactures and construction, but the building of the Trans-Siberian railroad with the purpose of making Russia independent of other nations in exporting her products.

In the course of his mission, Mr. Mayer visited Poland in order to make recommendations toward the bringing about of a more liberal treatment of the inhabitants of Russian Poland, and toward the establishing of industries. At that time he came in contact with, and came to love, the Poles. He found them to be a people of extraordinary industriousness and high qualities of character. The Russian program for the development of Poland was, however, interfered with by the mild revolution which broke out at that time in Russia and which ended in the battering down of the barricade of Moscow.

Later Mr. Mayer made several visits to Russi and Poland. The last occasion was a visit to th Prime Minister of Russia in 1914, before the out break of the war, when he was struck by th tremendous progress which the Poles had mad Manufacture, at some places on a vast scale, ha developed everywhere. More than ever was h impressed by the enormous resources and eco nomic possibilities of Poland—of the possibl greatness of a Polish nation could the people b freed from foreign rule.

Mr. Mayer months ago urged that the Allie give financial and military support to the or ganization of a Polish army toward the re-estab lishment of an Eastern front. He was active also, in urging the recognition by the America government of the informal Polish Nationa Council.

At a luncheon given in honor of Mr. and Mm Paderewski by The National Civic Federatio early in October, Mr. Mayer told of the strug gles of the Poles to raise an effective nationa army in Russia.

''The movement toward the formation of Polish Army was started by the Polish Suprem Military Committee in June, 1917,'' he said ''and despite the strongest opposition of Germa interests in Russia and the lack of support by th Kerensky government, the Poles succeeded i forming a corps of about 80,000 under th leadership of General Dowbor Musnicki. Tw other forces were formed, one in Ukrainia unde General Michaelis and another in Bessarabi under General Stankiewicz. Polish soldiers scat tered in various regiments through Europea and Asiatic Russia, partly armed and unarmed were prepared to join their national army at th first opportunity. At the end of 1917 the Polis Military organization outside the army of Gen eral Musnicki comprised over 200,000 soldiers General Musnicki's army was betrayed to th Germans by the Bolsheviki and was surrounde and forced to surrender and disarm. Part o the forces under General Michaelis and Genera Stankiewicz retreated to the East, where the are now fighting the Bolsheviki, side by side wit the Czecho-Slovaks.

''The Polish element in Russia has been o the greatest importance to the Allies because o its numerical force and fighting spirit. Th Poles are anti-German, and have realized ther can be no independent Poland without an abso lute Allied victory. The Poles once paid dearl for the experiment of forming an army withou the financial and military support of the Allies In response to a cablegram sent by Mr. Pade rewski to the Poles in Siberia, urging them t begin preliminary activities, the Poles imme diately began to organize an army and offere to cooperate with the Allies in operating the Si berian Railway, which is of vital importance t the conduct of military operations. The Pole form a big percentage of the railway employee in Siberia, and the presence of a Polish Nationa Army would raise their spirit by giving then the certitude that they are working for an serving their motherland.''

With their hopes fulfilled and the future o a free Poland now assured, Mr. Mayer look forward to a renaissance that will astonish an inspire the world. In the development of in dustries and trade expansion the Polish leader have invited the cooperation of the Unite States. To America Poland will offer an oppor tunity for the establishment of new and desira ble markets. Between the re-arisen republic which gave ideals of democracy to the world and which was the first country, in 1413, to adopt th form of a united states government, and our great nation, which entered the war to mak democracy secure, there will be relations of ex traordinary intimacy and cordiality.

Forces of Disorder

(*Continued from page 18*)

and the Hugo Schmidts, or had knowledge of their infamous schemes to undermine the Government of the United States with the ultimate object of placing this country under the domination of Germany in case "the Beast of Berlin" should subdue France and England, should not be permitted to remain in this country, much less to retain any positions of honor or trust here; and no settlement at the peace table should grant immunity for one moment to these creatures.

Of itself it means nothing that a German had taken out citizenship papers, or was the purchaser of United States Government bonds or a leader in the Red Cross, the Y. M. C. A. or other patriotic activities; a great many of the men now interned at Fort Oglethorpe were doing just these things; a disloyal German would seek to cover up his disloyalty by exactly that kind of action. The test is, what is the feeling he exhibited in his home and in his German circles when he read the headlines that have been appearing in the newspapers here since July 18? Was it one of elation or one of depression? That is the acid test.

Mr. Bloodgood concludes:

"But, while it is true that every effort should be made to rid this country of all treasonable Germans, great care should also be taken that full credit be given to the large majority of Germans whose loyalty and patriotism to the United States has been of the highest order, whose sons gave their lives on the battle fronts as freely as any other Americans, and whose chagrin at the conduct of disloyal German-Americans has led them to make even greater sacrifices at home than, in many cases, they are really able to bear. All honor to them! But all dishonor and suitable punishment to the other type of Germans and pro-Germans in our midst!"

Those who think the above resolution, with its explanatory clauses, a little drastic now that peace has come, are asked to re-read the words quoted above from Mr. George Creel.

So far as the need is concerned for "digging out" and "tagging" the exponents of socialism, the breeder of pacifism and Bolshevism, who are tucked away in positions of importance in official and unofficial life, I will ask the reader to re-read the quotation from Mr. Samuel Gompers used above in this article, in which he shows that socialism is entirely of German origin and intended by the Germans to undermine all civilizations except their own.

The reason the United States is not today in the hands of the Bolsheviki and socialists is not because of any concerted intelligent effort on the part of representative educated citizens to combat them. On the contrary, there are supposedly intelligent, hard-headed business men who, instead of opposing socialism, have by coddling its advocates flattered themselves that by pretending to sympathize with it they were pursuing a "far-sighted policy" that would tend to neutralize it. Nothing more puerile could be done. Every socialist who has a "capitalist friend" is making use of him to the limit and telling his audiences that capitalism is about to surrender and therefore encourages them to go on. Warming an adder in the bosom only to be stung by it is simple in comparison.

It is the American labor movement that is entitled to all the credit today for our freedom from Bolshevism, anarchy and revolution in this country. While fighting socialism, the American labor movement at the same time had to fight unfair employers, some of whom were even backing, financially, papers and magazines which advocated socialist policies and furnishing the money for movements undoubtedly under the control of those revolutionists who never miss a chance to take a whack at Samuel Gompers and the trade union movement.

Whether Mr. Bloodgood's resolution is finally adopted by the Next of Kin Legion or not, it certainly rings with the right spirit and points out the dangers that confront us. The two million boys who went to the front with our army and navy and the other two million who were preparing to go when the armistice was declared, with their relatives, friends and sympathizers, including the thirty-five million subscribers to the Liberty Loans and War Savings Stamps, as well as to the war funds of the Red Cross, the Y. M. C. A., the Knights of Columbus and kindred societies, constitute 90 per cent of the American people, and any principles, platforms, dogmas or individuals of which they disapprove will have short shrift in this country.

Shadow Huns and Others

(*Continued from page 9*)

mockery! A triumph that was grotesquely sham.

"LIVES THERE A MAN WITH SOUL SO DEAD?"

Of the "extraordinary outburst of popular emotion" which broke forth at the first report of Germany's surrender, the *Nation,* in seeking to interpret the reason, asked: "Is it possible that the war was not so popular after all with the rank and file? We confess to being completely baffled in our effort to analyze something in which fervor, excitement and suddenness could surely never be surpassed."

Is it hard to understand the inability of the editorial mind of the *Nation* to become elated over the Allies' complete victory, and to comprehend the simple human joy at the end of the killing, the spontaneous gladness that at last victory had come? To the negative academic mind, itself incapable of devotion to any high cause, simple human emotions as well as simple human virtues are incomprehensible. "Academic neutrals," incapable of allegiance and devotion to any cause or any master, have figured all down in the world's history—in the New Testament story, in our own revolutionary war, and in this war. They have not figured as exemplars of loyalty, chivalry or patriotism.

At the very time that Mr. Villard confesses his incapacity for understanding the joy of November 11, he ruefully "thinks of all the great things that Germany has accomplished for the world, its contributions to art, literature, music and science." And he shrinks as ever from what the Allies might consider justice in dealing with Germany. He inveighs against President Wilson: "He has seemed of late so infirm of purpose. To the inexcusable blundering invasion of Russia he yielded; one by one in response to foreign pressure he yields on his fourteen peace terms, last week in the matter of punitive indemnities and freedom of the seas." Was the mere demand by the Allies for reparation of material damage done by Germany "punitive"?

It was obviously considered a wrong to ask Germany to give up anything. But what about the Allies? Mr. Villard would "desire no end to revolution abroad until custom houses everywhere have gone by the board * * * until all the makers of secret treaties are cast out. * * * We would have England retire from Egypt and Persia, the Italians from Tripoli, and Japan from Kiao-Chou, France from Cochin-China and Madagascar, and Belgium from the blood-stained Congo, while the United States sets the example by retiring from the Philippines, Haiti, San Domingo, and Nicaragua." Had Germany, alas! not been compelled to give in to "humiliating" terms, such a Quixotic course of voluntary getting-out would have been most accommodating toward the speedy achievement of her stepping into her "place in the sun."

DR. HALE PLUS DR. SHAW.

In regard to the war there were others who were neither flesh, fowl nor good red herring. Dr. Albert Shaw, the gifted editor of the "American" *Review of Reviews,* "saw both sides of the question." Dr. William Bayard Hale, while in the Kaiser's pay, sought to prevent America from going to war with Germany over the submarine issue; Hale, for a wage, sought to foment American public sentiment against Great Britain's maritime policy. Hale opposed the war as a war forced by the capitalistic plutocracy. Dr. Shaw gratuitously did the same things that Hale did. Dr. Shaw asserted that the U-boat issue was not an adequate reason for our making armed resistance against Germany. He implied that the American Government had discriminated against Germany and in favor of Great Britain. He urged action against England because of her interference with neutral shipping, and advocated compromise with Germany over the U-boat issue. Like Dr. Hale and Scott Nearing, Dr. Shaw interpreted the war as having been accelerated by Wall Street plutocrats. "The tremendous effort," said he, "to bring the United States completely into the war had its origin in the chief centres of business and finance." In common with Scott Nearing, he impugned the motives of the Allies and accused them of "imperialistic programs." Scott Nearing was indicted; Dr. Hale has been exposed. Shaw, some time ago, was invited to become one of a party of patriotic and loyal American editors to visit Great Britain and France. Perhaps the British never read his "American" review. But here is part of Dr. Shaw's war record:

At the time the controversy with Germany over unrestricted U-boat warfare was reaching its climax, in the issue of the *Review of Reviews* of March, 1917, Dr. Shaw, referring doubtless to President Wilson's handling of the crucial issue, said:

"It would be shocking, indeed, if a democratic people were to acquiesce in the novel idea that the issues of war and peace should depend upon the processes of a single mind. * * * War as an expression of extreme disapproval in a given case may be neither practically expedient nor morally requisite. * * * Our expressions herewith are made in the hope that war may be averted."

Of the German announcement of the resumption of ruthless U-boat warfare, Dr. Shaw in the same issue said:

"In London and other capitals of the Entente Powers it was received with more jubilation than dismay, on the ground that it would result in bringing the United States into action against Germany and thus help the Allies end the war on their own terms."

MR. VIERECK PLUS DR. SHAW.

What were the Allied "terms," in Dr. Shaw's opinion? In the *Review* of March, 1918—issued after America had been in the war for a year—Dr. Shaw said:

"The Allies were involved in the meshes and toils of many secret pacts among themselves." In common with the *New Republic,* the *Nation,* the *Masses,* the literature of the notorious People's Council, the New York *Call* and Viereck's *Fatherland,* Dr. Shaw interpreted the Allied terms as "a patchwork program of spoils and conquests."

The Allies' reply to Mr. Wilson's peace note, made in January, 1917, according to the oblique intellect of the *Review of Reviews,* "made it clear that the Allies were determined to mutilate Austria first and then dismember her; and that their purposes for Turkey were nothing short of complete annihilation with a parcelling out of her territories and peoples. Bulgaria, in like manner, was to be reduced in size, deprived of outlets, and made permanently defenseless.

German Evacuation of Russia urged by League for National Unity

The League for National Unity has issued a statement urging that the absolute evacuation of Russia by Germany be made part of the terms of peace.

The signers of the statement include the Executive Council of the League, who are as follows:

Honorary Chairmen, James Gibbons, Cardinal, Baltimore, Md., and Frank Mason North, D. D., President Federal Council, Churches of Christ in America, New York; Chairman, Theodore N. Vail, President American Telephone and Telegraph Company, New York; Vice Chairmen, Samuel Gompers, President American Federation of Labor, Washington, D. C., and Charles S. Barrett, President Farmers' Educational and Cooperative Union of America, Union City, Ga.; Chairman Literary Bureau, Talcott Williams, Director School of Journalism, Columbia University, New York; Chairman Next of Kin Division, Wheeler P. Blodgood, Member Executive Council, Wisconsin Loyalty Legion, Milwaukee, Wis.; Treasurer, Otto H. Kahn, New York; Director, Ralph M. Easley, Chairman Executive Council, The National Civic Federation, New York; and Secretary, D. L. Cease, Editor "The Railroad Trainman," Cleveland, O.

Also the Executive Committee of the League, which includes:

John G. Agar, Treasurer New York Catholic War Fund, New York; Mrs. Carrie Chapman Catt, President National American Woman's Suffrage Association, Washington, D. C.; John Hays Hammond, President National League of Republican Clubs, Washington, D. C.; Frederick N. Judson, Attorney, St. Louis, Mo.; V. Everit Macy, President The National Civic Federation, New York; Alfred E. Marling, Chairman International Committee of Y. M. C. A.'s, New York; Mrs. Philip N. Moore, President National Council of Women, St. Louis, Mo.; Frank Morrison, Secretary American Federation of Labor, Washington, D. C.; Andrew Parker Nevin, of the National Association of Manufacturers, New York; George Wharton Pepper, Chairman National Committee of Patriotic and Defense Societies, Philadelphia, Pa.; Walter George Smith, President American Bar Association, Philadelphia, Pa.; Warren S. Stone, Grand Chief International Brotherhood of Locomotive Engineers, Cleveland, O.; Mrs. James Wadsworth, Jr., President National Association Opposed to Woman Suffrage, Washington, D. C.; William English Walling, Economist and Author, Greenwich, Conn.; Miss Maude Wetmore, Chairman National League for Woman's Service, New York; and Rabbi Stephen S. Wise, Free Synagogue, New York.

The statement follows:

President Wilson has over and over again pledged the Russian people the sympathy and substantial support of the American nation—and no declaration that he has made since the war have received such general and enthusiastic approval.

Nothing is more important than that Russia shall receive the very fullest consideration in connection with any proposal for an armistice, as well as in peace negotiations of any kind whatsoever. Russia is invaded territory as much as Belgium, Northern France or Serbia. Neither the United States, nor any of the Allies, has ever recognized the shameful treaty of Brest-Litovsk. The Western Front has always been of supreme importance with respect to a military decision, but it is in the East that the fundamental questions relating to world peace will be decided.

Russia was impoverished and economically backward before the war. The actions of the Kaiser and his Russian allies have put her back a generation, reducing tens of millions to the verge of actual starvation, and destroying a large part of her industrial and transport system. They have divided the country into a dozen fighting geographical sections, and the internal chaos they have introduced into each

THEODORE N. VAIL
Chairman, League for National Unity

of these sections is not the civil or class war known to history, but an endless series of class conflicts in which every man's hand is against his neighbor.

Germany's allies are slaughtering not merely the privileged classes of the old regime, not merely the bourgeois plutocracy, but also the middle classes, the small peasant owners who have achieved even a miserable beginning of prosperity, and even the skilled and intelligent workingmen who protest against these murderous and diabolical acts. The persons slaughtered are chiefly the leaders of the Socialist and Democratic parties who propose resistance to Germany and Germany's Russian allies.

The practice of "mass terrorism" or wholesale massacre of the educated and possessing classes in Russia has already called forth the solemn protest of all civilized mankind except those nations within the immediate reach of the German armies. But since President Wilson called for this protest, these massacres—which are aimed exclusively at the enemies of Germany—have reached the point where it can be said that the brain of Russia is being slaughtered in order that the masses of the population may the more easily fall under German domination. Nicolai Lenine has recently written over his own signature that what Russia needs is German intelligence, discipline and organization—in a word, German Kultur.

The American and Entente armies in Russia are met either by forces composed in part of German and Hungarian prisoners or by mixed forces largely non-Russian, led by German officers or military advisers and deceived by the most monstrous lies—largely of German origin—portraying imaginary American and Entente defeats, brutalities and purposes to conquer and exploit Russia.

In both cases, these armies are chiefly composed of mercenaries and represent no large proportion of the Russian population. They are controlled absolutely by a handful of political desperadoes in open alliance with Germany and—in addition—in relations with the German Government which they dare not disclose even to their crazed and ignorant followers.

In the Ukraine, the Caucasus, and other vast Russian territories, the armies of Germany, Austria and Turkey are obliged to maintain their brutal and bloody rule with little or no assistance from native allies.

But the most dangerous and difficult element of the situation remains to be mentioned. Germany maintains not one army in Russia but three. Besides all her many forms of military force, she maintains an army of agents and an army of spies—each of which is probably more numerous and more powerful than her armed forces. Her commercial army acts largely in the open. Germany took possession of a large part of the economic resources of Russia by the supplementary treaties following the surrender of Russian territory at Brest-Litovsk. Her hundreds of thousands of agents, taking advantage of the plundering and murdering by Germany's Russian Allies have purchased for a song nearly everything of value that remained, and protected from harm by the Kaiser's strong arm, are firmly installed in possession of the chief remaining resources of the country.

Even more dangerous than the military and economic armies is the great political army, composed in part of volunteers and in part of paid secret agents. Even before the war Russia swarmed with Russian-born Germans who owed political and economic allegiance to the Fatherland; Baltic barons and traders, German speaking and thinking agriculturists and citizens of the border districts, and officials, police and spies in the supposed service of the Czar. To these have been added not only hundreds of thousands of former German prisoners now in Russian civil life, but many thousands of Russian speaking emissaries who have been sent from Germany since Brest-Litovsk.

A well-known American correspondent now in Siberia has correctly stated the probable effect of an early peace and military evacuation of Russia under these conditions:

> "Germany is more anxious than ever to make peace now with the Western Powers. She could even afford to promise to evacuate Russia, knowing all the time that with her present organization here it would be years, if not decades, before the Allies or the Russians themselves could interfere with her Russian booty."

This correspondent quotes the American General in command at Vladivostock as saying:

> "Peace with Germany now would turn Russia entirely over to Germany, perhaps preventing the Allies forever from making headway in this country."

In the case of Russia, there should be an evacuation by Germany's political and economic armies as well as her military force.

Germany apparently is beginning to make real and not merely deceptive concessions to the Entente. She will make further concessions as her armies meet further defeats. But this is the very last concession she will make. Yet the war must not cease until every form of German intervention in Russia—since her political and economic intervention in the last analysis also rests upon past military coercion, is brought to an end.

For unless this war frees Russia, Germany will have gained a substantial victory. Not only will America have broken her pledge to the Russian people, but Germany will gain all the vast resources of Russia—and after having organized Russia's hundred and fifty millions into military and industrial dependents, she will be in a position to bring under her influence the hundreds of millions of India and China. Compared to this prospect, the Belgian ports and iron mines of Lorraine and the "Berlin to Bagdad" scheme are utterly insignificant. The one great question left by the war is Russia. And even less than any other of the great questions of human liberty involved is it subject to "any sort of compromise."

Shadow Huns and Others

(*Continued from page 19*)

Germany was to lose her entire Colonial Empire permanently to Great Britain, and was to be stripped for the benefit of France, not only of Alsace Lorraine, but also (by a secret agreement between France and Russia) of a further portion of her territory adjacent to the Rhine."

The Allied nations, in the opinion of Dr. Shaw, "were suffering and dying for the sins of their diplomats" and not in defense against the Hun onslaught for world dominion. In fact, according to Shaw, Germany did not precipitate the war with any aim of world conquest. It was the Allies and not Germany, who brought the squalid lust for territory and loot into the war. Dr. Shaw declared: "The vital point is that the concrete imperialistic programs of Russia, England, France and Italy hardened the German program of European domination into a definite reality, whereas it had previously been rather more a dream than a practical project." In other words, the Allies, instead of defending themselves, were forcing the war to continue in order to impose terms of extortion and revenge; the evil motives of the Allies were responsible for the "crystalization" of Germany's rather idealistic dreams of mere European domination into reality.

(*Mr. Harré, who gave valuable assistance to various Governmental departments in their investigations into German propaganda and intrigue, will tell in the next number of further activities on part of American writers which were calculated to work to the advantage of Germany.*)

INDUSTRIAL RECONSTRUCTION

AFTER WAR IMMIGRATION POLICY—GOVERNMENT OWNERSHIP OR CONTROL OF PUBLIC UTILITIES AND BASIC INDUSTRIES—FUTURE OF LABOR MEDIATION—COMMISSIONS TO STUDY RELATIONS OF EMPLOYERS AND EMPLOYEES AND ECONOMIC ADJUSTMENTS AT HOME AND ABROAD

INDUSTRIAL relations during and after the war; immigration and its effect upon unemployment and wage standards under reconstruction conditions; government ownership or control of public utilities and basic industries; federal labor adjustment methods; and other current social and economic problems were considered at a meeting of the Reconstruction Committee of The National Civic Federation held at 1 Madison Avenue, New York, Monday, December 2, 1918.

The outstanding result of the discussions was action authorizing the appointment by President V. Everit Macy of two Commissions, one to study the relations of employers and employees and war emergency measures in England, France and Italy, and one to make similar inquiry in the United States.

INDUSTRIAL RELATIONS.

V. Everit Macy, President of The National Civic Federation, who presided at the conference, made the following opening statement:

"During the past eighteen months, few meetings of The National Civic Federation have been held. Many of its members have been engaged in Government work. The Executive Committee felt that it was a time for action rather than for conference as there was only one great goal before the nation, namely, the winning of the war, and that the most effective way to accomplish this end was to cooperate without question with all Government agencies.

"While peace has not yet been officially attained, it now seems an appropriate moment to discuss our war experience and to decide whether any of the administrative war machinery should be retained, either as now constituted or in some modified form.

"A greater centralization of control in Federal agencies than any of us had ever dreamed of was required for the successful prosecution of the war. To let this highly concentrated machine disintegrate now without any definite plans for a transitional period seems most dangerous. Such procedure would seem to lead to the greatest confusion.

"At the present time conferences are being called on all subjects directly or remotely related to the war. It seems wise, therefore, to confine this conference to the subject of industrial relations during and after the war.

"It has been said that a successful man is one who is right 51 per cent of the time. If we apply this same standard to the Government method of dealing with the problem of employer and employee during the war, we must confess that it has been most successful as practically no interruption of industry of any magnitude has occurred during the past year and a half. All friction has not been avoided and here and there an occasional stoppage of production has occurred but, thanks to the far-sighted policy adopted by the Government, to the patriotic response of the employers and men, and especially to the statesman-like leadership of our Vice-President Mr. Gompers, the nation was spared any domestic strife while fighting an enemy without. When one considers the tremendous changes in industry necessitated by the war, the peaceful adjustments made were no small accomplishment.

"The National Civic Federation should take much satisfaction in the fact that the methods employed to prevent strife and interruption of production were the same methods that have been employed by the Federation for many years, namely the submission of all disputes to appropriate boards composed of representatives of employers, representatives of organized labor and representatives of the Government or the public. Unfortunately, these various boards were established only when a crisis arose in a particular industry or in the work of a particular department. They were, consequently, created upon varying foundations and with varying powers. This naturally resulted in the rendering of somewhat conflicting decisions and a total lack of related action.

"For instance, the agreement creating the Shipbuilding Labor Adjustment Board provided for the districting of the country and, in so far as practical, in fixing uniform conditions and wages within each district, the Board was also to be guided by the increased cost of living. On the other hand, the Cantonment Adjustment Board was compelled to render its decisions in accordance with established local conditions. This frequently resulted in the two Government boards setting different wages for the same craft in the same locality. The Shipbuilding Labor Adjustment Board and the National Adjustment Commission dealing with harbor crafts and longshoremen could only take jurisdiction after disputes occurred. In other words, if the employers and their employees agreed on a wage scale or on any condition of employment, the respective boards had no power to set aside such scales or conditions.

"In peace times, it is probably perfectly safe to permit employers and their employees to agree on any points that they can but it is a most dangerous and disrupting influence in war time, for during a war the Government is virtually the sole employer and it makes little difference to the manufacturer what wage is agreed to, as long as he can attract the labor to his plant for the Government directly or indirectly foots the bill.

"A few days before the signing of the Armistice, a plan had been worked out for a better coordination of the work of the various adjustment boards which would have been the beginning of a national labor policy. Since the signing of the Armistice, all is changed and there is a pronounced tendency for all boards to relinquish whatever control they have exerted.

"It is safe to say that if these various boards had not been established, there would have been constant interruption of production, an immensely increased labor turn over, much higher wages and a tremendously reduced output.

"If voluntary agreements to submit all questions in dispute to labor adjustment boards have proved of value in time of war, why should not similar boards be useful to industry in times of peace? We must not lose the benefit of the splendid spirit of cooperation to work for a common end that has been shown by both employer and employee during the war and which has produced such fine results.

"The only way, however, that this cooperative spirit can find effective expression in normal times is by better organization of employers and better organization of employees. I use the word 'better' in its broadest sense; it means more complete, it means more disciplined, it means more intelligent and broader minded action upon the part of members of the organization and their leaders, a greater loyalty to the organization and the substitution of a national for a purely local or trade point of view. Nothing can be accomplished in industry without cooperation and organization. It is not the organization of large business or of unions that we should combat but only the organization of narrow minded selfishness.

"The National Civic Federation in the past has advocated trade agreements. As the result of our war experience, can we not in the future develop voluntary labor adjustment boards to

RESOLUTIONS ADOPTED AT MEETING OF THE RECONSTRUCTION COMMITTEE OF THE NATIONAL CIVIC FEDERATION.

ENGLAND, FRANCE AND ITALY FIELD FOR INQUIRY.

RESOLVED, That the President of The National Civic Federation be empowered to name a commission of suitable size and representative character, of which he shall be chairman, to visit England, France and Italy for the purpose of reporting:

(1) On the methods employed in those countries with regard to the relations of employers and employees, especial inquiry to be made into the subjects of collective bargaining, mediation and arbitration, the shop steward system, the Whitley Committee program, profit sharing, bonus and co-partnership, social insurance, and employment exchanges;

(2) On the after-the-war policy of the governments of those countries with respect to continuing, amending or abolishing Government ownership and operation of public utilities and basic industries, as well as regulating price-fixing affecting the essentials in production; and

(3) On the methods in operation or under consideration for providing homes or cultivable lands either for the men released from war service or for citizens in general.

STUDY OF HOME WAR EMERGENCY MEASURES.

RESOLVED, That the President of The National Civic Federation name a committee of suitable size and representative character to inquire into and report upon the operation of the various war emergency measures adopted to secure cooperative relations between employers and employees, and likewise to report upon the effectiveness of the Government operation of public utilities and basic industries, as well as of the regulations fixing the prices of essentials in the United States.

which all disputes will be submitted without the interruption of industry or inconvenience to the public? These boards could be composed of representatives of the employers' organizations and the unions involved, with perhaps one or more representatives of the public. One of the difficulties that the labor adjustment boards had to meet during the war was the lack of any tradition or prevailing practice within any given industry, craft or even single plant. Such boards as have been suggested would, by their successive decisions, tend gradually to develop a code of minimum good practice in an industry and thus help to systematize the industry. A wide scope still would be left for individual initiative since we find that among the shipyards having the same wage scale and the same conditions of employment, the cost per ton of shipping produced will vary at least two hundred per cent. Such a plan cannot be successful without well disciplined organizations on both sides. This brings us to another point that we are destined to hear much discussed—that of raising or lowering of wages. The real question that should determine the wage scale is that of the cost of production per ton or per unit. It is too often assumed that high wages mean high cost and that low wages mean low cost. The manufacturer must realize that no industry should survive that cannot pay a living wage. The employees must realize that no industry can survive where there is not a living profit. Cost cannot be reduced except through good management and an honest day's labor, nor can high wages and reasonable profits be obtained, except by the same means. Competition and equipment are other factors that cannot be ignored if an industry is to be successful and most important of all is a cooperative spirit between the management and the men employed.

"In the past, little thought seems to have been given to the human equation in industry. Employers have paid large salaries to general managers and various experts but they have left all contact with their employees in the hands of foremen and sub-foremen, men often of limited opportunity, experience and understanding. On the other hand, the unions have placed too much power in the hands of local officials who are frequently also men of equally limited capacity. Some way should be found whereby the many causes of irritation could be handled by well paid representatives of the employer and by responsible representatives of the national unions. Petty foremen and small minded local representatives of unions are the greatest source of discord.

"Do not let us be deceived by the frequent statements that the end of the war is to usher in a new world. No miracle has happened. What is this 'new spirit' and these new conditions we hear so much about? Take for instance the English Labor program. It is nothing new; it is our 'old friend' Socialism. The name is all that is new.

"The Bolsheviki theory is a perfectly familiar one; it is merely anarchy and I. W. W.ism under a new name. Even our idealists are merely trying to find a new name for the centuries old Golden rule. Even the League of Nations is not a new idea for it is merely an extension of the idea of the Hague Tribunal for the settlement of International disputes.

"If nations can agree to arbitrate all differences and if the League of Nations is to prevent future wars, is it too much to expect that industrial disputes may be settled by means of arbitration or by labor adjustment boards and so prevent future industrial warfare?"

AFTER WAR IMMIGRATION POLICY.

Frank Morrison, Secretary of the American Federation of Labor, in presenting his views as to what steps should be taken to prevent the nations from dumping undesirables on our shores, said in part:

"The labor organizations are intensely interested in what is going on at the present moment. As a result of the abrupt ending of the war, thousands of men and women are thrown out of employment. They are in cities where they volunteered to go to do the war work. It is impossible for them to secure employment in those cities. Every day of idleness is so much loss of product to the nation. If the nation needs the product of its workers continuously, it must devise means to secure employment for them. The Government should transport the industrial volunteers to places where they can secure employment, pay their expenses, and more, it should pay those volunteers during their unemployment. That is a huge proposition but the country needs the product and if a billion dollars were spent, it would mean peace in this country. Unrest comes from lack of employment, and by dumping forty, sixty, a hundred, two hundred thousand workers out of the factories as at present there will be unrest in this country as in Russia, Germany and Austria. England has already arranged to pay a specified amount per week to the man, to the woman, and to the children of the workers, first child so much, and second child so much, so that we, at least, have a precedent to follow in urging Congressional appropriation to pay railroad fare and unemployment wages.

"Congress should enact a law stopping immigration entirely for the period of adjustment, until the workers who have been working in munitions factories have secured employment, and until every soldier has been returned and has secured employment. After that readjustment, we can open our doors to our brothers across the seas.

"If the large employers had been educated to the belief that low wages and low standards are not a benefit to the country such legislation might not be necessary, but there will be an effort to bring into this country additional labor. It has been the practice of large employers always to have an ample supply of labor. It has not worried them to have two men for every job. It is for the organizations that have an interest and the welfare of all the citizens at heart to bring about a condition where every man, woman and child will be able to have employment and live in reasonable comfort.

"The period now is critical. At Rock Island there are 12,500 people working. Prior to the war there were 2,500. Ten thousand must find employment some place else. The government cut off a thousand men who expected the war to last probably until spring. They put coal in their cellars and took their families there and employment is not in sight. They must be taken care of now and there is no other force that can do it outside of the Government of the United States, through its employement service, which can secure information as to where work is to be secured—but there must be an appropriation sufficient to transport those men and to take care of them until they secure employment. I hope that a strong resolution will be adopted by this body urging protection for the men that went from their homes to other parts to assist in manufacturing munitions to assist our soldiers to win the war, and also urging proper care of our soldiers who are returning. I understand that it is proposed to bring back a million soldiers at the rate of three hundred thousand a month. We must take care of that million. It is a big project for the Government, but it is able to handle it. It has the money

and the force should be put behind it to insist upon such action."

Mr. Morrison introduced the two following resolutions:

"RESOLVED: That the Congress of the United States be urged immediately to appropriate a sufficient sum to be used by the Department of Labor to transport all war workers thrown out of employment to points where they can secure sustaining employment, and to pay each worker a stipulated amount per week during the period of enforced idleness."

"RESOLVED: That the Congress of the United States be urged to enact legislation stopping all immigration to this country for a period of five years, or until such time as all our soldiers and war workers have secured employment that will sustain them and their families in reasonable comfort."

Both resolutions were referred to the Executive Council of The National Civic Federation.

PUBLIC OWNERSHIP AND LIBERTY

Henry A. Wise Wood, President, Wood Newspaper Machinery Corporation, speaking as an employer on the relations of capital and labor in the transitional period, made the following statements:

"The social and economic problems which the war has bequeathed the United States are too vast and wholly new to be solved synthetically by any body of men, however wise. They must work themselves out in accordance with natural law. If the resulting structure is to be healthy and enduring, it must be the product of natural growth, not of artificial processes.

"To accept this truism, however, is not to deny the need of assisting nature by art, of making it easy for the laws of social and economic progress, which are recorded in knowledge born of experience, to work themselves out beneficently.

"Once we have accepted the truth that these laws will have their way in the end, that we are their creatures, and they not ours, and we have planned accordingly, we shall be well along the road to economic prosperity and social contentment.

"Public ownership! The railways and express companies, the telegraphs, telephones, cables, and wireless, mines and oil wells, and water powers, the basic industries, thence to the common machinery of life,—public ownership. In Russia it extends to wives and children. What, let us ask, is the great boon in exchange for which the hard won right of possession is to be surrendered for all time by the individual? Is it a more precious right that comes to him in return? A fresh hold upon liberty? A new moral conquest? It is none of these. It is merely the fancied advantage of being able to buy the goods and services he consumes at a lower price. He is to sell for cash this right that cost him his blood!

"I say 'fancied advantage' because, having exchanged for it part of his economic freedom, he will have lost the one without gaining the other. Because of the very nature of the laws of economics and of human behavior when exhibited in sheltered surroundings, he will inevitably pay more under public ownership for the goods and services he consumes. The railways should already have taught him as much.

"But the right of possession is not the only right that the individual loses when he yields to the sirens of socialism. What is of vaster importance, he shakes the foundations of representative government when he consents to the erection of the enormous beaurocracy which is part of the plan of public ownership, when he countenances an organized force entrenched in the seats of government. Could one conceive a more effective means for perpetuating political power than would soon become a beaurocracy sufficient in size to operate no more than those public utilities which are now temporarily in the hands of the government? As for the operatives, themselves, of these public utilities, they are being urged to make permanent their transfer from employer to master, to a master to whom they must surrender their political independence, and by whom already they have been commanded no longer to exercise their civil rights by taking part in the political life of their communities, of the nation—a command which means, if interpreted after the political habit of the times, that they shall not oppose, but support, the party in power.

"And what shall these citizens receive in exchange for their civil rights, for their political independence, for their freedom of political initiative? An easier berth, a sheltered life, an opportunity to render less service for higher pay. They, like the consumer of goods and services, are to sell their liberties for cash. But in exchange for them the public servants are to receive more money for less service, whereas the consumer will expect to receive more service for less money. Both cannot be paid their price. If the consumer obtains his consideration, the public servant will be defrauded. If the public servant receives his, the consumer will be defrauded. If justice between them be done and a fair division be had, then neither will be better off than under individual ownership, while both will have lost for good traditional rights of enormous economic, moral and political worth, and our government will have been sent on its way to become an oligarchy.

"What is this spirit, that would pull from beneath us the very foundations of the individualistic democracy of the Anglo-Saxon? Professing to be idealistic, it invites us to part with our ideals of freedom in exchange for material benefits, and insolently does so in the very hour that has found us investing our every possession, our flesh and blood, in the preservation of the very liberties it now bids us sell for ready money. However it disguise itself, this spirit is not idealistic; it is sordid. It is not uplifting; it is debasing. It is not constructive; it is destructive. It is not native; it is alien. It is not friendly; it is hostile. It is not *for* the Anglo-Saxon; it is *against* him. Already its searching and inquisitive fingers are touching his vitals, will be gripping them shortly, and then will be tearing them out, as it tore out the vitals of Russia."

PROBLEMS OF GOVERNMENT CONTROL

Jeremiah W. Jenks, after referring to the foregoing stimulating, impassioned appeal against public ownership and management, and in favor of private ownership and management, made the following address:

"In the two very sane, suggestive statements that have been made before, it had impressed me that there was an underlying question that was not answered, as to how far we should go in peace times in the direction of government ownership and management; just where we should stop in that direction, how far we should go backwards toward the conditions that existed before the war.

"I suppose you were all very much impressed, as I was, with the fact that when Secretary McAdoo was made Director-General of the railways, his very first order was to permit universal pooling of the railroads. That is to say, under the powers that were given him, and in these extraordinary war times, he did exactly what all of the railroad managers, all of the economists, who had studied the subject, and the Interstate Commerce Commission itself from its very first organization on to the present time, had recommended. The bitterest discussions, at the time the Interstate Commerce Act was passed in 1887, were over the anti-pooling section of the Act. The railroads favored pooling under Government supervision. But Congress put into the law the anti-pooling clause, and in spite of the fact that the first Interstate Commerce Commission, under the wise leadership of Judge Cooley, and many of the succeeding Interstate Commerce Commissions, have recommended that that anti-pooling clause be repealed and pooling under Government supervision be permitted, the political feeling of the country has been against it; and it was not until we were under the stress of war that the advantages of centralized action could be secured. Now we have had some experience under a centralized action and it is very doubtful in my mind whether we want to give up the advantages. On the other hand, with the advantages of centralized action most people who are familiar with the administration of business find combined many things that are not so favorable. I presume that most of us have been in doubt as to how far some of the difficulties that we have felt as consumers and patrons of the railroads have come from Government management, the management of those who were not trained and experienced, and how far they have come from the exigencies of the war. The same thing applies to the administration of the telegraph and the telephone, and so on. Many things have not been going very well.

"Before we entered the war I attempted to see if I could test this question a little. It was at the time that our very active and energetic Postmaster General decided to increase considerably the work of the Government in connection with the parcels post. I sent out a thousand letters to a thousand shippers of small packages, picked out at random, all over the country, and in all different lines of business, with a detailed series of questions intended by a brief answer of yes or no to indicate whether the parcels post was more advantageous to the public than the express companies, or the contrary. Out of 220 odd replies that came which were complete enough so that they could be tabulated, I gathered these facts: That a very large majority of all of the shippers thought that the costs were less,—that is, the charges of the Post Office Department were less than those of the express companies; but on the other questions that were asked, as to speed of collection and delivery, as to care taken in handling the packages, as to the number of packages lost, as to the packages destroyed in transit, as to collections, the entire range of business, the very large majority of all of the shippers said the express companies were better than the Post Office Department. I then sent an expert investigator to talk with the auditor of the Post Office Department as to the system of cost accounting that he was using. I wanted to see who it was that paid this cheaper cost of service—the shippers, the railroads, the public? Who bore the burden? And certainly the Post Office Department ought to be able to tell. The auditor, in reply to the question as to his system of cost accounting, simply laughed and said, 'Cost accounting in the Post Office Department? There is no such thing! I can't tell.'

"We know that there are great advantages in many cases from centralized control, centralized management, pooling on a universal scale, but there are also certain disadvantages that come from Government ownership and management.

"A body organized, as is The National Civic Federation, to discuss and investigate and study these important public questions, should attempt, as soon as possible, to have the facts collected impartially to show us how far we should retain this Government control and management along various lines that could be suggested, and how far we should go back to the system of private control and ownership and manage-

ment that we had before. I do not expect to see us get back on the same basis we were before. I don't expect to see the present conditions remain but we should know the facts better than any of us know them now."

LABOR'S PART IN SOLVING WAR PLOBLEMS

Wheeler P. Bloodgood, Chairman Next of Kin Division, League for National Unity, opened his remarks by stating we are now dealing with two extremes, one element being represented by certain commercial organizations and one on the other side by such leaders as Mr. Berger in Wisconsin and Mr. Hilquitt in New York. He proceeded with the following remarks:

"It has seemed to me that the important thing in relation to the after-the-war problems was that we should work together as we have in meeting the war god. I don't think there is any difference in any community. Possibly we may think that in Wisconsin we face more difficult problems than you face in certain other jurisdictions. It is a fact that of our two and a half million of population, probably not to exceed seven hundred thousand are what you would term Americans—that is, Americans coming down from a number of generations. In spite of that, and in spite of the extreme represented by the socialists who, in St. Louis attacked the war, the President and Congress on the ground that the war had been brought about by the criminal conduct of the President and Congress, and who have sent throughout this country circulars and propaganda to the effect that the war was for the benefit only of the profiteers, and would be continued so long as there was profit in it—now, in spite of that, and due to the fact that men and women of every walk of life have gotten together in war agencies and worked around the table, and have heard every side of the question, just as it has been and is the purpose of the Civic Federation to hear every side of the question—they have gotten the result in Wisconsin not only in men and volunteers, but in money and materials way beyond the quota of that State.

"Now, what do we find? Just as soon as it appears that the war is over, these two extremes want to eliminate the agencies of good will that have grown up during the war. I think the vital questions, leaving out all questions of detail, are as to whether we agree on what changes should be made in the immigration laws; as to whether Government ownership is wise or unwise; as to whether we should do what England proposes to do, provide that no man shall be demobilized from the army until he has a job; and whether we should carry out some phases of the English labor program. It will not make any difference what the determination is. If we can in our respective communities work in a spirit of good will and good fellowship with all classes of society represented and having a hearing, we are going to come out of this period of reconstruction with great honor and with great credit.

"On the other hand, if we are going to sit supinely by and see the extremes, both of whom think today that they have in their hands the power of victory—if we are going to see them tear this country apart, we ought to be ashamed of ourselves. We should look facts in the face. Frankly, and I am ashamed to say it, prior to this war I was in about the same position that thousands of other men are. I had looked at but one side of this proposition. I had the impression, until I learned better, that Mr. Gompers and the American Federation of Labor, which he so ably represents, were a menace. I had been taught that. Today I find men of great force in this nation who, now that this war is over, talk about a surplus of labor, and that now is the opportunity for capital to reassert itself because labor has prospered way beyond its share because of the war. Now, that is not the spirit in which we should meet these reconstruction problems. If we go at it in that spirit, we are going to have trouble. Why, when I think of what has gone on in the past year, I realize that the men from whom we have had the real vision, the men who have had the real courage, have been representatives of labor. They have not hesitated to do those things which involved great sacrifice on their part. Now, are we going to forget all these things?

"I think we should in this meeting and in all other meetings endeavor to bring forth the feeling which will result in an expression of public sentiment throughout the United States, that will keep together these great forces that have met in solving the problems of the war so they can work together in meeting the problems of reconstruction."

MAINTAIN AMERICAN STANDARDS.

Samuel Gompers, the Civic Federation's vice-president, introduced by President Macy with the statement that "next to President Wilson, it is safe to assume that no one has done more to mobilize labor behind the war, not only in this country but among the Allies", spoke upon the grave dangers confronting our American people and of problems greater than mobilizing the good will and activities of our citizens. He said:

"To get the men to respond to the call to arms in defense of our Republic and our institutions required much effort but it was not difficult of accomplishment. To persuade our civilian population to do service behind and for the men at the fighting front, was difficult, but not so difficult, as are the problems before us today.

"I am not one who believes that the wisest and best condition of the people is what is generally understood by contentment. Contentment, in my way of thinking, is stagnation. A healthy discontent is the awakening of the aspiration for better things. It is essential today that the people of our country shall be alert to all that is transpiring and all that is impending. Thus far we have lived our lives alone and worked out our own destinies along the line of the policies we believed to be the best for us. Today, after either winning the war or helping to win the war, we are to have our representatives around a table where a treaty of peace is to be formulated. The representatives of no one government can have the controlling voice. Optimist as I am, I never fail to look upon the other side of the shield. Hoping for the best always, and striving as best I can to accomplish the right, or to help accomplish the right, I know the game played by the opponents of right. The democratic legislation enacted by the Congress of the United States, by the several states of our Union, by our municipalities, granting greater freedom of thought and action of a voluntary character, the understanding of what here we mean by sovereignty of citizenship and of the man and of the woman, a conception not held by any other country on the face of the globe—I appealed to the American people, without regard to their station in life, to see to it, to supervise, to be vigilant, lest around the peace table there are purloined from us, right under our very noses, many of the liberties and the freedom of our people.

"The treaty made by the United States with any other country or group of countries, that treaty being ratified by the Senate of the United States, becomes the supreme law of the land, and any law upon the statute books that is in conflict with the terms of that treaty becomes inoperative and ineffective and nil. We don't want to have made in vain all the sacrifices of our boys. We don't want to have that flesh of our flesh and blood of our blood given, and all the treasure given, and all the sacrifice made, in vain, and to have to make the fight all over again for the American people in their homes. While our boys were fighting and our men and women were working here to maintain freedom and democracy abroad, we ought to be alert now to see to it that we are not going to lose our liberty and democracy at home.

"I am impressed particularly with the appeal to the conscience, to the judgment, to the ideals, to the Americanism of our people for united action. You cannot get freedom, nor practice freedom, on empty stomachs. The hungry men may engage in a riot, may engage in a revolt, but their course is never of a constructive character. Hungry stomachs do not make reasoning brains. It is necessary to maintain the standards of life of the American working people that they may have sound bodies, and the opportunity for reasonable thinking, with aspirations of such a character they will build up the institutions of this Republic. Enlightened discontent, the higher and better aspirations of the masses of the people furnish the greatest impetus to progress and civilization. The discontent of hungry people leads to nowhere except chaos, confusion, and reaction.

"During the early months of the war, a phrase was applied to the industrial conditions then in the course of development. It was this: 'During this period, don't rock the boat.' I want to apply that same phrase to the present situation. There are too many circumstances and conditions of turbulent waves of an unruly sea to attempt to rock the boat now."

INDUSTRIAL FEUDALISM PASSED

A. Parker Nevin, formerly General Counsel for the National Association of Manufacturers, made the basis for the consideration of these complex problems the attitude of mind with which we approach them, and said:

"Before we discuss the merits of the great issues with which this country is confronted, let us get ourselves in the proper mental attitude. If we are going to raise discussions before we understand issues, we shall not get very far. And I propose violating the very thing which I have just said and take this opportunity of protesting violently against the utterance of the president of the manufacturers' association (National Founders Association) two weeks ago which provoked and invoked a controversy not very creditable to the manufacturing interests of this country.

"I hope the war will teach all of us a great many things. If it does not, the war, so far as we are concerned, will be a partial failure. I hope it will teach certain employers that the last vestige of feudalism has departed from this country. Feudalism and democracy cannot obtain in the same commonwealth, and unless we get into the consciousness of certain individuals and certain groups that we won't tolerate feudal acts or feudal thoughts, we shall have serious times in this country. Either the American point of view is distinct and stands for separate ideals, or else our strivings for a great commonwealth of democracy for the last hundred and forty-four years have been undertaken unsuccessfully. Either we must reduce the group consciousness in this country, or we shall have to reappraise everything. We cannot run this country on narrow group consciousness. The reason we won the war or contributed to the winning of the war was that all the people subordinated their group consciousness and concentrated on one single objective.

"We have a curious population—all nations, creeds, ideals, lack of ideals, reactionaries, progressives, aggressives, all kinds of groups. But with the exception of the anarchist and the socialist of a certain type, we saw the phenomenon of approximately one hundred and five

million people whose minds would function on one thing at the same time, and that was the winning of the war—and we won the war! Now, if we are going back to pre-bellum days and to such controversies, we have not learned our lesson. Don't let us try to fool either the other man or ourselves. If, on the other hand, the vertical and the horizontal lines converge in behalf of the execution of a policy, a progressive policy, the result of our conscience in this war, as Mr. Gompers has said, because these matters are largely a matter of our composite conscience—if we do that without acrimony and with no sign of industrial feudalism, we shall make healthy and wholesome progress; but let us once go back to those old issues, without enlightenment, without scientific suggestion for remedy, without an appreciation of what we have gone through, I hesitate to predict what our immediate future will be. Of course, labor has done marvelously, and, of course, labor is entitled to proper and due recognition, and, of course, the standards of labor must be maintained. I sat at table with Mr. Macy and Mr. Gompers in the somewhat perilous spring of 1917, and had the great honor of being signatory to the first proclamation of Mr. Gompers about 'not rocking the boat.' But in the composition of those documents we were making an appeal for the standards of labor to be maintained at their highest point of efficiency for the duration of the war. Why duration of the war?''

WOMEN IN CIVIC AFFAIRS

Miss Maude Wetmore, Chairman of the Woman's Department, The National Civic Federation, briefly addressed the meeting.

''Everything that has been said is so vital and so important that I respond in order that the women sitting here may be represented. There is one thing which the war has done. It has demonstrated that the women, who in their hearts have worked not only for the war but because of the vision they have seen which goes far beyond what even the scars of war mean,—that those women are not going to be able to sit still and do nothing afterward. A great many of us were busy in civic affairs long before the war began but it has awakened a consciousness of responsibility and patriotism which, it seems to me, no peace is going to extinguish and, therefore, Mr. Chairman, I want to thank you for letting me say just these few words, which are very earnest, because they are meant from the very depth of the women's hearts, that whatever the Civic Federation does, as in the past, the Woman's Department will stand absolutely shoulder to shoulder, inspired by everything it has heard today and determined to perform its service in the future.''

OPPORTUNITY FOR WELFARE WORK

L. A. Coolidge, Chairman of the Federation's Welfare Department, in dealing with factors other than wages which play an important part in maintaining a wholesome condition of employment in industry, stated that the last sixteen or eighteen months had given him a new light in regard to the spirit with which Mr. Gompers and his associates had been working.

He said further: ''I confess, while I knew Mr. Gompers before the war broke out, I did not begin to realize the breadth of his vision and the earnest unselfishness of his patriotism.

''The work of the Welfare Department of the Civic Federation during the war was transferred bodily to Washington. I cannot personally claim much credit for what was done by that department there. It so happened that, very early in the game, I was lifted bodily into the work of the Shipbuilding Labor Adjustment Board, where I was happy to be under the direction of the chairman of this meeting. The real work of the Welfare Department in Washington was under the direction of Mrs. Easley and I cannot let this opportunity pass without paying a tribute to her unselfish, indefatigable patriotism. I don't know of anyone connected with the work of the Government in the prosecution of this war who encountered greater problems than she did, and I don't know of any other man or woman who would not have become utterly discouraged by the difficulties with which she was confronted. And yet the result has been that some of the very finest accomplishments in the war were due to her initiative and her inspiration. The questions of housing, industrial training, Soldiers' and Sailors' compensation, factory conditions, ventilation—all questions which have been a part of the work of the Welfare Department for a good many years—found in her and through her an opportunity for real development. What was done there through the war is bound to develop now that the war is over. We are going through a period of waiting and deliberation, adjustment of labor, the change of locality,—and in that transformation there is going to be a magnificent opportunity for the application of the principles of welfare work, which the Civic Federation, to my mind, has done so much to further.''

H. C. Wright, Secretary State Charities Aid Association, urged action concerning adjustments after the war looking toward effort to harmonize opinions and to that end offered a resolution which was referred to the Federation's Executive Council. It follows:

''Resolved, That this Association, through appropriate means, endeavor to bring together representatives of group opinion, with the purpose that all efforts toward civic and social betterment may be directed, so far as possible, to one end, namely, a fuller and completer democracy.''

ADJUSTMENT OF LABOR DISPUTES

Matthew Woll, President International Photo Engravers' Union and Assistant to Samuel Gompers, Chairman Committee on Labor, Council of National Defense, in speaking upon the War Labor Board, and what the future may have in store for it or similar boards, said:

''The War Labor Board has accomplished a wonderful task. It has proven one of the most helpful agencies, not only in stimulating production during the period of the war but it has also made for a better understanding between the employers and the employees. As to the future work, that depends largely upon the attitude of mind that is going to be taken by the employing interest of this country. If it is going to be one of co-operation, one of helpfulness, and one of seeking to approach the problems in the spirit of solving them to do justice to all concerned, then I think the Board will prove of great value in composing the differences of opinion, and in reaching conclusions that will make for harmony and for protection in the future. If, however, the attitude of mind is going to be one of seeking to retard rather than to advance human happiness, then, under our system of government, I feel sure the board will fail; because the decisions of the War Labor Board depend entirely upon voluntary acquiescence and not upon governmental decree. Its future depends upon the fairness of the decisions and awards and, as I stated before, the attitude of mind with which we approach the problems submitted to it.

''At present, the War Labor Board has approximately five hundred cases on its docket of which approximately one hundred and fifty have had joint submission,—that is where both employer and employee have agreed that the War Labor Board should be the determining factor, should be the judge as to what conditions of employment should prevail. In those one hundred and fifty cases, the War Labor Board is in honor bound to bring about a settlement of the disputes. In those cases it acts in the capacity of an arbitrator, and should the employers and employees on that Board fail to come to an understanding, then an umpire is selected, first by their own choice, if that is possible, and if not, then by the President of the United States, that umpire's decision finally to become the decision of the War Labor Board, and to guide those who submit their differences to it. In the other cases, however, a more unfortunate condition exists. The other three hundred and fifty cases, were submitted in the main by an ex parte procedure at the request either of the Department of Labor or upon that of labor officials urging their members to cease to strike, and the employers on the other hand refusing to consent to the War Labor Board making a decision.

''Under the formation of the War Labor Board, it may proceed and hear both sides to the controversy, though one of the parties may not have assented to it. After having a hearing, if the Board can unanimously come to an agreement, then a finding will be rendered which is in the nature of a recommendation—nothing compulsory, and it need not be accepted. If, however, a unanimous decision is not reached, then of course no finding can be had and no ultimate arbitration will result. That situation is unfortunate and it will, I think, lead to a great deal of difficulty unless we can use influence and power to impress all who have controversies before the War Labor Board to acquiesce and accept its findings because in a number of instances men and women who are paid a wage too low under conditions far too onerous, have given up their power to refuse to give service and have foregone the advantage that the war period brought to them and, in answer to the patriotic appeals of the labor officials, have continued at work in the hope that the War Labor Board might secure justice for them. If, since that stress has passed, the War Labor Board ceases to function, or any of its representatives fails to respond, now peace is in sight, as he would have while the war was in progress, then I think a most grave injustice will have been done both to the men and women workers and to the citizens as a whole. I urge all who have the best interests of their country at heart to use whatever power and influence that they may possess to see that that will not be the outcome.

''Reference has been made to the remarks made by the president of the manufacturers' association (National Founders' Association) and to the unfortunate controversy which has resulted as an immediate consequence. I know of no greater danger to the future welfare and cooperative relation between employers and employees than to have the War Labor Board cease to function, at this period, in that same spirit, with that same ideal of justice, that it did during the period of the war. May I also say the War Labor Board realizes that with the termination of the war and the early stating of peace terms, its duty may be ended. A letter was sent to Secretary of Labor Wilson asking for his viewpoint on this subject, suggesting that the War Labor Board might cease to function after clearing its docket of cases. The matter was submitted to President Wilson, as we are informed, and it is the desire and wish both of President Wilson and of Secretary of Labor Wilson that the War Labor Board should continue in its work so well established in the war-time period. What, of course, the future of the War Labor Board is going to be, I cannot prophesy. It has accomplished a great deal of good. It has a place in the readjustment period of our time, and I hope that ultimately some organization of that kind will be estab-

(*Continued on Page* 17.)

Works of The National War Labor Board

SINCE its inception in April, 1918, the National War Labor Board has made awards and otherwise disposed of 358 industrial disputes between employers and employees in war industries and industries directly essential to war production. On Nov. 1, 1918, there were 315 cases awaiting settlement.

That 600 controversies should have come under the jurisdiction of the Board within the seven months of its existence, reveal the necessity out of which this Board was created. A modern war imposes on a nation the tremendous burden of maximum production. Maximum production can not obtain if industry suffers ante-bellum interruptions and slackenings. Strikes, lock-outs, dissatisfaction that in any way tend toward a lesser output, *must* be provided against.

After eight months of fighting Germany, it became apparent that in the interests of maximum production a special, an extraordinary, a hitherto non-existing government agency must be created for the settlement of labor controversies.

As a court to maintain industrial peace during the period of war, and for this purpose alone, the National War Labor Board came into existence. The Board is a step taken by this government in an emergency, to create for a "common cause", an unprecedented alliance between labor and capital. The following resolutions, adopted by the Board on July 31, 1918, clearly indicate the situation.

> This war is not only a war of arms, but also a war of workshops; a competition in the quantitative production and distribution of munitions and war supplies; a contest in industrial resourcefulness and energy.
>
> The period of the war is not a normal period of industrial expansion from which the employer should expect unusual profit and the employees abnormal wages; it is an interregnum in which industry is pursued only for a common cause and common ends.
>
> Whatever have been the accomplishment and effect of the Board must be considered an outcome of this working thesis. With its focus on production, it could show favor to no class, or privileged individual, or to any economic theory. It has been a practical experiment, adjusted to a definite situation, and its single disinterested nature is apparent in every fact in its history and its operation.

FUNCTIONS AND POWERS.

Take for example the steps which led to its establishment. In January, 1918, Secretary of Labor Wilson appointed a War Labor Conference Board, whose members were nominated on the one hand by the American Federation of Labor, representing 4,000,000 organized workingmen of America, and on the other by the President of the National Industrial Conference Board, representing a large body of manufacturers. The avowed purpose of this Board was to devise a method of labor adjustment which would be acceptable to both employers and employees.

On March 29, 1918, this Conference Board recommended to the Secretary of Labor the formation of a National War Labor Board, whose functions and powers should be:

> 1. To bring about a settlement, by mediation and conciliation, of every controversy arising between employers and workers in the field of production necessary for the effective conduct of the war.
>
> 2. To do the same thing in similar controversies in other fields of national activity, delays and obstructions in which might, in the opinion of the National Board, affect detrimentally such production.
>
> 3. To provide such machinery by direct appointment, or otherwise, for the selection of committees or Boards to sit in various parts of the country where controversies arise, to secure settlement by local mediation and conciliation.
>
> 4. To summon the parties to the controversy for hearing and action by the National Board in case of failure to secure settlement by local mediation and conciliation.

Acting on the recommendation of this Conference Board, the Secretary created the War Labor Board, appointing as members an equal number to represent capital and labor and an alternate for each member, who acts and votes for him in his absence.

The complete membership of the Board is as follows:

> William Howard Taft, joint chairman; Frederick N. Judson, alternate and vice joint chairman; Frank P. Walsh, joint chairman; William Harman Black, alternate and vice joint chairman.
>
> Representatives of Employers: Loyall A. Osborne, Vice Pres. of the Westinghouse Electric and Manufacturing Co.; (Alternate not yet chosen); C. E. Michael, Pres. of the Virginia Bridge and Iron Company; Alternate, J. W. Marsh, President of Standard Underground Cable Co.; W. H. VanDervoort, President of the Root and VanDervoort Engineering Co.; Alternate, H. H. Rice, Vice President, General Motors Co.; B. L. Worden, President of Lackawanna Bridge Co. and General Manager, Submarine Boat Corporation; Alternate, C. A. Crocker, President, Crocker-McElwain Co.; Fred. C. Hood, President, Hood Rubber Co.; Alternate, John F. Perkins, Vice President, Calumet & Hecla Mining Co.
>
> Representatives of Employees: Frank J. Hayes, President United Mine Workers of America; Alternate, Adam Wilkinson, member Executive Board, M. W. of A.; W. L. Hutcheson, President, Brotherhood of Carpenters and Joiners; Alternate, T. M. Guerin, member Executive Board, Brotherhood of Carpenters and Joiners; *Thomas J. Savage, member Executive Board, International Association of Machinists; Alternate, William H. Johnston, President, I. A. of M.; Victor A. Olander, Vice-President, International Seamen's Union; Alternate, Matthew Woll, President, International Photo-Engravers Union of N. A.; T. A. Rickert, President, United Garment Workers Union; Alternate, John J. Manning, member Executive Board, United Garment Workers.

Together with the nomination of these men, the War Labor Conference Board submitted a set of principles and policies to govern relations between workers and employers in war industries for the duration of the war. This was adopted as the constitution of the War Labor Board, and is as follows:

Right to Organize:

> The right of workers to organize in trade-unions and to bargain collectively through chosen representatives is recognized and affirmed. This right shall not be denied, abridged, or interfered with by the employers in any manner whatsoever.
>
> The right of employers to organize in associations or groups and to bargain collectively through chosen representatives is recognized and affirmed. This right shall not be denied, abridged, or interfered with by workers in any manner whatsoever.
>
> Employers should not discharge workers for membership in trade-unions, nor for legitimate trade-union activities.
>
> The workers, in the exercise of their right to organize, should not use coercive measures of any kind to induce persons to join their organizations nor to induce employers to bargain or deal therewith.

Existing Conditions:

> In establishments where the union shop exists the same shall continue, and the union standards as to wages, hours of labor, and other conditions of employment shall be maintained.
>
> In establishments where union and non-union men and women now work together and the employer meets only with employees or representatives engaged in said establishments, the continuance of such conditions shall not be deemed a grievance. This declaration, however, is not intended in any manner to deny the right or discourage the practice of the formation of labor unions or the joining of the same by the workers in said establishments, as guaranteed in the preceding section, nor to prevent the War Labor Board from urging or any umpire from granting, under the machinery herein provided, improvement of their situation in the matter of wages, hours of labor, or other conditions as shall be found desirable from time to time.
>
> Established safeguards and regulations for the protection of the health and safety of workers shall not be relaxed.

Women in Industry:

> If it shall become necessary to employ women on work ordinarily performed by men, they must be allowed equal pay for equal work and must not be allotted tasks disproportionate to their strength.

Hours of Labor:

> The basic eight-hour day is recognized as applying in all cases in which existing law requires it. In all other cases the question of hours of labor shall be settled with due regard to governmental necessities and the welfare, health, and proper comfort of the workers.

Maximum Production:

> The maximum production of all war industries should be maintained and methods of operation on the part of employers or workers which operate to delay or limit production, or which have a tendency to artificially increase the cost thereof, should be discouraged.

Mobilization of Labor:

> For the purpose of mobilizing the labor supply with a view to its rapid and effective distribution, a permanent list of the numbers of skilled and other workers available in different parts of the country shall be

*Mr. Savage died Oct. 9, and was succeeded by his alternate.

kept on file by the Department of Labor, the information to be constantly furnished:

1. By the trade-unions.

2. By State employment bureaus and Federal agencies of like character.

3. By the managers and operators of industrial establishments throughout the country.

These agencies shall be given opportunity to aid in the distribution of labor as necessity demands.

Custom of Localities:

In fixing wages, hours, and conditions of labor, regard should always be had to the labor standards, wage scales, and other conditions prevailing in the localities affected.

The Living Wage:

1. The right of all workers, including common laborers, to a living wage is hereby declared.

2. In fixing wages, minimum rates of pay shall be established which will insure the subsistence of the worker and his family in health and reasonable comfort.

The Board, acting on these principles was able to take under its jurisdiction any industrial dispute directly or indirectly affecting the government's war program, upon the request of either employer or employee or of the Secretary of Labor. The Board does not act so long as there is a local or state agency which has not been invoked, and not while employees are on strike. Continuance of work is an *a-priori* condition to the Board's consideration of a controversy.

IMPARTIALITY IN DECISIONS.

Its procedure has been simple. To obtain testimony in any case, the Board will either hold a hearing before all of its members, or before a representative section of them. Since its formation it has been found necessary to organize a staff of trained men, to act as examiners, who can hold preliminary hearings, and present their findings to the Board. The hearings before examiners or before the Board are arranged according to the convenience of all parties, either at Washington, or in the locality of the dispute.

If before or during the hearing, the two parties should agree to accept the Board as arbitrator, the award eventually made is of course binding. If arbitration is not agreed to, the Board may make recommendations, which have heretofore been complied with, except in a few notable cases.

The first such case was that of the Western Union Telegraph Company. The Board ruled against discrimination of union men. When the Company refused to follow the recommendation, President Wilson wrote a letter to its president, urging the adoption of this finding. The company persisted in its refusal, and as a result the President took over the telegraph and telephone lines for the period of the war.

By this act, the War Labor Board was established beyond all doubt as the supreme court for war-time industrial justice. The President had occasion later to prove to labor in a like manner his determination to uphold the decisions of the War Labor Board. Early in September, pursuant to an award made by the Board in the Bridgeport, Conn., controversy, 5,000 dissatisfied machinists went on strike. The President sent to these men a letter urging them to return to work, adding that if they refused, each of them would be barred for a period of one year from employment in any war industry in the community in which the strike occurred. He said that during that time the United States Employment Service would decline to obtain employment for them in any war industry elsewhere in the United States, or in the War and Navy Departments, the Shipping Board, the Railroad Administration, or in all other Government agencies. The draft boards would be instructed to reject any claim of exemption based on alleged usefulness in war production. The strikers returned to work.

Up to November 1, the Board had rendered 69 decisions, 54 involving wage increases, 14 the right to organize, 9 equal pay for women as for men, 17 the basic eight-hour day, 14 collective bargaining, and 33 involving miscellaneous issues.

JUSTICE OF AWARDS.

Wage increases have been awarded, in practically every case on the basis of cost of living investigations made by the government. The rates of course vary according to locality. For example, twenty-two railway awards were made on July 31, and the extremes are represented by a minimum of 38 cents an hour to a maximum of 42 cents an hour for Galesburg, and a minimum of 43 cents an hour to a maximum of 48 cents an hour for Detroit. In the Waynesboro controversy, a minimum of 40 cents an hour was granted, although the men asked for less. When the Board came to investigate this case, the cost of living could not be computed on a lower scale, and the award was made in accordance. In Bridgeport, a minimum hourly rate for male workers of 42 cents and for female workers of 32 cents was established, to apply to nearly every factory worker in the town.

The Board, preserving its policy of fairness, in nearly every street railway decision has made the following recommendation for an increase in fares:

> We have recommended to the President that special congressional legislation be enacted to enable some executive agency of the Federal Government to consider the very perilous financial condition of this and other electric street railways of the country and raise fares in each case in which the circumstances require it. We believe it to be a war necessity justifying Federal interference. Should this be deemed unwise, however, we urge upon the local authorities and the people of the locality the pressing need for such an increase adequate to meet the added cost of operation.
>
> The credit of these companies in floating bonds is gone. Their ability to borrow on short notes is most limited. In face of added expenses which this and other awards of needed and fair compensation to their employees will involve such credit will completely disappear. Bankruptcy, receiverships, and demoralization, with failure of service, must be the result. Hence our urgent recommendation of this head.

Also, in the News Print Paper Manufacturers' Controversy, the Board prefaced its award in the following manner:

> The National War Labor Board, in rendering its decision relative to working conditions and additional compensation to be paid by the news-print paper manufacturers to their employees, which said decision will measurably increase the cost of production of news-print paper, feels constrained, in simple justice to the parties in interest, to most respectfully request that the case involving the fixing of the selling price of news-print paper recently decided by your honorable commission be reopened, and that your honorable commission reconsider your finding in said case with a view to determine whether our award in this submission should require amendment of your finding.

The Board has invariably ruled against both discrimination against organizations and discrimination in favor of their recognition. Examples of the first instance are the cases of the Western Union Telegraph Co. and the Smith-Wesson which, like the Western Union, was taken over by the Government because of its refusal, at the Board's recommendation, to reinstate union men. Where, as in the case of the Herculaneum, St. Joseph Lead Co., the employer has not been previously committed to recognition of organizations, such recognition can not be granted to the employees by the Board's decision.

Collective bargaining, irrespective of unions, has been granted as the right of every group of workmen. Where no provision existed in the status quo, the Board has taken steps toward this end. Examiners administering awards of the Board in several cases are now establishing the machinery for collective bargaining by employees.

COLLECTIVE BARGAINING.

The general procedure of the Board has been to institute shop committees. Under the direction of an administrative examiner, a trained man sent by the Board after an award has been made, elections are held by the employees, every employee, having, under the protection of the examiner, the right to vote. The representatives of the men meet in committee with an equal or less number of employers to decide certain matters, often left undetermined in the award, and with the provision that all future controversy be considered by them.

The Board has had occasion to institute, besides, certain local committees, which act as central boards of mediation for a whole industrial community. This was the case in Bridgeport, where practically every plant in the city was engaged in one kind of manufacture, and the grievances of 60,000 employees involved were much alike. The local committee in this case was composed of six members, three chosen by workers of the city and three by employers. The function of the general committee is to settle by agreement those questions which affect the whole community, and which cannot be solved by shop committees.

The importance of this step taken by the War Labor Board, cannot be over emphasized. The principle of collective bargaining has not only been upheld by the government of the United States, but steps have actually been taken under Federal guidance for its institution.

One other great principle has received the support from the War Labor Board—that of the basic eight hour day. The Board has never declared itself for the basic eight-hour day, and as with the question of a living wage, awards shorter hours according to the particular controversy. But wherever it has been proved that government necessity, the health and welfare of the workers, or the custom of the locality require it, the Board has granted a basic eight-hour day.

The awards of the Board have established a nation-wide precedent for the stabilization of industry as it is affected by labor unrest. Many employers, realizing both the wisdom and the power of the Board, have settled with their employees before such disputes as existed between them could come under its jurisdiction. Workers, aware of their rights as defined under the Board's constitution and by its practice, have adjusted their grievances with the employers, or have agreed to bide their time, peacefully at work, until their cases could be heard for arbitration.

This Board is perhaps the first effort of the government to establish, for any period of time, an agency to promote industrial peace on a nation-wide scale.

To guide itself over troubled waters, it was necessary for the government to define temporarily at least some unified industrial policy. The constitution and the practice of the Board are interesting in that they indicate steps which were inevitably taken for the stabilization of industry which the unusual situation of the war imperiled.

Chapter I.

ORIGIN OF BOLSHEVISM.

"I HAVE noticed that the men who write most abundantly about Russia and with the greatest assurance are those who have just arrived," was the comment embodied in a report written from Petrograd not long ago by Frederick M. Corse, General Manager in Russia of the New York Life Insurance Company, and an American who had lived there for seventeen years.

Of a certain well-identified class of professional writers this observation is unquestionably true. An especially notorious example is found in a book published in New York early this year. Full of theorizing and a priori conclusions, the volume purported to present the Bolsheviki as the great regenerators of a decayed society. The writer of the introduction was an American magazine writer, who, by dint of long self-advertising, had contrived to gain national prominence. What was the extent of his experience in Russia? He had been there, it is privately said, just *eighteen days*. Returning to America, he at once posed as a noted authority on Russia under Bolshevik power. In his speeches to various groups, designed to influence popular opinion, he glorified the wondrous new industrial civilization that the Bolsheviki were establishing.

This is a characteristic, not an exceptional instance. Already book after book, magazine article after article on Russia has been run hot off the presses. Their authorship and views are various, but their substance is much alike. They rehash the story of recent successive revolutions in Russia, "playing up" the dramatic features and filling in the rest of their padded space with trite political generalizations, with an injection of what their authors think is real Russian atmosphere—the latter for the sake of "coloring."

HOW HAS BOLSHEVISM WORKED OUT?

Inquiring people, however, do not want repetitions of the story of political events in Russia. These they have been able to glean sufficiently from the newspaper despatches at the time of their happening. The Bolshevik movement has proclaimed itself as an epochal industrial revolution. It scorns being called political. Behind it and actuating its leaders is an elaborate set of transplanted theories. How have these worked out? What are the actual results of their application?

This is what the world most wants to know, and this is the information it has not obtained. Some of these popular writers have not lacked the understanding that a theoretical industrial experiment was being attempted on a large scale in Russia. But they could not forego their unfortunate habit of feverishly rushing out books. To wait until a movement has sufficiently developed its character and then painstakingly assemble the facts takes time and patience and a particular ability.

Hence from these published works we learn nothing or almost nothing of the specific facts that we would most like to know. Of the results of Bolshevik theories applied to land, railroads, finance, industry and to life in general hardly an informative word. Even when some sparse data are given their source is suspiciously of partisan origin. The author of one of the few books that does give some consideration to the economic aspects of what is heralded as a mighty industrial revolution was piloted around Petrograd by another American who was an adroit Bolshevik emissary. This visitor saw only what he was allowed to see.

All of these classes of writers can, however, say that they were contemporaneously in Russia. This is more than can be said by other groups of writers here in the United States who have been busily occupied in either creating Bolshevik sentiment or something akin to it. Their not having been in Russia could be passed over if, like President Wilson, they had tried to get information from reliable persons coming from there.

But this special coterie of writers have studiously avoided doing this. From the outset they have welcomed the Bolshevik movement as a great innovation, apparently convinced in advance that the results fitted in with the theories. Numbers of these writers are of that precious circle popularly dubbed as "highbrows." They call themselves "liberal intellectuals" or vice versa. Their imposing command of rhetoric gives a ponderous air of solidity to their writings. Others of this general group here, although personally distinct from it, are certain Socialist Party writers and leaders. With extreme bitterness did they not so long ago denounce and oppose Bolshevik theories. But once the Bolshevik movement attained ruling power they, like the parlor intellectuals, hailed it as the rising order. The very movement that was disreputable out of power became endowed with extraordinary attributes when in power. This power, as is well established, was obtained in Russia by means of German aid and backing.

It may be asked how these groups could formerly have opposed Bolshevism when, as matter of fact, the Bolshevik regime has been in power only a year.

I. W. W. GENESIS OF BOLSHEVISM.

Bolshevism was preached in the United States years ago but under other names. It was called either Syndicalism or I. W. W. propaganda, which were more or less synonymous. The I. W. W. took its doctrines from Syndicalism, which in turn was, to a considerable degree, of anarchistic origin. In a pamphlet on Syndicalism, written in 1913 by Emma Goldman, this definition is given (page 7): "Syndicalism is, in essence, the economic expression of Anarchism." Originally, the industrial union movement in the United States was not connected with anarchist ideas, but later—about 1910—it came distinctly under anarchist influence. The I. W. W. advocated "direct action," which meant sabotage. It insisted upon the general strike and control of industries by workingmen's committees. It fiercely assailed what it termed "bourgeois morality," and demanded the overthrow and extermination of the "bourgeoisie." This particular philosophy was based upon two main premises. One premise was that any means, however underhand, violent or bloody, was justifiable in overthrowing existing society. The other premise was that every man (or woman) was born with equal ability, and that committees of workmen could at once step successfully into the technical and administrative work of running industries.

It was from this movement in the United States that many of those who are now Bolshevik leaders in Russia absorbed their doctrines. Vladimir Shatoff, head of one of the Bolshevik Counter-Revolutionary Commissions, is an example. When in the United States he associated with the very lowest elements of the I. W. W. In decreeing slaughter on a widespread scale, his powers are entirely independent of Lenine and Trotzky, the chiefs of the Bolshevik Government. The same is true of Jacob Peters, head of another such commission. Peters' office, backed by an army of Red Guards at his call, gives him absolute right of decreeing life or death. Often he signs death decrees without looking at the papers. Trotzky and many other Bolshevik leaders were under I. W. W. influences while here in the United States. August Wesley, Chief of Staff of the Red Guard in Finland, was formerly an I. W. W. agitator in Seattle, Wash. Yijo Sirola, who was Bolshevik Minister of Foreign Affairs of Finland before the Germans came in, had been an I. W. W. strike organizer in Illinois. These are but a few examples of I. W. W. antecedents. Of the seventy-two persons composing the Central Soviet at Moscow, eleven are authoritatively said to control it. These eleven powerful men all returned to Russia from the United States. Upholders of the Bolsheviki deny that the Bolshevik leaders are Syndicalists, although admitting that many Syndicalists go to the Central Soviet and to the Local Soviets.

ILLITERATE AND UNDEVELOPED.

According to the Russian Official Statistics for 1917, Russia (as it then existed) had a population of 178,378,000.

771 of every 1,000 population were peasants.

107 of every 1,000 population were city people.

23 of every 1,000 population were Cossacks.

15 of every 1,000 population were noblemen and members of the gentry.

5 of every 1,000 population were clergy.

There were nine persons to every square verst (threequarters of a mile).

Russia had more than 100 languages.

75 per cent. of the people were farmers.

10 per cent. of the people were industrial.

4½ per cent. of the people were domestics.

3½ per cent. of the people were commercial.

Of every 10,000 soldiers 6,110 were illiterate.

About 6,500,000 or 4 per cent. of the people went to public schools.

About 65 or 68 per cent. of the entire population was illiterate.

In 1916 Russia, then about three times larger than the United States, had only 48,955 miles of railroad. In the same year the United States had 249,992 miles of railroad, not including 85,581 miles of yard track and sidings.

Russia, in 1915, had only 149,906 miles of telegraph lines, including police, railway and private lines. Continental United States had 238,940 miles of telegraph lines. In the same year Russia had only 18,760 post offices. Continental United States had 55,934 post offices.

These are some facts throwing light upon the backward and politically and industrially undeveloped situation of Russia, with its vast mass of uneducated people. It is in such a country,

needing the greatest possible intelligence and practical methods of development, that the Bolsheviki set out to try their theories and compel their acceptance.

Chapter II.

LAND, FACTORIES AND BANKS.

The first application of the "committee method" was to the Russian army. There it was that the theoretical scheme of selection by mass elective vote was put into operation in company or regimental meetings. Case after case actually occurred where a regimental commander of the rank of Colonel would be "elected" cook, scavenger or to some other menial post. Burly, mouthy self-pushers, knowing nothing whatever of military art, would be elected Colonels.

"Discipline," wrote Lieutenant Boris Schumanski, a Russian journalist and soldier, in the *New York Tribune*, March 31, 1918, "was supposed to be maintained by committees made up of the soldiers themselves. Every order given by an officer appointed by the committee, could be made the subject of an appeal from the soldier to the committee, and of a political campaign in the company. Politics ran rife through the army. Men became generals because they were orators. . . . . The new illiterate generals forced many [of the real officers] to do menial work in and around the barracks. . . . The result was hundreds of suicides of real officers in Petrograd."

No doubt much of this practise was encouraged by the Germans with the object of completely demoralizing the Russian army. But as for the basic doctrine of the "committee system" itself it far preceded the war. It was nothing more nor less than I. W. W. doctrine, as everyone familiar with the I. W. W. in this country knows.

BLOODY VILLAGE CONFLICTS OVER LAND.

With the Russian army demobilized and demoralized, the soldiers—mostly peasants—gradually found their way back to the villages, after many of them had stayed in the cities to loot. They carried back rifles, machine guns, batteries and munitions which they claimed as their private property. Regiments in the Russian army, it should be explained, were formed of men from the same or contiguous villages. What has happened since their return? Decrees of the Central Soviet, headed by Lenine and Trotsky, give the impression that the land has been equitably distributed in an orderly way. But these are merely paper decrees. Lenine and Trotsky have little or no power outside of Petrograd and Moscow to which their armed force is mainly confined. Villages have quarreled over which should have possession of land, and have been turning machine guns on one another to settle the dispute by force.

Under the agitation and decrees of the Bolsheviks there set in a universal passion in Russia for unions and committees. According to Samuel Lovich, a Columbia graduate who returned to New York early this year from a trip through Russia for a syndicate of New York exporters: "There is a union of housemaids, a union of janitors, a union of assistant janitors, a union of porters. In each apartment house the tenants form a union against the landlord and strike when he raises the rent. When I say the union of janitors, I should qualify it by saying that in Odessa, where this union went on a strike, one of the demands which they obtained was that they should no longer be called 'janitors' but 'inspectors of homes'."

Fantastic as part of this account may seem it is an understatement of what has actually been happening wherever the Bolsheviki have been temporarily or continuously in control. A well-informed Russian Socialist, a university graduate, who was in Petrograd at the time and recently arrived here, narrates a typical instance of "committee control."

SCRUBMAN ELECTED HOSPITAL CHIEF DOCTOR.

Number 6 Union of Towns Hospital is one of the largest hospitals in Petrograd. It contained 3,000 beds. When the Bolsheviki forced their way into power, this hospital was one of the many institutions where self-constituted committees were immediately formed. In this particular hospital the committee was composed of waiters, janitors, nurses, scrubmen and yardmen. It at once deposed the Chief Doctor, making him a scrubman, and it elected a scrubman Chief Doctor. Later there arrived a trainload of soldiers sick with scurvy. When they were taken to the hospital, the scrubman "Chief Doctor" tried to treat them but finally had to admit he couldn't. He thereupon called the deposed Chief Doctor, and ordered him to attend them. "Oh! No," replied the real Chief Doctor, "you've made me scrubman and that's all that I'll do. I'm scrubman now." Indignant at this tragical farce, a number of the patients rose from their beds, seized their crutches and slew the Bolshevik committee.

When, upon seizing power and by machine guns and bayonets preventing the Constituent Assembly from meeting, Lenine and other Bolshevik leaders denounced parliamentary government as "a deception upon the working class" that was but repeating the I. W. W. slogan long current in this country. The Bolshevik repudiation of Russia's national debt was a doctrine taken from the I. W. W. which long preached repudiation of all contracts. The Bolshevik demand for a bitter, sanguinary class conflict was taken, also, from the I. W. W. which had taken its class conflict program essentially from the Socialist Party. But where the Socialist Party avowed belief in political action, the I. W. W. and their pupils, the Bolsheviki, demanded one kind of control and one only. That was direct control of all economic and governing functions by workingmen and their committees.

This theory they have applied to railroads, street car systems, banks and factories. With what results?

Professor Ludovic H. Grondys, a Socialist, gives much first-hand information gathered during a long tour of Russia recently. At the outbreak of the war he was Professor of Physics and Mathematics in the Technical Institute of Dordrecht, Holland, and also one of the editors of the University Review of Philosophy, Holland. He is now correspondent for *L'Illustration* and *Le Temps*. En route to Siberia, he was in New York in October, 1918, and there gave me ample details of the Bolshevik experiment.

CRIMINALS LARGELY IN CONTROL.

"Almost all the Bolshevik leaders," he said, "are people who have returned from America. These were supplemented by an immense swarm of criminals released from Siberia, as also liberated criminals from the prisons in Moscow, Petrograd and other places. A certain number of those exiled to Siberia under the old regime were political prisoners but a far greater number were actual criminals.

"The first thing that these did after getting back to Russia was to burn courts and police courts. They thus destroyed records and Rogues' Galleries. With the records of their criminality destroyed, they could safely pose as political martyrs. With great assurance they did so. This explains why so many criminals became Presidents of Soviets, and this helps to explain also the bloody conflicts between villages, and why so many criminals are in control. Every town and village has the right to have a Revolutionary Tribunal, and can decree anything it pleases. All laws have been abolished. Only those having certificates of being thoroughgoing Bolsheviki can be elected to Soviets or Revolutionary Tribunals. The principle (!) prevails everywhere that 'Anybody who has been in Siberia and has suffered from the law ought to know something about it.'"

While on the subject of the criminals running Russia, it is well here to advert to a description of some of them given by General A. Dobrajanksky who recently arrived in New York City as the representative of a group of united Russians. General Dobrajansky says:

"As an instance of the calibre of men composing the various Soviets, (self-elected representatives of the Workmen's and Soldiers' Committee,) let me cite a few names of the members of the Soviet of Blagowestchensk. We have the President, Tobelson, a German spy, ex-jailbird and robber; Mochin of the Executive Committee, a deserter from the Russian Army, a counterfeiter and ex-jailbird; his assistant, Tchatkovsky, also an ex-jailbird; Commissioner of Prisons Emilianoff, ex-jailbird and robber; his assistant, Nakileff, previously condemned to jail for robbery; the Commissioner of Food, who was convicted for misappropriation of funds; Korovin, Commissioner of Schools, an ex-jailbird; Tillick, convicted for robbery, now Commissioner of Finance; Mithin, Commissioner of Militia, an ex-jailbird, and finally, we have as Commissioner of Health an illiterate peasant. And these are the men who are at the head of affairs in Russia today!"

To return now to Professor Grondy's statement:

"Does the Soviet system represent the people's will? you ask. It does not. It is forced on the people. There are no real elections. The Bolsheviki use the Red Guards to pack assemblies and force their candidates. Voters are exclusively Bolsheviki, and only Bolsheviki or those having no property can be eligible to office. This claim of Bolsheviki being propertyless is not true. Many of them have amassed money. In all my tour I met only a few of them who were honest. School-masters are not eligible for Bolshevik village Soviets. They are too intelligent, and are regarded as intellectuals."

ARMED ANARCHY IN FACTORIES.

"Soviets have been the great craze. Every great apartment house has a Soviet. Every factory was put under the domination of a so-called Council of Workmen. I personally saw the application of the theory to many factories. For example, Koopp's agricultural machine factory employing 500 men at Alexandroffsky, near Rostoff. The Council of Workmen in this factory voted to make Koopp an employe at 500 roubles a month, and made one of the loudest talking workmen (who was also President of the Soviet) Director of the factory. They voted themselves salary increases of from 800 to 1,000 per cent.

"Every day the workmen held meetings, sometimes lasting several hours, in the factory. There they discussed their rights and privileges but the words duties and obligations were unknown to them. They also voted themselves the right 'as an intellectual necessity' to read newspapers during supposed working hours. Nominally they 'worked' eight hours, but literally not more than four and a half a day. But they paid themselves for all time spent in meetings, reading newspapers and loafing. The funds they obtained by rifling the factory vaults, and when they were empty, they went to Koopp's house and to the banks where he kept his private account, and under threat of using arms, took away what money remained. In all, they seized about 1,000,000 roubles. Many of his workmen were members of the Red Guard. If one of these Red Guards stayed at the factory twelve hours a day with his rifle he would put in a claim for overtime and had to be paid from the factory funds. Workmen brought in their girls to the

Executive Committee

On the part of the Public:

WILLIAM HOWARD TAFT New Haven, Conn.
JAMES GIBBONS Cardinal, Baltimore, Md.
FRANKLIN MacVEAGH (former Secretary of the Treasury), Washington, D. C.
ELIHU ROOT (former United States Senator), New York City.
ANDREW CARNEGIE (Philanthropist), New York City.
ROBERT BACON (former Ambassador to France) New York City.
NICHOLAS MURRAY BUTLER (President Columbia University), New York City.
CHARLES MAYER (War Charities), New York City.
FRANCIS LYNDE STETSON (Attorney), New York City.
MARCUS M. MARKS (former President Borough of Manhattan), New York City.
WHEELER P. BLOODGOOD (Attorney), Milwaukee, Wis.
THEODORE MARBURG (Political Economist), Baltimore, Md.
FREDERICK L. HOFFMAN[4] LL. D. (Statistician), Newark, N. J.
BENJAMIN IDE WHEELER (President University of California), Berkeley, Cal.

On the part of Employers:

NICHOLAS F. BRADY (President New York Edison Co.), New York City.
TIMOTHY E. BYRNES (France and Canada Steamship Corporation), New York City.
LOUIS A. COOLIDGE (Treasurer United Shoe Machinery Corporation), Boston, Mass.
GEORGE B. CORTELYOU (President Consolidated Gas Co.), New York City.
HENRY P. DAVISON (J. P. Morgan & Co.), New York City.
T. COLEMAN du PONT (Chairman Executive Committee Equitable Office Building Corporation), New York City.
OTTO M. EIDLITZ (Building Trades Employers' Association), New York City.
HALEY FISKE (Vice-President Metropolitan Life Insurance Co.), New York City.
SAMUEL MATHER (Pickands, Mather & Co.), Cleveland, Ohio.
H. E. MILES (President Racine-Sattley Co.), Racine, Wis.
OGDEN L. MILLS (Director International Paper Co.), New York City.
GEORGE M. REYNOLDS (President Continental and Commercial National Bank), Chicago, Ill.
A. H. SMITH (Regional Director of Railroads, Eastern Region), New York City.
FRANK TRUMBULL (Chairman Board of Directors, Chesapeake & Ohio Railway), New York City.
THEODORE N. VAIL (President American Telephone and Telegraph Co.), New York City.
HARRIS WEINSTOCK (Weinstock-Nichols Co.), San Francisco, Cal.

On the part of Wage Earners:

JOHN R. ALPINE (General President United Association Plumbers and Steam Fitters, U. S. and Canada), Chicago, Ill.
JAMES DUNCAN (President Granite Cutters' International Association of America), Quincy, Mass.
JOHN GOLDEN (President United Textile Workers of America), New York City.
SAMUEL GOMPERS (President American Federation of Labor), Washington, D. C.
TIMOTHY HEALY (President International Brotherhood of Stationary Firemen), New York City.
W. G. LEE (President Brotherhood Railroad Trainmen), Cleveland, Ohio.
WILLIAM D. MAHON (President Amalgamated Association of Street Railway Employees of America), Detroit, Mich.
T. V. O'CONNOR (President International Longshoremen's Association), Buffalo, N. Y.
[illegible] (President Order of Railroad Telegraphers), St. Louis, Mo.
[illegible] (Acting President, Brotherhood of Locomotive Firemen and Enginemen), Cleveland, Ohio.
[illegible] (Grand Chief International Brotherhood of Locomotive [illegible]), Cleveland, Ohio.
[illegible] (President International Brotherhood of Teamsters), [illegible].
[illegible] (General President Boot and Shoe Workers' Union), [illegible].
[illegible] (President International Molders' Union of North America), [illegible].
MATTHEW [illegible] (President International Photo Engravers Union), Chicago, Ill.

AND MEMBERS OF EXECUTIVE COUNCIL

CLOSER UNITY OF LABOR AND CAPITAL. The outstanding result of the war in the industrial field is the greatly increased recognition by both employers and employees of an integral community of interest. That the harmony maintained during the war is not only to be continued but augmented is shown by the recent utterances of Samuel Gompers and a number of large labor organizations on the one hand, and by various preeminent leaders of industry and powerful commercial bodies on the other. This unity of purpose was all the more emphasized when, about a month ago, the president of a large manufacturers' association declared that wages would have to be reduced. Representing labor, Mr. Gompers served notice that organized labor would resist such an attempt to the full extent of its power.

From many quarters there has since come the most gratifying proof that the announcement made by the head of that manufacturers' association was representative of himself only. Many employers throughout the country have declared their opposition to summary wage-cutting, pointing out the injustice of such a course to labor while the cost of living remains at its present high standard.

The attitude of large employers, as shown by a succession of happenings within the last two weeks, goes, however, much further than a declaration of dissent to wage reduction. It has evinced the most sincere aim toward establishing broader and juster relations with employees, and laying further foundations for the mutual recognition by so-called capital and labor of the rights of each other. Convincing evidence of this sentiment is embodied in the program submitted to the United States Chamber of Commerce by its Industrial Committee at the meeting at Atlantic City, by resolutions adopted by the New York Chamber of Commerce, by statements made at the dinner of the Academy of Political Science by Charles M. Schwab and F. A. Vanderlip, and by addresses by John D. Rockefeller, Jr., and other captains of industry throughout the country. It is immaterial that in these resolutions, proposals and speeches there are all kinds of ideas, some practical, some impractical, others vague about how to produce this better state. The essential point is that they are all committed to an attempt to work for a bettering of our industrial conditions.

Carrying out the position of the American Federation of Labor that labor is not a commodity, but that all wage-earners should be treated as human beings, the Committee on Industrial Relations of the New York State Chamber of Commerce, which represents the richest and most powerful industrial and financial district in the world, has presented a report, declaring:

"Wage-earners as a class must be given an opportunity to count as men and women in the vital management of their industries in whatever position they may be qualified to count. This is the more necessary at this moment, since so many wage-earners will be returning from our active campaigns against the enemy, where men have counted as never before in the history of warfare."

Judge Gary in an address before one hundred and forty leading steel manufacturers of the country, members of the American Iron and Steel Institute, after predicting that "the next five years in this country will be the most progressive, prosperous and successful in our history," came out unreservedly in favor of a reduction of prices of their commodities, beginning January 1, 1919, and against a reduction in wages. On the wage question he said:

"For one, I believe we have not been paying more than was proper and just. The necessary costs of living have been growing and unless and until they are reduced it would seem that on the average the present wages are reasonable.

"Judging from the past, all of us believe we should not commence to make reductions at the point of wage rates; sacrifices must previously be made by employers. Our employees must continue to be treated liberally with respect to their compensation and general welfare. We will continue to show them that it is our intention to consider their merits, and to treat them as associates and valuable assistants in our work. We should give no cause for reasonable complaint or unfavorable criticism."

When E. H. Gary, president of the corporation which is the largest employer of labor in this country, John D. Rockefeller, Jr., the next largest employer, Charles M. Schwab, one of the largest employers, and Samuel Gompers president of the largest body of workers, all announce during the same week the same general broad views, there is certainly excellent ground for optimistic feeling as to our industrial future.

NURSING THE VIPER. In a recent statement of his policies, Premier Lloyd George declared:

"After what has happened in the last four or five years it is impossible to entertain in our midst a population of which a considerable portion abused our hospitality. This has been demonstrated by evidence impossible to ignore. They spied and plotted and assisted Germany in forming plans for the destruction of a country which offered them hospitality. They thus have forfeited any claim to remain."

There are detained at Fort Oglethorpe a small army of alien enemies—men who sought to serve the Kaiser and aid the German cause by every species of treachery, espionage and outrage. Before America entered the war they had already begun conducting warfare against us within our midst. After we entered the conflict, and as long as it was possible for them to do so, they sought in every way to negative our part in the struggle. They destroyed munition plants, factories, trains, storage warehouses and other property, incurring the loss of American lives. They fomented strikes. They promoted and secretly financed pacifist movements and encouraged resistance to the draft. They spied upon us, and plotted for our undoing. What shall be done with these treacherous underhand foes?

Already movements have begun agitating for the release of this host of enemy aliens—some of them bankers representing great German interests, others merely dynamiting henchmen and common spies. The Germans in this country have begun a spectacular display of crocodile tears, and with maudlin blubberings have joined the chorus of the "uplift fraternity" for mercy and pardon for all war prisoners. The foe has been beaten; therefore let him be forgiven. The intrigues of the plotters within proved fruitless; therefore let them be released instanter from prison. Why persecute with punishment an unsuccessful, repentant foe? Thus the appeals to cheap sentimentality go on.

Many citizens believe that entirely too much lenience was shown the men who were as actual enemies of the United States as the Huns in the trenches. Shall these interned aliens, when peace is declared, be permitted to go their own sweet way? America suffered more from the reptile Huns who violated our hospitality than did Great Britain. If Great Britain has reason to exclude them, America has a thousand-fold more cogent reasons. From the creatures of Bernstorff and von Papen this country can never expect any good.

Germany, though beaten, is not repentant. Only the other day Premier Ebert, addressing the Prussian Guard upon its arrival in Berlin, declared: "Your deeds and sacrifices are unexampled. No enemy overcame you." Daily reports come that the Germans do not admit defeat and claim virtual victory. The *Kolnische Volks-Zeitung*, protesting against the exclusion of Germany from a League of Nations and the

position of indemnities for damage done, says: If Germany had the guilt of the war upon her conscience, this demand would be a just atonement; but the whole German nation denies these accusations." Defiant in her defeat and brazen-denying her guilt Germany's immediate concern is to get the most favorable peace terms she can possibly secure. But her eyes are fixed upon the future. The Friends of German Democracy, an organization of loyal Americans of German extraction, which is well advised as to what is going on, in a recent bulletin, says: "The warning of Attorney-General Gregory that a new type of pro-German propaganda is rising its head again in this land did not surprise us. . . . Their purpose is, of course, to make the half converted regain confidence that 'the good old Germany' will rise again, and to implant in those who follow the seed of discontent."

Let it not be supposed that because the war has ended, that the machinations of Germans here are concluded. As a matter of fact, Germany, having lost on the battlefield and on the sea, will now resort to guile on a scale infinitely greater and more subtle than ever before. What we can expect in the future is shown by what Germany and Germans have done here in the past. A. Mitchell Palmer, in a recent speech, made startling revelations of the unscrupulous tactics used by German capital to get control of industry in this country. Deputy Attorney-General Alfred L. Becker, of New York, discovered Dr. Albert's plan, partly carried out, of securing a monopoly of all available shipping space for several months after the end of the war so that Germany would be able to dictate the condition on what she would buy foodstuffs and raw materials in the United States. Today, in order to get a tolerable peace by playing the Allies off one against the other, the German propaganda is seeking to alienate the Allies and especially to estrange the American and Allied governments. Having secured the best peace term possible, it is on the cards that Germany, the moment peace is concluded, will begin her carefully and scientifically mapped out program for commercial rehabilitation. Will she train a new school of commercial agents, spies, marplots and propagandists? Or will she not use those expertly trained in her name? Already her line of after-the-war propaganda is indicated. She will seek, in every way, to sow seeds of internal discord and strife. She will seek to promote internal revolutions in countries where it is to her interest to do so; she will play upon racial or national animosities and continue as the trouble maker of the world. She will endeavor, by every artful devise, to destroy concord between America and Great Britain. She will foster the propaganda about the "yellow peril" and endeavor to embitter the Japanese against us. Will she select novices to assist her in this task?

If any further evidence were needed, the disclosures made recently before the Overmann Committee in Washington should convince us of the world-wide scope of Germany's plans. Cunning and unscrupulousness are in her blood. Still unregenerate and untoward, her designs are treacherous.

Shall an easy and gullible sentimentality, a soft generosity, mislead us into nursing the vipers in our midst?

"It would lead to inevitable irritation and disturbance if Germans who have been fighting us for four years came here to take the bread out of the mouths of the men whom for four years they sought to destroy," continued Mr. Lloyd George, "and much as I regret that it is impossible to have free intercourse between all nations I hold we are up against the events of the last few years, for which Germany alone is responsible."

When the Hun soldiers went forth in an endeavor to fraternize with the American doughboys after the signing of the armistice, many declared that upon the conclusion of peace they intended to emigrate to America. Since then further reports from Germany tell of a concerted and growing movement to emigrate to our shores. Many of these Germans have relatives here who would assist them to emigrate, and will perhaps urge them to do so. One dominating motive will doubtless be a desire to escape the crushing burden of taxation and evade their share in paying the enormous war indemnities which will be levied. Germany will be in want of raw materials, wages will be low, food scarce and the cost high. Inevitably, the Huns, shirking payment of the just penalty for their crimes, will look abroad for more prosperous employment and more congenial, comfortable and well-fed conditions of living.

Shall we permit an invasion of Huns, of the men who shed American blood, when peace is declared? Shall we permit the race which rejoiced in the sinking of the Lusitania to come here to usurp the jobs which belong to the American boys who went to fight? Shall we suffer demoralization of industry, with lower wages, because of an influx of immigrant "square-heads" willing to work for any wage? Shall we permit the bestial hordes who ravished Belgium women and bayonetted little children to make their homes where American womanhood is held sacred and where innocent childhood is loved? Shall we take the enemy to our bosom, only to be stabbed in the back?

Will it not be the course of wisdom and self-preservation, upon the making of peace, to deport every interned Hun in America and forever forbid his return? Likewise, will it not be wise immediately to enact such laws as will prohibit for all time the landing upon American shores of all who have borne arms against the United States?

BOLSHEVISM IN ACTION. The article entitled "The Bolshevik Experiment In 'Industrial Government'" begun in this issue of The National Civic Federation Review is addressed to every thinking person, whatever his or her status in society, who cherishes liberty and values constructive social development.

It will contain nothing of interest to the Bolshevik propagandist because it contains only facts. Facts are utterly unimportant to that class of sociological adventurers who make a profitable business exploiting theories and panaceas.

The facts contained in this article are attested by men whose knowledge of conditions is first-hand. But that will not recommend the conclusions to be logically drawn to the attention of our wordy band of "intellectual" theorists. Their test of the truth or falsity of any statement is simple. Does the fact coincide with their theory? If it does not, the fact cannot be a fact, it is "an invention of the reactionary opposition."

Every evidence that has come from any responsible source proves more and more that the unutterable calamity which has come upon the Russian people has completely disorganized their social and industrial life, desolated their country and holds them under a bloody tyranny far surpassing the worst tyrannies the world has heretofore known.

Do these uncontroverted facts make any impression upon our pro-Bolshevik propagandists? They do not.

Among the supporters of Bolshevism in the United States we discern three more or less clearly defined types. One of these is a conglomeration of individuals of destructive tendencies instinctively scenting a longed-for opportunity to rush up and demolish existing restraints. The second is a scattering of weaklings who, in their wish for better conditions, eagerly grasp at anything without stopping to learn whether it is high explosive or not. The other group—and the most dangerous of all—is that which makes a self-aggrandizing cult of the "social uplift" enterprise. Though small in numbers it is, in general, the mouthpiece for the other two groups. These literary radicals are not risking anything in their support of Bolshevism. Their assurance and audacity would bring them sinecures in a Bolshevik regime, but the moment they thought Bolshevism had become a stigma and reproach in this country they would boldly disclaim their participation and seek some more congenial theory to exploit.

The difficult question to answer is—how much of this propaganda is made by fools and how much by knaves? In the face of such a horror as has resulted in Russia from the combination of German incitement and anarchist fanaticism, books, articles and pamphlets are being turned out here glorifying Bolshevism in its theoretical aspect and completely ignoring its actual results. Does this seeming determination to misinform the American people arise spontaneously?

The first essential of a conscientious social attitude is to understand well the nature of the thing we recommend. Not to do this is deliberately to mislead others, and perhaps involve them in disaster. With a complete disregard of the merest elementals of this principle, these self-styled "intellectual" liberals have been shouting Bolshevism without having the least idea of what it practically is, or without showing the slightest indication that they themselves know.

This article throws some light on the practical aspects of Bolshevism.

DANGEROUS CHURCH "ENTERTAINMENT." "And then, as far as organization is concerned, the average Russian workingman always is so vastly superior to the American workingman in discussing any sort of a problem. . . . I believe the average workingman of Russia reads more serious sociological, economic articles every day, than the average business and professional man reads here in a month." Such is a specimen gem taken from the twaddle of one, Albert Rhys Williams, who after a brief stay in Russia returned to the United States on the evident mission of trying to create a favorable public opinion of the Bolsheviki. Williams boasts of having made speeches from the same platform as Lenine and Trotzky in Petrograd, and describes himself as "an authorized messenger to the American people from Lenine and the Soviet Government." What does it matter to this driveling poseur that the Russian Official Statistics for 1917 showed that 65 to 68 per cent. of the entire population of Russia was illiterate? That only 4 per cent. of the people had been to public schools, and that of every 10,000 soldiers 6,110 were illiterate? That small part of the Russian workers able to read belong to the Menshiviki party which not only bitterly opposes the Bolsheviki but is being killed off by the Bolsheviki and is striking back whenever it gets a chance. Like all the rest of his shoddy tribe who boast of their "vision", Williams is incompetent to understand facts.

If these were merely hallucinations reserved for his own delectation, nobody would object to the weird contents lodged within Williams' cranium. But presenting such balderdash in churches to unsophisticated flocks is quite another matter. Recently, after Williams spoke at the Church of the Ascension in New York City, emotionally reeling out a tissue of assertions similar to the one quoted above, a resolution was passed favoring the recognition of the Soviets. On the strength of his airs and assurance Williams is getting access to other church congregations. The kind of entertainment supplied by the Williams type is of a brand that the authorities should note and take action on.

The Pan-American Labor Conference at Laredo

By CHESTER M. WRIGHT.

There was seen a great deal of the story of the past, the beginning of what will be part of the story of the future. Here were gathered representatives of the working people of two races—races which are not only possessed of different characteristics in themselves, but which, as typified in this gathering, come out of differing stages of social and industrial development.

Laredo, Texaxs, nestling on the American bank of the Rio Grande, was the scene of the gathering, which convened on November 13 and remained in session four whole days.

There are reported to be 100,000 organized workers in Mexico. This is 1.5 per cent of the population. And, considering Mexico as it has been and as it largely is today, the working population outside this 1.5 per cent has little if any effective voice in determining its conditions of life and culture. International relations of any kind cannot be considered properly without knowledge of and allowance for these facts.

In Laredo the Mexican workers were represented by about twenty five delegates. These men were workingmen, but they were not untutored workingmen. They were men of ability. Some of them were possessed of conspicuous ability. Oratory and the language of oratory were theirs in abundance. Cotton work shirts were no hindrance to fluency of tongue.These men represented the movement in which Mexico has its greatest hope. And yet, even these, presumably the boldest spirits, were clearly men feeling their way into liberty, spinning words in the devious ways of those who speak to be understood by friend and misunderstood by foe at the same time. Often they avoided directness of statement, often they spoke as men fearing some power at their back. Most of them probably stood for the first time in their lives on soil where they could feel sure of perfect freedom of utterance. But when all has been said, when the whole page of debits has been added up, the Mexican delegation was a remarkable delegation. It did magnificent work, it took its stand with American labor and it linked arms in permanency with the one force in the United States that can be of most service because it has no selfish motive.

Latin American workers got in Laredo a first hand impression of the benefits of organization as we know it. In future meetings of the same kind this impression is bound to be deepened. It must be remembered that at Laredo a permanent Pan-American Federation of Labor was organized. Conventions of this new international federation will be held yearly, the first being set for next July in the Republic of Panama.

Nearly all Latin American labor has been inclined towards Syndicalism—some of it very strongly inclined in that direction. The benefits derived from extreme radicalism in labor organization are extremely vague and doubtful. This has been especially true of Mexico, but strangely enough the tide has already set strongly in Mexico toward a more reasonable and solid type of labor organization. When the Carranza revolution was at its height, the great labor organization of Mexico was the Casa del Obrero Mundial (House of the workers of the world). This organization was strongly syndicalistic. It joined forces with the revolution and went so far as to secure a signed contract with the Carranza provisional government recognizing mutuality of aims and pledging support to the revolution because of that. This support it gave in the fullest degree, enlisting whole unions in the revolutionary army.

However, success of the revolution did not bring growth to the organization. It has steadily dwindled in size and strength until now the Mexican Federation of Labor is the great and dominant organization of labor in Mexico. This decided trend toward the right is one of the hopeful features in Mexico. It was the Mexican Federation of Labor which sent the majority of Mexican delegates to the Laredo conference.

Contact with the American Federation of Labor in successive conventions seem certain to result in a growing tendency toward adoption of sane and sound principles, toward a sound scheme of collective bargaining and toward a policy of education and stability among the membership of Mexican unions. Lack of stability has been a good deal of a characteristic in the past.

The Laredo conference adopted some rather striking resolutions. Two or three provide for joint action by American and Mexican labor in solving labor problems, one calls for the establishment of an organizing and educational center in New York. The most important bears on the coming peace and it follows in full:

> "WHEREAS, We, the delegates to the First Pan-American Federation of Labor Conference, meeting at such a critical time in the world's history, realizing that the problems now confronting humanity in the building of an enduring peace are no less acute than the problems of the war, and being deeply and fervently desirous that in the reshaping of the world's affairs the most critical consideration be given those principles that make for an enduring peace and create equality of opportunity for the people of all the nations, and,
>
> "WHEREAS, The time has arrived when the organized labor movement, with full understanding of its rights, its power and resources, its value and contributions to society, must bring forward its most profound, constructive thought, calculated to establish and insure the principles of true democracy, therefore be it
>
> "RESOLVED, That we declare that the following essential fundamental principles must underlie the Peace Treaty as well as the principles of all civilized nations:
>
> "A league of the free peoples of the world in a common covenant for genuine and practical cooperation to secure justice and therefore peace in relations between nations;
>
> "No political or economic restrictions meant simply to benefit some nations and to cripple others;
>
> "No reprisals based upon vindictive purposes, or deliberate desire to injure, but to right manifest wrongs;
>
> "Recognition of the rights of small nations and of the principle 'No peace must be forced under a sovereignty under which it does not wish to live;
>
> "No territorial changes or adjustment of power except in furtherance of the welfare of the peoples affected and in furtherance of world peace.
>
> "And be it further
>
> "RESOLVED, That in addition to these basic principles there should be incorporated in the Treaty which shall constitute the guide of nations in the new period and conditions into which we are entering, the foll wing declarations fundamental to the best interests of all nations and of vital importance to wage earners:
>
> "That in law and in practice the principle shall be recognized that the labor of a human being is not a commodity or article of commerce;
>
> "Industrial servitude shall not exist except as a punishment for crime whereof the party shall have been duly convicted;
>
> "The right of free association, free assemblage, free speech and free press shall not be abridged;
>
> "That the seamen of the merchant marine shall be guaranteed the right of leaving their vessels when the same are in safe harbor;
>
> "No article or commodity shall be shipped or delivered in international commerce in the production of which children under the age of sixteen years have been employed or permitted to work;
>
> "It shall be declared that the basic workday in industry and commerce shall not exceed eigh hours per day;
>
> "Trial by jury should be established."

In this resolution there is summed up the pur pose and essence of the Inter-Allied Labor con ference declaration in London last Septembe It also states the position of the American labo movement. Thus, the workers of Latin Americ brought themselves into agreement with the work ers of the world's democracies on the greates issue of the day.

There was a unanimous vote on this resolution though the Mexican delegation did a deal of talk ing and some caucusing before it cast its vote.

It should not be overlooked that throughou the conference there was wonderful unanimity While the Mexican delegation came with a se of proposals, adoption of which they made a con dition of their sitting in the conference, the abandoned half of their program—and still re mained. The fact is that, meeting the American face to face, they gained a new confidence.

It is expected that when the new internationa federation meets in Panama next July almos every nation on the American continents will b represented by delegates. For the first time real movement is under way to bring about ex change of fundamental thought between th peoples of this hemisphere. Out of it good mus come to the whole population. Fraternal rela tions mean exchange of ideals, exchange of ex periences, exchange of confidences and the gain ing of strength and knowledge.

When the gavel had fallen at Laredo for th last time, President Gompers summed up the re sults of the meeting this way:

"In thus bringing the people of the Pan American nations into a working relationshi greater promise is brought to all the people o North and South America. Understanding be tween peoples makes for accomplishment, just a it does between individuals. This conferenc has earned a permanent place in history as constructive effort.

"We have had here an example of popula diplomacy in which people of different races an different nations have met and talked out thei differences, finding themselves in harmony at th conclusion, prepared to go forward in unity o purpose for the greater gain of all.

"This Pan-American Federation of Labor comes into being at an hour in the world's histor when we need all of the intelligence and effor that we can muster for the right and for th development of the opportunities that have bee safeguarded to us by our glorious victory a arms.

"Labor of Pan-America has placed itself i accord with the labor movements of the grea democracies of the world. The mighty worl force thus knit together is one of the great hope of the world. Its full importance cannot b estimated today, but all who are here associate stand pledged to the fight for human advance ment. Labor redeems its pledges at their ful value.

"This conference and the federation her formed must mean more of life for the workin people of Pan-America."

Mr. Gompers was elected President of the new Federation by unanimous vote. John Murray member of the International Typographica Union, was elected secretary for the Englis speaking people and Canuto Vargas, member o the United Mine Workers, was elected secretar for the Spanish speaking workers. Headquar ters of the Federation will be established i Washington, where both secretaries will shortl become resident.

Shadow Huns and Others

By T. EVERETT HARRE

(In the previous issue, Mr. Harre analyzed the record of the "New Republic," "The Nation" and showed that Albert Shaw, in the "Review of Reviews" had accused the Allies of forcing the war to continue out of motives of extortion and revenge. Dr. Shaw actually asserted: "The concrete imperialistic programs of Russia, England, France and Italy hardened the German program of European domination into a definite reality, whereas it had previously been rather more a dream than a practical project."")

It was because of the Allies' confidence of winning and imposing the terms he has stated, that "Germany," according to Dr. Shaw, "felt herself forced to desperate measures"—the resumption of ruthless submarine warfare.

Referring to the *Review of Reviews* of March, 1917, issued a month before the declaration of war, one finds that Dr. Shaw condoned Germany's abrogation of her solemn agreement thus:

"Taking the view—as they must on both sides—that their very existence is at stake, they cannot forego any measure that would help to insure peace with victory." The submarine was the final "measure" to which Germany had been driven.

There followed this totally astonishing assertion regarding Germany's first appalling "measure" of the war:

"Germany had not the slightest desire or intention of inflicting harm on Belgium. She expected, afterwards, to pay damages for having violated Belgium's neutral rights."

Dr. Shaw accused the United States of not having been fair to Germany, and of having discriminated in favor of Great Britain. To Dr. Shaw, Germany's submarine policy was merely an "inconvenience." It was "far more inconvenient to Sweden and her allies—Norway and Denmark—and especially to Holland, than it is inconvenient to us," said he. The casual interpretation of the murdering of women and children on the high seas as an "inconvenience" is novel.

"We could have afforded well enough at the start," Shaw continued, "to make protests against all illegal acts, while warning American ships and American citizens to keep out of the danger zones that belligerents on both sides were unlawfully creating in waters contiguous to the shores of their enemies." Was Dr. Shaw endorsing the Bernstorff warning published as an advertisement before the sailing of the Lusitania, as well as the proposition embodied in the McLemore resolution? Germany was forced to resume unrestricted U-boat warfare as a reprisal for the British blockade. What was our own part and responsibility in forcing desperate Germany to this measure? According to Shaw:

U. S. DUPED CONFIDING TEUTONS.

"We told England * * * that we were going to be impartial and stand for neutral rights against both sides." The British "practices continued, and our Government did nothing more." And Shaw reiterated: "It is true that the British practices have led to the German submarine reprisals. * * * Here then, is the situation: The United States denounces as illegal certain practices, and declares itself the champion of neutral rights thus violated, solemnly stating that it will not submit to them. The British Government persists in these practices. * * * Germany is entirely familiar with our statements to Great Britain, and waits for many months in the hope that we may take some action to support our words." In other words: The United States made a bluff so far as England was concerned in the matter of protecting neutral rights. .We gave Germany to believe we would insist that England abandon the practices which finally forced Germany to submarine reprisals. We did not live up to our word, we deceived Germany, and permitted England to continue her practices; yet when Germany was driven to desperation we demanded, in fact, that she too submit to British aggression and desist from the use of her ultimate weapon. We were not neutral, and why? Dr. Shaw said:

"The banking interests were all committed to the Allied governments as agents for floating their loans or as concerned with contracts for supplies. THE PROSPERITY BOOM HAD ECLIPSED NEUTRALITY."

"We had gone far to conciliate England. * * * England had sea power and was using it illegally. Germany proposed to use a still more illegal form of reprisal. * * * England could have avoided this new submarine campaign * * * if she had chosen to pursue technically legal courses in her relation to neutral trade." Germany, therefore, was the injured party and England was responsible for the submarine measures which threatened to bring America into the war!

Dr. Shaw explained that the object of his resume was "to persuade our readers that for America to assume the status of belligerency just now would probably not serve the highest ends in the best way." For Germany and Austria "had ceased months ago to fight for victory, and their fight now is for terms of peace that will not be too intolerable."

NO AFFRONT MEANT IN SINKING LUSITANIA!

According to Dr. Shaw, America had "no avowed grievance against Germany except that she has created certain zones of terror in the seas." * * * "It would be useless to try to make the American people believe that an affront to us was intended, inasmuch as everyone knows that this is not the case."

Was the murdering of women and children on the high seas something less than an affront to us? Was Dr. Shaw unaware of the war which Germany was conducting against us on our own shores—in the dynamiting of bridges and railroads, the destruction of munition factories and ships, the fomenting of strikes, and the insidious underground work of an army of spies? Had he not read the papers of Dr. Albert, or the exposures of activities of Bernstorff and von Papen?

"Both sides in this war have created illegal zones in the high seas," Shaw continued, "have planted mines and have ordered neutrals to keep out of the way." * * * "We should have no clear reason for using the instrument of war, unless war should enable us effectively and at once to remedy that particular evil."

Inasmuch as he asserted the "particular evil" was committed by "both sides," did Dr. Shaw mean to imply that, if we could have ended it, we should have gone to war with both England and Germany? However, in Shaw's opinion, war would have been hopeless. "We have no soldiers to send against Germany's armies in Europe, nor has Germany any way of sending soldiers to fight on our soil." While, according to Shaw, we should have been helpless in war against Germany, "Germany could, however, immediately declare a danger zone along our Atlantic and Gulf seaboards from Halifax to Mexico, and could send twenty or a hundred submarines over to intercept commerce. It was not so many weeks ago that she sent the U-53 over to make a morning call of courtesy at Newport and to spend an afternoon sinking British ships outside the three mile limit."

Was this intended as a warning not to invoke the displeasure of the Hun overlords? Apparently, we had no course but to submit to the Huns' inhumane and barbarous decree.

AMERICA'S MEAN MOTIVES.

Was it because of Germany's aggressions on the high sea, because of the killing of women and children, that we went to war? Were we inspired by any high ideals in going to war?

Dr. Shaw admitted in the *Review of Reviews* of April, 1917, that Germany's violation of neutral rights on the seas had not in his opinion "supplied in itself a necessary reason" for our having gone to war. In fact, we used the sinking of passenger ships merely as a technical pretext to "throw off the pretense of neutrality."

Dr. Shaw said:

"Dominating forces and influences had determined that the United States should enter the European war as an Ally of the British Empire and France. From the standpoint of these powerful influences Germany's new submarine blockade of February merely afforded the occasion. * * * Presupposing our desire to enter the war, the submarine blockade could, of course, give us ample opportunity for inflaming the public mind by means of a great newspaper campaign, while affording in full measure those legal justifications that the official mind in Washington seems to regard as important. * * * The tremendous effort that was made in the month of February, and in the early part of March, to bring the United States completely into the war had its origin in the chief centres of business and finance."

It is there in black and white—in a magazine of wide circulation, reaching into American homes: the same familiar trite propaganda that Wall Street plunged the country into war, that the Allies were bent upon a program of loot, that Germany was forced by the illegal British blockade to the desperate employment of the submarine weapon. Just what was it that Rose Pastor Stokes and Eugene V. Debs said along similar lines that brought them ten and fifteen years' sentences?

HAD VIERECK, BILL HAYWOOD AND SHAW CARRIED THE DAY.

Today the world rejoices in such a victory as will guarantee all free peoples a secure and just future peace. What would have happened had Dr. Shaw been able to impose his ideas upon the American government in the crucial days when we had either to resist or submit to German aggression? What amity would there have been between America and the Allies had the *New Republic* idea of "divided counsels" prevailed—had we surrendered ourselves to insidious doubts and unworthy suspicions? What sort of peace would have come had the Allied councils been influenced by the views of the non-resistant Mr. Villard? Had Dr. Hale, Viereck, Jeremiah O'Leary, La Follette, Dr. Shaw, Bill Haywood, Victor Berger, Morris Hillquit and others had their way, Germany in all probability would not have been compelled to sue for peace. America would have kept out of the war in shameful submission to Germany, and the Kaiser in all probability would not today be a fugitive in Holland.

Sometime ago a book published by the Review

of Reviews Company, "Two Thousand Questions and Answers About the War," was exposed as a piece of subtle Hun propaganda. This volume interpreted the war a "fifty-fifty" affair, and ascribed the causes to historic wrongs — chiefly against Germany. It accused Great Britain of monopolizing the earth. The interesting thing about the discredited volume is that the line of pro-German argument parallels the point of view expressed editorially by Dr. Shaw in his "American" *Review of Reviews*.

At the time Dr. Dernburg was conducting his propaganda in America, M. B. Claussen, head of the German Information Service, secured a thirty-day option for the purchase of the controlling interest in the American Press Association. This enterprise, which supplies boiler plate matter chiefly to country newspapers, was available to the Germans for $900,000. The purpose of the German agents was to use the concern to fill American papers with propaganda designed to deflect the blame for starting the world war from Germany to England, to agitate for an embargo on the shipment of arms and munitions to the Allies as reprisal for the British blockade, to create anti-British sentiment and to keep America from going to war with Germany because of her submarine outrages. The deal did not go through, for a bigger possibility in the shape of a news service loomed in sight. The printing of propaganda matter for the German Information Service, however, was awarded the American Press Association. Mr. Courtland Smith, president and holder of the controlling majority of stock of the American Press Association, is a brother-in-law of Arthur Brisbane, and Dr. Albert Shaw is one of the directors of the concern. At least, despite the exposure of this proposition by the publication of the Dr. Albert papers in the *New York World* in 1915, Dr. Shaw, according to the 1918 Directory of Directors, did not resign.

The Class War Propaganda

Part II.

WHEN the great war broke out in August, 1914, the issues were immediately and distinctly clear to most right-thinking and intelligent people all over the globe. The neutrality of Belgium had been violated, France and Russia were assailed; imperial Germany, after forty years of preparation, had taken advantage of the Serajevo murder as a pretext to launch her long-nurtured onslaught for universal dominion. The Allied nations rose in self-defense to preserve their soil from invasion, to protect their women, to resist the yoke of a conscienceless oppressor. As one, they joined in a struggle to defend their sovereignty, their heritage of freedom, and to make democracy secure for the whole world. Germany's subsequent outrages but rendered past dispute what was foreseen when she first broke her solemn covenant by the invasion of Belgium. That struggle was bitter and at times seemed well-nigh hopeless and unending. England, France, Belgium, Italy and Serbia poured forth their blood. America, entering the war only after insolent and challenging attacks had been repeatedly made upon us, brought about the turning of the tide. Today German militarism is crushed; the haughty German autocracy is dethroned; the Teutonic dream of world empire has vanished as the smoke of battles.

Yet at this very hour there are still those among us who would turn this sorely-earned victory into defeat; who, in lieu of Teutonic world dominion, would shackle the free peoples with a tyrannous anarchic "internationalism," who, with the haughty German autocracy overthrown, would erect an autocracy of furious fanatics and bigoted zealots employing a life-and-death power derived from a cunning and artful demagogue play upon the passions and prejudices of the masses; who, with German militarism crushed, would plunge the nations into a reign of terror with mob-riot and mob-violence unleashed. These men speak in terms of social justice and reform—which is to be achieved through social chaos and disorder; they talk about making the future peace of the word secure—through revolution and red-handed wholesale murder. Their propaganda has now concentrated upon the so-called "war after the war," the class-struggle, in which the unskilled workingman will be at the throat of his employer, the illiterate roughling at the neck of every man educated in a profession, in which all the vicious, debauched and lawless elements of society will seek indiscriminately to destroy with knives, guns and bludgeons people of gentle breeding, of intellect and learning, of kindly culture. In America, as in every country on the face of the earth, they would precipitate what has happened in Russia.

THE SOPHISTRY OF THE SCRIBES

It is, of course, not surprising that these very hatchers of anarchy and revolution could not see those issues of the war which were vividly revealed to many of us in August, 1914; that they could not in any way hold Germany especially culpable; that in the sacrifice and agony of the Allied nations they could see only a squalid struggle for territories and revenge. Themselves knowing no country, no faith, no cause, they evaded taking any part, or making any sacrifice, in the great struggle. They were variously pacifists, conscientious objectors, and "internationalists." Preaching a class war to come after the war, they of course sought to evade service when the country in which they claim technical citizenship joined in the fight against Germany. Not only were they noticeably lacking in patriotism and devotion, but their work—at a time when it might have done so—was calculated directly to aid the cause of the world's supreme foe. Disloyalty they veiled in a maze of verbiage. Arguments and pleadings calculated to destroy national unity and morale, to dampen our enthusiasm in the war, to create doubts and suspicions of our Allies and to bring about a spirit of lenience, compromise and "magnanimity" toward Germany, were camouflaged in a high-flown intellectualism, a wordy sophomoric sophistry designed to impress the intellectually adolescent and amateur and professional "uplift" fraternity. This clique of sedition-mongers and scribes without a country did not harangue "in the market place"; they sought to reach college graduates, social workers, pacifist clergymen and fossilized college professors, not to speak of fledgling diplomats, academic and provincial government employees, advisers, etc., through ponderous, solemn and rhetorically involved writings in books and expensively printed magazines.

Germany has been beaten. Yet many who carried on Germany's work, consciously or unconsciously, paid or unpaid, are still actively at large. No direct service can be rendered the cause of the Huns; but service can be and is given the baleful cause which was inspired and promoted by imperial Germany in Russia. The little literary Lenines and Trotzkys are not without power and influence. Since the surrender of Germany they have become more insidiously active and brazenly outspoken than ever; they enjoy the ears of certain men in high places in Washington; some, indeed, have wormed their way into influential positions in the Government.

THE PROPAGANDA OF CIVIL WAR

Walter E. Weyl, as a writer, would not call for any particular consideration. He has never marked himself by any special brilliance or originality of thought, and as for his literary style—one might say he writes English like a German. His last book, however, "The End of the War," published by the Macmillan Company, is worth analysis because, through an involved subtlety and play upon stereotyped idealistic phrases, it expresses the whole philosophy, if such it could be called, of the *New Republic*, *Nation* and *Masses* school of thought. Between the covers you find embodied the whole propaganda of social ferment and revolution, Bolshevism, pro-German pacifism and "internationalism"—the identical propaganda imperial Germany itself fostered. The information has been volunteered that this book has influenced men in greater or less position in affairs of state, and various high-brow radicals have admitted it constitutes a sort of complete catechism in the program which aims at upsetting all existing social order. Dr. Weyl, who absorbed his ideas of political economy at the universities of Berlin and Halle, is an editor on the staff of the *New Republic* and spends much of his time holding forth in Washington.

Dr. Weyl's book was advertised on the paper jacket as "an appeal to America to assume leadership" in "the diplomacy that leads to peace," "to eliminate imperialistic elements from the demands of our Allies." The book is recommended by no less an authority than that distinguished exponent of true Americanism, Prof. Charles A. Beard, who in a book interpreted the birth of American independence as an attempt by George Washington and other Colonial plutocrats to enrich themselves. According to Prof. Beard: "Mr. Weyl draws swiftly under review . . . the plans of French, Russian, English and Italian imperialists for spoiling the enemy, Italy's ambitions, the war of new Russia against capitalistic imperialism, the faint hope of German liberalism, the inconclusiveness of a bitter-end peace, the sham of most of the 'guaranties' demanded by statesmen of the old school." Dr. Weyl is one of those best-unclassified self-pushers who have assiduously and slyly tried to propagate the idea that the great war was devoid of any ideals until they were injected by the entry of the United States. Yet, according to Prof. Beard, "he (Dr. Weyl) doubts not that mundane considerations have actuated America as well as Russia and Italy. Mr. Weyl wishes that President Wilson had imposed upon the Entente Allies certain democratic conditions as the price of America's cooperation. That, he is well aware, is crying over spilt milk. . . . Mr. Weyl begs us to listen to the voice of democratic moderation. To beat Germany to earth and then impose terms that will only lead to a new balance of power and renewed slaughter on a grander scale does not seem to him to be the task for which America has girded her loins."

In other words, here we find the doctrine that complete victory over Germany will somehow, in some way, at some future time lead to an even more frightful war than the war which German militarism produced.

UNCONSCIOUS BUFFOONERY

Dr. Weyl, as an exemplar of Christian meekness as well as other Christian virtues, must find himself in congenial company on the *New Republic*, which so modestly in full page advertisements—which must cost considerable money—announces itself as a semi-official interpreter of President Wilson's administration. Dr. Weyl, according to his own admission, wrote his book and "criticised certain actions of the Allied statesmen . . . in order to help bring a just international policy out of the present chaos of indecision." In this self-assumed and considerable role, Dr. Weyl says: "I am standing, I believe, 'behind the President.'" After examining Dr. Weyl's book one is impressed more than

ver by a fact demonstrated in the course of uman observation—to wit: that to stand be-ind a person does not necessarily imply that he motive is to give friendly support; that the ntentions and ways of standing behind a person re different, and are sometimes far from desir-ble so far as the passive individual is concerned; n fact, it is not unusual that the gentleman who neakingly, and uninvitedly relegates himself to he rear may have a foot upraised or may even ave his hand on a hidden knife.

Dr. Weyl, like Dr. Shaw of the "American" *Review of Reviews*, was of the opinion that the war was unnecessarily prolonged. Was this due o the malign intentions of an implacable Ger-nany? Oh, no! "During the six months from April 1 until October 1, 1917, and even after-wards, the war might have been concluded on the basis of internationalism and democracy," says Dr. Weyl in the "Postscript" with which he swaddles this dubious offspring of his brain. The Kaiser, of course, at the time this was written, was still shaking his "shining sword," the Ger-mans had not been in retreat through northern France and Belgium. They were willing, the dear democratic Germans, to make peace—as we all know, on their own generous terms. But with whom did the fault lay for not making peace "on the basis of internationalism and democracy" *a la Potsdam?* "By maladroitness, by diplomatic errors and by a display of callousness and insin-cerity, our Allies proved that they did not un-derstand and could not act. The Allies revealed an inelasticity, an intolerance of the new Russian democracy and a thinly disguised desire for con-quered territories that made diplomacy on a high level impossible."

HOW WE MIGHT HAVE NEATLY GROVELLED TO THE HUNS

To the Allies, and not to Bolshevik treachery abetted by German trickery, does Dr. Weyl lay the blame for the outrageous Brest-Litovsk peace. To "Italy's desire to gain hasty possession of coveted territory and lack of unity among the Allies," and not to revolutionary Socialist propa-ganda in the Italian army, does Dr. Weyl attrib-ute the blame for Italy's defeat in the fall of 1917. "By permitting, if not encouraging, Japan to invade Siberia, in circumstances which indicated that the proposed intervention was to be a predatory attack, our Allies set upon them-selves the stamp of imperialism," says the student of Berlin and Halle. "Statesmen in the Allied countries clamored for immediate ends, a profitable victory and a punitive peace."

President Wilson, back of whom Dr. Weyl as-sumed an ambiguous stand, "was a great man uttering noble sentiments in noble language, yet missing one chance after another to translate those sentiments into decisive action and to force adherence upon unwilling Allies." Before our declaration of war, says Dr. Weyl, "we might quietly have said to their Governments: 'Either revise your war aims in conformity with princi-ples of internationalism, so as to rob them of all tinge of imperialism and vindictiveness, or we will not join.'" By attributing to the Allies monstrous motives, as suggested by the wily Dr. Weyl, we should have had a pretext for conven-iently submitting to German submarine out-rages!

Dr. William Bayard Hale, the Kaiser's "kept" professionally "distinguished and pa-triotic American," went into the Socialist Party after returning to this country from Ger-many, where he had enjoyed felicitous inter-course with William II, the Crown Prince and Philip Scheidemann, with the announced pur-pose of aiding the Hillquit propaganda for a Lenine-Trotzky pro-German peace with "no an-nexations and no indemnities." Dr. Weyl, so far as we know, never rose to Dr. Hale's height in Teutonic bosom confidence and esteem, but he shared Dr. Hale's peculiar point of view. "When the Russian Republic published its formula of 'no annexations and no indemnities,' we should immediately have accepted, if not that exact formula, at least one that breathed the same spirit, and should have insisted upon its acceptance by the Allies." Did Dr. Weyl actually advocate that we connive at forcing our Allies into the same ghastly predica-ment that the Bolshevik envoys found themselves in at Brest Litovsk? Or was he intrigued by a naive predisposition to believe that the good bluff Germans were more to be trusted than the machiaevelian, insincere, grasping, cold-hearted men at the head of the Allied governments? America's chief trouble, apparently, was not with perfidious, treacherous Germany—not at all; our troubles lay in an alliance with nations that could not be trusted. "We have been silenced by what we were assured was the superior wisdom and the older experience of European statecraft," says Dr. Weyl. "In so doing we have involved ourselves in a grave and general error. We have forced ourselves to believe that we could fight for democracy and maintain the integrity of the Alliance despite secret arrangements violating the principles for which we fight. *We have be-lieved that we could trust to selfishness, enlight-ened and unenlightened, to overcome the brutal militaristic spirit of Germany.*"

WAGGING THEIR HEADS AND SCOFFING

"We believed that we could trust to selfish-ness, enlightened and unenlightened!" This is a conjuring phrase, an unwitting admission, a self-betrayal in words of idealism that is worth dwell-ing upon. Among all the nations which for four years valiantly "carried on" in that dire strug-gle, among the peoples who nobly labored with dry eyes and aching hearts to do their share, among the armies which braved the poison gases and fire of a fiendish foe, in all the tribulation, the bloody sweat, the agony and dying, the im-mortal sacrifice of fathers, mothers and sons, what was there?—*"Selfishness, enlightened and unenlightened."* This bald, sneering, cynical characterization of all those who resisted auto-cratic Germany is an ignoble calumny of the men who lie buried in the blood-stained sacred soil of France and Belgium, of Italy and Serbia, a jibe at the very ideals cherished in the hearts of our own boys who went forth to take up that fight. The marvel is that, in this day, one wag-ging his head could dare thus to revile and scoff at the spirit of humanity sacrificing itself upon the Calvary of that long war. The Huns in their furious onslaught in Belgium destroyed churches and defiled the sacraments. There are men who would likewise desecrate and deny in scornful derision the divine gleam-ings in the human heart. These are men whose laughter is bitter, the foam of whose mouth is rabid, who approach their fellow men only with a sneer behind their smile. Cynics contemptuous of men, disbelieving in any noble human virtues, in lieu of human kindness their hearts are filled with gall. Their nostrils quiver with an eager scent for human meanness. Behind all unselfish endeavors and self-sacrifice for ideals, they seek only for mean and sordid person-al—or national—motives. Incapable of national loyalty and devotion, like unnatural men incapa-ble of love for father and mother, they are strangers in the human family—intellectual pariahs and scavengers battening upon hatred, suspicion, strife and discord. To consider a thinking creature of our species as summing up the epic heroism of France, the giving by Eng-land of a million men upon that altar, as "selfish-ness, enlightened and unenlightened," is appall-ing. Yet it is valuable—as sometimes odious things are—in revealing a certain stripe of mind, in stripping bare the character of a breed of intellectual strangelings and spiritual aliens that have come up demanding a hearing, and seeking to deceive by subtlety, in our midst.

IS THIS BOLO-PASHAISM?

To pursue the self-revealment of the *New Re-public* mind nursed and milked at Berlin and Halle: "We have fought fire with fire and been burned in the process," Weyl goes on in words of a high-brow specious idealism: "We have kept our own skirts clean and not considered whether those of our Allies were clean or filthy. We have believed that an alliance could be half-moral and half-immoral."

Again and again, with gyrations and repeti-tions, Dr. Weyl evinces the twistings of a gnarled mind. He accuses America and the Allies—and not Lenine and Trotzky—of "having handed over Russia to the Germans." And he continues with the familiar defeatist stuff that long ago was inflicted upon France. "We have allowed the military supremacy to pass temporarily to the enemy. . . . We have created conditions where time no longer fights decisively in our favor and where the pressure of war begins to bear as heavily upon our associates as upon our enemies. We have robbed ourselves of the solace and unifying power of a great ideal, and have made it possible, both in the countries of our Allies and in those of our enemies, for the worst elements in the population to gain control."

Dr. Weyl, like "Dr." Walter Lippmann, his predecessor on the *New Republic*, was not at all optimistic about a complete military victory over Germany. In fact, did he consider such a victory desirable? Let Dr. Weyl answer: "Today we are again exhorted to shut our eyes, to offer no negotiated peace and accept none, to make no dis-tinction among Germans, all of whom are equally brutal and hypocritical, and not to think of peace until the enemy is prostrate, starved, shat-tered, beaten to a pulp. . . . We shall accom-plish nothing even if after unparalleled sacrifices we gain the supreme military victory and our khaki-clad soldiers march in triumph down the silent *Unter den Linden.*"

It is seen that Dr. Weyl shared the unique and anxious concern of Mr. O. G. Villard, Dr. Albert Shaw and others regarding the terms which the wicked Allies, if victorious, might impose upon a beaten, prostrate Germany. "If we and our Allies fight this war as we have fought it for almost four years, for Dalmatia, Constantinople and various Turkish islands, if we fight for a peace at which we at our own will and pleasure are to determine German and Austrian bound-aries as Germany now determines those of Russia, the war is lost . . . then we have an ignoble peace, and the war for democracy is a failure and our high pretensions are a mockery."

THE AGONY OF THE WAR A MERE "INCIDENT"

Despite Dr. Weyl's self-delegated and la-bored efforts to bring "a just international policy out of the chaos of indecision," Germany accepted the terms of surrender unanimously agreed upon and offered by the Supreme War Council at Versailles, and the world enjoys free breathing. Nor is it likely that the final peace terms to be decided upon at the Peace Confer-ence will be in any degree influenced by Dr. Weyl's busy friend and literary associate, Wal-ter Lippmann, who, despite "defeatist" state-ments in the *New Republic* that might well be investigated by the Department of Justice, man-aged to crawl into the Government employ and get sent abroad on a diplomatic mission.

However, whatever terms of peace are agreed upon, Dr. Weyl optimistically and with almost unconcealed malignance and glee predicts that harmony and concord among peoples will not be for long.

"The present war is but an incident, disas-trous and ghastly, in a larger development, in a struggle between two principles: the principle, of autocracy, militarism and nationalistic im-perialism, and the principle of democracy."

The war against Germany, then, was not in itself a war for democracy, as against autocracy, militarism and nationalistic imperialism; in the victory over Germany, therefore, there has been no complete and adequate victory over the forces opposed to democracy. This terrible, unprece-dented war, which counts its dead at more than

ten millions, is but an "incident." Inevitably the suggestion arises that if Bolshevism did sweep the world, that if the crew of malcontents and sedition mongers could carry out their program, the world would experience a bloody reign of terror compared to which, in truth, the slaughter in Europe would be a trivial affair. Dr. Weyl frankly wants this other war, the world war of class against class, to go on. The bloodthirsty revengeful program is veiled in the verbiage of humanitarianism and idealism. Weyl plays upon the appealing if cant phrase about the "poor and disinherited." He pleaded for a compromise peace with Germany, yet in this world war, this precipitation of internal strife and social chaos in every nation, he would not leave a stone upon a stone. He would have desolation upon desolation compass the world. It seems this fellow gloats upon the prospect. "The moment the war ends the struggle will change its form, though not its character. . . . Not only the autocracy of Germany, but the English, French and Italian rulers as well, have revealed crassly egoistic class motives concealed under pious phrases. The wage earners of the world and the hundreds of millions who make up the poor and disinherited will have long years in which to reflect upon the lessons of this conflict. . . . They will see the war beneath the war, and will realize that whatever the immediate issue, the victory is to the group in the community that is most conscious of its interests and most insistent upon its rights. . . . There will remain after the war the same clash within the nations as before."

AMERICAN BOYS SENT TO ENGAGE IN "A SENSELESS SLAUGHTER"

The war which has ended with the surrender of Germany is fruitless, and worse than fruitless, farcial. It is now easy to understand why so many intellectual pacifists, "conscientious objectors," possessing this point of view, could see no reason why they should risk their precious carcasses in a purely "incidental" affair. Among the peculiar stripe who read, and subscribe to the views of, the *New Republic* and the *Liberator* were many who failed to enlist, "slackers," evaders of the draft —little young men who preferred to write or to talk instead of taking a manly part in the great struggle. Some, like Roger Baldwin, were sentenced to prison for evading service in the army. Like Dr. Walter Weyl, many of these molly-coddle "world-reformers" found it more to their taste to impugn the ideals and purposes of those who were fighting and dying than to engage in any useful work. To the virile men who did enter military service, who did take up their obligations, Dr. Weyl, like the others, had merely the message to give that the war opened "up the vista of an endless prolongation of a senseless slaughter . . . the persistent hope of a victory that is always to be and never is." *A senseless slaughter! A victory that will never be!* Didn't Germany endeavor to tell the brave soldiers of France, through her sinister agents, that theirs was the "hope of a victory that is always to be and never is?" "To the common run of unmartial people," Weyl goes on, "the war has become odious." The run of "unmartial" people to whom the war, so long as it had to be fought, was odious is, I venture to say, severely limited—and among men of fibre and light, of courage and ideals, these would not be in congenial company. Was the struggle which America entered, and in which American boys went forth to fight and to suffer and die, in any sense or aspect for a noble cause, for high ideals? The associate editor of the *New Republic* says: "It is no 'merry war,' but a desperate, unhonorable conflict, a war of money, deceit, bribery, murder and ruthlessness both against neutrals and enemies." That, mark you, is the interpretation given by Weyl of what they engaged in with such high hopes and self-surrender to the American boys who are coming home maimed and wounded. That is the interpretation to fathers and mothers of the cause for which their sons made the greatest sacrifice, in the giving of their lives. That is the summing up of the mortal struggle and agony of many nations, by a man who would render the whole struggle futile by promoting "the class war after the war"—ergo, international Bolshevism.

"DANGERS OF AN ALLIED VICTORY"

In the "Postcript" to his book, Weyl condemned the Allies' "policy of fighting imperialism with imperialism" and accused them of forcing the war to continue when "in Germany itself a democratic movement was in full swing." On page 23 Weyl describes a group to which he had presumably qualified himself for admission: "Many idealists among the Allies expected that in a few months—in a year at most —they would overturn the Imperial German Government and confer upon the unhated German people the blessings which they themselves enjoyed. Better still, the Germans, perceiving the abyss toward which their dynasts were leading them, would themselves revolt." Dr. Weyl then makes an illuminating and startling admission: "None of all this has happened; on the contrary the Germans have made common cause with their rulers, and believe quite sincerely, that they, and they alone, are fighting for the right." Did Dr. Weyl enjoy this realization when he rose in his might and railed at the Allies for their wicked intentions toward the enemy which had "made common cause with their rulers?" Dr. Weyl plunges into a jeremiad:

"We have tried to hammer the enemy into a confession of sin and into a state of grace, not realizing that for this purpose machine guns and asphyxiating gas are no adequate instruments. Though we cannot win this war without arms, we cannot win it by arms alone."

While in one breath he admits "the Germans have made common cause with their rulers," Weyl in the next paradoxically declares: "In Germany many millions now perceive that they were enrolled in this conflict by a conscription of lies and that the real objects of their exalted rulers were different from those avowed." But Dr. Weyl hastens to add: "Similarly, though in a lesser degree, the Allied peoples are beginning to dread too complete a victory. . . . Divide all conquered territories according to the clashing desires of the flushed Allies and you have a state of Europe and the world of the world, no better than that from which men sought to escape in the insane venture of 1914."

Dr. Walter E. Weyl, student of political economy at the universities of Berlin and Halle and associate editor of the *New Republic,* must today be in an exceedingly depressed state of mind. Is his advocacy of the "war-after-the-war," of the class-struggle, of universal Bolshevism, urged as an escape from the distasteful and irksome conditions which American and Allied victory over Germany means?

AMERICA'S IDEALS—SORDID GAIN?

"It is a discouraging outlook," says Weyl, "a vista of ever new dangers, a dread that the world will escape from the consuming fire of this war only to fall into hotter conflagrations." (Certainly this is a prospect of what Weyl and his half-baked crew are doing their utmost to plunge us into.) "A real victory, a victory of peace, eludes us," he says. "And when we enquire why it eludes us we see that we, the Allied nations, carry into the conflict something of that evil principle against which we fight." The most patent, transparent and consequently futile phase of the official Teuton propaganda instituted by Dernburg was that which sought to besmirch the Allies, especially England, with their own Teutonic tar. Weyl, talking from the perch of a sterling Americanism, declares that the Allies "are also militaristic, aggressive and imperialistic." The official, paid German propagandists sought to nurse the dangerous idea of the "yellow peril." Weyl, who of course is a simon-pure American, says: "Between Germany and Japan there is little to choose in the matter of imperialistic ambition." And what in the opinion of the sage delivered from the womb of Halle, caused the war? German militarism aspiring to world dominion? "The war in its origin was an alignment of aggressive nations against aggressive nations." The same explanation mark you, offered by Dr. Dernburg Viereck's *Fatherland,* the *Review of Reviews* Company's book "Two Thousand Questions and Answers" and by other paid and unpaid, official and unofficial, known and unknown, conscious or duped German agents, sympathizers and special pleaders. "In carrying on the war each combatant group has gained the adhesion of former neutrals by appealing to greed and ambition," explains Dr. Weyl.

Why did America enter the war? The reasons are summed up by Weyl:

"We threw our economic weight against Germany because our economic interests lay with the Allies, and because, for other compelling reasons, we wished the Allies to win or at least not to loose."

Further:

"Our aid to Great Britain in her extremity might easily lead to a profitable cooperation with that nation, in which our capital and her knowledge, experience and prestige would be united. We could lay the foundations for a vast, overpowering and ostensibly pacific imperialism."

Again:

"We have read recent history wrongly if we conceive of it in terms of an aggressive Germany constantly planning to attack nations wholly devoted to peace. Both groups of Allies meditated both aggression and defense. . . .

"The efforts of the Allies to gain a victory for democracy and internationalism have everywhere been impeded by their own nationalistic ambitions. . . .

"Even today, however, the Allies are inspired by motives of national gain as well as by a sincere reprobation of Germany's crimes; the idealistic motive is still weighed to earth by a thousand gross desires and an inveterate predatory habit. . . . These diplomats of the old school want from this war something concrete and tangible . . . that will show on the map and in the balance sheet."

THE LITTLE LENINES

Dr. Weyl, Walter Lippman, and various miscellaneous sentimentalists and charlatans of the *New Republic* mental incubator type have put themselves up as "diplomats" of "the new school." (Mr. Lippman especially.) They, too, want from the war something concrete and tangible—whatever may show on the balance sheets of the Lenines and Trotzkys,—or in this country, of the Hillquits, Bergers, Judah Magneses, Abe Cahans, Eastmans, Nearings, etc. They have not been strong, however, for indemnities from Germany. Taking up the argument against "punitive indemnities levied upon Germany," Dr. Weyl pleads:

"Adequate compensation is utterly impossible. The allied losses incurred in this War will by August, 1918, far exceed a hundred billion dollars, a sum in excess of the total national wealth of the Central Powers. The indemnity is uncollectible."

Thus it meanders on interminably, tediously —the whole thread of familiar argument that the war was a war of rival capitalistic powers; that the Allies were beset with motives of greed and revenge; that Germany was invincible; that while Germany was willing to make peace, the perfidious Allied statesmen forced the bloodshed to continue; that, should the Allies by any

ance be victorious, no indemnities could be llected from Germany. And invariably with e thought of possible Allied victory was upled the strange concern about the terms of ace which the Allies might impose. In all this opaganda in books, magazines and speeches ere is that constant repetition which symp- mizes mental obsession. And this is an in- resting thing—just as the official German opaganda disseminated various set arguments id ideas in rubber stamp phrases, so that you und Germans over their beer in every *Turn rein* repeating the identical remarks of the aiser or Dr. Dernburg, so this intellectual olshevik propaganda of the-war-after-the-war nploys the same trite arguments and ideas, and ou find Dr. Weyl, Rose Pastor Stokes, Scott earing, the *Liberator,* the *New Republic* and the *ation* unconsciously employing the identical ereotyped cant phrases. There are certain inds that simply don't function, that are given fixed ideas, and repeat parrot-wise whatever alf-baked ideas manage to make an impression. heir mental shallowness is concealed under a emeanor of owl-like bespectacled wisdom, and ie essential fallacy or absurdity of their con- ctions is glossed over by an impressive solem- ity and obscurity of expression. Naturally ose of this kidney gravitate to any "ism" hich affords a sop to their vanity through a delusion of grandeur"—*i. e.,* of being "ad- nced thinkers," light-bearers of progress, oulders of opinion, or social prophets to lead e oppressed masses into some bunkum prom- ed land.

One seeks in vain among all the voluminous ritings of this gentry to find a single original ought. As in all crazes and isms, the affected ink alike and talk alike. Of course, they are lieved of the pain which actual cerebration tails. Whatever is original in their isms is nerally in the original Teutonic basis, as for stance, Socialism, internationalism, Feudism, xism, and the motley varieties of camouflaged o-Germanism. Like birds of a feather these range folk flock together, yet they cannot even ll their plumage their own. Their discovery the perfidy and wicked intentions of the im- erialistic Allies, of the changed spirit of con- ite, democratized Germany, of the virtues of olshevism, was not original with them; their ock arguments were made in Germany.

The world is today confronted with the prob- ms of making peace. For a considerable time ow, propaganda has been conducted calculated arouse hostility toward the heads of the Allied overnments. As has been the case with every her form of pro-German propaganda, it is be- g put forth in set shibboleths, in stereotyped nes of argument, in coined phrases dropped ith the purpose of poisoning the public mind. he value of repetition, part of the psychology advertising, is not unknown to the Germans. *Statesmen of the old type—"* meaning the achiavellian leaders of the Allies. *"Return to e old balance of power—"* meaning the danger such peace terms as will pain the tender Ger- ans. *"A return to that same sinister system f Power Politics which has bred every war in urope"*—meaning that the Allies will insist on ich monstrous and unjust demands as will bring out further wars. And so forth. Somebody paying considerable money for the promulga- on of these insidious phrases in full page news- aper advertisements.

This propaganda regarding the Peace Confer- nce, the Allied statesmen, and the amorphous nternationalism camouflaged under the League f Free Nations idea is more than ordinarily sig- nificant.

Dr. Walter Weyl, one of the school engaged in his sort of thing, long ago undertook to interpret he coming peace conference as an affair calling or the closest scrutiny and the most questioning uspicion.

"Tomorrow that Peace Congress will meet," he said, with a machiavellian sneer, "Will these gentlemen and noblemen be guided by the unique desire to 'make the world safe for democracy?' . . . Will there be friction and cross lines of interests between allies and a furious scrambling for spoils?"

The peace conference, judging by Weyl's analysis, will be made up of diplomatic bandits, international second-story men, experts in the game of stratagems and spoils. The methods calculated to create distrust of the representatives of the Allied powers have been rendered familiar to the general public through the recent page advertisements of the *New Republic* in the daily press.

What purpose has there been in the sedulous and insidious attempt to create in the American public mind doubt of our Allies, of their war aims, to impose upon the American public the conviction that Mr. Wilson, in going to Europe, has gone to combat the sinister plots and intrigues of international pickpockets, liars and knaves?

Perhaps Dr. Weyl himself gives a reason in the extraordinary and illuminating suggestion:

"If at the Peace Congress Germany could detach Italy, France, or any other powerful opponent, she might, by a threat to throw over the whole proceedings and return to a war status, force great concessions from all her former antagonists. She could play off one against the other."

GERMANY'S SOLE CHANCE

As stated in my previous article, Germany's one hope of obtaining a fairly satisfactory peace lay in estranging the United States from the Allies, in destroying full cooperation, confidence and international morale. She tried to do that in France so far as France and England were concerned, in the early days of the war. It was with this purpose she gave nearly two million dollars to Bolo Pasha, whose proposed propaganda strikingly parallels the defeatist propaganda carried on in the United States by sundry Bolshevik intellectuals. Any attempt to sow seeds of distrust regarding our Allies was in its essence, whether intentional or not, part of the German game. Were these little people and pretentious weekly periodicals merely unwitting instruments in the great Teuton intrigue? Or did they simply function, as their instincts and nature impelled them, toward an end in which their amorphous and dubious sympathies lay?

There is no danger of such division among the Allies as might play into some secret, cunning German game. The efforts to alienate the people of America from the cause for which England, France and Belgium fought and bled have been fruitless. But efforts to negative the great victory achieved through unprecedented sacrifice continue.

"The final war . . . will begin after the war," concludes Herr Weyl. "It will be a wider conflict than that which now rages and the alignment will be by classes and interests rather than by nations. It will be a war which will be waged until separate interests within each nation are completely extinguished." Thus the 100,000-word volume ends, with a gloatingly triumphant blood-thirsty prediction of mob chaos, civil war, wholesale class murder. It is not inapropos in this connection, to recall that the whole program of "separation movements and civil war" throughout the world originated in Berlin; that as Marxian Socialism, which would make man fight and work for his belly instead of his soul, was born in Germany, so was the Bolshevist plot conceived and promoted, to the ruin of Russia, in the land of the Huns.

In a circular letter, dated February 23, 1915, sent by the Director of the Press at the Ministry of Foreign Affairs in Berlin, all German ambassadors were instructed: *"The propaganda will have for its object the inception of social movements, accompanied by strikes, revolutionary explosions, separation movements and civil war, as well as an agitation in favor of disarmament."* That program went through in Russia.

The great question now up to the American people is to what extent we shall allow the reptile brood hatched out in Germany, when German imperialism was at the apex of its power, to continue to spawn and drool their venom in our midst.

(To be Continued)

Industrial Reconstruction

(Continued from page 5)

lished whereby employers and employees may adjust in a friendly way those differences of opinion which are bound to exist."

In response to a question as to the percentage of cases of joint submission and those placed before the War Labor Board ex parte, Mr. Woll said:

"I think the greater number of applications have been on the part of the employees, and the reason for that is that whenever unrest existed, the Department of Labor immediately would send its investigators and conciliators into those localities to avoid industrial disturbance and friction. In almost every instance the appeal of the Department of Labor was heeded and the men and women refrained from using their right to strike, in order that production might continue, and feeling that justice would be done them through that impartial Board. I should say the greater percentage was on the part of strong organizations of labor. Had they exercised their right to strike, there is no question but that they would have been successful. So that it was a real, true, loyal, patriotism that induced them to submit their questions to the War Labor Board. The same is true with some of the employers. There were instances where employers, as you might say, had the upper hand and who, rather than use the upper hand on the employees, submitted their controversies to this impartial Board for adjustment."

President Macy emphasized the points brought out by Mr. Woll by stating that as to the cases referred to the War Labor Board and their decisions—it was all a voluntary matter; and that it was so in regard to all the war labor adjustment boards in Washington. They were all established by agreement. There was no legislation enacted creating any of them. They were established through agreements between the American Federation of Labor and different departments, or between organizations of the employers and the American Federation of Labor. Their representatives were appointed by each side. But there was no statutory compulsion and notwithstanding the fact that it was a free cooperative movement, he said the violations of the agreements on either side could be counted on one hand, and they were of short duration. When pressure was brought to bear on them, when they were brought fully to realize that their action was a violation of any agreement, they rescinded it and abided by the agreement in all cases. "So," he said, "we have a hopeful outlook for the future. I believe that where large numbers are involved in our industrial life, if they can voluntarily and logically settle their difficulties without any statutory measures, we can look to the future with great confidence; with that same spirit of cooperation in peace that has been pursued in war, the same results should follow."

Bolshevik Industrial Government.

Continued from page 9)

factory at night, and voted themselves pay for this 'overtime.' After the Germans took Rostoff, Koopp's factory was returned to him.

"This is a typical instance of what has happened everywhere in Russia under Bolshevik power. Many of the technical staff of the factories were killed on the charge of their being 'bourgeoisie.' Many other administrators, experts, foremen and others fled. Still others of the technical staff who escaped death were ordered to go to the factories, and if they refused were shot on the spot. Hundreds upon hundreds, yes, thousands have been shot without trial. Naturally, in these conditions, the machinery spoiled and grew worse, and everywhere, except where the Germans have come in, factories have had to stop. Nearly all of the factories are discontinued.

"To the outside world the decrees issued by Lenine and Trotzky may seem to represent something. They don't. The workmen don't recognize Lenine and Trotzky unless they want to. They are not sure of Lenine and Trotzky. They recognize only their Soviet, and if they don't like it they set up another. It is armed anarchy.

"There is less freedom of speech than under the Czar. Only Bolshevik papers are allowed. There is no freedom of assemblage whatever. Merely suspicion brings death at once."

THE "COMMITTEE SYSTEM" IN OPERATION.

Of the results of Bolshevik control in the large industrial plants in Petrograd and Moscow, Lieutenant Boris Brasol, of the Russian Army, and now connected with the U. S. War Trade Board at New York City, gave me these facts:

"The Oboukhovsky Steel Works near Petrograd were owned by the Russian Government, and run by the Navy Department. This plant manufactured guns, armor and munitions, and covered about 500 acres. Before the war it employed 7,000 men. After the war started, the number increased to 12,000, and later to 15,000 and 16,000. During 1914-16 the average mechanic's wages were from 700 to 800 rubles a month for an 8 to 8½ hour day. With few exceptions the members of the technical staff were paid lower salaries than the average mechanic's wages. And as for professional pay in general compared with that of manual labor, it was only about 500 rubles a month. Professors in colleges never received more than this amount.

"After the Revolution headed by Kerensky broke out, in April, 1917, the scheme of Workmen's Committees or Councils of Workmen's Delegates was started on the initiative of a member of the Kerensky Government. This personage was not a Bolshevik—in fact is now an exile from Russia—but in this respect he allowed himself to be influenced by Bolshevik doctrines which were being agitated forcibly.

"WORKMEN'S DELEGATES."

"In the Oboukhovsky Steel plant each of about 20 shops elected their own delegates. There was no system at all about it. Representation was not based upon the number of men in each shop. A small shop would have a larger representation than a large shop, and elections were disorderly. Only in exceptional cases were actual workingmen elected. The workmen in the shops elected (for the most part) outside professionals who had a command of oratory and who flattered them. These Bolshevik shop committees are totally unlike the regular British trade unions or the Belgian co-operatives. They are anarchistic.

"The whole group of works elected about 75 delegates, most of whom were outside agitators. About three fourths of the entire working force in this particular plant knew how to read and write, but only the merest rudiments. So far as real education is concerned, about 95 per cent in this plant as in other plants were uneducated. They were able only to read a few pamphlets, written in crude style, calling upon them to rob the bourgeoisie.

"The first stand taken by the 75 delegates of the Oboukhovsky Steel plant was that the worst enemies of labor was the technical staff. Agitators made speeches like this: 'You laborers are working eight and nine hours a day. These fat men of the technical staff are working only three or four hours. But it is the manual labor that turns out the product. The technical staff are ruling you. They belong to the bourgeoisie. Look at their wives! See how well dressed they are! Manual labor must control the technical staff.'

"The immediate result was that when the technical staff gave instructions as to how to produce the best steel or pointed out how some other improvement could be made, the workmen replied that they would hold a meeting and decide as to whether the instructions as to the method of work were right. If the technical engineer pointed out that by holding meetings in work hours the workmen were delaying output, they would exclaim, 'Look how he is agitating against us' At once work would be abandoned and a noisy meeting begun. After a long discussion the meeting would decide that the orders given by the technical staff didn't agree with the interests of the workers and should be refused. The same thing happened in every shop.

INCESSANT MEETINGS—TALK, NOT WORK.

"In the Oboukhovsky Steel Plant the laborers voted to reduce their work hours usually to three and four, and in some cases to six. Every day they held meetings. Some of these were from 20 to 25 minutes, others two to three hours. For this time they insisted upon being paid.

"Frequently, during working hours, some one would suddenly rush in and announce: 'Comrades, a very important procession is going on in Nevsky Prospekt. Let us join.' The men didn't know what it was all about. But, dropping tools, they would form in processions, carrying banners, flags and armed with rifles on the six mile walk to the city. They called these 'Liberty Strikes.' They were paid for them, too. Nobody dared question it.

"Within four months the workers in the Oboukhovsky plant alone had received, under different titles, from the Navy Department an increase in their pay of 90,000,000 rubles. During these same four months their efficiency was, at a very conservative estimate, cut down 80 per cent. Their endless discussions, meetings and processions were partly one cause. Drunkenness was another, for notwithstanding the prohibition of vodka, that fiery liquor is being privately manufactured, and is all the more effective because of the scarcity of food. And, of course, by refusing to follow the instructions of the technical staff the machinery fast went to pieces.

SLAUGHTER OF INDUSTRIAL EXPERTS.

"Since November, 1917, a large number of the technical staffs of all factories have been imprisoned or murdered. Others fled. Thousands upon thousands were put in prison or slain. On the one day that the Bolsheviki had possession of Kieff the Bolsheviki murdered 3,500 'intellectuals,' many of whom were members of industrial technical staffs. In December, 1917, all operations at the Oboukhovsky Steel Works were discontinued. But the Bolshevik Government still kept paying the workmen's wages, and it has supplied them with foodstuffs. The men refused to work on the ground that the war was a 'capitalist quarrel.' Other causes of the shut down were impairment or destruction of machinery. It has been not merely usual but an everyday incident for workmen to carry away products, tools or parts of machinery and sell them for their own profit. Still other causes of the shut down have been lack of fuel and raw material. The same conditions spread everywhere. Miners wouldn't work, and railroads hardly operat at all.

"The Bolshevik Government robbed all of t banks (paying part of the plunder to Germany and every day is issuing 150,000,000 rubles paper currency. The Russian-Asiatic bank Petrograd was robbed of $50,000,000 rubles gold, silver and stocks. We have positive inf mation that Trotzky has 2,000,000 rubles in g to his personal credit in Sweden.

[If this report is true, it is a question wheth the fund is for personal holdings or a fu placed in Trotzky's name for spreading Bolsh vik revolutionary propaganda in Sweden. R cent cables report that the Swedish newspap *The Sveneska Dagbladet,* "declares that pla traces have been found of great sums of mon being spent to produce disaffection and muti in the Swedish army."]

PLANTS COMPLETELY WRECKED.

"The conditions and fate of many other plan were the same as those of the Oboukhovsky St Works, as for instance: the Semiannikoff Met lurgical Works, the Ericson Telephone Factor the Nevsky Stearine Plant, the Vargunin Clo Factory, the Railroad Repair plants, the Balt Car and Foundry Plant and other establishmen in Petrograd. Much the same conditions r sulted in Moscow concerns such as the Mosco Car & Foundry Co., Morosoff's Linen & Clot Manufacturing Company, the Mitishensky C Plant and others. Many owners of factories ha been killed, and many of their families starve The Bolshevik Government controls food su plies and has been systematically starving wh it calls the bourgeoisie."

These details are amply corroborated by oth responsible observers who have recently co from Russia.

Says Frederick M. Corse:

"The brass, cotton cloth, cotton, machine and other factories in Petrograd were chiefly the hands of the British. The responsible hea of departments were old English stock settled Russia for two or three generations. These fa tories with their entire contents were taken ov without compensation by the Bolsheviks. T same was true of Moscow factories. The hea of these factories had left Russia before I di which was in February, 1918. There were cas where the laborers wanted to impress manage into service at regular wage rates. They held the managers under armed guard and compell them to report under the supervision of a Lab Committee organized in each factory. But i this design they didn't succeed permanently.

"The experience of foreign, especially Ame ican, corporations in Russia is no criterion what has happened to all corporations in Russi The Bolshevik leaders have been very wary making too much trouble for individual foreig corporations, and thus stirring up internation complications that would discredit their pr gram. With their own people, however, they a perfectly ruthless.

"But we had some edifying experiences. I our Petrograd headquarters of the New Yo Life Insurance Company we had about 50 clerk They were of varying degrees of educatio They, too, held meetings and tried to lay dow the law to me. They wanted to take all manag ment out of my hands, and determine by the vote who should be employed, who dismisse what the force's compensation should be, hou of work and other conditions. For two montl I put up with the situation. Then I dismisse the entire staff and removed headquarters Moscow, where, up to the time I left, the Bolsh viki didn't have the hold that they did in Petr grad.

"MANAGING" THE BANKS.

"As far as I can learn the Bolsheviks have n touched our 50,000,000 rubles in money and s

urities. But my experience with the banks was significant experience. The Volga Kama Bank as one of the biggest and richest in Petrograd. t was like the National City Bank here. I had ie largest account in it. The Bolsheviki early 1 1918 deposed its president and board of di-ectors, and put a man who had been the bank's :ar yardman in charge of the bank. I had to eal with him and he was still there when I left.

"All private banks had this same experience. Multiply the Volga Kama Bank's experience by thousand and you have the situation. The Bol-ieviki deposed managements and put ignorant ienials in charge. But this was only what was oing on in all other lines. Under such anarchy o bank could voluntarily remain open. Those iat were forced to remain open were made ranches of the State Bank. Former depositors ould draw only up to 150 rubles a week,—and iat in a city where a single meal cost 70 rubles. 'o get these 150 rubles took three days, with all orts of preliminaries such as getting permits nd vises in different parts of the city. But if ou paid to certain lesser Bolshevik functionaries 5 per cent of the amount you drew, you could raw a million rubles.

"Not caring to plunge into international com-lications with America, the Bolshevik Govern-ient, so far as I know, didn't take over the New 'ork Life Insurance Company, the International Harvester Co., and some other corporations in ie sense of destroying their corporate name or lentity.

FACTORIES AND SHOPS RUINED AND CLOSED.

"When I left Russia, the efficiency of indus-ries had been reduced seventy per cent, and the esults of the committee system were the gradual losing of factories and shops everywhere. 'here is a lack of skilled men. Cost of produc ion is too high. There is no credit. The Labor 'ommittees know nothing of administration, and iake no provision for depreciation. Much ma-hinery has been wantonly destroyed by rowdy-sm, spite and grudge. It is a national charac-eristic of Russians to vent spite on property of :hich they are no respecters."

Substantially the same details are given by V. F. Dixon, Director of the Russian Singer Company. Mr. Dixon lived in Russia for 23 ears, leaving it in November, 1917, and return-ng to America recently.

"Before the war," Mr. Dixon said, "the Rus-ian Singer Company in Moscow employed up to ,000 men. Our plant on the outskirts of Mos-ow covers about 100 acres.

"Here, as elsewhere, the laborers established abor Committees. In our case the head men or eaders of the shop committees were outsiders, ut they ran matters. These outsiders were com-osed of various elements. Some were the dregs f the legal profession who nad never been able o make a respectable living. Others were a ueer kind of university student familiar in Moscow — students who perpetually attend the niversity without ever being graduated. Still thers of the outsiders were shoddy intellectuals. Jone of these outsiders were manual laborers. A Russian crowd is more susceptible to eloquence han any other crowd. These outsiders all had he art of oratorical appeal to the crowd. Equal-ty of rights and opportunities is admirable, but hat they preached was that everybody was of qual ability. These were the men who came o us with demands veiled as 'requests.' If hese 'requests' were not allowed, they would hreaten. They reduced the workday to eight ours, but the men worked only six. They in-reased wages 500 to 600 per cent, and the in-reases are continually mounting. Stopping ork to hold meetings or join processions was a egular part of their program. A few leaders wayed everything and the rest were afraid to bject. On the whole, however, we were excep-ionally fortunate with our labor.

"Many of the chief Bolshevik propagandists were bums. One of these bums—an average skilled laborer—was employed in my factory. Addressing some people coming out of a church in a village near Moscow, he denounced them for going to church services and said, 'Don't you know that when the Czar was overthrown, God was abolished too?'

"The Bolsheviki have killed a large number of the technical staffs in industrial centers. These included a great many of the more intelligent, experienced technical engineers, foremen and administrators. Others of the technical staffs have fled. However plausibly the decrees of Lenine and Trotzky may read, the Central Soviet led by them has practically no authority outside of Petrograd and Moscow. Lenine is credited with having some months ago declared in favor of employing technical staffs and paying them higher wages than manual workers. Such a decree means nothing. It is only a paper decree. What is actually happening may be judged from a recent report from Petrograd that at the Poutiloff Works,—a locomotive, car and artillery plant,—100 members of the technical staff were killed in one batch.

"The so-called Bolshevik rule is really a mutiny of slaves and criminals. In the very act of slaughtering what they call the bourgeoisie they themselves are becoming a new bourgeoisie. Many of them have enriched themselves. There was a report that the notorious Commissioner of the Interior, Moses Uritsky, who on August 30, 1918, was assassinated by a Socialist, had salted away 4,000,000 rubles. Paper money is so common that every laborer has plenty.

"The chaos of conditions in Bolshevik Russia is such that we haven't been able to get any advices from our Russian representatives since February, 1918. What has become of the Russian Singer Company's plant since then we don't know."

RUTHLESSLY SHOOTING WORKINGMEN.

"The Bolsheviki," declared Colonel Vladimir I. Lebedov, "are shooting down the workingmen far more ruthlessly than under the old regime. They have been shooting them by the thousands in frequent massacres."

Colonel Lebedov was an officer in the Russo-Japanese war. The oppressions of the Czar's regime made him a revolutionist. He joined the Socialist Revolutionary party and the Union of Revolutionary Officers. In 1907 he led a revolution in the Sebastopol Army. He was forced to flee, living in subsequent years in Belgium, France and Italy. When the war broke out in 1914 he formed a detachment of Russian Socialist refugees and joined the French Army as a private in the Foreign Legion. He was wounded several times, and was named lieutenant and decorated. Returning to Russia after the Revolution, he was Secretary of the Navy under Lvov and Kerensky, but left the Kerensky Cabinet because of failure to take strong measures against the Bolsheviki. He now holds the office of Associate of the Secretary of War of the Russian Omsk Government in behalf of which he visited the United States recently. In New York City, on December 2, 1918, he gave many details of the Bolshevik regime.

"In normal times," he said, "there were about 400,000 workingmen in Petrograd. Early in the war there was a great influx of peasants who went to Petrograd to work. After the Bolsheviki seized power, hundreds of thousands of workers, mostly unskilled, left Petrograd for the country districts. By May, 1918, there were only 132,000 workingmen left in Petrograd, but these were the best kind of skilled labor. They had always lived in Petrograd and had nowhere else to go.

"In May, 1918, they began to revolt against the Bolsheviki. They held several enormous mass meetings which, because of the great numbers present,—more than 100,000 in all—the Bolsheviki were afraid to molest. They elected representatives and drew up resolutions denouncing the Brest-Litovsk treaty as a shameful peace which they didn't recognize, and declaring that instead of peace the Bolsheviki brought internal wars and instead of bread they brought famine. The resolutions further asserted that instead of liberty the Bolsheviki had established a reaction to such an extent as never had existed in Russia. The workmen demanded the resignation of the Bolshevik Government, and the election of a Constituent Assembly. They sent delegates secretly to all Russian cities. In Moscow the workingmen adopted similar resolutions. Here, too, the Bolsheviki were afraid to take action. But in the provincial cities, where the meetings were smaller, the Bolsheviki imprisoned or shot thousands of workingmen in cold blood.

"As for the delegates elected by the workingmen of Petrograd and other cities to the Soviets, the Bolshevik Government would not allow them in those bodies. The Bolsheviki would not permit any Socialist, trade-unionist or laborite in the Soviets. They ordered the Red Guard to shoot them, and this was always done."

AN ARMY OF MERCENARIES.

"What is the Red Guard composed of?" I asked.

"Mostly," Colonel Lebedov replied, "of Hungarians. There is also a conglomeration of Germans, Letts, Chinese, and a few Russians consisting of hooligans and criminals. The Red Army now numbers about 250,000, and is held together by the pay per man of 1,000 rubles a month, plenty of clothing and food, and full license to plunder and commit rape. It is absolutely a mercenary army, and does whatever it is directed.

"All through the summer of 1918 revolts continued. There were several Cossack revolts, and many revolts of industrial workers. For example, at the Izjorsky Metal Works near the City of Perm, a plant employing 40,000 workingmen, a revolt of the workers broke out in July, 1918. For three months the workingmen there fought the Bolsheviki. By October, 1918, the revolts throughout Russia had assumed such proportions that Lenine's position became increasingly difficult as the People's Army became strong in numbers.

"Thereupon Lenine resorted to a trick. In the latter part of September he announced that he had declared war on Germany. He called 15,000 officers to Petrograd and Moscow, and other batches of officers to other cities, and they joyfully responded believing that Russia would again war on Germany. Once the officers had got to the cities he had them all arrested and held as hostages. Many were shot. This was intended to intimidate revolters and deprive the People's Army of officers.

SECRET PACT WITH KAISER REVEALED.

"Then in October, 1918, Lenine made a secret treaty with Germany by which in return for the removal of Bolshevik forces from the German front, the Kaiser ordered all German prisoners to join the Bolshevik Red Army. It was this order that increased the Red Guard from 150,000 to 250,000. With this accession of strength the Red Guard was able to suppress the various revolts, especially as the Allies failed to keep their promise to supply the People's Army with guns, ammunition and other vital supplies. In the suppression of these revolts thousands upon thousands of workingmen were shot down.

"Counting lives lost by massacre, hunger and disease, Russia has lost more lives under the Bolshevik regime than were lost during the time she was in the war."

(To be continued)

Woman's Department

NATIONAL CONFERENCE PLANS

A series of weekly conferences, to deal with problems arising during the period of reconstruction, has been announced by the Woman's Department of the National Civic Federation. Miss Maude Wetmore, the National Chairman, in outlining the scope of this new endeavor, stated that:

"At no time in the world's history has it been more essential that women of the Nation should be prepared to understand and take an intelligent part in the discussion and solving of the problems on which the future well-being of our country depends. The signing of the Armistice and the calling of the Peace Conference have suddenly brought to the consciousness of the American people the knowledge that we are, to a very great extent, ignorant regarding the questions fundamental at this critical time. These conferences will be addressed by men and women who are expert and in active touch with movements allied to the topics selected for consideration which have been recommended to all Sections of the Woman's Department and which are given below:

1. PUBLIC EMPLOYMENT SERVICE:
   Plans and Methods; Community Labor Boards; Public Exchanges. How does the service function in your Section?

2. HOUSING:
   Governmental; Private owned. What has been accomplished in your Section? What are the needs?

3. FOOD PRODUCTION AND CONSERVATION:
   What is the demand, and what agencies are meeting the necessity, including concrete demonstrations in conservation?

4. RESPONSIBILITIES OF CITIZENSHIP:
   Alien Group; Citizen Group; Propaganda. Including Information Centres, Community Experiments and Literature. Where may the force of the Woman's Department be expended with the greatest usefulness?

5. PUBLIC HEALTH:
   Federal and Local Laws and Agencies. Wherein do they fail to meet the situation, as for instance, venereal disease, child welfare, etc.

6. PRISON REFORM:
   The situation and the needs.

7. SHOP AND FACTORY WELFARE:
   Developments and necessities. To what extent is welfare work inaugurated in your Section?

8. LEGISLATION:
   Intelligent survey of pending legislation dealing with matters relating to social and economic reconstruction.

VACATION ASSOCIATION, INC.

The purposes and some of the achievements of the Vacation Association, an incorporated committee of the Woman's Department of The National Civic Federation, were set forth in a glowing tribute by Louis K. Anspacher at a luncheon on December 4, at the McAlpin Hotel, New York. The President of the Association, Miss Gertrude Robinson Smith presided.

The following quotations from the address of Mr. Anspacher, who watched the development of the movement from its inception, indicate the usefulness of its activities. In the course of his remarks he said:

"The creed of the Vacation Association states: 'We believe that no one group in a community is self-sufficient'—in other words, we realize that we are our brothers' keepers. 'We believe that true Democracy rests on a mutual sympathy and a mutual understanding between different environments; we believe above all that joy and happiness can be the greatest constructive force in the world.' This last needs no interpretative comment. It is American, pragmatic, optimistic, and it has demonstrated its success. It was organized in 1910.

"Its purpose was to investigate country boarding houses where self-supporting women and girls could safely go for their holiday. During the first year approximately 1000 boarding houses within 75 mile radius of New York were investigated and only 300 met the requirements.

"Many girls used this list and found it very helpful. On the other hand, it was found that great numbers of girls had no vacation. A meeting was therefore called in November, 1911, to ascertain the cause for this. Several reasons were given. First that the girls received no paid vacations; secondly, that if girls took a vacation at their own expense they often lost their positions; and third, that the girls had no money with which to pay for their vacations.

"A survey was made among 3000 employers The astonishing fact developed that the large majority of employers gave no paid vacations, though many of them, especially in the seasonal trades, were willing that their employees should take several weeks holiday at their own expense. Among the girls it was found out that many contributed to the family budget and that often when they received a paid vacation they were unable to go away because of this family obligation. A savings fund by which any self-supporting woman or girl could lay aside each week the small amounts that ordinarily go for the unnecessary things of life was organized. Many employers became interested, and gave it their hearty approval, and further in all concerns where the Vacation Savings Fund was established, they appointed one of their representative women to act as Local Secretary.

"In 1912 it developed that a very unfortunate habit existed of collective giving at Christmas among the employees of all large concerns. Also the custom of giving exchange presents among the employees. After carefully investigating this question, a meeting was held and the movement known as the SPUGS was launched.

"Three years after the work was inaugurated, three buildings were rented; two were turned into lodging houses where the members could have at the nominal rate of $5.00 a week, and a restaurant was opened where approximately 500 girls ate each day. Besides these two activities, there were clubrooms especially arranged for the members and classes in languages, dancing, gymnastic, dramatics, etc., were arranged at a nominal cost. All depositors who wished to take advantage of the opportunities offered them at the Vacation Headquarters paid $1.00 a year for these privileges and became taxpayers. After the first year it was decided to organize the Taxpayers Committee and to make it self-governing.

"In 1915 the Penny Provident Fund felt that we were filling the need that they had heretofore filled and asked us to absorb them. This we gladly did as far as the girls were concerned but we were unable to take care of their boys.

"In 1914 when the war broke out the Vacation Committee organized the Vacation War Relief Committee for the purpose of helping its members, who had lost their positions because of war conditions, to get other jobs. It also opened workrooms where they were paid a tide-ove wage to make garments for European Hospital and war refugees.

"After America declared war on Germany i 1917, the members of the association decided t open its club rooms to the enlisted men and wel come them at their dances on Wednesday an Saturday nights. Since then they have furthe extended this hospitality and a canteen an social club have been thrown open to the soldier and sailors.

"The Vacation Association always takes it part in any big campaign that is conducted i New York. It has been most successful in al the Liberty Loan drives and during the last on had a booth for three weeks at the McAlpi Hotel where $1,500,000 in bonds were sold. I was very successful in the Red Cross drive. I has stimulated a great number of women t open Savings accounts permitting them to bu Liberty Bonds and Thrift Stamps.

"During the seven years that the Vacatio Savings Fund has been in existence approxi mately 50,000 girls have saved nearly $700,000 Whether in peace or in war, for vacations or fo work, for Spugs or spenders, for canteen or em ployment, for amusement or for interchange o ideas by discussion, for dancing or for lectures for tide-over wages or for Liberty Loans, thi organization has organized itself for duty an responsibility.

"We have helped to win the war. We hav become accustomed to the big, sudden hero isms of this enormous conflict." Now, afte the war, there will come the relaxing fro effort. We are no longer tuned up to concer pitch for the great and thrilling event. No will come a period of social, economical an industrial adjustments—now will come the prob lems of the unemployed, the resumption o status, the dull prose of ordinary life after th clanging poetry of the big emotions and the bi achievements—now will come the friction inse arable from readjustment. It is organization of this kind that relieve social and industria friction.

"This Association is affiliated with the Civi Federation. That Federation exists for the pur pose of bringing about a closer understandin between employer, employee and the public. I any one of these falls, the other two are bound t suffer. Among the most important of the activi ties of this organization is a forum for the inter change of ideas and the creation of an enlight ened point of view through mutual understand ing of our common needs and exigencies. Thi is of immense importance in a Democracy. I is in periods of adjustment and industrial suffer ing that Bolshevism and kindred forms of revo lutionary and disintegrating socialism flourish We shall have to face that menace here in Amer ica, when the men and women in industries will be blinded by indignation, by hope or by fear It is organizations such as this one that will be called upon to stabilize conditions, to help by sympathy and understanding in the work of equilibration and progress. We do not want an outraged proletariat in this country. We have never had it as they have had it abroad; and the best way to avoid it is to remove the conditions that create it. That also is what this organization helps to do. Then do not forget that these girls are not the working goils from the Bowery melodramas; they are the self-supporting women with industrial pride and initiative; they are citizens with a vote capable of expressing their political preferences. They are entitled to consideration. They share with us a political and social responsibility, and they call upon you to share it with them."

CAN ALL WARS BE PREVENTED?

PROBLEMS ENTERING INTO THE FORMATION OF A LEAGUE OF NATIONS—QUESTIONS FOR THE SERIOUS CONSIDERATION OF THE AMERICAN PEOPLE

NATIONALISM VS. THE LEAGUE

(Extract from Memorial Day Address to the Veterans of the Grand Army of the Republic, May, 1918)

By **HON. A. J. BEVERIDGE**

AMERICANS are firmly and unbreakably united for this war upon the solid ground that we went into it because we were attacked. Upon that there is absolute and universal agreement. Some go further; but all go that far. While the war lasts the discussion of all war purposes that will divide us ought to have been avoided. But instead of this an old project, not of American origin, has been and is being urged upon us with all the power and persistence of a highly organized propaganda, although with the highest and most patriotic of motives. Its leading advocates actually state that the establishment of an international league to enforce peace is one of the principal objects for which the American nation is sending into the hell of conflict our conscripted youth and burdening the people with a debt that a century of toil and sacrifice will be required to pay.

SHALL WE ABROGATE THE CONSTITUTION?

If that is so, then Congress stated inadequately, if not untruly, the reason for America's martial declaration; and conscription was adopted by Congress and accepted by the people under a misapprehension.

Since, in the very midst of war, advocates of the League to Enforce Peace press their scheme upon the country, even asserting that the adoption of it is one great purpose for which we are fighting, we are forced to examine it. France has aroused the imperishable admiration of the world, not only by her heroism but also and equally by her intelligence; and it is important for us to note that France has not welcomed with fervent enthusiasm the plan of the League to Enforce Peace and its denationalizing doctrines. If we are to accept them, let us at least do so with our eyes open to the certain results. Two or three obvious consequences of this ancient and foreign proposition will be enough perhaps to put the American people on inquiry as to the wisdom or folly of the whole plan.

To become a member of the league we shall have to destroy one of the most vital parts of the American Constitution—that which gives to Congress the sole power to declare war. This is admitted; and an amendment changing the nation's fundamental law was actually introduced in the Senate. Thus, the mighty question of going to war would be permanently taken further from the people—indeed, neither the people nor their representatives would have the least thing to say about going to war or keeping out of war. If the league should fail to impose its will on the world, we as a member of it would be bound, for all the future, to take part in any war wherever waged, that the majority of the league decided upon.

ONE of the great questions to be dealt with at the Peace Conference and, on account of the stress laid upon it by President Wilson, the greatest question for this country to consider, is what manner of machinery can be provided to reduce to a minimum the possibility of future wars. The National Civic Federation Review opens with this number a discussion of various programs that have been proposed, beginning with that of the League to Enforce Peace. Its proposals being definite and concrete, it has naturally invited criticism from many writers and speakers, the gist of which is well contained in a speech made by former Senator Albert J. Beveridge last Memorial Day, at Indianapolis, and in a speech by Senator Henry Cabot Lodge in the United States Senate, December 21, 1918.

Dr. Talcott Williams, a member of the Executive Committee of the League to Enforce Peace and one of the sub-committee of five that has had much to do with changes from time to time in the program of the League, was invited to reply to those speeches and to give specific answers to the criticisms made.

EDITOR.

COMPLICATIONS OF LEAGUE PRINCIPLES

As to small and weak nations, we, as a member of the league, would have had to go to war with various powers several times during the last fifty years—either this or the league would have had to sanction historic aggressions in Asia, Africa and Europe, or the nations making them would have had to keep hands off the little countries absorbed, something which every student knows none of those great powers would have done.

In our own history we would have been forcibly prevented from waging war with Mexico, and California, Arizona, New Mexico, Utah, Nevada and half of Colorado would have been kept under the Mexican flag and would not today be the vital part of the American nation that they now are.

A league to enforce peace would have forcibly restrained us from making war with Spain; and Porto Rico, now ours, and Cuba, over which we have the most absolute suzerainty ever written on paper in the history of the world, would this moment still be Spanish. Yet they command the gateway to the gulf, are indispensable to our safety, belong to us geographically, and the possession of them has been our historic purpose and aspiration since long before the revolution.

FOREIGN NATIONS WOULD DECIDE AMERICAN QUESTIONS

Apply the plan to our present and future purely American questions; these would be decided, not by the American people, but by the votes of foreign nations. Take, for instance, the problem of Mexico. It is adjacent to us and the control of it profoundly concerns the Gulf, our canal, the near Pacific and 2,000 miles of our southern boundary. Legitimate American interests are and always will be greater in Mexico than those of all other nations combined. For years Mexico has been in a state of anarchy; American men and women have been killed and outraged, American property destroyed, the American flag literally trampled in the dust; and the dispatches advise us that the situation again grows alarming.

Yet, as a member of the League to Enforce Peace, the American nation would have no more to say about Mexico than would Holland or Servia, Siam or Germany, Italy or Roumania, Great Britain or Uruguay, Peru or Costa Rica, the Argentine or Bulgaria or Japan. American interests, rights and honor, as affected in Mexico, would be at the mercy of a majority vote of every nation, little and big, near and remote, friendly and hostile, that is a member of the league.

Or take the Monroe Doctrine. Under the regime of the League to Enforce Peace every European and Asiatic government would have as much authority over that fundamental American policy as would the American nation itself.

The control of our canal, built through our territory, by our money and essential to our well-being and safety, would be taken even more completely out of our hands than it already has been. Every question that affects other nations, especially our tariff and immigration laws, would be subject to possible interference by this international super-state, which the propagandists of the League to Enforce Peace proposes to erect for the regulation of the world. Indeed, certain foreign advocates of this international scheme advance universal free trade as one of the necessary results of it.

WOULD DESTROY AMERICAN NATIONAL INDEPENDENCE

Not only would we be involved in every European, African, South American and Asiatic embroilment, bound to expend unestimated amounts of American money and numbers of American lives if necessary to enforce the ukases of the league, but it should be repeated again and again that we would have to surrender American problems, the solution of which vitally affect our economic and political life, to the mercy of those European, South American and Asiatic nations. Unless human nature has been repealed, what, under such an arrangement, would become of the interests, rights and honor of the American people, the richest, most fortunately situated and therefore the most envied nation on the globe?

It all comes to this:

If the League would prevent foreign wars, still it would take out of our hands the settlement of vital American questions and put the disposition of them in the hands of foreign nations. If the League would not prevent foreign war, then, as a member of it, we would be bound to take part in those wars; and also our purely American problems would be dealt with by other governments than our own. In either case America is sure to be the loser, however much certain foreign interests might be the gainer by our loss.

DIFFICULTIES OF ADJUSTMENTS

(*From Address to the Senate, Dec.* 21, 1918)

By HON. HENRY CABOT LODGE

The words "the league of nations" are captivating and attractive. Everybody would like to bring about a world condition in which wars would be impossible. But we ought to be extremely careful that in our efforts to reach the millennium of universal and eternal peace we do not create a system which will breed dissensions and wars. It is difficult to discuss it at this time because no definite plan of any kind has yet been put forward by any responsible person. Intelligent discussion becomes difficult when the advocates of the league of nations drape themselves in trailing clouds of glory and omit to tell us the conditions to which they propose to bind the nations.

If, however, there is to be a League of Nations in order to enforce peace, one thing is clear. It must be either a mere assemblage of words, an exposition of vague ideals and encouraging hopes, or it must be a practical system. If such a league is to be practical and effective, it cannot possibly be either unless it has authority to issue decrees and force to sustain them.

What nations are to be members of the league? Is Germany to be one of the members? If so, when? How are these nations thus joined in a league to vote in determining the operations of the league? Theoretically, in international law every independent sovereign nation is the equal of any other nation. Are the small nations to have an equal vote with the great nations in the league, a vote equal to that of the United States or England or France? I saw that there occurred in New York a few days ago a meeting of representatives, so called, of some small nations who demanded this equality of voting power. If this were agreed to, the small nations could determine the action of the league, and if the league had an international force behind it they could order that force where they pleased and put it under any command they pleased, which might give rise to complications.

If nations are to vote in the league on a democratic basis, then their voting power must be determined by population. Here, too, some curious possibilities arise, not without a certain intricacy. The population of China is, roughly, four times that of the United States, and this system would give China four times the vote of the United States in the league. If England is to have the right to cast the vote of her possessions, India alone would give her from three to four times as many votes as the United States and ten times the vote of France.

JUSTICIABLE QUESTIONS?

All the plans which have been put forward tentatively for a League of Nations, so far as I know, involve the creation of a court. We must remember that we have carried voluntary arbitration as far as it can practically go. Assuming that there is a distinction between justiciable and non-justiciable questions, who is to decide whether a question is justiciable or not? Is it to be done by the league, voting in some manner hitherto undefined, or is each nation to decide for itself whether a question affecting its own interest is or is not justiciable?

Let me give an example to make my meaning clearer. We have recently purchased the Virgin Islands. Suppose that that purchase had not been effected, and that Denmark undertook to sell those islands to Germany or some other great power. Is that a justiciable question? If it is and it went before a court there can be no doubt that any court would be obliged to hold that Denmark had the right to sell those islands to whom she pleased. In the past the United States would never have permitted those islands to pass out of Denmark's hands into any other hands, because we consider their possession of vital importance to our safety and to the protection of the Panama routes.

The same will be true in regard to Magdalena Bay—a case in which the Senate passed a resolution, with unanimity, I think, stating that on the plain doctrine of self-preservation we could not allow Magdalena Bay, or any other similar position of advantage, to be turned into a naval base or military post by another power. Would that be justiciable? And if not justiciable, then is the League of Nations to compel, nevertheless, its submission?

Let us be honest with ourselves. It is easy to talk about a league of nations and the beauty and the necessity of peace, but the hard, practical demand is: Are you ready to put your soldiers and your sailors at the disposition of other nations? If you are not, there will be no power of enforcing the decrees of the international court or the international legislature or the international executive, or whatever may be established.

WHY A LEAGUE IS INEVITABLE

By DR. TALCOTT WILLIAMS

When a deed is done for Freedom, through the broad earth's aching breast
Runs a thrill of joy prophetic, trembling on from east to west.
Nation wildly looks at nation, standing with mute lips apart,
And glad Truth's yet mightier man-child leaps beneath the Future's heart.
For mankind are one in spirit, and an instinct bears along,
Round the earth's electric circle, the swift flash of right and wrong;
Whether conscious or unconscious, yet Humanity's vast frame,
Through its ocean-sundered fibres feels the gust of joy or shame;
In the gain or loss of one race all the rest have equal claim.
Once to every man and nation comes the moment to decide,
In the strife of Truth with Falsehood, for the good or evil side:
Some great cause, God's new Messiah, offering each the bloom or blight.

"The Present Crisis." Lowell, 1848.

What Lowell published in 1848 is as true today as it was seventy years ago. Read it! Every word fits the hour and pulses to the thrill of the moment. Beveridge, Lodge and all the rest of the Senators are where Webster was in his speech for the Fugitive Slave Bill on the Seventh of March, 1850. "God help her, Massachusetts kneeling with the rest." But not for long. The Senator elected last November carried the State and defeated Senator Lodge's colleague on the issue of a League of Nations. If Senator Lodge has any doubt, he had better poll the State. Let Beveridge start something in Indiana, where great meetings have covered the State and every County is organized for the League to Enforce Peace.

Lodge and Beveridge talk like Patrick Henry in 1787. He was chosen by the Virginia Legislature for the Convention which drew the Federal Constitution. He was not willing to go to Philadelphia and Independence Hall (where, by the way, the League to Enforce Peace was organized in 1915) to sit in the Convention between Washington and Madison. Men like him pointed out to Virginia that the Declaration of Independence made it a "free, independent and sovereign State." It was for that the War of the Revolution was fought. He predicted sudden evils and the loss of liberty if Virginia made a union with twelve other States. He was more eloquent over the perils of that day than Lodge, Beveridge and all can possibly be, for reasons too obvious to mention.

It is a piece of small petty pleading and crass iginorance of history when these men, Beveridge leading, insist that we did not go into the war for a League of Nations. No nation ever finds out for what it went into a war until the war is fought. We went into the Revolution on a tax and we came out a Nation. We fought for Articles of Confederation and we adopted a Federal Union. God bless it and keep it! You could paper a room with editorials in Democratic papers from 1861 to 1865, yes to December 18, 1865, when the Thirteenth Amendment to the Constitution was adopted, that the war was fought to save the Union and not to free the slave; that Lincoln's Emancipation Proclamation was a breach of faith. Beveridge took his seat in the Senate in March, 1899, a fortnight or so after hot debates in the Senate that we went into the Spanish war to "free Cuba" and we must not on any account take the Philippines, and the Senate ratified our treaty of peace with Spain, 55 to 27. One vote would have defeated the treaty. Are the twenty-seven proud of their vote then? Not much! They are forgotten, except by men like a leading Democratic lawyer of Philadelphia, who told me that the Battle of Manila was won "at the loss of one man and all our institutions." Does any one today regret that the United States became a world power or that the Republic has again planted victorious feet beyond the seas?

Now, as always, in all our history, in the debates over the Federal Constitution, over the Jay treaty, over the treaty of peace with Mexico, which gave us an imperial domain on the Pacific, Sumner over the Alabama Arbitration treaty, in the treaty that closed the Spanish War, those who oppose each great step forward, are full of perils and pitfalls, risks and rattraps in which a great nation is to be ensnared. But the change comes in the great march of events and the event brings the wisdom to meet it.

So now. The speech of Mr. Beveridge is only six months old and most of its arguments are as extinct as the Dodo and for the same reason. He wants the American eagle to waddle like a duck and lose the might of its wings for lack of courage to rise to new heights and know the upper air of liberty, justice and a League of Nations, where the world can be seen as a whole and the duty of a Nation not alone to itself but

o Humanity in all its parts, its present work nd its greater future.

A "League of Nations" has suffered from too uch definition. The world is full of cranks, nany of whom do much to turn new move- ients. You can't turn anything without a rank. Such men are great at constitution. onstitutions are not made. They grow. They ake time. Look at all the wreckage behind our ederal Constitution. When it was put in mo- on in 1789, the first attempt at federation be- ween colonies was 106 years old and it was eventy-six years more before it was decided for ood, for all and for ever, that the Constitution f 1787 had made a lasting union of States hat last. Growth marks every living reform nd labor pains come with the birth of every ew idea. The cumbrous platform of the League o Enforce Peace adopted in May, 1915, has een dropped by the League itself. Even that ecognizes, as Mr. Beveridge fails to note, that here is a difference between "justiciable" ques- ions and those which cannot be arbitrated. till more, it only prevented war for a year. t the end of that time any nation could make ar.

There were the necessary compromises of a ascent reform. All attempts to make a new orld legislature, to decide the basis on which ll nations shall be represented in a world Par- iament are premature, not to say foolish. These aper contributions grow like leaves on a tree nd wither like leaves. These details cannot be ettled in advance. Events regulate. Time egislates. Look at the difference between ex- Senator Beveridge in May and Senator Lodge n December.

What Beveridge Wants (May)

Not only would we be nvolved in every Euro- ean, African, South merican and Asiatic mbroilment, bound to xpend unestimated mounts of American oney and numbers of merican lives if neces- ary to enforce the kases of the league, but t should be repeated gain and again that we ould have to surrender merican problems, the olution of which vitally ffects our economic and olitical life, to the mercy f those European, South merican and Asiatic na- ions. Unless human ature has been repeated, hat, under such an ar- angement, would become f the interests, rights nd honor of the Ameri- an people, the richest, ost fortunately situ ted and therefore the ost envied nation on he globe?

The great body of the merican people are na- ionalists — American ationalists — determined hat the world shall be ade to understand that merican spirit will not ermit any nation to in- ult us and American ommon sense will not llow any nation to use s. We Americans stand n our own feet, depend- ng on our own judgment o decide what is best for s, on our own strength o defend our rights, on ur own wills to shape ur destiny. When we ease to do so American history will become the grotesque record of a cen- tury and a half of folly, Bunker Hill and York- town, Vicksburg, Chicka- mauga and Appomattox, San Juan and Manila Bay will have been in vain; and the American flag, as the emblem of a free and independent nation, will lose its meaning and its glory.

What Lodge Asks Us to Do (December)

I do not need to re- hearse what these phys- ical guarantees of a per- manent peace should be, for I have stated my views upon them more than once to the Senate, and I think there is gen- eral agreement upon them not only in the Senate but among the American people. They include the restoration of Belgium, the return of Alsace-Lorraine to France, of the Italian Ir- redento to Italy, the es- tablishment of a Jugo- Slav state and of an in- dependent state formed by the Czecho-Slovaks. They include also the se- curity of Greece, the set- tlement of Albania and Montenegro, the restora- tion of Rumania, the consolidation of all the Rumanian people under one government, as well as the neutralization of the straits, the putting of Constantinople under in- ternational protection, with Greece perhaps as the mandatory of the powers to administer the affairs of the city, the independence of Armenia, the return of those por- tions of Asia Minor where Greeks are pre- dominant to Greece, the protection of Syria and Palestine from the Turks, a large, powerful and in- dependent Polish state, the independence of Rus- sia's Baltic provinces, the return of Danish Schles- wig to the Danes and the neutralization of the Kiel Canal.

These physical guaran- tees which I have thus far suggested all have one object, and that is so to hem Germany in that she cannot attempt conquest in Russia or in the East, and that the Slavic populations, which she has mercilessly used in her wars, can never be so used by her again.

We cannot leave Rus- sia lying helpless and breathing out infection on the world. We must help to bring her back to health and sanity and wellbeing. Some proper settlement of the Russian question is absolutely vital to the modern civili- zation of which we are a part. We cannot disre- gard it or stand by as idle spectators without making any effort to aid Russia to rid herself of the poison which is now eating out her life and once more resume her place among the great nations of the world.

If the ex-Senator was right in May, how are we going to do all that Mr. Lodge wants? If we set out to do all that the Senator from Massa- chusetts wants us to do now, to all of which he would vehemently have objected five years ago and tear his senatorial toga to tatters before he would vote for it, how can we get along with- out a League? Are we going to do the job alone? Are we going to settle the reorganiza- tion of ten million square miles and three hun- dred millions of human beings (put in China, as Lodge does, and it is nineteen million square miles and six hundred million of population) as "nationalists—American nationalists," as Beveridge wants us to be, on our own lonesome?

The American people is opposed to war, dis- likes war, abhors needless conflict, and en- deavored for the first time in history to put the control over a declaration of war in the hands of an assembly representing the people by requiring Congress to declare war. In Eng- land the King could declare war. This con- stitutional privilege, this protection, Mr. Bever- idge declares, would be lost if a League were organized. But this would make no change in the practice of the United States now. Those who drew the Constitution were familiar with international law. They provided for those hos- tile operations which are necessary if a nation is carrying out a policy, broad, far-reaching and effective, by making the President, Commander in Chief of the Army and Navy, a direct con- stitutional grant, over which Congress has no control. He is authorized to use the army and navy to carry out any settled policy, but Con- gress can check his action by refusing to vote appropriations for the army or by legislation.

Through all our national existence, a sharp line has been drawn between mere hostilities not war and war formally declared with all its changes of status as to trading with enemy citi- zens, communication with the enemy, control of aliens, and espionage laws. Hostile operations arise on a different basis. Under a treaty with Colombia (1846) we had the right to preserve order at the Isthmus. We landed troops there in almost every year from the time the treaty was negotiated until the Canal strip was ac- quired. Polk sent Taylor into disputed terri- tory. We shared in occupying Alexandria in 1881, and kept order in the town for weeks. We shared in the expedition to Pekin in 1900, took the city by storm and governed a part of it for months. Under the Monroe Doctrine in Rio Janeiro our fleet, with approval from Washing- ton, took charge of the harbor and opened it to trade. Four years ago we occupied Vera Cruz. Not one of these things required a decla- ration of war or was "war." As a matter of history, in the two centuries from 1700 to 1900 hostile operations went on for weeks and months in more than one hundred cases. Sometimes these brought on war and its status, and some- times they did not. The territory which Eng- land occupied in Egypt in 1881 under an inter- national mandate was held but England never issued a declaration of war. Mr. Beveridge is a good lawyer, he knows all these things; he is familiar with them; he trusts to the ignorance of the people in declaring that if a League of Peace is adopted we shall be making war with- out a Congress declaring war. This is already the case, with a policy followed, adopted and es- tablished. It is necessary in the nature of things that a power should be able to use its military force to accomplish results without a declara- tion of war. This has been the habit of the United States, whenever its policy required or reprisals were necessary.

The League of Nations would do its chief work in preventing war by the use of military force to prevent hostilities by acting without a decla- ration of war, avoiding disturbance to trade, to international intercourse, and to credits.

Senator Lodge proposes that the Peace treaty shall provide for his program for the re-arrange- ments of a great area—the largest population with which any peace treaty has endeavored to deal, and he wants to postpone a League of Na- tions until this treaty has been ratified. This is to make the treaty nugatory. If the United States is to have the power to do this work with other nations, the treaty must provide some way in which it can act. It is not possible in opera- tions which will extend over years, which will require constant vigilance, perpetual willing- ness and a capacity to use adequate military force to protect small nations and prevent at- tack upon them, to act without a settled plan of action. This plan of action in the nature of things will be a league of the nations concerned. To divide a treaty which creates these obliga- tions from the steps by which such obligations will be discharged is to put all out at a stroke. Is it possible that Mr. Lodge thinks that it would be better to have this done by a Republi- can President and Congress? Is it for this pur- pose that he is willing to leave this large pro- gram open? Would the American people be willing to enter on this job without some steps toward disarmament? Would it be willing to assume the attitude of the old order and leave it possible for any nation to arm at will and to use its powers to suppress revolution and dis- order?

The United States could have refused to enter the war, and defended itself at home. If it chooses, having defeated Germany it can stop, withdraw its troops, cease to trouble about Europe, and make peace with Germany alone. But to agree to keep Europe in peace and these small nations unprotected, to take no steps to reduce armaments, provide for no permanent peace, arrange no League to prevent an attack by a strong nation on a weak, as Austria at- tacked Serbia, increasing all the perils of the past and making no new provision against them. This the country would not accept.

If Senator Lodge is right in feeling the re- sult of the war will be thrown away unless we enter on the problem of the old order, it is as plain as the sun in the heavens that a world authority must exist in order to discharge a world task. Such authority implies a League of Nations to preserve peace. It requires it. Mr. Lodge may wish to postpone action upon it in order to secure partizanship advantage, but this does not make his advice more sound, more safe, or more effective.

A League is inevitable. It must come. It exists already for war. Why fear it for peace? Mr. Lodge assumes that all nations must come in and on equal rates and powers or on some elaborate plan to be arranged now. Why? The League does not propose one. In its meeting at Philadelphia, the League carefully avoided discussing details because details divide. A common cause, a common end, a common de- termination, these unite. President Wilson is wisely leaving the League to develop.

There are twenty-three nations at war with Germany. Five of them today manage the whole war by land and by sea. No one gainsays them. The League proposes to continue the present plan of action, the big powers doing the work needed to keep the world at peace and the lesser powers sharing in the work. This is to take the five great powers as the Executive Committee of the world. Has Senator Lodge any better authority or agency to offer? None. There is none. Let the Hague Court stand, all nations in it. Enforce its decisions as they come. Provide some agency, the Five Great Powers are again the best, to act as permanent mediators in conflicts between countries, stopping war and insisting on arbitration. If a country is in hopeless disorder, as Russia is, let these powers act, to use President Wilson's happy phrase, as an "international agency" to keep the peace, educate and prepare for self-rule and final independence.

Senator Lodge proposes in the treaty of peace to pledge ourselves to the reform of the world but proposes no way, no method, no League by which to do it. His list is nearer forty than the President's fourteen. When his points are all in the treaty and we are bound by them, how can we meet these vast new obligations unless we are part of a League of Great Nations, using the lesser powers as we can? He proposes some twenty new States, their peoples hating each other, no single boundary that suits both sides, each suspicious, none used to self-government, all illiterate (not over one in ten adults can read) and apparently expects these gigantic changes over an area from forty to fifty times as large as the Balkans and with a population from twenty to thirty times as large, to run in peace with no wars, when once set up, when the Balkans alone have caused five wars in forty years, the last the greatest of all.

This is ridiculous. It is insane. I am not a Senator like Mr. Lodge, or an ex-Senator like Mr. Beveridge; but I happen to have been born in the East. I know those lands. Their tongues and their natures are not unfamiliar to me. There is scarcely a week in the past forty years in which I have not written and spoken on these peoples. My first contact with the Russian nature came in a Russian playmate sixty years ago. He was very affectionate and very uncertain. All that Senator Lodge proposes I have for years felt should be done. It is twenty-five years since, in a course of lectures in Philadelphia, I predicted that America must play its part in the Near and the Far East. Even I would have hesitated in a single speech to redraw the map for a third or more of the human race.

But if this be our duty, can aught be better done than to continue the practical League that now exists? Mr. Lodge's friend and college mate, Theodore Roosevelt, who once saved him from defeat in Massachusetts, urges a hard and fast alliance. If the Five Powers that have saved Liberty, go on to create a new peace and enforce that peace, is not this not only wise but inevitable? If we do as he proposes, can we embark on stormy seas to make over all the world between the Rhine and the Amur, the Vosges and the Thien Shah, can we do this and leave it open to England at any moment to cut off our army by its sea-power; if we disagree? When in peril, trust was possible; but suppose India flames and has to be set right, or Ireland rises, are we to be powerless to advise and urge at least as much justice as we propose between the Adriatic and the Ural? Is one nation to dominate the sea alone? Are we going to spend billions and keep a great army abroad to bring peace for Pole and Slovak, Roumanian and Serb, Croat and Ruthenian and twenty more peoples and do nothing to make a peace so dearly bought for them permanent for us? Is each of these new nations to begin arming to the teeth as has Poland? Are both navalism and militarism to run a race again? Is there to be no effort by "open covenants of peace openly arrived at" to prevent another conflagration? Does Senator Lodge propose a secret treaty like the "Treaty of London," in which the allies and Italy left Jugo-Slavs feeling they are unjustly treated?

These questions answer themselves. What Senator Lodge proposes assures a League of Nations. Unless all he plans is to tumble into hideous and world-embracing ruin, there must be a League of the Five Great Powers—with a share proportioned to their responsibility for lesser lands—a world court, a world authority, world mediation and a recognition of world reform by a world league, of great powers and small, each doing its share.

If Mr. Lodge, who fears not to overturn, fears to build a secure peace, I return to Mr. Lowell for my answer in closing:—

"New occasions teach new duties; Time makes ancient good uncouth:
They must upward still, and onward, who would keep abreast of Truth;
Lo, before us gleam her camp-fires! We ourselves must Pilgrims be,
Launch our Mayflower, and steer boldly through the desperate winter sea,
Nor attempt the Future's portal with the Past's blood-rusted key."

PEACE BY "AGREEMENT OF MIND"

By RALPH M. EASLEY

THE words of Lowell, quoted by Dr. Williams, are certainly inspiring, if not illuminating, but, if Lowell had gone through all the vexatious experiences that Dr. Williams and many other workers for international peace have passed through during the last three years in trying to work out a plan that would prevent war in the future, he might have contributed more toward a solution of the problem. It may be "a piece of small, petty pleading and crass ignorance of history where these men, Beveridge leading, insist that we did not go into the war for a League of Nations," but is it not true, nevertheless? We went to war for the very good and sufficient reason that had we not done so the Central Powers would have been victorious, and we should then have had Germany to fight on our own shores and alone, instead of on the battle lines in France with the aid of the Allies. This was not altruism in every sense but enlightened self-interest and far-seeing worldly wisdom. As we get away from April 6, 1917, we are too prone to forget events and sentimentalize on the real causes back of our entrance into the war. It is a too common expression now, that we had "nothing to gain by going into the war," that "our whole conduct has been based upon the highest altruism" and that we are "going to the Peace Table with purely unselfish motives." It is a fact that we go to the Peace Table with clean hands and with no selfish demands in the way of compensation for our great loss in blood and treasure, but we did not go into the war for unselfish purposes nor to secure a League to Enforce Peace. Harry Lauder, to my mind, expressed it exactly last June when he said to a group of our men just before they sailed: "Boys, you are not going over to save France nor to save England nor to 'make the world safe for Democracy.' Get that out of your heads! You are going over there, by God, to save your own skins, your own homes, your own wives and children, and you know it and we know it. So, cut out all the gush. The Allies have their backs against the wall. If they go down, you are the next in line and that's why you are going over." I believe that the two million boys who went to France will agree with Harry Lauder.

When one recalls the literature put out in t various Liberty Loan drives and the speeches former Secretary McAdoo and others who c clared that it was well known that Germany h planned to make this country pay the cost the war or to attack it; how Zimmerman boast that Germany had half a million trained men this country organized for the purpose of a tacking us when *Der Tag* came—that is, wh Germany had captured Paris and London a sunk or taken the British fleet, which was pa of her ambitious program; when one reca those campaigns and then is informed that went into the war for the purpose of securi a League to Enforce Peace or for the high idealistic aim of saving the democracy of t world, it is time to come back to earth and co sider once in a while just what we did go in the war for!

I well remember, on one of the "blue" da last June, when I was stirred by the excited de laration of Dr. Williams that it looked as thou the Germans would take Paris and the Chann ports within the week, resulting in France bei put out of the fight and England compelled make peace terms, and that this would mean th the United States would have to arm ten millio of men and possibly spend one hundred b lions of dollars to defend herself on her ow shores, but that, whatever the sacrifice, it wou be made or we should become a possession Germany, experiencing all the horrors of Be gium and Northern France which would follo such a conquest.

JUSTICIABLE AND NON-JUSTICIABLE QUESTION

Dr. Williams takes Mr. Beveridge to task f criticizing the cumbersome platform, which D Williams says had been dropped by the Leagu itself. At the time Mr. Beveridge criticized i however, it had not been changed. That D Williams should make such a statement is som what puzzling when one compares the two pr grams—the one adopted in Philadephia, Jun 17, 1915, and the other in New York, Novembe 23, 1918. There is not an idea that I can reco nize in the old one which is not in the new, bu there are many things in the new one that a not in the old. Instead of making it less "cum bersome," it is clearly more cumbersome. I the later program it is proposed, as an "initia ing nucleus," that the membership of the Leagu should be composed of the nations associated a belligerents in winning the war. In the olde program, the matter of a definite start for th League was left up in the air, the implication be ing that all nations would have to come in befor a start was even made, but in the detailed ma chinery proposed for the functioning of th League, which Dr. Williams seems to impl represents only general principles, the new pro gram is more drastic than the old.

In the paragraph relating to justiciabl questions—those questions of comparative unim portance and about which no serious troubl would arise if some of them were never settled— the new statement provides that the jurisdictio of the "impartial tribunal" "shall not depen upon the assent of the parties to the contro versy"—surely a compulsory provision. No only that but provision is made for "enforcin the decisions," which means, of course, compul sory arbitration and brings in the police force of the army and navy power at once. The old clause had no such teeth but submitted such questions to a "judicial tribunal" for hearing and judgment, leaving the enforcement to pub lic sentiment.

As to non-justiciable questions—that is questions vital to the life of a nation or its honor —the League reserves the right in the new plan after making recommendations, "to determine what action, if any, shall be taken," which might mean determining to enforce the decision by the combined armies and navies of the countries in the League, whereas, in the old pro

gram, the League stopped at making "recommendations." Still more teeth for the new program!

In the new program, Clauses Three and Four provide for "an administrative organization for the conduct of affairs of common interest," etc., and "a representative Congress to formulate and codify rules of international law," etc.; then "An Executive Body able to speak with authority in the name of the nations," etc. And yet Dr. Williams says the new plan has dropped the "cumbersome" platform of the old one, which provided for none of this detailed machinery, and emphasizes the point that "the League carefully avoided discussing details because details divide."

DIFFICULTIES OF PROBLEM

The powers contained in the third section of the old program, it will be noted, are incorporated in the "representation of the different nations" and the "resort to force by any nation" clauses of the new one, the latter referring rather childishly to "solemn agreements," as if the word "solemn" added any weight to an international agreement! In other words, the only alterations made in the new program were to change it from a compulsory investigation program to one of possible compulsory arbitration, and to add the provision for complicated administrative and legislative machinery, as well as the provision for an "executive committee," presumably given all the power of the League to act "in case the peace of the World is in danger."

In the old program, the separation of justiciable from non-justiciable questions or, in other words, the determining whether questions are of minor importance or whether they are of vital import, was left to the same tribunal which passed upon justiciable questions which no nation would be likely to permit an outside body of "disinterested statesmen" to decide for it.

In the new program, this weakness is avoided by no provision being made for the determination of that delicate, and also very vital, difference, the matter ostensibly being left for each nation itself to determine what questions it will submit. This is even weaker, because no nation then would ever submit any matter of importance, on the plea that it is non-justiciable because it is of "vital import" or affects "national honor."

That this is an almost unsolvable problem is well indicated by the fact that the Second Hague Conference spent weeks upon an attempt to agree upon a list of justiciable questions and gave up the problem in despair.

As, in some form, we are sure to have brought before the American people, sooner or later, some sort of a League of Nations program, there cannot be too much discussion of the various questions and responsibilities involved in the acceptance of such a program.

Much of the criticism, so far, has revolved around such questions as:

How is the League itself to be formed? Are all nations to be included? If not, who is to draw the line and where is it to be drawn? Is Germany to be included? If only a selected few, are they to have equal representation? Shall the Allies and the United States form the first League of Nations, which would be simply another name for an alliance of the "Big Four?" Shall all vital questions be submitted and shall this Government turn its army and navy over to any outside combination of powers?

These and other questions require great study, care and wisdom before rightful conclusions can be reached, but there are other questions, about which little has been said, in which labor has especial concern. The reason for this concern is that the principles finally accepted in dealing with international disputes will probably have a bearing in this country on the policy adopted in dealing with industrial disputes.

Furthermore, Lord Robert Cecil, the British representative in charge of all questions affecting the proposed League of Nations at the Peace Conference, in a letter to J. H. Thomas, Secretary of the National Union of Railwaymen in England, stated that a League, when once organized, in addition to dealing with international questions, would, doubtless, deal with labor questions.

In one of the pamphlets sent out by the League to Enforce Peace, entitled "Labor's Interest in the League to Enforce Peace," written by Samuel Gompers, there appears the following paragraph:

> The League's program wisely recognizes the danger of creating a League of Nations that would undertake to enforce the *decisions* of an International Court, and contents itself with enforcing the *submission to* an International Court of all disputes for examination. Until democracy is more clearly universal, until democracy becomes a social and industrial fact as well as a political catchword, a League with power to enforce decisions would almost certainly become the repressive tool of the reactionary and privileged forces of the world.

COMPULSORY ARBITRATION A FAILURE

In this comment Mr. Gompers was referring to the 1915 program, and not to the revised draft adopted in November, 1918.

When Mr. Gompers congratulated the League on not having attempted compulsion, he voiced the almost unanimous view of organized labor, and I may say of organized employers and of all classes of persons who have had any practical experience with industrial arbitration. Those who will examine the matter will find a close parallelism between the principles that underlie industrial and international peace measures. Former President Taft, now President of the League to Enforce Peace, referred to this similarity between nations and people when he said:

> We have no right to assume that we have passed beyond the period in history when nations are affected by the same frailties and the same temptations to cupidity, cruelty and injustice as men.

Compulsory arbitration in industrial disputes has proved a failure in every country where it has been tried. Likewise, compulsory *investigation,* which was all that was involved in the original program of the League to Enforce Peace, has been tried out industrially in Canada and found to be a failure. As it is generally claimed that no nation will agree to arbitrate its vital questions—those affecting its national existence or its honor—so there are questions in the industrial field which cannot be arbitrated. It is a popular belief that there are no questions that wage-earners or employers should not be willing to leave to "high-minded," "disinterested" citizens to pass upon, or that there are no questions between nations that should not be left to a tribunal of "high-minded," "disinterested" statesmen to settle. But red-blooded union labor men would never agree to arbitrate their right to belong to a union; neither would employers agree to arbitrate the demand of a union that they should discharge their non-union men and give the places to members of the union; nor, again, would wage-earners who had the eight-hour day arbitrate the question of going back to nine or ten hours, because experience has shown too often that leaving matters to these "high-minded" representative citizens too frequently means not justice but injustice, in some cases guess-work and, in many, sheer confusion. In fact, so unsatisfactory has been the experience of calling in outside arbitrators that many of the most important organizations of labor and employers, both here and in England, provide in their contracts, in case of a threatened controversy, against any odd man being brought in and provide only that there shall be an equal number of arbitrators on each side, with no umpire. The late Seth Low, after sitting for four months in a great railroad arbitration case, in which he and John H. Finley, as the neutral arbitrators, wrote the decision, when called upon to interpret it, admitted he could not do so. He afterwards declared that he would never again favor outside parties as arbitrators in large industrial matters.

Does any one contend that this country would have arbitrated the questions that led up to the Spanish-American war? And would any one in this country consider arbitrating whether we should give back to Spain Porto Rico and the Philippines and surrender our suzerainty over Cuba? Would the United States have considered a proposition to arbitrate the questions leading to our declaration of war against Germany?

GAMBLE OF THE "ODD MAN"

It is true that we are already bound in the so-called "Bryan treaties," made with nearly all countries excepting Germany and Austria, to arbitrate *all* questions, which would include the questions just referred to, as well as the admission of Asiatics and the Monroe Doctrine, and, for that reason, as asserted by former President Roosevelt, those treaties ought to be annulled, because this country would never pay any attention to them if called upon to submit such questions to arbitration.

The reason the United States would never submit such propositions to arbitration is the same reason that the labor people would never submit their vital questions to arbitration and that is, that, when once submitted, the risk of defeat is always taken and no nation and no labor organization would place in jeopardy its right to live.

The method provided for the selection of arbitrators under the Bryan treaties (and it is the common method provided in all arbitration matters, whether international or industrial) is that each side shall select an even number and that they shall agree upon the odd member. This always means that the odd member is to decide the questions, because, assuming that the vital questions are submitted to it—the Monroe Doctrine, for instance—the representatives of the respective sides would be nothing more than attorneys for their principals. This makes the securing of the odd man the securing of the victory, and it can well be understood what kind of a scramble such a situation would create.

The League to Enforce Peace, in its latest program, proposes for non-justiciable questions a Council of Conciliation which shall hear, consider, and make recommendations and, if the parties fail to acquiesce, the League shall determine what action, if any, shall be taken. This, as before stated, might mean the attempt to enforce compliance by the combined naval and military forces. The implication is that this Council of Conciliation is to be a permanent body. To such a body, of course, no nation would submit a vital question but would, at least, insist on selecting its own representatives, taking a gamble on the odd man, if it should ever agree to submit.

But, if the League did not attempt to enforce a decision and merely handed down a recommendation, it is asked, "What harm could be done?" The proponents of the League point out that it would give time for public discussion and "to cool off," which might prevent a break. This is the great argument that was made in favor of the Canadian Compulsory Investigation Act. What generally happened was that, during the time required for the Government to get its machinery ready and to hear and hand down a decision, the employers were getting ready for the strike, in the event the decision was against them, securing strike-breakers, putting up barracks, etc. This weak spot the State of Massachusetts undertook to meet in a

compulsory investigation bill by providing that the *status quo* should be maintained. But it was soon pointed out that, in the case of a street railway company, for instance, threatened with a strike of its employees, while the company could not openly make a contract for strike breakers, strike breakers' agencies could prepare and be ready on an hour's notice to fill the places of the strikers, and there was no way by which to prevent such an advantage being taken.

In case of wars between nations, identically the same situation would arise. There is no way by which to preserve a *status quo*. If the United States should happen to have a controversy with a country less honorable than itself, it would keep its word and not make preparations for war, whereas the other country could prepare—not openly, of course, but finding opportunities to arrange its finances, make secret alliances, provide for obtaining guns, munitions, equipment, etc. In fact, there would be plenty of dealers in those materials doing just what the strike breakers would do for the street railway management—getting all ready for them. As in the case of a union, the nation that finds it necessary to fight, has the right to strike at the most propitious moment; and that moment, despite all questions of ethics, or morals, or philosophies, is when the opponent is the least prepared and the aggressor stands the best chance of more quickly scoring a victory.

HOW EXERCISE INJUNCTIVE POWER?

Take a concrete case within the memory of all. If the United States and Mexico had been in the League to Enforce Peace, before President Wilson could have sent General Pershing after the raiders of Columbus, or, to be exact, invaded Mexico, he would have had to wait until the matter had first been submitted to the judicial tribunal for hearing and judgment, to ascertain whether it was a justiciable or non-justiciable matter. If the latter, it would then go to a Council of Conciliation for "hearing, consideration and recommendation," supposing that such a council could ever have been agreed upon by Mexico and the United States. This board would have had to determine, among other things, such simple questions as—whether Villa had made his raid at the behest of certain Carranzaists, in which case our invasion would have been justified; at the behest of certain American mine owners, in which case this country would have been responsible; or on his own fiendish initiative, in which case Villa would have been morally responsible, but the Carranza government would have been held legally responsible—a proceeding that would require several months' patient inquiry. And, while these interesting proceedings were being conducted, Villa could have been making his way on to Chicago, and we should have been helpless because under the proposals of the League all the battle ships and armies of the world, including our own, would have been staying the hands of the President.

If Germany had accepted the Bryan treaties, as did England, Russia and France, the "Lusitania" and "Sussex" matters would have gone before a board, for the formation of which six months were allowed, were it ever possible to agree on the odd man in so crucial a matter. During all this time Germany could have gone on torpedoing passenger ships without let or hindrance, so far as the treaty was concerned, because the only clause in it covering such a contingency says: "In case the cause of a dispute should consist of certain acts already committed or about to be committed, the Commission shall, as soon as possible, indicate measures to preserve the rights of each party that ought, in its opinion, to be taken provisionally and pending the delivery of its report." That is, restraining action is to be taken by a commission that, in the nature of things, it may never be possible to form. The League to Enforce Peace has no provision covering such a contingency.

When Senator Borah asked what action the United States would take in case Mexico proposed to lease Magdalena Bay to Japan and put the question: "Would the United States submit that question to a tribunal where it has but one vote and one voice and permit its entire future to be disposed of by a court where it has but a single representative?" he was answered by Mr. Theodore Marburg, a member of the executive committee of the League. Mr. Marburg said he agreed with the Senator that the United States could not permit Mexico to make such a lease, but added that there could be no harm in submitting the question to the Board of Conciliation, because the United States would not be bound by the decree and could go ahead and take any action it might choose to take. This was, of course, under the Philadelphia program of the League.

But, under the new program, the League, after hearing the matter, might determine to enforce its decision with the armies and navies of the world, including our own. Mr. Marburg further stated, to meet the weakness referred to in the Bryan treaty: "Pending the inquiry, Japan would be stopped by injunction from proceeding with the objectionable act of taking possession of and possibly fortifying Magdalena Bay." Mr. Marburg was assuming that there would be such an injunctive power. There was no provision for it in the League's program, either the old or the new, and the attempt to draft such a provision would open up endless difficulties.

It may be answered that a League of Nations would and could thresh out and furnish satisfactory answers for all such questions but the United States Senate will not be likely to be satisfied with assurances, but will want to see the program in detail. It will demand this because, in the end, the matter has to come down to a question of whether or not this country is willing to submit its questions of vital interest to a decision by representatives of European governments and the turning over of its army and navy to a league necessarily composed of representatives of a large majority of nations who do not sympathize with our conception of national rights and duties and who, if they did sympathize today, by a change in their own internal politics, might be against us tomorrow. Last October we wanted Liebknecht to develop a revolution that would overthrow the military party in Germany. Now, we are afraid he will succeed. Could we depend on Germany's voice in a League of Nations being sympathetic with the United States, or Russia, or Italy, or France, if the Bolsheviki get control, as many fear?

PRESIDENT WILSON AND LEAGUE COMING TOGETHER

The first paragraph of the new program of the League states:

> The war now happily brought to a close has been above all a war to end war, but in order to insure the fruits of victory and to prevent the recurrence of such a catastrophe there should be formed a League of Free Nations, as universal as possible, based upon treaty and pledged that the security of each state shall rest upon the strength of the whole. *The initiating nucleus* of the membership of the League should be the nations associated as belligerents in winning the war.

This declaration is on all fours with the views of President Wilson, who said before the Sorbonne:

> My conception of the League of Nations is just this—*that it shall operate as the organized moral force of men throughout the World and that whenever or wherever wrong and aggression are planned or contemplated this searchlight of conscience will be turned upon them and men everywhere will ask: "What are the purposes that you hold in your heart against the fortunes of the World?"*

Has not President Wilson by his utterances and others made in France and England, indicated his belief in moral and voluntary forces rather than compulsory measures? While avoiding all reference to programs or details, has he not emphasized the holding together of the Five Powers as an "initiating nucleus"—the idea of the League to Enforce Peace—with the hope of evolving a reasonable and practicable agreement that will eventually bring in all nations? In his speech at the Guildhall in London, on December 28, also he intimated this.

In other words, if the League to Enforce Peace would strike out from its program all after the enacting clause, so to speak, it would have practically all that it looks at this writing any one can hope to have come from the Versailles Conference—and is not that quite enough?

The four nations, England, France, Italy and the United States, can well be an "initiating nucleus" and act as "*An Executive body,* able to speak with authority in the name of nations represented, and to act in case the peace of the world is endangered," as provided by the League to Enforce Peace, without at first formulating too many rules, regulations or by-laws, but leaving it to the common self-interest of those nations to protect our civilization and forever bar the return to power of the "Beasts of Berlin" either through machinations in Russia and the Far East or the promotion of Bolshevism throughout the World.

PEACE TO BE SECURED BY AGREEMENT OF MIND

No true American can read the inspiring account of the popular acclaim given to our President in France and England without being thrilled and fired with zeal to work for that day when wars can come no more. But we must not expect too much, or too soon. Human nature of all peoples cannot be made over during the night. The millennium is not yet even within reaching distance. Right now, breaking through the din of the triumphant applause in London are strident voices for war. Italy is ready to go back into the trenches to enforce the claims disputed by the Jugo-Slavs; blood-soaked Poland is again the scene of new bloodshed, her sons fighting the Germans on one side and the Bolsheviki on the other, with the hearty approval of the Allies and the United States, while there are organized forces in this country today, with abundance of funds and newspaper and magazine support, who are trying to destroy our faith in our Allies and ready at the drop of a hat to embroil us in war with England. Even Dr. Williams expresses the fear that Britain's dominion of the seas may lead to war between England and the United States and hints at the possibility of our having to interfere in the internal affairs of Great Britain in Ireland and India. Truly, not a peaceful outlook, to say the least.

That the passionate desire of all peoples for peace is overwhelming was happily expressed by President Wilson in his Guildhall speech, when he said:

> And back of us is that imperative yearning of the world to have all disturbing questions quieted, to have all threats against peace silenced, to have just men everywhere come together for a common object. The peoples of the world want peace, and they want it now, not merely by conquest of arms but by agreement of mind.

Certainly it is the hope and desire of all mankind that there be brought about this agreement of mind.

Bolshevism Convicted Out of Its Own Mouth

Prepared for the League for National Unity

By WILLIAM ENGLISH WALLING

I

HE PRO-BOLSHEVIK PROPAGANDA

It would be possible to print volumes of evi-ence as to the Bolshevik regime in Russia. his evidence comes from every possible source. ithout exception the diplomatic representa-ves and the commercial agents of America, rance and Great Britain have told the same ory. With one or two exceptions, the large rps of correspondents stationed in Russia for any years and familiar with the language of e country substantiate the story. Thousands American citizens, tens of thousands of other reigners who have lived in Russia for many ars, have, upon their return to America or eir native lands, given an account which is entical in every important particular.

But unfortunately the extreme liberality of e American press and the fair-mindedness of e American public has resulted in an almost ually wide publication of utterly baseless pro-olshevik statements. These statements have ad a certain success because the Bolshevik cen-rship, beginning in August, has very much ecreased direct communications with Russia.

This pro-Bolshevik propaganda resembles in very way the pro-German propaganda. It be-ins by denying absolutely the mass of existing vidence, including even the original documents ut forth by the American Government with e direct authorization of President Wilson. ll the vast masses of material gathered directly r indirectly through any governmental sources re rejected on the entirely false assumption hat it is all official or governmental. The daily apers and correspondents with the exception f a few pro-Bolshevik writers are repudiated s being capitalistic. The same is said of all oreign witnesses. The immense amount of tes-imony gathered from other political parties in ussia is rejected as being either "bourgeois" r "partisan."

Having thus gotten rid of all existing testi-ony, the pro-Bolshevik propagandists then roceed to build up an entirely new and im-ginary structure of their own.

The pro-Bolshevik agitation has had little or o success in accomplishing its main object. It as produced few Bolshevists in this country nd not many pro-Bolshevists. But it has suc-eeded in confusing the public mind. For four onths there has been comparatively little new aterial from Russia. During this period the ro-Bolshevists have succeeded in getting before he public many of their imaginative produc-ions. What is the origin of these stories? A ew newspaper correspondents and writers have ecome the official mouthpieces of Bolshevism. or example, the *New York Times* and other ewspapers for many months published the rticles of Arthur Ransome as coming from heir own official correspondent. At the end f this period *The Times* on several occa-ions printed a notice to the effect that Ransome as the official mouthpiece of Lenine and rotzky. There were several other similar ases. The second group of pro-Bolshevist ropagandists is composed of correspondents or social workers" who knowing nothing of the ussian language, Russian politics, Russian eography or the Russian people, went to etrograd or Moscow and spent a few weeks or few months in the country under the chaotic onditions of the revolution. Even in times of peace Russia is difficult to understand because of its huge size and complicated conditions—even by persons who have spent many years in that country. During the revolutionary turmoil, communication has been so bad that it would take months to gather evidence which might be secured in a day in ordinary times. The evidence of these fleeting visitors, most of them entirely without any qualification whatever for such difficult investigation, is all but worthless.

Fortunately there is a method by which the whole situation can easily be cleared up. It is not necessary to consider either the so-called testimony of the pro-Bolshevist propaganda or the vast mass of evidence gathered from hundreds of other sources. The avowed position of the Bolsheviki themselves, their own utterances and actions which they do not deny are quite sufficient for all practical purposes.

This article therefore concerns itself almost entirely with the Bolshevists' own declarations and acts which they themselves do not deny, but, on the contrary, boastfully avow. In order to acquaint the reader with the nature of some of the evidence which comes from non-Bolshevik sources, some of it is referred to only briefly; but most of our space is given to the Bolshevists' own statements.

II

THE BOLSHEVIK PROGRAM

Like the German propaganda, the pro-Bolshevik agitation makes very grave blunders—even from the standpoint of its own interests. The pro-Bolshevists, for example, are making claims on behalf of the Bolsheviki, which the latter themselves deny!

In America, the Russian Bolshevists are represented as being democrats; in Russia, Lenine and his followers lose no occasion to repudiate democracy, both in word and in deed. Our quotations will show that the very basis of Bolshevism consists in the repudiation of democracy!

In America, the Bolsheviki are represented as having given land to a landless peasantry; in Russia, the Bolsheviki attribute nearly all of their troubles to the fact that there has been very little land (not in peasant hands before the revolution) to give—a fact which will also be demonstrated later by quotations from the Bolsheviki themselves.

In America, the Bolsheviki are represented as being pacifists; Lenine and Trotzky have neglected no opportunity to denounce bourgeois pacifism and to assert that they are in favor of a holy war against any and all non-Bolshevik governments wherever such a war has a chance of success.

In America, the Bolsheviki are represented as favoring individual liberty; in Russia, the Bolsheviki absolutely repudiate such regard for personal liberty as being a "bourgeois doctrine and practice."

In America, Lenine is presented as being a hundred per cent Socialist; in Russia, Lenine presents himself as being one hundred per cent anti-Socialist, that is, a "communist," opposed to the Socialist International.

In May, 1917, the first or non-Bolshevik revolution was already sufficiently developed to enable Lenine to define the application of his doctrine to the new political situation in which Russia found itself. From the *New International* (April, 1918), an American Bolshevik publication, we quote the following paragraph of a long article by Lenine:

> The word democracy cannot be scientifically applied to the Communist Party. Since March, 1917, the word democracy is simply a shackle fastened upon the revolutionary nation and preventing it from establishing boldly, freely and regardless of all obstacles, a new form of power; the council of Workmen's, Soldiers' and Peasants' Deputies, harbinger of the abolition of every form of authority.

Shortly after the Bolsheviki came into power, Lenine defined the new "dictatorship" of the proletariat as follows:

> Just as 150,000 lordly landowners under Tsarism dominated the 130,000,000 of Russian peasants, so 200,000 members of the Bolshevik Party are imposing their proletarian will on the mass, but this time in the interest of the latter.

In order to understand thoroughly the extent and precise grounds of Lenine's repudiation of democracy, let us quote his denunciation of the rival faction of the Social Democratic or Workingmen's Party, namely, the Mensheviki:

> In its class composition this party is not Socialist at all. It does not represent the toiling masses. It represents fairly prosperous peasants and workingmen, petty traders, many small and some even fairly large capitalists, and a certain number of real but gullible proletarians who have been caught in the bourgeois net.

We are progressing into the Lenine psychology. Even "a fairly prosperous" workingman is not a "proletarian."

In a political catechism prepared in the summer of 1917 Lenine asks the question, Is it necessary to convoke the Constituent Assembly, and answers, "Yes, and as soon as possible." This demonstrates that the Bolsheviki did not dare to oppose the idea of a democratic Constituent Assembly and did not intend to oppose it if they could gain control of it. It was only because they found the overwhelming majority of the peasants and a large part of the working people against them that they dispersed the Constituent Assembly and established the "Soviet" doctrine. What this doctrine is we may see from an examination of the Soviet constitution adopted at the fifth Pan-Russian Congress of Soviets.

In the preamble, the Soviets state that they propose "to put an end to every ill that oppresses humanity." The Soviets necessarily proceed to a very extreme policy to carry such a program into effect, declaring for "a dictatorship of the proletariat and the poorest peasantry."

Here the cat is out of the bag. Not even "the poor peasantry" can be relied on. Only a very vaguely defined class of "the poorest peasantry" is trusted to support the dictatorship of the city working classes, which in Russia do not represent more than ten or twelve per cent of the population.

Furthermore, a very large proportion of this working class, as we shall show below is anti-Bolshevik.

The utter impossibility of defining the "poorest peasantry" leads the Soviet Congress to adopt another anti-democratic expedient for preventing the Russian people from controlling Russia—for disfranchising the peasantry representing eighty-four per cent of the population. This expedient is very simple. Each Bolshevik workingman (the non-Bolsheviki being excluded

by methods described below) is given the same vote as five peasants! The following is Article One of Section 8 of the Soviet Constitution:

> The Pan-Russian Congress of Soviets consists of representatives of the urban Soviets (one delegate for each 25,000 votes) and representatives of the government congresses (one delegate for each 125,000 voters).

No discussion of the Soviet program will be complete without stating its position on international affairs. The Soviet proposes a world-wide war against all non-Soviet governments, whenever and wherever such a war promises success—and the wars they have actually waged show what they will do if they get the chance.

III

BOLSHEVISM IN PRACTICE

We have given sufficient Bolshevik evidence on the Bolshevik program. Let us now turn to the practical working out of the program, which is a far different thing.

Certain new converts to Bolshevism have been circulating the entire Bolshevik program, together with their plans for the transformation of industry, government, education, literature, music and art as if the mere publication of Lenine's ukases were equivalent to the complete accomplishment of the stupendous changes proposed! We have already quoted expressions of Lenine's showing the breakdown of his program in its most fundamental point, namely, the effort to secure the support of the peasantry. We shall now quote Trotzky and Gorky as to the failure of Bolshevism in other directions.

Gorky is undoubtedly the greatest literary figure among the Bolsheviki. It is true that his paper was forbidden for a long period and that he was for a time practically out of that movement. But he has re-entered it recently and has been given an important position by the Bolsheviki. They not only accept him once more as one of their leaders, but are boasting about his return to the fold. The motives for this return we do not know. Possibly Gorky desired to stay in Russia and to keep his head on his shoulders. Possibly he was influenced by the considerable power given him in matters pertaining to literature and education.

It needs the pen of a master writer like Gorky to describe the practical workings of Bolshevism. And he has done a good job! We shall now reproduce quotations from Gorky's principal articles about the Bolsheviki—with the minimum of editorial comment necessary to bring out the importance of the points raised.

Nikolai Lenine is the Kaiser, the Pope and the Karl Marx of the Bolshevik movement. His doctrines and ukases are absolute. No instance is on record where his doctrines or authority have been impugned. In his works Lenine defends not only a dictatorship of the proletariat, but a highly centralized revolutionary movement with one man at the top. Gorky's description of Lenine therefore becomes extremely important. We see him from the point of the great Russian Bolshevik writer as a sort of Calvin or Loyola, a fanatic, a man who is willing to put his theories into effect regardless of the cost in human life and regardless of the opposition of the overwhelming majority of the population.

GORKY ON LENINE

> Lenine is one of the most remarkable men of the Socialist "International." He is very intelligent, and possesses all the qualities of a "chief," including the absolute moral indifference which is often necessary for such a part. On occasions he does not lack a certain sentimentalism, but, at the same time, he has no pity for the mass of the people. And he believes that he has the right to make this terrible experiment on the Russian people. Weary of the war, and very unhappy, this people has already paid for Lenine's "experience" with thousands and thousands of lives. It will still cost it tens of thousands more. But this atrocious tragedy never makes Lenine hesitate, for he is the slave of dogma, and his partisans are his slaves.
>
> Lenine does not know the people. But he does know—from his books—how to arouse the masses and how to excite their worst instincts. The working classes are to Lenine what minerals are to the metallurgist. Can a Socialist-Nationalist state be made of this mineral? Indeed no, and Lenine doubts it. But why not try? What does Lenine risk if the attempt does not come off? Nothing much.

This description of Gorky's is all the more important because he himself shares a very large part of the Bolshevik theories—he opposes only the violent and autocratic methods of Lenine. In another article in his paper, the *Novoya Zhism,* Gorky resumes his analysis of Lenine's cruel and despotic actions. Let us note that Gorky realizes fully that Bolshevism and the Soviets have become identical. This is important, for the pro-Bolshevists of the *New Republic* and other similar American publications have endeavored to secure the recognition of the Bolsheviki by the round-about method of demanding the recognition of the Soviets—insisting that they are still two separate and distinct things! Gorky says:

> Here begins the line of sharp division between myself and the chaotic, topsy-turvy activities of the Soviets. I regard intellectual Bolshevism to be of great value to the aspiring Russian soul. This intellectual Bolshevism or Bolshevism of ideas could train the Russian soul to boldly demand its own, stir it to readiness for struggle and activity, awaken this indolent spirit to the sense of initiative, and especially give it form and life.
>
> But the practical Bolshevism of the anarchistic-communalistic visionaries which emanates from the Smolny Institute is injurious to Russia, and, above all, to the laboring class. The Soviets regard Russia as so much material for experiments. The Russian people is to them like the horse to the bacteriologist who injects the animal with the bacillus of typhus in order to produce the antitoxin. *It is with this kind of brutality and this form of disregard of consequences that the Soviets treat the Russian people, without giving the least thought to the possibility that the tortured and half-starved creature may die in the process.*
>
> *The social revolution that is planned can never be realized under the present conditions of life in Russia, for the reason that it is not possible to turn overnight into Soviets 85 per cent of the population of the country, which consists of peasants, living together with about twenty million of nomads from alien races.*
>
> My own opinion is that the Soviets are undermining and destroying the working class of Russia. They are setting up formidable towers of fearful and senseless complications that will stand in the path of the working class. Deaf to the voice of reason, they are bringing into existence unheard of insurmountable difficulties for the whole of the future course of the proletarians in their efforts to advance the progress of the war.

THE BOLSHEVIK PROGRAM "WRITTEN ON WATER"

Gorky says that there is practically no relation whatever between Bolshevik professions and Bolshevik practice. The professions are themselves sufficient to arouse the last degree of hostility on the part of every democrat—as we have shown above in quoting the Bolshevik's own statements. The practice is infinitely worse. As Gorky says, the Bolshevik actuality can have no relation whatever with any sort of idealism—not even with the perverted, reactionary and anti-democratic idealism of the Bolsheviki themselves. Gorky says:

> The proletarian is the bearer of a new culture. In these words were incorporated the beautiful dream concerning the triumph of righteousness, reason and love, the dream of the triumph of man over the beast. In the struggle for the realization of this dream thousands of men of all classes gave up their lives. Now the proletarian is at the helm, he has secured the coveted freedom to labor and create freely.
>
> It is now in order and pertinent to ask "How does this labor and the proletarian's freedom to create express itself?" The decrees of "the Government of People's Commissioners" are no more than newspaper feuilletons, no more, no less. *It is that sort of literature which is written on water, and even though a real idea is now and then given expression to, the present circumstances forbid the realization of any idea.*
>
> What new things, then, is the revolution bringing? How is it transforming the bitter realities of Russian life? How much light is it bringing into the darkened lives of the Russian people?
>
> *For the period of the revolution ten thousand lynchings have already been accounted for.* This is how democracy is meting out judgment upon those who have in some way sinned against the new order.
>
> During the days of the progress of drunkenness human beings were shot down like dogs and the cold-blooded destruction of human lives came to be a commonplace daily occurrence. *In the newspaper "Pravda" the pogroms of the drunken mobs are written up as the "provocative acts of the bourgeois"* which is clearly a misrepresentation, the employment of a pretty phrase which can only lead to the further shedding of blood.
>
> *Theft and robbery are increasing from day to day. The practice of the art of taking bribes is becoming more and more widely introduced and our new officials are already as well trained in the art as those who served under the Czar-government.* The dubious individuals who have assembled around the Smolny Institute do not even hesitate to intimidate the frightened citizens. The coarseness of the representatives of the government of the "People's Commissioners" have aroused universal protest, and yet these representatives speak in grieved tones. *The various petty officials who hover about the Smolny Institute appear to be drunk with a sense of conquest and regard the citizens as if they were the conquered,* acting even as the mi guided police of former days were in the habit of acting. They shout and scold and give commands to every one, just as of yore the village sheriffs would treat the inhabitants of the obscurest rural districts in Kanotop or Tchsuloma, *and all this is done in the name of the "proletarian," in the name of the "social revolution." But in reality it represents only the triumph of the beast over man,* the ascendancy of the Asiatic spirit which still dwells among us, the ugly growth upon our soul. Where then, is that spirit which expressed itself in "the idealism of the Russian workingman" whom Carl Kautsky has so enthusiastically eulogized?
>
> Where is that which is supposed to be incorporated in the morality of socialism—the new morality?
>
> I expect that one of our "realists in politics" will answer me contemptuously with the usual phrase: "What is it you wish? Do you not realize that this is the revolution?"
>
> *No! I do not recognize the unmistakable signs of the social revolution in this association of zoological instincts. It is a combination of the feelings of our lower selves, without socialism, without the spirit of socialism, without the psychology of socialism.*

THE DEMORALIZATION OF THE MASSES THROUGH BOLSHEVISM

It cannot be said that Bolshevism has had no effect upon the Russian masses. No free election or any other evidence has indicated that the Bolsheviki have a majority in Russia, or even in the big cities where they are strongest. But the power that they hold through their control of the arsenals, the food supply, the railways, the firing squads and the secret police has enabled them to have an immense effect—of a deleterious kind. (They rule precisely as the Czar did. There can be no question that Nicholas II had 90 per cent, if not 95 per cent of the people against him. Yet the helplessness of a disarmed peasantry scattered over two Continents allowed him to continue his rule.) The effect of Bolshevism on the masses is described by Gorky as follows:

> All observers of the village today are unanimously of the opinion that the process of disintegration and demoralization is proceeding there with irresistible force. Having plundered the estates of the landowners, having shared out among themselves or simply destroyed the dead and living stocks on those estates, having even

taken to pieces the buildings, the peasants are now preparing for war against one another for the division of the spoil. To this is added the calamity of famine. In some districts the population has long ago consumed all the available stocks of corn, including seed-corn; while in others the peasants, having had a good harvest, are hiding corn and even burying it in order not to share it with their starving neighbors. *All this must lead, and in some places has already led, to a war of all against all, and to the most senseless chaos and universal destruction and murder.*

In a bitter passage, terrible in its irony, Gor- concludes:

Yes, the process of self-discipline among the masses is proceeding with gigantic strides. The revolutionary army garrison at Sebastopol has already undertaken the last final struggle with the bourgeoisie. Without much ado they decided simply to massacre all the bourgeoisie who lived within their reach. They decided and did it. At first they massacred the inhabitants of the two most bourgeois streets in Sebastopol; then the same operation, in spite of the resistance of the local Soviet, was extended to Simferopol, and then the turn came of Eupatoria.

Apparently similar radical methods of class-war will soon be applied to Greater Russia, for we have already Mr. Bleichmann (the leader of the anarchists) energetically carrying on an agitation within the walls of the Petrograd Soviet in this sense.

In Russia conscience is dead. The Russian people, in fact, have lost all sense of right and wrong. "Pillage whatever there is to pillage." Such is the motto of the two groups of Bolsheviki. The Red Guards, constituted to attack the counter-revolutionaries, shoot without trial any one whom they suspect. Pillage in all its forms is the only thing which is organized. In Petrograd every Bolshevik citizen may share in the spoil. The churches, museums, shops and stores are robbed.

In the provinces still more tragic events are taking place. Almost incredible demands are made upon the population at a few hours' notice. The Crimea is undoubtedly the province which has suffered most. The sailors of the Black Sea Fleet brutally murdered several hundreds of their officers, and repeated these barbarous outrages in several towns, where they also murdered political prisoners. The scenes were such as to cause several cases of insanity among the terrorized population. The slaughter continues, and shooting is rife in the towns.

TROTZKY AND THE PROFESSIONAL BOLSHEVIKI

When the Bolsheviki secured control of the ssian Government by the aid of bayonets and arge supply of money, the source of which is l a matter of dispute, the party had from one ndred to two hundred thousand members ac- ding to statements of Lenine. These are the fessional Bolshevists—and it is with them ne that the real power rests. After the Bol- viki had been in power for seven or eight nths, Trotzky made the following frank tement of the character of the Russian labor ganizations which compose the Bolshevik vement:

Let us be honest. Who are the leaders of the labor organizations today? Partly worthy self-sacrificing and convinced people who therefore have learned nothing and are scarcely able to read and write, but partly all sorts of adventurers and swindlers who take advantage of every great chance to make a position for themselves.

Trotzky proceeds to explain that the educated sses (which the Bolsheviki have been prose- ing in such a frightful manner) refuse to rnish them the experts and administrators solutely indispensable in every department of e today.

EVIDENCE OF A PRO-BOLSHEVIK PRIME MINISTER OF FINLAND

Oscar Tokoi, first constitutionally elected ime Minister of Finland, who has just spent veral months in Russia as an ally of the Bol- eviki, an alliance which he has since repudiat- sums up the situation as follows:

In comparison with the entire population only a small minority supports the Government, and, what is worse, to the supporters of the Government are rallying all the hooligans, robbers, and others to whom this period of confusion promises a good chance of individual action.

Even a great part of those who from the beginning could stay with the Government and who still are sincere social democrats, having seen all this chaos, begin to step aside, or to ally themselves with those openly opposing the Government. Naturally, as time goes by, there remains only the worst and the most demoralized element. Terror, arbitrary rule, and open brigandage become more and more usual and the Government is not able to prevent it.

Naturally only a small part of the people will remain backing such an order.

A Socialistic society cannot be brought about by the force of arms and cannot be supported by the force of arms, but that a Socialist order must be founded on a conscious and living will of an overwhelming majority of the nation which is able to realize its will without the help of arms.

I do not believe that at this time there is in Russia any social force which would be able to organize the conditions in the country. For that reason, to my mind, we should to begin with, frankly and honestly rely on the help of the allied powers.

The democratic traditions of these countries are some surety that the social order established by them will be a democratic one.

We must destroy the originator and the cause of the war, militarism, by its own arms, and on its ruins we must build, in harmony and in peace—not by force, as the Russian Bolsheviki want—a new and a better social order under the guardianship of which the people may develop peacefully and securely.

IV

SOVIET "ELECTIONS"

The ukases fixing the electoral qualifications for the Soviets are issued from time to time by Lenine and are countermanded or modified when results are not satisfactory. In the middle of last June at Lenine's orders, the Central Executive Council of the Russian Soviets "decided to expel those of its members representing the social revolutionists of the Right and the Center and the Mensheviki. All local councils are asked to expel representatives of the same parties." This is a wireless message of the official Russian Bolshevik agency.

But all Socialist proletarians and even extreme revolutionists who did not agree with the Bolsheviki are now being defranchised. The above mentioned groups are more or less moderate Socialists. Lenine, the official Bolshevik organ tells us, has now proceeded to disfranchise even the extreme Social Revolutionaries of the Left.

Kazan, July 26.—As the important offices in the Soviet were occupied by Socialist Revolutionaries of the Left, the Extraordinary Commission has dissolved the Provincial Soviet. The Governmental power is now represented by a Revolutionary Committee.—Izvestya, July 28.

The most extraordinary Soviet elections were perhaps those of Petrograd at the end of the month of June.

Maxim Gorky's newspaper, the *Novoya Zhism,* which furnishes the report probably most nearly correct, shows that the Petrograd proletariat was absolutely governed by Bolsheviki:

The Bolsheviki, it was indicated, won through the votes of the unemployed, the red guards, artificially created government organizations and alleged unions. The Soviets, at the point of the bayonet, arrested opposition leaders, stopped meetings, suspended newspapers and closed factories and workingmen's clubs.

In all the Obuchovsky and Nevsky districts martial law was proclaimed. Many workmen were arrested. Patrols and armored automobiles still fill the districts. The workmen are extremely resentful and a serious outbreak is expected.

A special conference of Petrograd workers decided on a day's strike as a protest. They will demand abolition of capital punishment, which has been one of the methods by which the Bolsheviki retains its power.

The one day general strike was carried out by the labor unions of Petrograd, but without effect. The unions had to content themselves with the issuing of the following manifesto, which, of course, led to their dissolution by the Bolsheviki:

According to a resolution adopted by the Petrograd shop stewards committees, day and night, in the streets and in houses, murders occur, carried out not only by criminals but also by responsible agents of the Soviet Government.

Murders are committed in the guise of fighting the counter revolution, and the victims belong not only to the enemies of the people but very frequently to the most peaceful class of citizens, workers, students, peasants and soldiers.

Murders are committed wiithout any inquiry or trial, deliberately and coldly, and in the name of the revolutionary proletariat.

We, the representatiives of the Petrograd working class, before the entire people of Russia, proclaim that these murders are polluting the honor of the revolution, of democracy and socialism. We repudiate with indignation all responsibility for these sanguinuary deeds, which form a stain upon our socialist banner.

We call upon all workers and upon all honest citizens to join us in our protest and demand a public trial of the authors of these bestialities and murders.

V

THE GERMAN SOCIALIST VIEW OF BOLSHEVIKI

It is unnecessary to point out that the German Socialists have been deeply interested in the Bolshevik movement from the beginning and have followed it from day to day. We shall not quote the opinion of any of the moderate Socialist wing which is obviously anti-Bolshevik. We shall confine ourselves to quotations from the Independent or Minority Socialists, the group led by Haase, Kautsky and Bernstein.

Karl Kautsky, who is the world's leading Socialist authority and who belongs to the radical wing of the movement, is now Foreign Prime Minister of Germany. In a recent article on the Bolsheviki he says:

"The Socialists must defend democracy, as Socialism without democracy is impossible." He cites Karl Marx to prove that Socialism is attainable peacefully in democratic countries and gives a series of citations from Marx to prove that Bolshevism is false to his principles.

Kautsky says a dictatorship by the lower classes leads to a dictatorship by the sword, and he sharply criticises the Russian Soviet Government, which has taken the power from the masses and created a dictatorship by one party of the proletariat, outlawing opposition.

He says the Bolsheviki are going to lose completely in Russia, as when they lose their power they will be unable to continue as a minority. He says the Bolsheviki know it, and are therefore trying by all means, clean or dirty, to hold power.

In the early stages of the Bolshevik movement, Kautsky gave a lengthy analysis showing how from the Socialist standpoint Bolshevism was an impossibility. His principal expressions were as follows:

The population of Russia is still three-fourths agrarian and the greater part is illiterate; agriculture is technically backward and the means of communication extraordinarily deficient . . . . *from this it results that the revolution, because of the general character of the country can only be bourgeois and not Socialistic.*

The dictatorship of the proletariat meant the discontinuance of the capitalistic production, which would be impossible under the proletariat

THE SOVIET PROPAGANDA

For six months the pro-Bolshevist propaganda in this country has taken a new form. Very few persons are willing to be labelled pro-Bolshevik, but the propaganda initiated by Lenine and Trotzky has been brilliantly successful in securing sympathy for the "Soviets." The Americans are a hard-headed race; not many have been caught by this superficial scheme, but it cannot be denied that sympathizers with "the Soviet form of government" may now be found in all directions. It is true that most of these sympathizers were formerly among the friends of Germany and advocates of a "peace without victory." Every day some new voice is heard employing the term "Soviet" as representing a desirable, practical and democratic form of government.

It is safe to say that not one out of one hundred persons so glibly using this new word, could give a clear and satisfactory description of the Russian Soviets and the way they work.

What is the Soviet? It is impossible to define within a few words—for the simple reason that the whole institution has changed from day to day to suit the needs and purposes of the Bolsheviki and their dictator, Lenine. The essence of it can be briefly stated. The Russian Communists, as the Bolsheviki call themselves, are violently anti-democratic. They are equally opposed to majority rule in the nation, in the province, in the city and even in the parish. The Soviets, it is true, are elected bodies, but so was the Council of the Empire in Germany and the Kaiser's own pet parliament in Prussia.

While Lenine's ukases, changing the electoral bases of the Soviets, have varied from month to month, the fact that the overwhelming majority of the Russian people are against him has obliged him to settle down to a definite and permanent basis. The one body upon which Lenine can absolutely rely is the Red Guard. Like every Lenine institution, this body is called "proletarian"; but the members of the Red Guard are personally chosen by Lenine and the executive committee of which he is head. This Red Guard is therefore literally a Pretorian Guard or body of Janizaries; nothing like it has been known since Wallenstein's mercenary army, which depopulated large parts of Central Europe during the Thirty Years' War. There is no pretense that the Red Guard is formed on patriotic grounds; exceptionally high pay is offered and a double ration of food (more valuable than gold in Russia today), besides exceptional privileges of loot.

The constitution of the Soviets announced by Lenine has made the Red Guard the foundation of the Soviet power!

The representation in the local Soviets, according to the paper program of Lenine, is as follows: Each one thousand working men to have one delegate and each one hundred and twenty-five Red Guards to have one delegate! That is, one Red Guard is worth eight working men.

But this is only the beginning of Lenine's hierarchy, which goes under the name "Soviet." He established for the provincial Soviets a law by which 125,000 peasants shall have the same representation as 25,000 workmen. That is, one workman is worth five peasants. Now certain changes are proposed in this Soviet constitution, but the sacred proportion which makes one Red Guard mercenary equal to forty peaceful and hard-working peasants is apparently to be maintained. It is now proposed that each five working men shall have the same voice as each two Red Guards and, on the basis of this lordly beneficence, Lenine expects the Menshe-viki and social revolutionists to be tempted back into the fold. Fortunately, the democratic or anti-Soviet socialists have not swallowed the bait. But while the working men are possibly to be given a slightly less insulting treatment, the peasants have now been still further humiliated in comparison with the workmen, and in the New York *Nation*, of December 28, the provincial Soviet organization is described as follows: Every one hundred workmen are to have a delegate, whereas each volost, or group of villages, is to have only two delegates. The Russian volost varies greatly in population but it usually consists of from half a dozen to a dozen villages, each ranging in population from 500 to 5000 persons! Thus the volost with anywhere from 1000 to 20,000 families, is to have the same number of delegates in the provincial Soviet as a factory of two hundred working men! That is to say, one working man has the same vote as from ten to two hundred peasants.

This is not in the least surprising to anybody who knows the Bolshevist doctrine and practice. They have not only been suspicious towards the peasant population, which constitutes 85 per cent of the Russian nation, but hostile to it. In all their writings they convict themselves of being anti-democratic, which is the very meaning of the term "dictatorship" of the proletarians—that is, the rule of the manual laborers of the towns.

However, the preference of the Red Guard already referred to shows that Lenine has not even established a dictatorship of this proletariat, but of the Red Guard. According to the figures above given, the 300,000 members of the Red Guard have a vote in the provincial Soviets outnumbering the entire one hundred million peasants. But Lenine takes no chances. He also relies upon the support of the working class element in the Soviet, after having arrested, terrorized, expelled or starved to death the anti-Bolshevist elements, however revolutionary and socialistic they may be.

All the essential parts of the Soviet constitution, as above described, have been laid before the public again and again in the pro-Bolshevist statements of the socialist high-brow intellectuals. The ukases by which the anti-Bolsheviki are to be slowly starved to death, have been boasted of as being the most clever of their methods. What excuse is there then for educated and presumably well-informed persons to pretend that they do not know that the Soviets represent the extreme of anti-democratic violence to be found among any of the nations of the world today?

"HEROES" OF THE SLACKER BATTALION.

The heroes of the great war are not represented, good readers, by the brave men who gave their lives in battle with the Huns, by the armless and legless lads who have begun to return to their homes, by the millions who self-sacrificingly and devotedly left their loved ones to fight for democracy and freedom. There were other heroes in this war—that is, if we accept the oleaginous enconiums of *Survey*, *Nation* and *New Republic* writers of the doughty fellows who heroically defied the laws of the land in refusing, or in trying to evade, service under the Selective Service Act. These men, if we are inclined to accept the interpretation of their champions, are the "idealists" of the war. In the *Survey* they are called "war's heretics." "They are not cowards," declares one Norman Thomas, vice chairman of the National Civil Liberties Bureau in the *Survey*. "Indeed, cowardice cannot justly be alleged against any objectors. . . . Only a firm and lofty courage will lead these men to jail."

Inspired by a lofty "idealism," these "co cientious objectors" refused to register, or r spond to the draft calls. Rather than go fight Germans and face the dangers of shrapn liquid fire and poison gas, they preferred to to jail where they could be safe in their ski and eat three full meals a day. And now th the Germans are beaten—through the valor men who shed their blood, who were maimed f life, who braved privations and sufferings u nameable—a movement has been put afoot liberate from prison these real "heroes" wh were "conscientiously" opposed to fightin "Now that the war is over must we keep the there (in jail)?" pleads the unctuous M Thomas. "A group of idealists, lovers of th future," this fellow Thomas calls them.

At a meeting held recently in a fashionab Fifth avenue church, with the purpose of agita ing for an amnesty for the violators of th Selective Service Act, the rector declared "America was settled by conscientious objec ors. Surely the country still needs men with conscience."

Does it not seem that the insults gratui ously offered the lads who are now returnin home from France are going too far? In lau ing the slackers, is it implied that the men wh willingly responded to the draft call were me without a conscience, without courage, witho personal initiative and will? To class th flabby-bodied and flabby-souled nondescript who tried to sneak and crawl out of doing thei duty on a mealy-mouthed plea of "conscience with the pioneers who settled America, wh braved uncharted oceans and a virgin wilder ness, is an affront to every virile American wh cherishes veneration for the fathers of th country and the ideals on which the nation wa founded. Of course, it is simply grotesque t class Roger Nash Baldwin, who was sentence to serve one year in the Atlanta penitentiar for violating the Selective Service law, or tha virulent voicer of violence, Rose Pastor Stokes who was sentenced for violating the Espionag Act, with the spartan Puritans. Those me and women, and the other pioneers of America did come to these shores because they were con scientious objectors—they objected to a tyranny which refused religious and civil freedom. Fo what they believed they were willing to sacri fice, they were willing to fight. They were neither sissies nor mollycoddles. They were militant, brave, ready to shoulder a gun. Many had fought in the armies of Cromwell. And when they settled in Massachusetts, in Pennsylvania, in Maryland, they undertook a grim and vigilant struggle—they had to war against the Red men, against wild beasts, against the forces of primeval nature. Nor were their offspring slackers when the time came to fight under George Washington.

"I not only refuse to obey the present conscription law," said Roger Baldwin in court, "but I would in future refuse to obey any similar statute which attempts to direct my choice of service or ideals." Baldwin boasted of his "essentially American upbringing and background."

In announcing that he was opposed to this war, the former director of the National Civil Liberties Bureau—which some time ago undertook to defend the I. W. W. leaders charged with violating the Espionage Act—admitted that he was opposed to fighting Germany. If such "conscientious objection" had inspired the peoples of England, France and Belgium, Germany would today rule the world. Was the German "ideal" the "ideal" in which these "conscientious objectors" believed? Did they secretly hanker for the rule of the Kaiser? For the ideals in which men believe they are willing to fight. These objectors, therefore, could not—and they have admitted this—have believed in the ideals of the nations arrayed against Germany.

A great pother is at present being made about e imprisonment of these "lovers of the fu-re," in fact, a whole propaganda has been t under way by such champions of "idealism" d "patriotism" as Oswald Garrison Villard, ystal Eastman, John Haynes Holmes, Judah ignes, Paul U. Kellogg and Scott Nearing. ie pertinent question is this: How many of ese inimical objectors and disloyalists are eaching the class war after the war? How iny of the snivelling cravens who tried to ade service in war against Germany are today ying to promote civil war in our midst? How iny who put forth "conscientious" scruples a reason for not fighting the Kaiser are now vancing themselves as leaders of a bloody)lshevik revolution?

IT HENDER-N, MAC DON-LD, SNOWDEN, AL

It wasn't so very long ago that the parlor Bolshevists of this country were declaring that the British Labor Party was going to run England. In fact, they reatened that if the British Government per-sted in its wicked intentions of bringing Ger-any to her knees the British Labor Party, ider Mr. Arthur Henderson, would go ahead its own accord and force peace with the good erman people through negotiations over and)ove the heads of Mr. Lloyd George and his sociates.

Many of our young domestic intelligenzia rankly based their hopes for a satisfactory eace—that is, a peace which would let Germany f easy—not in the combined leadership of resident Wilson, Mr. Lloyd George and lemenceau, but in "the combined leadership n the one hand of President Wilson and on the her hand of such men as Henderson, Clynes nd Thomas, their British and continental as-)ciates."

These same parlor Bolshevists fervently en-orsed the proposed Stockholm conference and itterly assailed Mr. Lloyd George for opposing ich an unofficial peace discussion with repre-ntatives from the Central Powers. Their itter and vindictive attacks upon Mr. Gompers, ecause of his implacable stand against such eace parleys, are not beyond the reaches of iemory. These folk were painfully wrought p about the "dynastic ambitions" and "com-iercial imperialism" of the Allies, and sought y every means to make Americans believe that ibor in the Allied countries was not back of the llied Governments. While these carping folk ere trying to cast suspicion upon the Allied eaders, they at the same time sought to under-nine the American Federation of Labor, which ad taken a stand solidly to back the war to a ictorious conclusion. They would have liked 3ritish Labor to repudiate Mr. Lloyd George nd back Mr. Henderson. They would even iore have liked to swing Mr. Gompers' follow-ng over to the ranks of Morris Hillquit.

One organ of self-alleged brilliance and rophetic understanding, which took the spot-ight whenever any little pro-German peace move vas staged, declared that if a discussion of the ierman and Austrian peace bids was rejected 'the Allies will be divided by disaffection on art of the labor groups of France and Great 3ritain." In other words, it was going to be a ighty dangerous thing for any of those wicked Allied Governments to try to be hard on the nisled and unfortunate German people. Mr. Lloyd George and Clemenceau might be set on 'punitive indemnities," but the Hendersons, Snowdens, MacDonalds, the *Manchester Guard-an,* London *Daily News* and other continental adicals wouldn't stand for any such thing. No ir! In their perfervent advocacy of this group, heir American friends charged them with noth-ng less than possible premeditated treason.

However, what happened? The British elec-ions came along. Mr. Lloyd George without mincing words declared for a peace of justice, in which Germany would have to pay for wrongs done. Did the British Labor Party carry Eng land, as was predicted by our parlor Bolshe-vists? Mr. Lloyd George, who has been assailed as one of the arch-plotters against a peace of magnanimity to Germany, won out with a clear majority of 235 over any combination of other parties. The pacifists and Bolshevists were utterly routed. Exit Mr. Henderson, who ad-vocated the Stockholm conference; Mr. Philip Snowden, the pacifist; Mr. Ramsay MacDonald, the Morris Hillquit of England.

Great Britain has given her answer to the pro-German sympathizers, Bolsheviki and foes of internal order. In endeavoring to explain the enormous landslide for Mr. Lloyd George, George Nicoll Barnes, Labor member of the War Cabinet, expressed the opinion that the Labor Party had lost by truckling to the pacifists and Bolshevists. The *Manchester Guardian,* the organ of "liberalism," alleged the Premier had won by "exploiting" the strong popular feeling regarding the punishment of Germany. One thing is certain: The British people have ex-pressed themselves as unalterably opposed to what the *New York Times* has characterized as "a gentle truce with Germany until the next war," or the peace which the *New Republic,* the *Daily Call,* the *Nation,* the *Masses* and *Survey* have advocated.

Premier Clemenceau, addressing the Chamber of Deputies, received an overwhelming vote of confidence. That was the voice of France speak-ing.

No doubt there will be whimperings and whin-ings among the shadow Huns here as the Peace Conference progresses. But there has been ob-servable in this country a change in the temper of the people. With American boys returning home wounded, legless, armless, blind, suffer-ing from the gases of a fiendish foe, there has been a noticeable decrease in patient toleration of subtle disloyalty and insidious pro-German-ism.

ENGLAND'S NAVAL SUPREMACY

(From Bulletin Sent to the German-Language Press Under the Above Heading By the American Friends of German Democracy, Franz Sigel, President)

In a German-language paper published in the United States we recently read an article bit-terly condemning England's claim to supremacy on the seas. The article which was thoroughly anti-British, culminated in the threat that the American people would even take upon them-selves the burden of conscription so as to make it plain to the British that they were not in the mood to be dictated to by any foreigner and to recognize any foreign supremacy, on land or sea.

Similar articles have appeared in other Ger-man-language papers of the United States. They are absolutely mischievous, in bad taste, and seem to indicate a desire to embroil the peo-ple of the United States with the people of Great Britain. This anti-British feeling has of course nothing in common with the anti-British prejudice which was formerly so prevalent in the United States. The new anti-British feeling is merely an echo of the propaganda conducted in the United States by the late Imperial Ger-man Government before we entered the war. Americans of German origin who have felt the baneful effects of this propaganda should be on their guard and not allow themselves to be de-ceived by catchwords and idle rumors which in the end will hurt them as much as they will hurt the United States.

There is no truth in the assertion that Great Britain will have nothing to do with the pro-posed League of Nations. The truth is that in Great Britain as well as in France, Italy and the United States, there are reactionary cliques who do not want a peace as outlined by Presi-dent Wilson. The people of Great Britain, from what we know of them, are heartily in favor of a League of Nations and the British Government has delegated Lord Robert Cecil to the Peace Conference for the special purpose of conducting the negotiations for a formation of a League of Nations.

It is true that Great Britain insists upon naval supremacy, and under the present cir-cumstances no fairminded person can say that such a claim is unjustified. As long as there is no League of Nations to guarantee the peace of the world Great Britain is absolutely at the mercy of a stronger naval power.

The position of Great Britain is unparalleled in human history. There is no other country in the world which could be brought to its knees so quickly by a superior naval force. Naval power alone could never have vanquished Ger-many. The greatest naval power could accom-plish little against the self-supporting United States. France could not be conquered by naval power. But Great Britain which for its food stuffs depends almost entirely on foreign im-ports brought to the Island across the sea, could be reduced to utter impotence by a superior sea power within six months. The case for British naval supremacy would have an entirely differ-ent aspect if the British Isles produced the bulk of the food consumed by their teeming popula-tions. If that were the case it might be fairly argued that the claim of Great Britain for naval supremacy sprang from a desire for world domination and was not the fundamental prin-ciple of British national defense.

These facts are too little understood by most people, but in England they are fully appre-ciated by everyone, even by the pacifists. For the masses of the British people naval suprem acy is a question of bread and butter. Even the least intelligent among the British people fully understand that if under present world conditions naval supremacy passed out of the hands of Great Britain, the people could be starved out in a very short time. . . . As long as the present economic structure of Great Britain lasts and especially as long as there is no League of Nations to provide better security against wars, the British people will undoubtedly insist upon having the strongest sea power.

This claim does not indicate a desire to domi-nate and bully the world, but is merely the re-sult of the natural wish to maintain national security and independence. If President Wil-son succeeds in carrying out the American policy of bringing into life a League of Nations it is as sure as anything can be that the appre-hensions felt by the British people will disappear and that Great Britain will become one of the stoutest pillars of world peace. Let us remem-ber that it was not Great Britain that willed the Great War. Prince Lichnowsky, in his famous memorandum, clearly pointed out that Great Britain tried to avoid the war in 1914 by all the means in her power. Great Britain, with her vast mercantile marine, had not the remotest interest in a world conflagration. Moreover, a government of pacifists was actually in power in Great Britain when the war broke out. In no other country had the idea of world peace so many adherents as in England.

An American newspaper which attempts to sow suspicion against Great Britain at this time does the greatest disservice to the United States. Mutual recriminations will certainly not ad-vance the success of American policies. A League of Nations must be based upon inter-national trust and confidence. Let us abandon national hatreds and prejudices. The world has had enough of that poison, and if there is one group of the American nation which should set its face sternly against the propaganda of na-tional or race hatreds, it is surely the Americans of German extraction who have suffered so much from the evil passions let loose by the war.

Shadow Huns and Others

By T. EVERETT HARRÉ

Part III

GENESIS OF "PARLOR BOLSHEVISM"

IN times of peace, when life goes on along the lines of orderly and constructive process, these people who have identified themselves with the motley phases of disguised pro-German and other sinister forms of propaganda would call for little if any notice; in fact, it is only by reason of the unusual times and their extraordinary conduct that they have succeeded in attracting attention. It is only because of their power to work harm, when the world is in turmoil and men's opinions are unsettled, that their work calls for sober and impartial analysis.

To gain an understanding of their untoward activities it is helpful if one appreciates the character of this breed and gauges their motives. Here is a tribe of individuals, divided into several specific groups, who, first of all, opposed our going to war with Germany, who did all in their power to obstruct the country in effectively carrying on the war against Germany, who opposed the draft, sought by every means to destroy the confidence of the people in the Allies, and who to the end waged a campaign against military victory over the foe and pleaded for mercy to the Huns. Some have figured in every pacifist movement that came along. They came out strong in defense of the yclept "conscientious objectors" and tried to raise a defense fund when a hundred or more I. W. W. leaders were on trial in Chicago for seditious conspiracy. They have in every case been arrayed with the forces of disintegration and destruction, and never with the forces of social construction and amelioration. Having done their utmost to prevent the collapse and surrender of Germany, they are now found to be setting themselves forth as exponents of a program which shall bring about an over-night millennium—by the abrogation of all laws and existing social order, by the destruction of representative democratic government, the turning topsy-turvy of civilization and the erection upon the ruins of society of a so-called rule of the proletariat. It is certainly not out of a fine, sincere and sterling desire to help humanity constructively that they have become the mouthpieces of Bolshevism and "internationalism," but out of a very obvious desire to get into the lime-light.

THE "UPLIFTERS'" PROGRESS

Considering their colossal pretensions, these folk fall below mere mediocrities. Utterly unoriginal, lacking any depth, or grace of style, not one could possibly hope to make any mark in the legitimate lines of human endeavor, in art or literature, in politics or philosophy. Consciously or subconsciously realizing their insignificance and pitiful ineptitude, the meagreness of their mental gifts, they have consequently sought to attract attention and get their names into print by attaching themselves to the outré, the fantastic, the supposedly ultra-modern, and as a final recourse to the disloyal, pro-German, anarchistic and disreputable. Snobs and egotists, they are able to flatter and delude themselves with the idea of being above the ordinary when, as they believe, they step out of the common run of humdrum people. Actually these "advanced" thinkers and ultra-modern "liberals" are extremely sixth-rate. Their trumpet calls to humanity to follow is as ringingly clarion as a ten-penny whistle. The role of the leader and prophet fails to hide the shoddy, vulgar and ill-mannered mountebank.

Before the war gave them an opportunity for being unique by being pro-German, these same individuals were found affiliated with every bizarre and freak movement that came along. They originally commercialized and egotized "muckrakeism," and thence drifted on to liberal-clubism, "hereticism," etc. They lined up with Cubism and impressionism in art, *vers libre* in literature; they were on the crest of the wavelets of Socialism, I. W. W.ism, anarchism and Greenwich-villageism. From pragmatism they gravitated easily to tangoism. They were strong for "free verse," "free love," and free grub. Over their table d'hotes and wine in the cigarette-reeking cafés of Greenwich village they ventilated vapid inanities about affinityism and Freudism. Often misled women, past the first bloom of youth, believing they were being introduced into a real Bohemia of advanced art and high thinking, paid for the dinners, the wine and the cigarettes. This crowd advocated "birth control," and every kind of control excepting self control. They were for "social reform," dress reform, and every sort of reform except moral reform. The women took to bobbed hair and going without corsets. The males took to long hair and a mincing gait. Their stock-in-trade included the preaching that marriage is legalized prostitution, yet when it came for them to marry into a house or a flat, with three square meals assured per day, they didn't hesitate at ensnaring other people's husbands and wives. They let off considerable "steam" about wage slavery, the crimes of organized wealth, etcetera, yet did they mix and mingle with their pet proletariat? Did they stick to the East Side? With all their affected emancipation, they craved for respectability, sought entre to the homes of the refined, toadied to possible capitalistic benefactors and wealthy ladies inclined to uplift the lowly, and noisily thronged the forums of fashionable churches. They schemed in every way to waylay and marry wealth, and did so in many cases. Rich adolescents who went in for settlement work, and impressionable heiresses on high-brow slumming expeditions who were taken off their feet by what they thought were Hall Caine and Mrs. Humphrey Ward radical heroes, found themselves married to professional viragoes and social scolds whose main personal ambition was to "live easy." Few of these people, either as laborers or journalists, could have earned their living by an honest day's work. Instead, they exploited theories which they carefully failed to practice. Many, alas, were notoriously deficient in ordinary human decency. A certain woman who was duped and preyed upon by a number of these trousered parasites was sued by her husband, a merely everyday business man, for divorce. The husband got the divorce on the strength of testimony which he secured from the lofty-thinking Greenwich village co-respondents.

VOCIFERATION AND VICTUALS

While they railed at capitalistic imperialism, by every sort of flattery many courted the patronage of the wealthy whom they pretended to despise, and it was only by pursuing the intellectual mendicant game that they succeeded in financing their books, pamphlets and magazines. This tin-cup social uplift, reform-the-world-over-night confidence game goes on. The subsidized pensioneer periodicals come regularly like the old call in the market place please to help the blind.

Before they succeeded in fastening themselves, parasite-like, upon rich benefactors, wl financed their journalistic undertakings, or b fore they married into respectability and wealt or else "got next" to German or Bolshev "slush funds," many of these queer folk grav tated to the Washington Square district of Ne York, where they haunted sordid speak-easi and basement restaurants with grotesque nam conducted by young lady anarchists who affecte bobbed hair and "emancipation." A restau rant, particularly frequented by the fraternit possessed by an inordinate passion for gab an grub, for a considerable time was run in th basement of the Liberal Club. When its repu tation of being the feeding place of oddit and freaks drew slumming expeditions from up town out to see the sights, a rival "joint" wa opened in south Washington Square. The pro perity of this place was short-lived, as it wa unceremoniously raided by the police.

In the heyday of their careers these subter ranean dispensaries of "eats" drew such di tinguished patrons as Bill Haywood and Emm Goldman, with the Haywood and Goldma clique. There one ate off of hardwood table table cloths and napkins—refinements of th hated bourgeoisie—being sternly eschewed b the prophets of the proletariat and saviours o society. There Bill Haywood, surrounded by bevy of bob-haired adorers, ate like the man h was and wiped his mouth on his unstarched cuf Over their victuals, cooked according to th canons of anarchism and lacking the delicat savors which appeal to the decadent, these fol heartily and with gusto regaled themselves wit cheap drinkables and cheaper talk. It was no so much what one said, but loudness of utter ance that made one heard. The spectacle o these generals of social progress at their foo or in their cups was not without a unique in terest. Whenever one screwed up sufficient cour age to brave the unseasoned food, the wors clamor and the even more indelicate odor, on was certain of a choice evening's entertainment To find one's-self in this free, easy and uproari ous democratic circle was to appreciate the truth of the saying of Smollett's uncle: "There is very seldom anything extraordinary in the appear ance and address of a good writer; whereas a dull author generally distinguishes himself by some oddity or extravagance. For this reason I fancy that an assembly of grubs must be very diverting."

PROPHETS OF THE PROLETARIAT

Those were days before Bolshevism was heard of, before the war, but Socialism, anarchism and I. W. W.ism impregnated the foetid air. These folk wouldn't have struck you as very dangerous, most of them coming within Smollett's classification of "spirits too flat to be kindled into frenzy." They did, however, attract attention by their clothes, and the uninitiate slummers from uptown lent an eager ear because of the spicy, snappy, unexpurgated, emancipated talk. The "ladies" of the clan wore gowns that looked like burlap sacks sewed together, with wide Japanese-wrapper sleeves. They affected weird and clashing color schemes, for at that time Cubism and futurism were the hobby of every mediocrity incapable of doing anything genuine in art, and the loose gowns of some were painted fantastically and inartistically in oils. While feminism was the vogue, most of the women were anything but feminine. They had shaken from their sandalled feet the dust of domesticity; they had come from the "prison" of the home; they

e—and you had their word for it—free! y announced that they believed in the theory forth by Bernard Shaw—that the female of species pursues the man. Many did. Some he men in this group who were going to over- n society, were, so far as appearance went, et and gentle souls, and they uttered the most adful things in the softest and most persua- tone of voice. The slummers from uptown re thrilled to their toes by the things they ard—it was like listening in on some frightful archist conspiracy, some plot to commit whole- e murder.

There was, in this group, a large amazonian son, who had left her youth long in the au- nnal past, with the features of a gorgon ved in stone, whose gaze was a threat. She re tailor-made suits, with short skirts, affect- a mannish gait and a coarse masculine tone voice. This sibyl of the social revolution spe- lized in expounding to the unwary feminine ophytes of Socialism of tender age the philoso- y that marriage as sanctioned by those insti- tions of capitalism—the church and state—is alized slavery; a doctrine Trotzky adhered to en he recently established by decree a "free e bureau" in Russia and declared "children o are the issues of these unions are to become e property of the Bolshevist state."

One summer this advocate of freedom rented cottage on the sea coast, and thence took th her a number of possible disciples of the ir sex, one of whom, however, was unmoved the teachings and remained, beause she loved r husband, a loyal, faithful and devoted wife. his young woman precipitately departed from e summer retreat because she "couldn't stand ." She described the evenings, when the anti- atrimonial famished fanatic, wrapped in a eamer blanket, sat close to a wood fire expound- g Freudism and discussing with savory relish e erotic vagaries of humankind. It was upon er return to New York that the unexpected appened, that Greenwich Village was taken y its ears by the news that this foe of the arriage institution had taken unto herself legally wedded spouse. And that spouse! -meek, mild, with a tender seedlet-sprouting of mind, of the male species a clinging vine. He ore khaki-colored bloomers, which matched his olasses-colored Van Dyke beard. Wandering p and down Fifth Avenue, book in hand, he ever wore a hat, not wishing to conceal the ffy locks grown in imitation of Anton Lang, e actor of Ober Ammergau.

"GENIUS" STILL UNHEARD OF

There came nightly to these dens a young oet from New Jersey, whose ambition aspired the lofty heights of assisting in the social reak-up and of writing book reviews at thirty ollars per for the *New Republic*. He wrote ouching verses about Emma Goldman's red awn, incense and choir boys. There was a retty, flashing-eyed, neurotic Russian Jewess, hose chief claim to notoriety was that she ad assisted in making bombs in a garret in t. Petersburg, and who has lately made a pecialty of writing magazine articles about enine and Trotzky and the women of the Bol- evik revolution. Of course, these recent arti- es extolling the Bolsheviki have basis in such nside knowledge of Russia as is gained in Green- ich Village, the ardent girl not having been Russia since 1905. Being in need of ready ash at one time, this daughter of delirium un- ertook to write for a capitalistic publishing oncern a life of Abraham Lincoln. The result as interesting, as she knew nothing of Ameri- an history and was incapable of understanding merican psychology. Today the charming per- on, having never been in England, is anti-Eng- sh; having no country of her own to love and or which to fight, is a pacifist, and, not hav- ng seen their bloody marauds in Russia, is a ruculent and rampageous Bolshevik.

There was a large, soft-muscled, puffy creature, with a putty face, the suave caressive movements of whose hands gave one the "creeps." He is today one of the soap box apostles of the "reds," and at that time was hailed as the novelist of the coming revolution. He was terrible in his arraignment of the wicked capitalist system, and if the hard-hearted plutocrats had known what he said about them over his red wine they would probably have been unable to sleep. In one respect only was this advocate of the general strike and revolution, Christian—he took no thought of the morrow, of what he should eat or what he should drink. There was no need. A fund was raised to finance him while writing the great novel of anarchism—which, needless to say, was never written.

A near-poet, who beceame a paid German agent after the European war broke out, was original in announcing as his most admired and inspiring heroes, Judas, Nero and a poet of unfortunate memory. Over his food this fellow would read to his companions love letters written to him by women who should have known better. He had a face which reminded one of a rat and a gait which called to mind a hopping sparrow. He, too, managed to live by getting donations from certain rich women on the fringe of demi-society who were willing to pay to have a literary flavor given their meretricious, gilded and vulgar drawing rooms by the presence of pseudo-writers and near-poets. A friend of this parasite was a Jew who posed as a Frenchman and assumed a French name. At that time he eked out his bread and butter by writing very bad books which a certain lady with a purse and without position published as her own—at her own expense—in order to enhance her non-existent social standing by a smack of the literary. Of late, this fellow has lectured on syndicalism and Bolshevism and now draws contributions from women who were formerly openly pro-German and whose only outlet for their repressed feelings is to encourage loose talk about Allied imperialism and social revolt.

In those days preceding German propaganda and Bolshevism, one young man busied himself collecting contributions in order to publish thin volumes of thinner verse. His lack of ability was made up by an irrepressible loquacity concerning the greatness of his own Gaelic genius. He gave out visiting cards on which he ingenuously labelled himself, "Poet, Prophet, Patriot." Even among the Greenwich Villagers he was regarded with good-natured pity, being as impecunious of pocket as he was of grey matter. Through the good influences of a Tammany politician he got a job as a sort of office boy *de luxe* in the Senate at Washington, where, after the war broke out, he acted as messenger, for a paltry pittance, for German agents. He boasted of having himself written a bill designed to keep American citizens from traveling on ships carrying munitions. Whether this was so or not, he was the author of an anoymous novel attacking Great Britain which the German agents published in a disreputable pro-German weekly. Any desired effect of this piece of fiction was, of course, negatived by its amateurishness and puerile absurdity. This unconscious scaramouch took part in a burlesque celebration at which the independence of Ireland was declared in 1915 by a half-dozen hare-brained freaks. After America entered the war, and the Department of Justice showed an interest in certain Sinn Fein activities this young "poet and patriot" of the Irish revolution found it healthful to "fade" from assemblages of the Poetry Society and the purlieus of Washington Square. Another member of this group was a leader in the Rand school, and has since become a pacifist. Singular, isn't it, how the whole crew who plied their pens and mouthed so mightily about fighting for humanity, individually and as a body retired when it came to fighting German autocracy!

"HEROES" OF THE REVOLUTION

There is a certain woman who has figured in the past few years in the public prints as an agitator of the social revolution. Before the war, she specialized in woman suffrage. During the war she became affiliated with a string of pacifist organizations, from which incidentally she has drawn large salaries. After America entered the war a group of well-meaning Quakers, possessed of considerable wealth, were induced to subsidize a society which proposed to fight militarism, conscription, etcetera. This woman, as the directing brains of the pacifist organization, drew a salary of something like a hundred dollars a week and expenses, and out of the funds subscribed by the Quakers paid to a particular "gentleman friend," it was said, a salary of $125 per week. Both the lady and the "gent" were against war with Germany, and were strong for the Bolsheviki. A small riot was created in the Washington offices of the pacifist society when the $125 a week revolutionary beheld a mouse mousing among the refuse of waste paper on the floor. Beholding this formidable monster, the gallant knight of the pen, always so eager to take up that trusty weapon in defense of the exploited classes, took refuge upon the height of an office chair, whence, striking frantically with his cane and waving his Derby hat, he called loudly for help from the staff of female stenographers. Of such stuff are the heroes of the revolution made!

Amid the crowd who congregated in the stale atmosphere of the basement regaling places there was one who was regarded by his confreres with an esteem not unmixed with envy. This writer, of little actual literary ability but considerable professional shrewdness and cunning, had chanced upon muckraking when muckraking was in the initial stages of its popularity. He had undertaken to expose the wickedness of politics in the great cities, and his articles, published in a magazine representative of the capitalistic press, had brought him no little revenue and a certain notoriety. He had never done anything of note before the publication of this series—which, by the way, was widely quoted and reprinted in Germany with the purpose of showing the German people how rotten American politics were and how superior the Teuton system of Government was—and he has done nothing since. Except one thing. Having revealed America's political rottenness to the debased American public, as well as to the gratified Teuton public, this gentleman espoused what he called "early Christianity." He commercialized, and lectured upon at so much per lecture, the philosophy of primitive brotherhood. When the war came on he became a pacifist, and after the Bolsheviki surrendered Russia to Germany he put himself forward as an interpreter of Bolshevism and a messiah of the world revolution. In keeping with this role he affected a messianic beard trimmed after the style of beards worn by characters in the religious paintings of the German artist Hoffman. He became theatrically solemn, grave-eyed and quavering voiced. Whenever he addressed well-fed lunchers and convocations of evening eaters he reminded one of an amateur rehearsing for the role of a Charles Rann Kennedy semi-religious sociological play. For some months now he has been engaged in enlightening the ignorant of the American public upon the Russian revolution, how it happened and what it all means. He has particularized upon emphasizing the perfidy of the Allies and in exposing the text, context and significance of their "secret treaties." He tells about the Bolshevik revolution as one who saw it first hand. He was, it is true, in Russia. His personal investigations and profound observations, it is reported, embraced the lengthy period of seventeen days.

To the fell activities of this sentimentalist may be to a large measure ascribed the catas-

Bolshevik "Industrial Government"

Prepared for the League for National Unity

By **GUSTAVUS MYERS**

(*Continued from previous issue*)

FORTY BILLION RUBLES DEFICIT A YEAR

Cornelius J. Callahan, manager of the Russian-American Company for International Trade, gave me a further graphic description of conditions in Russia. The company represented by Mr. Callahan did a business of $28,000,000 during three years in Russia. Mr. Callahan was in that country three and a half years, leaving Moscow on August 26, 1918, and Petrograd five days later.

"Industrial conditions in Russia have completely broken down," he said. "Only a few factories have recently been in operation. Such technical experts as have survived or remained have been forced by the threat of utter starvation to go back to work. Their salaries in some cases are lower than the wages of many laborers. The factories are run by workingmen's committees or their agents. But where these have been what the workers considered too strict in their orders, they have been ousted by the men under them. Any of the executives—and they are selected by the men themselves—who try to get a fair amount of work a day from the men at once become unpopular and are summarily removed. The workmen demand executives who will allow them to have their own way. The workday is supposed to be eight hours, but the time spent in meetings is deducted. Sometimes there is more than one meeting a day, and often these meetings of the workingmen last for hours.

"Under such impossible conditions production is pitiful compared to costs, and such factories as have been running have piled up large deficits. There, for example, is the Kolomna Steel Works, sixty miles south of Moscow. This plant, which makes steel and locomotives, is one of the largest in Russia. It employs about 10,000 men, and the average pay is 700 rubles a month. The men are supposed to work eight hours, but they hold daily meetings, and even when they apparently work, they idle much of the time. Probably they don't do more than three or four hours a day efficient work. In March, 1918, this factory produced less than 1,000,000 rubles worth of material, but the pay roll for that month was 7,000,000 rubles. This 7,000,000 rubles of outlay did not, of course, include the cost of raw material.

"I don't suppose production in all plants is ten per cent of what it formerly was. In one of the Government workshops it cost, in August, 1918, the sum of 84,000 rubles to repair a motor truck. The same kind of motor truck could be manufactured in America and landed in Moscow for one half the price the repairing there cost.

"The Bolshevik Government is plunging ahead on a deficit, even growing vaster. This deficit can now be conservatively estimated at forty billions of rubles a year. How is this deficit met? By the printing of prodigious issues of paper money. This avalanche of paper is added to by counterfeiting which is being done on a large scale. Counterfeiting is the only flourishing industry in Russia. When the Bolshevik Government finds a good counterfeiting plant, it puts the counterfeiter to death, and if his press turns out a good product it takes it over and uses it itself—so it is reported.

"The present scale of wages is ten times more than the pre-war scale. But the workmen cannot get an existence. The average monthly pay of 700 rubles will buy only 70 pounds of bread, or 20 pounds of butter or one pair of shoes.

"All of the workmen, both skilled and unskilled, are now opposed to the Bolsheviki. About sixty per cent of these workers, especially those with families, would be pleased to see some strong, stable, rational government established so that there would be some relation between wages and a liveable existence. About twenty per cent of the workmen are neutral, not knowing themselves what they want, excepting that they would like security. The remainder of the workingmen are opposed to the Bolsheviki because they object to any organized power that compels them to work.

"As for the women they are almost unanimously against the Bolsheviki, and they are much more courageous in expressing themselves than the men. Full ninety per cent of the women of all classes would relish any government —no matter what—that would restore the old peaceful conditions.

MILLIONS OF UNEMPLOYED

"Millions of workmen are unemployed. Many came originally from villages, and have gone back there where they have a bit of land or relatives on whose land they can work. About seventy-five per cent of the total population—which several years ago swelled to the abnormal figure of three millions—have left Petrograd, and at least forty per cent of Moscow's skilled and unskilled workmen and intelligencia have quit that city.

"To give you an idea of the temper of the workmen, let me tell you of an incident last July in the Michelson factory at Moscow. The facts were related to me by a person present. Lenine and Trotzky came there to harangue a meeting of the workers. Trotzky started to denounce the bourgeoisie, demanding further severities against them. A workingman interrupted him. 'We've taken their factories from them,' declared the workingman, 'but what have we got? They've got nothing and we've got nothing.' There was a great uproar. Then Lenine came forward to speak. A workingman bitterly shouted: 'We haven't had bread for two days. Now, Mr. Lenine, are we going to get bread tomorrow? If so, you can speak; if not, don't speak!' Lenine promised bread, and was allowed to go on. The workmen in the factory got their bread the next day.

"The machinery in factories has largely been ruined through misuse and improper handling. The textile factories have all gone to pieces. Many factories will need replacing.

"It was rumored in Moscow last June that Lenine wanted to surrender governing functions and work thereafter by underhand propaganda. He and some other of the Bolshevik leaders decided that the experiment had gone far enough, but the extreme elements of the extremists would not agree, and their will prevailed."

THE INTERNATIONAL HARVESTER PLANT

Authentic information reveals that, at least up to some months ago, the International Harvester Company works at Moscow was the only plant that survived Bolshevik methods. When the Bolshevik movement first came into power, the company at once adopted a comprehensive policy of feeding its employes, even going to the extent of having grain made into flour. This and other practical welfare work greatly helped to assure good feeling. When Bolshevik committees that were formed in the plant asked to take over the plant and operate it themselves, the company's representative agreed to turn over the physical plant to them, but firmly declined to transfer the company's funds to them. By its welfare wo the company had kept open its plant long enou for its workers to see the ruinous results of B shevik confiscatory methods in other plants, or nearly all, of which had gone to pieces. Th therefore, realized that unless they abandon these claims, the International Harvester pla would have to be discontinued, too. At latest counts the International Harvester works w one of the few plants that escaped the gene industrial wreckage.

Another American, one who has had extra dinary special facilities for getting informati on events in Russia and who is an influential fi ure in an organization to aid the Russian peop says:

ENSLAVING THE MASS OF WORKERS

"The workmen in Russia are divided into t classes: first, those who are real Bolshevists, a second, the real Russian workers. The first cla is satisfied with anything maintaining their don nation of the proletariat. The Bolsheviki ha to have a machine to maintain their power. Th must maintain themselves by providing for considerable section of the workers. Most e penses are paid by the Bolshevik Government.

"The second class are workmen who are n Bolsheviki, but who to preserve their lives a the lives of their families and to get food, si with the Bolsheviki and are willing to work u der existing Bolshevik conditions.

"These workmen see that they are being us only as pawns for Bolshevik power, and that things are going destruction is ahead. They ar therefore, making every effort to get away fro industrial centers and place themselves in t country districts and live away from the terro of Bolshevik power.

"In other words, the great mass of Russia workers—eighty per cent at least—are anti-Bo shevik.

"They see that the present conditions are onl temporary. But they are afraid to run counte to the Bolshevik leaders who control the arm and food.

"We have absolute statements from men ov there and who know, that in factories under Bol shevik control the men take away the manufac tured goods which they themselves make. Thes goods they sell for their private profit. The Bol shevik Government runs the factories, pays th men, and the men in turn privately and for thei own profit sell the goods.

"For example: There is, or was, a big tool fac tory at Moscow. The Bolshevik Governmen supplied the raw materials and ran it. Th workmen took away the manufactured product and sold them outside for whatever prices they could get.

"There have been many similar examples There is an absolute condition of industrial chao in sections under Bolshevik control."

BUYING MASS SUPPORT

A. J. Sack, head of the Russian Information Bureau in the United States thus epitomizes the industrial situation under Bolshevik power:

"In the directing of factories ability was not considered. The Bolshevik Government also had to create jobs for its followers to get mass support. Men who had no technical knowledge whatever were put in charge. In many instances the factory force would sell the raw material, shorten the work hours, and raise wages above the capacity of that industry to pay. Workingmen, urged on by criminals, would ruin the machinery. The consequence has been that all factories have had

shut down excepting those where the bosses e graft to the Bolsheviki. In turn these ses were allowed to charge all they wanted, l to exploit the workers as much as they ld. There are only a few factories being op- ted, and these but three or four hours a day.''

Not to confine this account to sources that Bol- vik advocates might say were prejudiced or agonistic, I went to a Bolshevist headquarters New York City, asking them for their side of story. They handed out a typewritten copy a stenographically reported speech made on ne 11, 1918, by Professor George V. Lomono- f at Madison Square Garden, New York City. though professing not to be a Bolshevik, Pro- sor Lomonosoff spoke under the auspices of e Russian Soviet Recognition League, plead- for the recognition of the Bolshevik Govern- nt. These are some extracts from his speech:

PRO-BOLSHEVIK ADMISSIONS

''Is it not a fact that the power in Russia rests t in the Bolsheviki as such but in the Soviets? day the majority in the Soviets may be of the lsheviki. Tomorrow, it may be of the social volutionists or even of the Black Hundred..

''According to information from different urces the land at the present time is being di- ded among the peasants, and whatever cannot physically divided, as for example, libraries, oductions of art, 'bourgeoise' breeding cattle, d even agricultural implements are being de- royed.''

Professor Lomonosoff's argument was that, vertheless and notwithstanding all these ex- sses, ''Russia must be helped, regardless of the mposition of the Government and the popula- on. Shoes, locomotives, agricultural imple- ents are a necessity to the Bolsheviki, as well as e Menshiviki, to the Cadets and even to the lack Hundred. Help is needed by the whole ussian people.''

Neither he nor the Bolsheviki considered the oint that if, as he admitted, the Bolsheviks were stroying on so widespread a scale such material they had, why should America go to the ex- nse and trouble of sending material to em? If they could not take care of what ey had on the spot, could they take greater care material and supplies shipped thousands of iles to them? Furthermore, Professor Lomono- ff admitted that the Bolsheviki were extermi- ting the intellectuals who in Russia com- ise all the educated classes, including teachers, ctors, dentists, technical staffs, etc. The sup- ies sent would be seized, therefore, and held the Bolsheviki and used to intrench them- lves further in power. No part of them would allowed to reach that great part of the Rus- an people opposed to the Bolsheviki.

THE TYRANNY OF ANARCHY

To a *London Chronicle* representative, a mem- r of a well-known London business house who d been in Moscow about a year gave on Octo- r 3, 1918, a graphic account of conditions in ussia. He was the head of a party of 76 British gitives from Russia reaching London.

Part of the interview follows:

''What Bolshevist rule means in that land of assacres it is difficult for people at home to lly realize. Banks are, in my opinion, gone; vestments in goods are confiscated; current ac- unts are taken, safes opened, nothing is left. ou cannot close your business on the ground at it doesn't pay, lest the officials hand it over your employes to keep going. If you discharge employe you have to give three months' no- ce and pay three months' money to the Un- mployed Fund.

''There is no law or reason in the taxes. hey may tell you to pay what you did before, d repeat the demand a month later. You can- t speak in the streets without the risk of ouble. There is no free press. All the papers ve been taken over by the government and con- fiscated, as has been trade after trade. Houses and flats are requisitioned on various pretexts or none at all. Especially have educated people been victimized. Though there are hundreds of flats empty in Moscow, expensive furniture is dumped in the main streets and left there because the owners have nowhere to take it.

''Women are in a pitiable plight. Thousands whose husbands have been shot in the war or are away on service are stranded, with their war pensions stopped, their investments confiscated, their jewelry confiscated or taxed beyond endurance, and even their stored furs appropriated for the working people. Hundreds of educated and refined women have asked me for work for a mere pittance.

''The government workers had their pay raised 100 per cent, and they get preferential treatment in the use of bread cards. The educated man, such as the doctor, is bottom dog and gets nothing.''

Chapter III

PUBLIC UTILITIES

According to information received by well-informed members of the American-Russian League the same conditions of anarchy prevail on such street car lines as are being run. The well-informed person of the American-Russian League heretofore quoted says this reliable information has reached him:

''Tramcars in such sections as are controlled by the Bolsheviki are operated by Government money, and the proceeds—that is to say, the fares—are divided between the workers who run the cars and the Government which needs the money. Apparently the men who operate the power houses and keep the system going are paid out of the Government funds. They don't share in the proceeds graft. The 'system' is one of everything going out and nothing coming in.

''The hours of work are determined in different localities by the local Soviets. Everything is in a chaotic state. Cars are run on a crazy system. Nobody knows when cars will run. This is not the case, however, in sections where the control has been taken over by the Germans.''

FOOD AT FAMINE PRICES

In an interview published in the *New York Times*, Sept. 27, 1918, Dr. Angus Campbell who left Moscow early in September and arrived at New York September 26, stated:

''The conditions existing in Russia at the present time are so bad that they cannot be imagined, except by those who have been there. The Bolsheviki hold full sway and are a band of adventurers assembled from all parts of the world. I did not see Trotzky, but I often met Lenine and heard him address meetings. He is a fanatic out and out and very dangerous.

''One thing certain is that the Bolsheviki are pro-German. At first they were passive, but gradually they became bolder and bolder, until they openly acknowledged their partisanship with the Central Powers.

''In Moscow food is at famine prices. When I left there at the beginning of this month bread cost 18 rubles [$9] a pound, butter 32 rubles [$16] and sugar 30 rubles [$15] a pound. Green apples, which gave the people who ate them cholera morbus, cost 3 rubles [$1.50] each.

''The Bolsheviki divided the inhabitants of Moscow into four classes: first, the workmen, who were given what food could be obtained in the city; secondly, the women, who came next in order for the rations; then the clerks, who got what was left; and lastly, the unfortunate wealthy class who were allowed three herrings a day and no bread.

''There are a few street cars running in Moscow but no cabs. The hotels have all been commandeered by the Bolsheviki and I had to go to them to get a room. There are no courts of justice and no regular police. Guards stand at the street corners with loaded rifles ready to shoot on the slightest provocation. They will hold a foreigner up and take his money from him, and may kill him if he has none. It depends upon how the particular guard feels that day.

''Other Bolshevist agents in uniform often stop foreigners in the street in Moscow and take away their papers and money under the pretence that it is for official examination. They tell the victim to call at the police station next morning, but that is the last he will see of any of his property.''

CHAOTIC RAILROAD CONDITIONS

One hardly needs to be told, so general is the knowledge in Europe and America of the chaotic condition of Russian railroads.

''The Bolshevik Government,'' says Mr. Corse, ''is a go-as-you-please regime. As a rule the railroad men are a higher class of workmen than the industrial workers. They, too, have their committees. There has been a great deal of friction between them and the ordinary workers and the soldiers. Frequently the Railroad Labor Committees have refused to obey the orders of the Central Soviet. Trains are run on no schedule but on caprice. Often the soldiers take control, override all instructions of train despatchers, with frequent fatal consequences. There have been many bad accidents.''

On October 17, 1918, Mr. Corse received a letter dated Stockholm, September 13, 1918, from a personal friend who had arrived there from Russia.

''Believe me,'' it read in part, ''the last few months in Russia have not been far short of hell. A reign of terror existed, and probably exists now, that those outside of Russia cannot imagine. Wholesale arrests have been made among the English and French, and of course rumors of all sorts were flying about concerning what the Bolsheviki had in store for Americans. * * * We left Moscow on Monday, August 26, and arrived at Petrograd, Finnish station, the following day, where we were held up until Saturday. I went into town several times, but toward the end it was too risky, as people were being arrested on all sides by the Red Guard.''

Samuel Lovich testifies to the fact that ''the employees of a locomotive repair shop struck because they no longer wanted to repair locomotives whose only function, as they saw it, was to facilitate the travelings of the bourgeoisie.'' Since that incident took place there has been a wholesale slaughter of the so-called bourgeoisie, and such as have survived are being deliberately starved to death.

A cable despatch February 24, 1918, from Amsterdam told of the chaos in Russia as described by an eye-witness in the *Tageszeitung*. Passengers on trains were frozen to death because of lack of glass in the car windows. There were in Petrograd only two locomotives, one of which could only be run ten miles an hour. Repairs formerly costing 30,000 rubles ($15,000 in normal times) now cost 500,000 rubles ($250,000). The riveting of a boiler cost 70,000 rubles ($35,000), ''which is not surprising, as the riveter gets 40 rubles ($20) for a day's work of 3 or 4 hours.'' There were then 500,000 unemployed in Petrograd, and the industrial production of Russia had sunk to 5 per cent of the normal. In some districts most of the blast furnaces had been extinguished. Sugar production last year had been reduced from 1,800,000 tons to 720,000 tons, and this year would not reach 180,000 tons.

The account went on to describe some of the Bolshevik department heads: ''The chief of the Finance Ministry is a college student. The fifth army chief is a former actor. The chief of telegraphs is a clerk. The government reporter of the financial commission at Brest Litovsk was a clerk who hadn't the faintest notion of the simplest exchange problems.''

"YOU WANT MONEY? ROB THE BANKS!"

In an article in the *New York Tribune,* April 7, 1918, Lieutenant Boris Schumanski wrote:

"The telegraph is nearly abolished in Russia; not that the wires are damaged or the apparatus out of order, but simply because the telegraph operators are so busy with political meetings and discussions that the telegrams arrive at a speed of first and second class mail.

"The mail service is still worse. Letters from Petrograd to Gatchina, which in normal times arrived the same day, take now about a week to deliver, and from Petrograd to Minsk, which is only a two days' journey, letters travel now three weeks and more owing to the scarcity of trains." Lieutenant Schumanski further narrated this incident: "A group of railroad employes came to Foreign Minister Trotzky and complained that they had no money to carry on their work of transportation. 'Why, go to the bank and take it,' he replied."

Trustworthy recent information leaves no doubt of the fact that the railroads are now in a still worse condition. Rolling stock has been destroyed. Quantities of food have rotted because of lack of transportation. The result has been starvation. Even the very few factories that have operated could not obtain enough fuel and raw material. In some places the railroads have stopped altogether. Where railroad trains do run they are overcrowded and there are long delays. Normally the schedule from Moscow to Petrograd was twelve hours. The train on which Dr. Angus Campbell traveled from Moscow was forty-eight hours in reaching Petrograd.

CITIES STARVING; TRANSPORTATION NIL

An exceptionally well-informed observer who had been in Russia six years, leaving Moscow on September 27, 1918, and arriving in the United States on November 10 following, wrote a long special article on conditions in that part of Russia under Bolshevik domination. This article was published in the *Christian Science Monitor,* November 16, 1918. Some extracts are as follows:

"Class hatred, envy, revenge are aflame. The result was inevitable. Although aimed primarily only at the bourgeoisie, anarchy has destroyed anything that resembles normal life. Factory and shop are standing still, or are closing one after the other. The peasant refuses to sell his stores of hidden grain, for in return he cannot receive the much-needed clothing, and even if he would, the railroads are in such a chaotic stage that they could not transport it to the starving centers of population.

"Today, you know your friend alive, tomorrow he might be shot down like a dog without accusation, without trial. Probably some one pointed him out to the secret police as a foe to Bolshevism, nothing more. Your own experience is the experience of hundreds and of thousands of the best families in Russia. The official press of the Bolsheviki printed the account of how 500 political prisoners were selected by lot, and shot down as a reprisal for the killing of Commissary Uritzky in Petrograd. When there was made an attempt to kill Ulianoff (Lenine), the same measures were taken, and reports were pouring into the press that the different commissaries in the province were trying to outdo the capitals in the 'red terror.' Red guards drop into your houses, search you and all you possess, take away the last pound of bread or flour and leave you without redress if you happen to belong to the unfortunate bourgeoisie."

The breakdown of railroads is further pointed out by M. Rosoff, member of the Jewish Central Committee in Russia for Relief of Refugees. He recently arrived in London from Russia on his way to Palestine. At the Zionist Headquarters in London he gave out a long statement, part of which read:

"It is hoped that much assistance can be sent by America by way of Vladivostok. As long as the Bolsheviki are in power, any money sent from Europe will be seized by them. The transport difficulties, owing to the stoppage of railways for lack of coal, is the factor of all others which render the next six months critical in European Russia. With the Volga frozen over there remains no channel of communication for the carrying of foodstuffs."

"Conditions in Russia are very bad," cabled A. R. Decker from Berlin to the *New York Globe,* on December 16, 1918. "The Bolsheviki hold the railroads and factories, but are unable to operate them. The mines produce no metal and peasants refuse to deliver grain where there is little metal remaining. The Bolsheviki fill a few cars and bring them to the cities.

"The residents are divided into four classes: Workmen, who receive 200 grams (7 ounces) of bread daily; light workers, who get 100 grams (3.5 ounces); Bolsheviki office employees, who get 50 grams (1.75 ounces), and bourgeois, who get no bread, but only two herrings. The bourgeois are allowed a few rooms according to the size of the family and in the extra rooms they must lodge the workmen, furnishing heat and light and paying the rent, while they are allowed to collect only a small part of the income."

Mr. Decker further says that the Bolshevik officials are receiving enormous salaries; that local governors are receiving 18,000 rubles a month.

Chapter IV
THE TERROR AND THE NEW BOURGEOISIE

The Bolshevik regime, it would conclusively appear from many reliable sources, has been signalized by an increasingly ferocious persecution of the educated classes. Professor Lomonosoff in disapproving of these imprisonments and executions thus seeks to explain the motive:—

"And what sort of bourgeois is the village teacher? It is a matter of unconscious revenge of the enraged people at everybody who was in a privileged position under the old regime. And since education was the privilege of the idle, the people look upon the educated as belonging to the privileged class."

Other defenders of the Bolsheviki say that the hunting down and disposing of the educated are confined only to those who are counter-revolutionists, and that the Bolshevik movement is one directed against bourgeoisie and church enemies of the Russian people.

Such are the extenuations advanced. What are the facts?

The confidential report made to the American-Russian League of a mechanical engineer recently returned from Russia points out:

TERRORIZING DECENT WORKMEN

"About 3,000,000 of the so-called workingmen of Russia and now considered as being members of the Soviet or Workingmen's Party, and including the industrial centers of European Russia, are made up as follows: One-third or about one million who are really Bolsheviks, including the Red Guard. Their principal object in life being their 20 to 80 rubles a day and privilege to rob. They are made up of pro-German sailors, old regime followers, criminals, idealists, the bad class of Jews and pro-Germans. The remaining two-third of these workingmen can be classed as good men; many of them being exceptional in the skilled labor class. They include some Socialists, some dreamers and good workingmen who are anxious for the return of any substantial government which will enable them to work for an honest living for themselves and their families. The Bolsheviki hold 2,000,000 good workingmen only through fear and the control of bread." He added that about 100,000 intelligent men, centering around Petrograd, and composed of bankers, manufacturers, Germans, some old regime Czar followers, and others w deliberately backing the Bolshevik disorgani tion and sacrificing Russia in the interests Germany. This they did with the understa ing that if Germany got control their propert would be restored and they would be given po tions and privileges in the future.

CRIMINALS AS LEADERS

"In general," says Samuel Lovich, "it may said that the dirtier you are the better yo chances for political preferment at present. man with a white collar has no chance at all. criminal record is also a great advantage. T Chairman of the Workmen's and Soldiers' Cou cil at Tamboff was a life-termer returned fr Siberia, where he had been sent for twenty-t killings. He admitted them, and was genera justified in popular opinion, since the victi had been bourgeoisie." The facts as to this p ticular criminal are corroborated by Lieutena Boris Schumanski in one of a recent series articles published April 14, 1918.

After relating the particulars, and adding th "in Simbrisk the principal stars of the Bolshev play were criminals released by the Red Gua from the local prison," Lieutenant Schuman inquired:

"Who is the bourgeoisie? The practical d inition of that word no one in Russia kno One day it is the big manufacturer of proper running into millions of dollars, and the ne day it is the small trader, the owner of a groce stand, with property amounting to less than t worth of a soldier's rifle. The wearer of a go watch and chain is a bourgeois, but when t same watch slips into the pocket of a Red Gua the latter is still considered a proletarian."

"The Bolsheviki at present," explained Rosoff, "are just like reeds carried along by t torrent. They have set in motion a force whi they can no longer control. The elements Russia which have carried out their policy destruction and extermination, are the Letts a the Chinese imported into the country for t building of railways. It is difficult to foreca what will follow, but it is a fact that the Bolsh viki are an active power no longer; they a merely being borne along. They know it, th have known for some time they were doome and since they had failed to organize the Sta on their own lines, they were determined nobo else should; hence, their policy of incitement murder and wholesale assassination, Russia's R Terror."

KILLING THE BRAINS OF RUSSIA

"It is stating nothing but the facts," sa Professor Grondys, "to say that while the B sheviki are murdering the existing bourgeois indiscriminately, they are themselves becomi the new bourgeoisie. Many of the Bolsheviki a taking bribes from families to let some impri oned member go free. This bribery is going everywhere. One of the few honest Bolshevi that I met was Shostack who is now in Mosco as a member of the Bolshevik Superior Milita Council headed by Trotzky. He hasn't becon rich. Personally he has never ordered a man be shot, but on the contrary has saved many live He is a well-meaning young fellow, 23 years ol and came back from California.

"Every Soviet organ in Russia declared t bourgeoisie enemies of the Bolsheviki and ther fore outlaws, and demanded that they should killed."

"The Bolshevik slaughters," says Lieutena Boris Brasol "first began with the officers. The it spread to the intellectuals. Many of the i tellectuals disguised themselves in old clothin But this has not saved them. 'Who are you', Red Guard asks anybody trying to pass. 'I'm workman,' is the reply. 'Well, then show you hands.' If you have clean hands you are sh down. Physicians, educators, teachers, editor architects, lawyers, professionals of all kind scholars of all ages, are murdered wholesale rig

the streets. This is a German policy. It kills e brains of the nation."

Here the fact may be interjected that it is uch more than a German policy. It antedates e war. Years ago the I. W. W. in this country re preaching hatred of the professionals. In ct I. W. W. branches excluded professionals, d expelled some of their own chief agitators the charge that they had become infected with professionalism". The I. W. W. did not have e power to do anything more than exclude or pel. In Russia, where their disciples have the wer, professionals are murdered.

"Schools," Lieutenant Brasol continued, have been absolutely discontinued by the Bol-eviki. Not only universities, academies and gh schools but primary schools. They have en closed on the ground that education is a pitalist invention. In the Don region near ovocherask, the Bolsheviki, in February, 1918, dered that teaching in the grammar school be opped. Nevertheless teachers and scholars ent to school. They were immediately shot own, teachers and pupils. Most of the scholars ere only twelve to sixteen years old.

"At least 70 per cent—perhaps more—of all ussian workers and peasants are illiterate or an scarcely sign their names. Yet the Bol-eviki have been murdering the very people who ould educate. Hundreds of thousands of peo-le have been shot down in cold blood. There re no laws or trials. Courts have been discon-inued. There is the most enormous raping of omen. Marriage and the family have been or-ered abolished, and every woman over seventeen s compelled to give herself up at the first re-uest. Nobody takes care of the children. ully ninety of every one hundred born die im-ediately."

REPRISALS AGAINST THE EDUCATED

Pro-Bolshevik organs in England and here are ow making it appear that the Bolshevik leaders 'have found that the production of factories annot be maintained without the recognition nd co-operation of the technical staffs." heorists like Lenine and Trotzky may have ound this out after the application of their heories had such bloody and futile results. If hey have found it out, then their former theories re in the discard. But their followers don't now it and don't want to know it, and they have ontrol.

Thus, in detailing the extremities to which the Russian intellectuals have been systematically subjected by the Bolshevist regime and how the brain workers are in a far worse position than either the manual laborers or the real capitalists, the Moscow correspondent of the *Berliner Zeitung am Mittag* says in that paper's issue of Oct. 31, 1918:

"In the long run it is a matter of life or death for the Bolshevist Government to succeed in effecting an agreement with the intellectuals which will enable the latter to co-operate with it. The methods of intimidation, the red terror, the requisition of houses and clothing, the forced labor, which compels the brain workers to do menial labor such as cleaning the streets, &c., are hardly adapted to reconcile the intellectuals with the prevailing regime. And the number of the members of the intellectual groups who have already been shot by the 'Extraordinary Commission' as 'counter-revolutionaries,' or hostages, runs into hundreds."

The whole world recalls President Wilson's recent telegram asking joint action on the part of all neutral countries in protesting against the "openly avowed campaign of mass terrorism" in Russia where "thousands of persons have been shot without even a form of trial; ill-administered prisons are filled beyond capacity; and every night scores of Russian citizens are recklessly put to death; and irresponsible bands are venting their brutal passions in the daily massacre of untold innocents."

A LEADING BOLSHEVIK ON BOLSHEVISM

The most remarkable summary of Bolshevik rule is that written by Oscar Tokoi, who was no less a personage than Bolshevik Prime Minister of Finland. It was published in full in the *New York Call*, of October 16, 1918, and was sent from Archangel, Russia. These extracts show what a leading Bolshevik found were the results of Bolshevism:

"The workers, liberated from the czarism and rule of the knout, who for the most part are illiterate and ignorant about all social questions, have lost all foundations of reality. Their efficiency and even their willingness to work have altogether disappeared.

"When a law was issued decreeing that if an industrial establishment is shut down, the workers must receive six weeks' or even six months' wages in advance, the result was that the workers of almost all factories decided to close the factories, and every one took his respective wages in advance and became a peddler. The mass of speculators, against whom the government on one hand is fighting, has already, because of this reason, grown tenfold and makes a struggle altogether hopeless.

"A frightfully big number of workers thus have joined the ranks of speculators and opponents to the government. One part of the unemployed who are not sufficiently intelligent to become speculators, remain unemployed because the government is distributing unemployment relief. They are supporters of the government, of course, *but as time goes by they become so heavy* a burden to the government as to become a factor which alone is able to put down any government. And then, lastly, that minutely small group, which still is working, is working with such intensity that the whole production is becoming altogether disrupted and sooner or later will reach complete bankruptcy. * * * *

HOOLIGANS AND ROBBERS

"It is already clear that, in the face of such economic conditions, the whole social order has been upset. Naturally, only a small part of the people will remain backing such an order. The whole propertied class belongs to the opponents of the government, including the petty bourgeoisie, the craftsmen, the small merchants and profiteers. The whole intellectual class and a great part of the workers are also opposing the government.

"In comparison with the entire population only a small minority supports the government, and to the supporters of the government are rallying all the hooligans, robbers and others, to whom this period of confusion promises a good chance of individual action. It is also clear that such a regime cannot stay but with the help of a stern terror. But, on the other hand, the longer the terror continues, the more disagreeable and hated it becomes. Even a great part of those who from the beginning could stay with the government, and who are still sincere social democrats, having seen all this chaos, begin to step aside, or to ally themselves with those openly opposing the government. Naturally, as time goes by, there remains only the worst and the most demoralized element. Terror, arbitrary rule and open brigandage become more and more usual, and the government is not able at all to prevent it. And the outcome is clearly to be foreseen—the unavoidable failure of all this magnificently planned system."

For daring to tell the truth, Tokoi was recently condemned to death by the Bolshevik government on the ground that he had asked the intervention of the Allies. He, however, contrived to escape to England.

THE BOLSHEVIKI'S HUGE FUND

A cable from Russia, October 21, 1918, stated that the Bolshevist Control Committee's official bulletin, containing a signed Treasury statement, shows a deficit in the first six months of 1918 amounting to 14,740,000,000 rubles (nominally $7,370,000,000). The amount here stated is an underestimate. The actual deficit has been about three and a half billion rubles a month. This is not surprising. With all or nearly all the factories closed, mines shut down, and railroad and street car lines in chaos, productive power has ceased. Nevertheless the Bolshevik Government, so-called, is paying out vast sums ostensibly as wages to great numbers of workers who don't work. These sums are nothing more or less than subsidies to assure the Bolshevik leaders the support of the ignorant mass.

Where do they get these immense sums? The fact is that when the Bolsheviki captured control of the Government they found 1,600,000,000 rubles in gold which had been kept as a reserve in the Russian treasury. They also obtained control of 800,000,000 francs in gold, which the Rumanians had transferred to Petrograd just before the Russian Revolution. Recently, however, the Anti-Bolshevik All-Russian Government, the headquarters of which at present is at Omsk, managed to seize 800,000,000 rubles in gold which the Bolshevik Government had sent to Kazan, not, of course, anticipating that it would be captured. This sum was half of the total of 1,600,000,000 rubles of Russian treasury gold that the Bolsheviki had found upon their assumption of power. The vast quantity of paper money issues that the Bolsheviki have issued are not based upon this gold supply. This paper money is simply fiat money, and is not even numbered and registered. Moreover, they do not contain any signature except in the case of 250 and 1,000 ruble notes.

What, then, has become of the immense supply of gold coin as also of the further huge sums of gold, silver, jewels, securities, stocks, paper rubles, and other valuables that the Bolsheviki have seized from banks, private safe deposit boxes, churches, former crown possessions, stores, homes, factories and other plundered places, the aggregate amounting to a truly colossal sum?

BUYING UP FOREIGN PAPERS

Some hints of their further disposition are given in the statement of Dr. David Soskice, formerly Kerensky's secretary. This statement cabled from London and published in the *New York Sun*, November 19, 1918, said:

"Bolshevik leaders in Russia are packing up. For a long time Bolshevik couriers have been going abroad with their portmanteaux packed with millions of rubles.

"These rubles, stolen from the Russian nation, they exchanged at any price they could obtain for foreign money and placed in neutral banks. When the Central Powers were arranging for an entrance into Russia in the expectation of carrying away grain and merchandise they began to buy rubles, which they believed would enable them to acquire goods.

"They were mistaken, because peasants refused to part with their grain for paper rubles, but it was an immense help to the Bolshevists. Ruble exchange in Sweden, instead of dropping hopelessly on the advent of Bolshevism, has risen rapidly. The Bolshevik agents thus were enabled to deposit immense sums in banks in neutral countries.

"The money thus accumulated was used lavishly in acquiring the influence of the democratic press and especially that of the labor press. A great number of labor papers with strong Bolshevik tendencies appeared in neutral countries. The Swedish Government long allowed the Bolshevists to accumulate financial power and to use it in undermining the social order of the State. Lately they have begun to realize the danger. A couple of months ago Gukovsky, former Minister of Finance in Lenine's Government, arrived in Sweden with 50,000,000 rubles and a cargo of platinum, which he tried to sell in Sweden for foreign money. This time the Swedish Government interfered. In Switzerland tens of millions of rubles likewise have been exchanged and deposited in the banks."

Shadow Huns and Others

(*Continued from page* 13)

trophe which swept over Russia, took Russia out of the war, and which threatens the civilized world. When Trotzky left America with the purpose of wrecking Russia, he was taken off the ship and held by British officials at Halifax. This American muckraker at once began agitating for Trotzky's release, and actually succeeded in inducing the Department of State to request the Kerensky government to ask Great Britain to let Trotzky proceed on his way. The Kerensky government acquiesced to the representations of the American State Department, as did England to Kerensky's request, with results that have spelled bloodshed and disaster to Russia and calamity to all the world.

One might go on with pen pictures of these pretentious petty folk ad infinitum, and you would find the same intellectual amateurs and dilletante who dabbled in Socialism, syndicalism, pragmatism, Freudism and other isms in the past are now lined up with Bolshevism and "internationalism." To these more recent isms they bring to bear the same sincerity, same quality of mentality, same reasoning ability and clarity of understanding that marked them in the past. These folk, with clairvoyant vision, saw all the evils of society; but they were stricken with blindness when it came to taking up their portion in the struggle against German military aggression. The majority, it is true, "cut little ice," as the saying goes, but certain ones who hail from the intellectual slums, or the purlieus thereof, by reason of a dull persistence, or by racial aggression, or by accident, or by a rich marriage, have gotten books published and have gotten magazines started. The intellectual confidence game has not been entirely unsuccessful. In fact, the more prosperous exponents of Bolshevism and the class war-after-the-war no longer seek congenial harbor in the dingy basement eating hovels about Washington Square, but belong to well appointed clubs, receive in editorial sanctums furnished with impressive antiques, and make regular trips to Washington where, so they aver, they are cordially received by the young intellegenzia who are temporarily lending their powerful intellects to the conduct of affairs of state.

A CERTAIN BRIGHT YOUNG MAN

There was a certain young man who took prizes at school and won a fellowship in college, yet who was never able to advance beyond his first precocity. His was the sort of mind that is fitted for the "nursery" of human life. Yet instead of confining himself within his limitations, instead of, for example, conducting a second-hand bookshop and personally enjoying whimsical fantasies written for children, he with others of his tribe assumed the pose of being a diplomat and statesman of the new school and undertook to write about national and international subjects, about politics and philosophy, about the war and peace—subjects certainly which only the most acute, fine and discerning minds are fitted to handle. Self-satisfied with a vicarious learning painfully absorbed from fossilized Teuton professors, he essayed an impressive and heavy profundity of style and wrote tediously as though he combined the wisdom of Solon and Socrates. Incapable of profound and original thought, his mind warped by cheap cynicism, this young man devoted himself to phrase making, the delight of juggling words; yet his concocted cleverness was patently laborious, his most careful phrases lumbered. The stock arguments of Socialism and internationalism were put forth impressively as ex cathedra facts; the stale slogans of Bolshevism were advanced as a new message for the world.

Another tribesman and friend of this young man was that more clever, more cunning, but no less shallow, was wont to take up his stage-prop quill and write in such wise as to imply that he had inherited the mantle of Plato. Arrogant to those from whom he could expect nothing, servile, flattering and a toady to those in power, a defeatist, having virtually predicted that the war against Germany could not be won, this beguiling-voiced charlatan managed to crawl his way into important positions where his "defeatist" principles were not wholsesome, to put it mildly. To that extent was effrontery and chicanery crowned with success.

THE AFFINITY OF MEDIOCRITIES

Mediocrities generally confederate and band together by reason of the law of attraction and an instinct of self preservation. A mutual admiration crowd, they can help one another along by log rolling and reciprocal boosting; likewise, in their professional conduct they seek to disparage and damage men of genuine talent whose accomplishments they envy and whom they fear as men able to see through them. Enjoying some subsidized organ, printed on good paper, they self-constitute themselves as a tribune to pass upon the products of creative Americans and even to advise, criticise and assail the statesmen of the world. Despite all the astounding pharisaical pretense of intellectuality and ideals, they advance nothing positive, nothing original, nothing concrete. Able to read the work of others and perhaps write glibly, they scavenge for intellectual garbage which, as literary delicatessen dealers, they dress up and palm off as fresh products. The fact that any of their books attract attention is no more proof of substance than the fact that Montgomery's volume of verse ran into eleven editions proved it was poetry. Macaulay took up that volume and point by point showed it had been plagiarized from Byron and other poets. Today Montgomery is a "dead one." No one ever hears his name.

It is not improbable that most if not all of these folk take themselves with genuine seriousness. The indefatigable, undiscouraged, dull perseverence of their efforts week by week, and their total lack of any sense of humor in regard to their muddled, involved and contradictory lucubrations about the great affairs of the world, indicate that. Were their methods of trying to attract public attention less sinister, they might be simply pathetic. One may always feel a spontaneously human commiseration for the poor mountebank who suffers from the obsession that he is supreme in the role of Hamlet. What is certainly astonishing, if not inexplicable, about the whole thing is that these humbugs of radicalism and "Bottoms" of intellectualism have been actually able to get themselves taken at their own preposterous rating by a small number of people whose brains are supposed to function. The phenomenon of such a clique of shallow poseurs actually getting their journalistic enterprises financed, and even getting themselves mentioned in the wills of certain rich men for sums running into the hundreds of thousands of dollars, would be titillating to one's risibilities except for the fact that an actual realization of truth in P. T. Barnum's cynical characterization of humanity conduces to melancholy. I have never forgotten an experience, both pathetic and comic, last winter in Washington. There I had the pleasure of meeting a lady of most extraordinary charm and bewitching presence. Enjoying a unique social position, she had, since America entered the war, given herself unreservedly to a branch of war work and had accomplished results richly abounding to her credit. She had been to Europe, had visited the battle front, and personally in a social way knew most of the Allied statesmen, from whom certainly she could have gained a clear understanding of the ideals and issues of the war. To my surprise, in the course of conversation, I found that she considered Arthur Henderson a more representative leader of the British than Mr. Lloyd George. She was quite convinced that the British Labor Party was "going to run England," and that even America "great changes were going to co after the war." She also entertained the opini that the British war aims did not coincide wi Mr. Wilson's war aims. And then, to my ama ment, she casually opined: "Of course, it is right to talk about crushing Germany. Aft all, the German people are human, and if t Allies carried on a war of revenge and le them prostrate we'd simply be sowing seeds future wars."

Naturally, I wondered where she got su "liberal" opinions—was it from the Alli statesmen, the generals of the armies, or t diplomats resident in Washington? Pursuin the conversation discreetly, we branched up Bolshevism, the Stockholm conference, the pro osition for a negotiated peace with the Centr powers, and I touched upon certain Americ journals advocating these propositions. A su picion was born that perhaps, unlike the peop of her class, she might be secretly addicted reading Mr. Hearst's editorials. Turning su denly upon me, however, the lady enthusiasti ally exclaimed:

"I *do* hope you read the *New Republic*— gives one such an open-minded view of thing Of couse, it is hard for an ordinary person understand at times—it is so *deep!* Oh, I thin those boys who run it are *perfectly* wonderful!

(*To be continued.*)

Bolshevism Convicted Out of Its Own Mout

(*Continued from page* 9)

> government. Has Russia advanced to the poi where Socialistic production is possible? Mor over, the proletariat of Russia is not politicall strong enough or sufficiently developed to tak over the whole machinery of government an adapt that machinery to its needs. *The dange was that the proletariat government would wor in the direction of destroying the governmen instead of taking possession of it and transform ing it.* And another danger arose, that the back ward sections of the country which felt tha they were oppressed (under this new system would protect themselves by declaring for th complete independence of provinces, yes, even o villages, as the Bakunin anarchists did in th early seventies in Spain. *Under the condition existing in Russia the dictatorship of the pro letariat threatened to bring about the politica and social disintegration of the country an to lead in this way to chaos and to the mora bankruptcy of the revolution.*

Bernstein is the Finance Minister of Germany Theoretically he is in opposition to the ortho dox Marxism of Kautsky and is almost as wel known to the entire Socialist world. But he i a member of the Independent Party and agree with Kautsky about the Bolsheviki. In a long article he declares that the Brest-Litovsk Treaty was a calamity both for the Russian and Ger man Socialists, and that the Russian Bolshe viki must be considered as responsible for tha treaty. He says that they pretended to base their conclusion to sign it on the fact that a German revolution was impending. But he does not accept this excuse, for he points out that both these men were fully informed as to Ger man conditions and must have known that the German revolution was still far away. The German revolution, according to all the best observers, awaited the defeat of the German armies and the facts have proven these observers to be correct.

Bernstein also says that the appeal of the Bolsheviki for immediate revolutions throughout Western Europe was equally inexcusable as they must have known that things were not ripe for a revolution in those countries either. The signing of the treaty was therefore nothing more nor less than an alliance with German imperialism.

Among the new figures brought to light by the German revolution has been Kurt Eisner, Prime Minister of Bavaria, an exceptionally radical Socialist. Along with Barth, Dittmann and others of this group—who were in accord

h Liebknecht until the latter went over to shevism—Eisner totally repudiates the new ssian despotism. He says:

> Ours is a bloodless revolution. I was always opposed to Bolshevism and shall continue to be so. We don't want chaos and terror in Germany. What about a dictatorship of the proletariat? I believe somewhat in dictators, but they must be nominated by the people and not imposed upon them.

In contrast with this, let us take the view the German Imperialists who recognize the lshevik Government and aided it to get into wer by every conceivable means.

Of course, the German Imperialists deeply preciate the immense service done for them Trotzky and Lenine. This appreciation has where been better expressed than in a recent icle by one of the leading publicists of Gerny, Paul Rohrbach. Rohrbach is not a firester, but one of the most level-headed of the rman Imperialists. He is even called a iberal'' and ''democrat.'' No doubt the ultratremists are even more gratified with the lsheviki and would express themselves even ore cynically Rohrbach's ''liberal'' views e more interesting, however, as undoubtedly presenting the standpoint of the attitude of e vast majority of the German nation on Bolevism. Rohrbach writes:

> The Bolsheviki are gradually getting into trouble. What is our attitude? For the present there is for us no greater interest in the East than the interest of maintaining Bolshevism. Many people have the curious idea of wanting to conclude a commercial treaty with Bolshevism. If anybody expects any benefit from it, by all means let him talk to the Bolsheviki about commercial treaties or similar things; it will do no harm, but what the Bolsheviki are doing for us is something much greater than that.
>
> They are ruining Great Russia; they are destroying absolutely the very roots of any possible danger from Russia in the future. They have already relieved us of most of the anxiety which we could feel about Great Russia, and we ought to do everything in order that they may continue, as long as possible, activities which are so very profitable for us. If they offer armed help against the Czechs at Samara and Omsk, we should consider the offer very seriously. We should also prevent the Cossacks from going too far against Great Russia, and from seriously disturbing the Bolsheviki. The Bolsheviki themselves believe that they are the salvation, not only of Russia, but of the world. That is the very best creed that we can want—provided that it remains confined to Great Russia. Great Russia for the Bolsheviki and the Bolsheviki for Great Russia! Let us preserve that situation, and we shall earn at the same time gratitude of the Bolsheviki and the profits for Germany.

VI

THE BOLSHEVIK DOCUMENTS PUBLISHED BY THE UNITED STATES GOVERNMENT

The criticisms passed by a handful of persons f the documents published under the direction f President Wilson have been utterly refuted. hese criticisms were so contradictory that they ad little effect on anyone who took the time o study the documents or who was familiar vith Russian affairs. What were these criticisms?

1. In an appendix to the documents Mr. Creel aw fit to print a few *copies* of additional documents, the original of which he did not have in is possession. He stated that he did not have he originals but at the same time gave grounds, based upon the other documents, for believing hat these *copies* also were substantially correct. Nearly all the attacks made from Socialist and ro-Bolshevik quarters were based upon this appendix.

2. Two or three professors could not understand why the Russian-German spies and agents who issued the documents used Russian dates instead of German dates. Has not the connection between the Russian and German secret police always been intimate? This is really no problem at all. Each individual instance of such dates has been thoroughly explained by Mr. Creel.

Based upon these absurd criticisms there has arisen a campaign of suspicion of Mr. Wilson and the whole American Administration, which, after the utmost deliberation, gave the full weight of their support to these extremely important documents. They are just about as firmly established as the Declaration of Independence.

The writer is personally acquainted with one of the individuals chiefly responsible for gathering these documents. This man is not an official of the American Government. He is an American author and Socialist. He has spent years of his life in Russia, and is thoroughly familiar with the Russian Socialist movement, having been for many years in more or less sympathy with that movement, including the Bolsheviki, with whose leaders he is personally and thoroughly acquainted. This man, in cooperation with many Americans and Russians, gathered these documents together from many different quarters.

Mr. Sisson, who was the organizer of the campaign to bring these documents together, is also a man of established reputation. There is, therefore, no ground whatever to suspect the origin of the documents. But the photographic reproductions themselves furnish evidence that has been absolutely satisfactory to every unbiased person who has seen them. Furthermore, they are now reproduced by the government in pamphlet form and have been circulated by the thousands so that every American is able to examine them for himself.

Let us remind the reader of the chief conclusions demonstrated by these documents. We are no longer interested in the relation of the Bolsheviki to the war. But it is important to note that their relations with the German Government were kept secret by Lenine and Trotzky from the Bolsheviki themselves.

It is also important to remember that the German Government named a list of men who were to be elected to the Bolshevik Central Committee, and that these men were elected.

It is important to know that before the Brest-Litovsk Treaty was signed, the Bolsheviki deliberately betrayed Russia by appointing a German-named commander to ''defend'' Petrograd.

It is interesting and important that the identical arguments used by the German propaganda for two years were employed by the Bolsheviki to demoralize the Russian armies and to overthrow Kerensky.

What are we to conclude from facts of this sort? Were the Bolsheviki German agents? In one sense they were, in another sense they were not. They were never *mere* German agents. *But they were secret allies of Germany.*

These Bolsheviki allies proceeded not only to turn over half of Russia to cruel enslavement by the German armies, but attempted by the means of spies and agents to extend the territory under German control.

Nor did the secret allies stop here. The German General Staff and the Bolsheviki sent agents to bring about revolutionary movements in all the great democratic countries. It is true that Lenine doubtless wished these revolutions for the sake of Bolshevism alone. It is also true that he was willing to run the risk that these revolutions would result in nothing whatever but the victory of German Imperialism and the enslavement of the world. In other words, in order to obtain a chance, however remote, of imposing Bolshevism on the rest of the world through the victory of German arms, he was willing to compel the rest of the world to run the risk of being conquered by German Imperialism.

THE RED RAG AND THE BULL

By ELIZABETH MARBURY

President Women's National Committee, American Defense Society

Representing the National Committee of Women of the American Defense Society, I ask every law abiding citizen to stand sternly and unflinchingly with us in our protest against the public display, the obnoxious and unwarranted flaunting of the Red Flag of Anarchy in these United States, which at this time is naught but a new form of German propaganda and of German effort directed against the spirit of our national unity.

Today duty is grey and grim.
Today education supplants emotion.
Today restraint supersedes rebellion.

We are realizing every hour that normal evolution has given woman her place as an economic producer and that it has demonstrated her right to form a police reserve as well as a battalion of death.

Thus at the dawn of a new era of Peace the women of this country must patrol the streets of our cities and must set the sign posts along the highways of our states. It is the women as well as the men who demand that their mayors and local rulers shall take the same stand as has Mayor Hylan in forbidding the exhibiting of the emblem of resistance to all authority. They must insist that there is only room in our midst for flags that mean law and order and that our beloved Old Glory shall not hang side by side with the flag of lawlessness and of disorder.

The Red Flag does not stand for liberty, but for every crime that has been committed in the name of liberty since the history of the world bega

The Red Flag marches at the head of riot and rebellion. The pretended reconstruction which it proclaims is based upon *unequal* rights, not *equal* rights.

Rapine and robbery cannot dictate the terms of trade agreements.

The Federation of Labor is a better tribunal than are the ash barrel and the soap box.

As a people we have a large store of common sense and our equilibrium cannot be lightly disturbed.

The grip of discontent is undesirable baggage to most of us.

We do not welcome imported grievances.

We fling open our gates to those prospective citizens coming from abroad who seek honest opportunity for honest work. They have their labor to sell, and nowhere in the world will they be paid as high for it as here. The grinding oppressor is no longer a familiar figure in our country. In this connection it might be pertinent to note that with us the sporadic enemy of labor is rarely ''made in America''.

There should be neither display nor glorifying of the Red Flag in this country where it is no more indigenous to our soil than is the poisonous cobra. The Red Flag cannot be safely waved before the wide open eyes of the American Bull. He will not stand for it.

The sooner the Red Flag is cut into stripes, towards the making of the only flag which we Americans propose to keep floating undisturbed over our land, the more sensible its present advocates will be.

We will then welcome your red as part of our whole, united as it then will be to blue, the color of vision; to white, the emblem of purity, and canopied by the stars which are our inheritance and our pride.

Be loyal Americans with us, not disgruntled aliens against us. Learn to believe in America for Americans even as we do.

Look up and not down, and soon you will find our stars the antidote to the mud of injustice and of oppression upon which you and your fathers have turned your beaten backs.

National Work of the Woman's Department

By MRS. COFFIN VAN RENSSELAER

MRS. FRANCIS McNEIL BACON
Chairman, New York and New Jersey Section, Woman's Department

MISS MAUD WETMORE
Chairman, Woman's Department

MISS ANNE MORGAN
Treasurer, Woman's Department

MRS. FREDERICK S. MEAD
Chairman, New England Section, Woman's Department

The abrupt termination of the war has brought the Nation to the realization that it is face to face with a new era—a new era of infinite possibilities, of greater responsibilities, mutual understandings, and a broader brotherhood.

As a people, united and unified with our great allies, we have carried our share of the fight for democratic principles to a triumphant conclusion. But Victory, in the last analysis, only spells Opportunity, and the fruition of the victory—the crystallization of the opportunity—lies in the hands of the people. They can make or mar this new era. More than ever in the history of the world, women have taken their part in the nation's life, in all phases of endeavor during war time. Politically, professionally, industrially, socially, women met the test of citizenship and have contributed in no small part to the successful termination of the four years' agony. But the greater test is yet to come. Women must, of necessity, take a larger and larger share in public affairs, and the first essential should be an adequate understanding of the problems to be solved, combined with a spirit of real sympathy and a desire to be of real service.

The Woman's Department of The National Civic Federation faces a definite responsibility. The Department was organized in Washington in May, 1908, interesting itself primarily in the welfare of government and industrial employees. As the Department developed it was found necessary to enlarge its scope, and since 1912, it has concerned itself with questions relating to social, economic, and industrial life, as affecting women and children. Its functions are investigation, survey, and constructive experimentation leading to legislation for the improvement of conditions. As a department of The National Civic Federation, it conforms with all principles laid down by the Executive Council.

The Woman's Department is organized under Sections, of which there are eight, comprising fifteen states:

New York and New Jersey Section, Mrs. Francis McNeil Bacon, Chairman.

District of Columbia Section, Mrs. Archibald Hopkins, Chairman.

Virginia and West Virginia Section, Mrs. J. Allison Hodges, Chairman.

New England Section, Mrs. Frederick S. Mead, Chairman.

North and South Carolina Section, Mrs. William N. Reynolds, Chairman.

Alabama Section, Mrs. Cyrus Pitman Orr, Chairman.

Missouri Section, Mrs. J. F. Binnie, Chairman.

Ohio Section, Mrs. Lawrence Maxwell, Chairman.

These Sections are autonomous, working in accord with the ideals of the Civic Federation—the cooperation, mutual understanding and sympathy of the employer, employee, and public. The Department has, as well, a membership-at-large of women interested in its work, and who do not live in parts of the country organized into Sections.

When war was declared the entire womanhood of the nation turned to the obvious and immediate relief work which was so distinctly its province. Its purpose being clearly defined and its functions definite, the Woman's Department advised its Sections to cooperate most closely with the organizations formed for relief alone and not to duplicate effort by introducing a program completely at odds with the object of the organization. That this was wise has been amply proved. It is interesting to know that in almost every State where the Woman's Department was organized, its members were appointed upon the Woman's Committee of the local Council of Defense. Miss Maude Wetmore, Chairman of the Woman's Department of The National Civic Federation, is a member of the National Woman's Committee of the Council of National Defense.

The Sections, during the past two years, have done excellent service, not only in their cooperative efforts, but along the line of their own program. The war brought vividly to our consciousness the housing situation, and in the North and South Carolina Section some interesting experiments were carried through. The rapid development of welfare work through this Section is most encouraging. In all Sections, food production and food conservation have been a vital part of war work. Agricultural experiments were undertaken in cooperation with the State universities and colleges, intensive gardening encouraged, and the Home Economics Section took a very prominent part in developing a conservation programme. In Boston, unde the New England Section, a Demonstration Ce tre has been run with great success; a speciali was sent throughout the Section, showing th use of available substitutes; and menus wer carefully and scientifically prepared at the r quest of other organizations. In cooperatio with existing agencies, Emergency Canteens, o Community Kitchens, are being formed through out the State. In New York active cooperatio with the Federal and State Food Commission proved of great value.

In the Liberty Loan and War Savings cam paigns, the organization as a whole has take an active part, as in all other definite calls o Government agencies. It has placed its Section at the disposal of the Federal Public Employ ment Service, to aid in the working out of th comprehensive plan outlined by the Departmen of Labor, through its Community Labor Board and Public Exchanges. As the emergencies de veloped the Sections have responded to th varied calls for service in separate localities t meet the varied needs. For instance, in New York City, at the request of the War Camp Com munity Service, a Home Club for Soldiers, Sail ors and Marines has been successfully run fo over a year. But during all this period the rea purpose of the organization has remained it guiding principle, and its Committees on Ameri icanization, Prison Reform, Industrial Relations Shop and Factory Welfare, etc., with their supplemental subjects, have been continuing their work, preparing for the time when the fundamentals should again take their essential place; when, happily, the necessity for the immediate relief should have passed.

The Department faces the new era with hope and confidence. Its members have been drawn together through a vital interest, and a desire to be of service, with an intelligent understanding of the paramount issues at stake; and wherever the opportunity arises to use such understanding to aid in the betterment of conditions, the readjustments which must arise, the developing of the great things whch have come out of the war, into a firm and solid foundation for the future. Complete reports of the programs of the various Sections may be had upon application to its office, 105 West 40th Street, New York.

Tyrrel Print, New York.

PROBLEMS OF SECURING PEACE

COMPOSE LEAGUE OF NATIONS OF THOSE THAT WON THIS WAR—ADMIT OTHERS AS THEY PROVE TRUSTWORTHY—WILL NOT INTERFERE WITH NATIONAL SOVEREIGNTY

By A. LAWRENCE LOWELL

PRESIDENT OF THE LEAGUE TO ENFORCE PEACE

WHEN a great war has come to an end and the right has triumphed, the victors are very apt to believe that the millennium is here, or at least that the world is sure to be better than it was before. But this is not always so, unless we look out very carefully. Perhaps there was never a war fought for a higher purpose than our Civil War, but the Civil War was followed by the horrors of reconstruction in the South—blunders which no one now ventures to defend; and just here in New York City it was followed by the Tweed Ring. It is not always true that when one evil spirit goes out of a man, seven do not come back. That story was a parable, but very true. Most wars have been followed by periods of moral relaxation.

Let us look, for one moment, at the condition of Europe before this war and now. Before this war the western part of Europe was in a state of political contentment. It contained two or three large countries,—three large countries, you might say,—England, France and Italy. It contained a number of small ones. These small countries, in the first place, were contented, at least passively, they had no desire to fight with one another. They had each of them an entirely separate race, or, as in Switzerland, the races agreed to live happily together. The large countries, it is true, had some differences; France wanted Alsace-Lorraine; Italy the Irridenta; but those things, alone, would not have brought war.

There was, however, in the southeast of Europe, a place which was very far from being contented. In fact, as soon as the Christians had thrown off the domination of the Turk, they proceeded to quarrel among themselves. Everybody had known that that was a black spot; everybody had known it was a collection of explosives which were liable to take fire at any time. All the powers of Europe had got together more than once and tried to settle the affairs of the Balkans, and never did. Why? Because those peoples were infiltrated more or less by one another. They each of them claimed a piece of the other one's territory, because it was inhabited by people of their own race. And it was the occasion of a war in more than one instance.

A. LAWRENCE LOWELL

Of course, the cause of this war was that Germany chose to make a war, but her excuse was the Serbian incident. We believe, more than anything else, that she went to war to carry out the Berlin to Bagdad plan. But do you suppose that if the Balkans had not been in that condition of restlessnses and strife it would have been possible? I do not. It was the condition of the Balkans that made that scheme possible.

What is the state of central Europe at the present day? There are a large number of nationalities there which are bitterly hostile to one another, infiltrated in just the same way. I can give you an example of this strained feeling which came under my own observation. There was in Prague a German student, who subsequently came to Harvard. He went to a concert of the Boston Symphony Orchestra and said that he was very much pleased that he had heard the symphony of a Czech composer which was often played in Prague, but which he had never heard there because it would not do for him, a German, to be seen in a Czech theater in Prague.

Of course, that whole region is in a state of war. An explosion may take place at any moment.

There is not any single race there that is going to be satisfied with any delimination of territory that can possibly be made for it. It is a case of children, each of whom wants the piece of cake and seven of them want it. That is the situation at present, and it runs through the greater part of Central Europe. Besides which, you have the fact that Russia and Germany are in a state of anarchy, which never conduces to a general peace. There is liable to be a fire started at any minute which would spread over all Europe. You have a more dangerous condition than you ever had before, and that will last until those people have been brought under a condi-

tion that they recognize as permanent and just.

Now, what should be done about it? Why, it is perfectly clear that there is only one thing to do about it; and that is that some of the great powers must see that justice is done and maintained, and that we do not allow Central Europe to be like packs of wolves, fighting one another and setting the whole world at odds!

Let me point out another matter. What was the occasion of this war? Well, it was Serbian pigs. The exports of Serbia were mostly pigs. Her way of getting out to the markets of the world was through Austria-Hungary. She could not go through Turkey, because Turkey had not railroads and ports sufficient to handle her commerce. Austria formerly kept her in order, because whenever there were open agitations, in Serbia, the Serbian pigs became "diseased" and could not be allowed to come into Austria; and that had a very strong restraining effect upon the people of Serbia as well as upon the pigs.

As soon as Serbia, after the second Balkan war got Sentari and Greece got Saloniki, and there was a railroad from Belgrade to the sea, Scutari cared comparatively little about her relations with Austria. Then additional Serbian agitations took place, the final result of which was the murder of the crown prince at Sarajevo, as a result of which Germany declared war. I do not mean that that was the cause of the war; it was the occasion which Germany took to make war. But Germany was always looking for a disturbance at that spot, as the thing which might start a conflagration.

I think, in such a condition of things, it is pretty clear that it is worth while for the people of Europe to get together and see that that inflammable territory does not start another fire.

And what have we to do about it? We have much to do about it. It is all very well to talk about our glorious isolation and our disinterestedness in the political questions of Europe. Our glorious isolation in this war has not saved the lives of our citizens. Why? For the simple reason that when a war takes place between any two great maritime powers, they are bound to interfere with neutral countries; they are bound to try to check neutral ships from trading with the enemy; they are bound to quarrel with neutrals. We found that out one hundred years ago, when it was perfectly evident that we had to fight either England or France when they were at war with one another. And ultimately we fought England. But one or the other of those two countries we had to fight during the wars of Napoleon.

Why did we go into this war? Oh, we fought this war to make the world safe for Democracy; we fought it to put an end to barbarism; we fought the war for the sake of humanity. But that was not the real reason. We went into this war because we could not, with self-respect, stay out. And that will be true of every war that comes in the future. Therefore in self-protection we must see that fires do not start. It is all very well to say, "My neighbor's house does not interest me. Let him set it on fire if he pleases, and I will sleep comfortably." That depends on how far off your neighbor's house is. Mind you, we saw in the paper the other day that it took to fly from, I think it was, Mesopotamia, to Bombay, 3,000 miles, but 41 hours. That is the distance across the ocean. How far are we from Europe? Is the Atlantic an ocean, a lake or a river? How near are future inventions to bring us together? How far can we keep away?

But I dislike to put the duty of the United States wholly on a selfish basis. It seems to me in justice a man owes some duties to his fellowman, a nation owes some duties to its fellow-na- of a thousand years hence would point back to this country and say, "Oh, yes, some people called them the country of the Almighty Dollar; but that country not only contributed to civilization through her inventions, but she took her place in the perilous days of the world and helped to organize things so that she was one of the great nations which tended to the uplift of civilization for all time."

There are one or two difficulties, however, which confront us when we consider the formation of a league of nations. People say, "Of what nations shall such a league consist." The organization to which I have belonged for three and one-half years has taken very great pains not to answer that question, believing that the answer would depend largely upon the issue of this war; and I believe that this war has settled that issue. A perfect league of nations in a perfect world, would undoubtedly be one where all mankind was organized into free nations and all were bound together in a great league of humanity. But one does not begin with perfection. One begins with the existing things, and it is surely perfectly obvious today that the only nations that can initiate a league of nations are the nations that have won this war. They may let in others whenever they prove themselves trustworthy, and we hope that many nations will prove themselves trustworthy, but it is not necessary to go too far at once.

I want to take up two or three objections very commonly suggested to a league of nations. One is that Washington never did so in his day. Now, when I was a little boy it was the fashion to make little boys read Casabianca, presumably because it had a good moral influence and raised high moral standards for the little boy. I never got that impression from Casabianca. I never admired the boy upon the burning deck. I never thought that he paid very much respect to the intelligence of his father, who, if he had been present on the burning deck when the boy called to him would have said, "Get off this deck just as quick as you can."

Now, what did George Washington do in his day? He tried to prevent war for, mind you, before the adoption of the constitution we were very close to war between many of the states, and doubtless war would have come. He tried to prevent war by welding those states together in such a way that they would not fight with one another. That was as far as it was wise for him to go. But look at it. Do you realize that at that time New Hampshire was farther from South Carolina in terms of travel and methods of communication and distance and time for covering that distance than we are from Germany. New Hampshire was less likely, if we had been separate states, to be drawn into a war between South and North Carolina than we are to be drawn into a war between Russia and Germany today.

This has happened. We were drawn into a war which began between Russia and Germany. And there is no part of the world now so remote as the two ends of those thirteen colonies were then. Let me say this: Washington was a great man, because he looked the facts of his day in the face, and we are only worthy to be his descendants if we look the facts of our day in the face.

The second objection which is raised is this: "It will interefere with our sovereignty." It has nothing whatever to do with our sovereignty. People say Congress has the power to declare war or not to. But the power of Congress is not in any way affected. We simply agree that in certain conditions we will declare war, but Congress is not bound to do it. The agreement does not interfere with Congress in the least. It does morally bind Congress to declare war, yes, certainly; every treaty morally binds the country to do something. A great change that has come from the Middle Ages, is the change from status to contract, from the time when the relation of things was fixed by the accident of birth to the time when man regulates his relations to neighbors by contract. Contract means limiting your freedom of action in consideration of someone else limiting his freedom of action. And it is in consequence or by reason of contracts that the world is able to advance. More treaties, each of them binding the country to do or not to do certain things, have been made in the last fifty years than in all the history of the world before. Why? Because countries have found it was worth while to bind themselves if others were so bound also.

Now, there is a third objection that I want to take up which is always brought forward. "How about the big and little nations?" Does anyone seriously suppose that anyone is going to allow small nations in a league of nations—to allow nations like Guatemala, for instance,—to have the same votes as the United States? It is easy enough, in a consideration like that, to say it is absurd and throw it down. But no sensible person would believe for one moment that was to be done.

We are told again that our men will have to go and fight in every broil in Europe. But surely the object of the league of nations is to prevent broils in Europe. If the league of nations will not prevent broils in Europe then it is a failure. But does anyone doubt that a league made of the great nations of the earth can stop any broils in Europe? Why, I remember a man coming to my office one day—it amused me very much, and it seems to me it is somewhat similar to this situation. He said to me: "Don't you want to insure your life?" I said: "No; there are so many risks in life that I do not want to increase them by that method." And he replied to that: "Why, this is insurance against risk." And that is the situation here. The object is to prevent war. Of course, if the league will not prevent war, then it is a failure. But it will.

Let me ask you this: if you went to live among barbarous people,—or, let us say in a mining frontier town in the olden days, with its undesirable characters and everyone carrying a gun, what would you do? You would have a pistol and learn to use it quick. And then, a vigilance committee comes, and if you are a good citizen you join that vigilance committee, and it gets to work and puts down that sort of thing, and you lay your pistol away, put it in the bureau drawer and so does everybody else. Are you a bad man because you have to carry that pistol? Not at all. You had to. In other words, a man cannot be an orderly citizen in a disorderly community.

The trouble with us in the present day is that certain nations are trying to be orderly and decent in a disorderly condition of the world. The nations of the world are in just the same situation that you would have been in, in a frontier town of the olden days, when it was necessary for you to carry a pistol. There is only one way to stop it, and that is to make the world an orderly one.

And I want to ask you, are the resources of civilization exhausted? Is this sort of thing bound to repeat itself every little while? Are the most civilized races in the world going to try to exterminate each other with ever increasing ferocity and ever increasing ingenuity of weapons? Is the manhood of the next century to be devoted to seeing how much more wicked we can be? Are we to develop the one horror that did not take place in this war, but was talked of, and that is dropping poison bombs from aeroplanes on undefended cities?

Or, is it possible, is it conceivable, that the world can be brought to a state of peace and orderliness in which scraps between the nations occur no more than scraps among the inhabitants of the town of New York? Is such a hope merely an idle dream? And if that can take place shall America stand by and say: "Civilize the world if you can, but don't trouble us?"

The Real Poland—A Land of Possibilities and Opportunities

By JOHN F. SMULSKI

(EDITOR'S NOTE.—*John F. Smulski, the uthor of the following article, is President of e Northwestern Trust & Savings Bank of hicago, and was formerly State Treasurer of linois, and Municipal Attorney of the City of hicago. During the absence of Mr. Paderewski road he is the recognized representative in the nited States of the new Polish Government. e is also the President of the National Polish epartment, which is the chief executive and lministrative body representing the interests four and one-half millions of Poles within the nited States.*)

ALTHOUGH the American business man is still far removed from an appreciation of the importance of the Polish problem in ıe rearrangement of the map of Middle Eu-ope, he has a vital interest in the disposal of ıis issue at the Paris Peace Conference. If the llied Powers in fulfillment of their pledges reate a Poland of large area which will include ıe indisputably Polish populations, with Dant-g as a Polish seaport, and with full power of lf-government, a positive step will be taken wards assuring the real world peace for which e are all striving.

If, on the other hand, the spirit of the Vienna ongress of 1815 should prevail and a Poland small area—a new Congress Kingdom as it ere—is created, it will be well for the world prepare for wars, because the Polish country so rich in mineral resources, so rich in labor, rich agriculturally, that it will be a land given ver to the exploitation of the neighboring owers, no matter what their form of govern-ent.

Poland, it must be remembered, is the bridge ıto Russia. Through Warsaw pours the trade ot only into Russia but Siberia and the far ast. With a real Poland that bridge will be n open way across which the trade of the orld will be free to pour and American busi-ess men will have their entry with all others. small Poland would mean primarily a Ger-ıan Poland, and the bridge would become a ridge-head with German manufacturers taking ll and even blocking the entrance to the Rus-an markets.

This is not my vision alone. The thought hich I have attempted to express has been ex-ressed with greater clearness by the statesmen f the world. Lloyd George declared that the reation of a United and Independent Poland as necessary for the stability of Europe. resident Wilson a year earlier, but with equal ffectiveness, declared that statesmen every-here were agreed that there must be a Polish ate. Pichon, Clemenceau, and Poincaire in rance have been equally insistent and direct, nd from the Italian Government officials have me positive pledges. Dr. E. J. Dillon, of ngland, who is regarded as one of the greatest xperts on Near Eastern affairs, has gone even urther and declared that but for the mis-hand-ng of the Polish question at the Congress of ienna, the world war just closed would never ave taken place, because a real Poland would ave made the German foray of frightfulness mpossible.

Now, while these several declarations are ased in part on an appreciation of the suffer-ngs of the Polish people and the nobility of heir struggle for statehood during a century nd a quarter, it must be admitted that the llied statesmen have also been obliged to re-ard conditions in a materialistic way. Wars all for suffering and for sacrifice, and a merely entimental appreciation of the pleas of a peo-

JOHN F. SMULSKI

ple hardly justifies the deliberate creation of conditions which may provoke new wars. The enthusiasm of the Allied governments for a new Poland is not only because the leaders believe that the Poles deserve freedom and have the ability to defend it, but because of their understanding that a small Poland means a close corporation dominated by German influence and with new wars, while a large Poland will mean a real nation standing equal with the other nations throughout the world and peace assured. It is not only for Poland, but for themselves they are standing. Yet from the beginning the vision of the peoples of Europe as well as America with regard to Polish affairs and prospects has been seriously clouded by clever German propaganda. At the Congress of Vienna, the German leaders appeared with an exact and complete understanding of Polish resources and possibilities, for they had made an intensive study of the country, but the French and English statesmen had so little knowledge of the land that they were easily cajoled into an a ceptance if not full approval of the German program. The German plans for the disposal of the Polish problem were so complete that the English and the French felt the matter did not require independent study. Germany thus gained by the ignorance of those sent to trade, and the fostering of this ignorance of Poland among the western European peoples, and lately the American people, has been for some time one of the chief aims of the German politicians.

Within the United States, it must be admitted, German propaganda methods have developed a haziness as to Poland, which has worked to the advantage of the German politicians. The heart of America has been touched by the sufferings of the Poles, and aid has been given because of their need, and the problem has been regarded as a sociological rather than a political one, which has imposed a double burden on those who have been advancing the national claims of the Polish people.

Even today, as in 1815, German statesmen are hoping at the Paris Peace Congress to win by the tongue what they lost through the sword. They are planning today, as over a hundred years ago, to profit in the discussion of the Polish question by the ignorance of the outside world and by their exact knowledge of conditions. For four years they have been studying and traversing Poland; the German Chambers of Commerce have established national branches in Warsaw, Lodz and in other cities for some years, with selling agencies in active operation. The Germans have full information as to the coal, iron and oil resources; they have studied the fertility of the soil, the totals of the standing timber, the number of looms in the factories, blast and other furnaces in the iron districts. Knowing these facts they are in an ideal position to manipulate them according to their own advantage. Only a tithe of this information is in the possession of the Allied Powers, though the Polish Information Bureau in Switzerland, and the Polish offices in London and Washington have for some time been assembling and compiling information which it is hoped will aid in making the real country known.

German propaganda agents have with considerable skill succeeded in creating the general impression that Poland at the best is only a small nation which may perhaps have wrongs, but which on the whole has hardly a population sufficient in size to be considered as worthy of special attention. Even within the United States this opinion has taken root and in public discussions and even in formal written articles reference is continually made to Poland as a member of the family of small nations. Poles in America anxious for any comfort or recognition of their claims have themselves at times participated in the gatherings of small and oppressed nationalities and thus unwittingly have advanced the understanding, which is most unfortunate.

Poland, the new Poland, will be the fourth nation in population on the European Continent. With 35,000,000 population it ranks close behind Italy. Its population equals the total continental populations of Norway, Sweden, Denmark, Belgium and Serbia, and it will have an area second to that of Germany. But area and even population will not make a great or a free state, and the Polish statesmen have no thought that prosperity can be founded on these mere attributes. The confidence in the future of Poland is based on the homogeneity of the people, the prevalence of one language, one form of thought, one great ambition for union and liberty. And back of that, the economic future is viewed with satisfaction because of the diversity of the industries and the many lines of activity prevalent. For this population is diversified in its employment, having substantial numbers of its people employed in mining, in manufacturing, in agricultural pursuits, as well as in distinctly commercial undertakings. It is a population which with freedom will increase its needs, its scale of living, and its business ambitions. It is a population, as evidenced by the Polish immigration in the United States, which is scrupulously exact in its use of credit, its payment of obligations and its thrift. This statement will, it is hoped, dissipate once for all the German fiction that Poland is a small nation.

The new Poland will not only be strong enough to care for its own interests, but it will be able to serve as a barrier state between Germany and Russia and thus protect the Russian people against German aggression while they work out their own salvation. It can also lend a helping hand to the Czecho-Slovak state. Indeed while a self-sustaining and competent Poland is wholly feasible of itself, the safety of

the Czecho-Slovak nation is dependent absolutely on Poland's being made free.

But the American doubter may say, granting that you will have large area, and a large population diversely employed, what has Poland to offer for the sustaining of these people? We are willing to extend a helping hand to Poland, but will our obligations only involve a loan later to be met from Polish credits, or will we be obliged to advance not only a temporary helping hand but a protecting arm? In short, will Poland be an asset or a liability in a League of Nations?

It will be an asset, and a most valuable one, and in proof of my contention I again will break through German misrepresentations. Poland, it must be remembered, stands forth in the world in the production of wheat per hectare and third in the production of corn. It is producing over 1,000,000 metric tons of beet sugar per year, and with freedom this amount can be materially increased. It has enormous areas of standing timber which even German efficiency was unable to destroy; it has grazing lands for the raising of beef, and the manufacture of dairy products; it has coal mines, iron mines, and oil wells; it has opportunities for the development of hydro-electric activities. Its textile development in Lodz has given to that city the title of the second Manchester of Middle Europe. It has a flexible banking system which makes easy credits for land and plant improvement and it has in process of development an extraordinary system of co-operative stores. In addition, it must be remembered the people are western in their culture. Polish universities and technical schools rank among the best in the world and Polish exploits in chemistry and the applied sciences are known to the civilized world.

Agriculture has from the beginning been the traditional occupation of the Poles. They came to Poland as a grazing and agricultural people and covered the great plains with their flocks and their farming activities. Their warlike attributes were a latter development, made necessary after they had opened the doors to visitors who turned out to be marauders. Although the profession of arms thus developed because of the necessity of defense, it must be acknowledged that they have materially improved since those early days.

But even the arts of the husbandman has aroused the cupidity of their German and Russian neighbors and what progress has been made has only been accomplished despite differential railroad tariffs, custom frontiers, and the lack of a free port, so that even when surplus crops have been accumulated, the Poles have been obliged to let them rot because of lack of means of communication for distribution through Poland and lack of a port by which to sell their products abroad. The farmers have developed considerable technical skill. The land requires intensive cultivation and yet by reason of their willingness to indulge in steady labor, they have reached high production rates per hectare in standard crops. It is figured by those who have studied the situation, that with an elimination of the disadvantages enumerated with the creation of a Polish state, in short, the growth of grain in Russian Poland can easily be increased from 40 to 50 per cent. The potato crop can also easily be developed with an assured water egress to a large export figure. It is also hoped to reintroduce cattle grazing, which formerly was an extensive industry but failed by reason of prohibitive veterinary measures forced by the Prussians and by the feeding of Warsaw and Lodz with cheap Russian beef.

In an independent Poland, there will be great possibilities for the development of cattle raising. In the absence of Russian competition the price for meat and dairy products should reach a high level in the local market which would be in proper relation to the cost of production. Since the Polish government will no doubt create strict veterinary supervision and construct refrigerator plants, it will be able to export considerable quantities of meat and live stock.

The new Poland will have mineral wealth which will assure prosperity of a most substantial nature. It possesses coal, iron, and oil resources sufficient for its own needs and for sale in the markets of the world. Although industrial Poland develops to the degree to which the Polish people aspire, there will be sufficient of these natural resources to meet all demands. The great mineral wealth of Poland is found on the northern slopes of the Carpathians and principally on the western corner near the sources of the Vistula, Nida and Varta.

The centre of the Polish coal-fields is exactly placed under the small town of Myslowice, called the Three Empires' point, because here, before the war, the three frontiers of the Austrian, German and the Russian Empires met together.

The coal-fields occupy an area of 2,048 square miles and are situated in Dombrowa, Krakow and the Silesian basin. The deposits of coal in this area are estimated at 94.33 milliard metric tons. This coal is of good quality and produces little ash, but only the coal of Upper and Austrian Silesia can be transformed into coke. The strata are of considerable thickness and are generally found not far from the surface.

The total production of coal in the different basins amounted in 1911 to 52,168,800 metric tons. The annual production of the three coal-fields enumerated, which is over 50,000,000 tons, represents only 0.055 per cent. of the estimated total deposit of coal.

The Polish oil wells are situated at the foot of the Carpathians, the easternmost being those of Sloboda, Hungurska and Kosmacz, while the most westerly are those of Klenczany. Between these two extreme points, lying almost 240 miles apart, are numerous oil fields. In 1912 the normal average output of crude oil amounted to 1,168,371 tons. While many reservoirs have been built and new appliances added, the development of these fields on an efficient basis has not yet been accomplished and there are opportunities for the further development which under proper governmental regulation should make largely for the prosperity of the country. A fourth or even a fifth part of the output will satisfy Polish needs, which will leave close to 75 per cent. available for export trade. The number of wells before the war numbered 1,825, of which 269 were in process of drilling. German military and economic authorities have since increased this total as they were so firmly satisfied that they would win the war and hold the territory.

The salt industry is important. There are two important government mines near Krakow. The Wieliczna mine is one of the greatest in the world and contains approximately 21,000,000 metric tons.

The iron ore production in Poland before the war totaled 510,600 metric tons. Again, there are great possibilities of development. The Silesian ore situation is only moderate. In Galicia thereare four varieties of iron ore and in Congress Poland there are some 29 iron mines which were developed, then allowed to wane, and then redeveloped according to the political orientations of the masters in control.

In addition to the agricultural and mining developments in Poland, there is also a substantial manufacturing phase of life which has escaped attention. Unfortunately for the Poles, their manufactured goods from Posen have been marked as German, and those from Russian Poland have been marked as of Russian production, but in the new and happier era the full volume of a "Made in Poland" label will be well advertised to the world.

I wonder how many Americans appreciate that in Russian Poland alone there are 10,953 industrial establishments employing over half a million employees and producing goods o the value of $455,000,000 annually; that i Galicia there are 4,363 establishments wit 125,000 workmen and an annual output value at $127,477,880, and in Prussian Poland ove 600,000 workmen have been employed in in dustries.

Before the war Russian Poland alone con tributed 75 per cent. of the total woolen produc tion of Russia, and 25 per cent. of the total cot ton production. It also produced one-third o the total amount of sugar manufactured i Russia.

The metal industry of Russian Polan amounted to 14 per cent. of the whole Russia production; chemicals, 17 per cent; paper in dustry, 18 per cent. In the production of zinc Poland supplied 80 per cent. of the whole quan tity produced in Russia. Although the popu lation of Congress Poland represented only 10. per cent. of the European population of Russia nevertheless during 1911 1,264 permits wer granted in Poland to commercial travelers whilst in the rest of Russia the number of per mits granted was only 2,081.

It is due mainly to the natural wealth an intelligence of its population that Russia Poland has taken such a decisive economi position, notwithstanding the fact that unde the influence of Berlin the Russian political at titude toward Poland was one quite opposed t any economic or political development. Dis crimination in taxes prevailed and land withi the Central Russian provinces represented onl 3d. per head, whilst in Congress Poland the were taxed as much as ⅛d; meanwhile the ex penses allowed by the Minister of Agricultur represented in Poland 1.4 per cent, the expense of the Education Department 4.4 per cent. o the total budget, although the population in th Polish provinces represented 10.3 per cent. o the total population. In the year 1911 th Russian Treasury drew from Poland under th heading Rates and Taxes 228,360,000 rubles, an spent on Poland only 123,746,000 rubles. Wit regard to the Railway Budget, during the te years from 1906 to 1916, seventeen thousan miles of railway were to be built in Europea Russia, whilst to Poland were allotted 96 mile only. The special tariff politics hindered Polan from obtaining raw material and selling of man ufactured goods on the Russian markets. Th freight per ton of goods from Warsaw to Mosco represented almost one and a half as much a from Moscow to Warsaw.

Even though this article is a meagre one a the best it indicates at least the possibilities i Poland. A nation of 35,000,000 people en gaged in a variety of agricultural and manu facturing activities has a very considerabl purchasing power. The new Poland has alread entered into economic and customs arrangement with Czecho-Slovakia and with the Jugo-Sla peoples, and harmonious relations with th Rumanians will continue. The trade with Rus sia is certain to be further developed becaus there will be a growing together of the peopl now that the German poison is eliminated fro the veins of the Russians.

Poland is not a land for exploitation, but it i a land for real trade relations, and I sincerel hope that the United States will have a share i developing them. One of the primary demand which will be made on America will be for ne textile machinery to replace the machiner which the Germans removed from Lodz, an also the delivery of parts to replace those whic the Germans, failing to remove, destroyed. Po land will need new mill machinery, new appl ances for iron working, for sugar beet produc tion, for oil well development.

Poland needs railroads, not only new line but equipment, rails, locomotives, cars, freigh vans. It will have a substantial credit wit

(*Continued on page* 18)

The Czecho-Slovak Republic

By DR. J. F. SMETANKA

THAT phase of the revolutionary movement of the Czecho-Slovaks against Austria which resulted in the creation of hree armies—in France, Italy and, above all, n Ruusia—and which culminated in the ecognition of the Czecho-Slovak National 'ouncil under President Masarky's leaderhip as the provisional government of 3ohemia, is well known in America. But onditions in Bohemia itself are not so well nown. The campaign abroad has been paralleled all along by another movement centering n Prague, to all appearances independent, but ctually connected through underground chanels with Masaryk's organization. For four 'ears the few leaders in Prague who kept in ouch with Paris were in constant danger of heir lives from the Austrian police. Now their ames have been published and they are the naional heroes of their people.

Nobody will accuse the Czechs of cowardice r opportunism. Their opposition to the Gerıan-Austrian side of the great quarrel was lefinite from the very beginning, and the varyng fortunes of war influenced them not in the east. Nevertheless, this determination to be ined up on the side of the Allies and to win heir liberty was combined with far-seeing wisiom and careful calculation. The temptation vas there during all those terrible years "to kick ver the traces" and start a rebellion; but there vere no irresponsible elements in Bohemia, the vhole nation followed unhesitatingly its elected epresentatives, and these representatives realzed the hopelessness of an armed rebellion gainst the Austrian and German empires. A 'lance at the map shows that the Czecho-Slovak ands are in the very center of what was Gerıan Mittel-Europa, far removed from any iope of Allied assistance. An uprising would ave been quenched in blood.

So while the Czecho-Slovak soldiers in the Austrian armies went over to the enemy and istinguished themselves on the other side, while heir leaders in France, England and America ıade the Allied statesmen realize that Austria ıust go, the leaders at home waited for the ripe ime. It came in the end of October. When 'resident Wilson notified Austria that before t could get peace its oppressed nations must be iberated, and when Count Andrassy humbly ccepted these conditions, the Czecho-Slovak Jational Committee of Prague took the decisive tep.

On October 28, representatives of the Comıittee which all Czechs accepted as their suoreme authority called upon the officials of the Austrian government in Prague to take an oath f fidelity to the Czecho-Slovak State and to the Jational Committee. Without a blow fell the yrannical system of Austria, under which the Czechs had suffered for three hundred years. 'he emperor's governor fled, a few objectionble higher officials took a leave of absence mounting to resignation, but the great mass of Austrian functionaries submitted without proest. The State police of Prague fell in line, nd even General Kestranek, commander of the 'rague garrison, placed his force at the disposal f the new government. In two hours all traces f Austrian domination disappeared in Prague. Black and yellow flags on government buildings vere replaced by white and red banners, the olors under which the Czecho-Slovaks had won uch great victories in Siberia; Austrian doubleıeaded eagles were torn from entrances to court ıouses and post offices, soldiers voluntarily hrew away the imperial insignia from their aps, the police put on the Bohemian lion and

HON. CHARLES PERGLER
High Commissioner in the United States of the Czecho-Slovak Republic

the white and red badges, and the overthrow was complete.

No revolution in history has lacked so completely all elements of violence as this thoroughgoing revolution of Prague. No lives were lost, and the only incident savoring of force occurred when an Austrian officer would not take off the imperial badge from his cap and was knocked down. To describe the exalted feelings of the people would require the pen of a poet. The day was a holiday in all Prague. All business ceased; street car rides were free, crowds paraded through the principal streets, enthusiastic speeches were made by leaders of the National Committee, the Allies were cheered, the people wept when the names of Wilson and Masaryk were pronounced. The evening papers on the same day printed the official reports of the Allied chief commands under the heading of "Our Allies," while the German and Austrian general staff reports were inserted under the heading of "Enemy Official Reports." The people were exalted with joy over being free at last, and they were proud that they could range themselves openly on the side of their Allies.

To describe the progress of the revolution throughout Bohemia, Moravia and Silesia would be simply to repeat the story of Prague. The day following the breaking out of the revolution in the capital every Czech city and every Czech district threw off the Austrian rule, and the Czecho-Slovak State sprang into being, complete in every detail, with a perfectly functioning government and the willing allegiance of the entire nation.

The new government had several difficult problems to deal with. Of these, two demanded immediate attention—namely, the problem of the German minorities in Bohemia, Moravia and Silesia, and the occupation of that part of the new state formerly included in Hungary and known as Slovakia.

It is well known that the Czechs have fought the Germans during the entire period of their national existence, for the Czechs constitute an advance guard of the Slavs thrust into German territory. In the course of the thousand-year struggle the Germans succeeded in occupying certain portions of the Bohemian lands, and thus the Czecho-Slovak State had to face a considerable German minority. If that minority held certain well defined territory, they could go their own way; the Czecho-Slovaks desire nothing better than to be rid of the Germans for good. But the problem is not so simple.

Bohemia is a geographical and historical entity. It is surrounded by mountains on all sides; these mountains have been both historical and natural boundaries of the country; it would be impossible to draw new boundaries which would give the German neighbors of Bohemia the crest of the mountain ranges, as well as the slope on both sides. But in addition to that, the two races are so intricately mixed that it would tax the ingenuity of any international commission to separate them. Here and there along the boundaries of Germany are small districts where the population is altogether German. As to these, the Czechs stand ready to trade them for other districts in Prussian Silesia and Lower Austria, where the population is Czech. But for the most part territory in Bohemia, Moravia and Silesia, claimed by Germans, is settled by both Germans and Czechs. According to Austrian statistics the Germans have the majority in large sections of northern Bohemia, bordering on Saxony and Prussia, as well as along some sections of the southern frontier bordering on Upper and Lower Austria. But to accept Austrian statistics as accurate would be erroneous, for they shamelessly favor German claims. In this disputed territory there are in addition to genuine Germans, hundreds of thousands of people of Czech origin who were Germanized by force of circumstances, but who would revert swiftly to Czech nationality if conditions were reversed. There are hundreds of thousands who are undoubtedly Czech, but who were forced by their employers, by the German municipal authorities, by the fact that they were state officials or by other compelling circumstances, to allow the census-taker to inscribe them as people with the German "conversation tongue." The Jews in Bohemia who have heretofore classed themselves as Germans are now aligning themselves with the Czechs.

All this is already exemplified in the case of certain German islands in Czech territory. Some of the cities in Bohemia, and particularly in Moravia and Silesia, were in the hands of the Germans, because the antiquated municipal franchise allowed large taxpayers to outvote the common people; and all the great influence of the city hall was used in cities like Brno, Budweis, and Alomouc to create the appearance that the entire city was German. Czech children were forced to attend the German schools, streets had only German names, policemen spoke only German, and at the decennial census Czechs who did not assert themselves sufficiently were inscribed in the census as Germans. But when the great overthrow occurred in Prague, everyone of these German bastions in Czech territory fell without a struggle. The German mayors and councils submitted without even a protest to being ousted from their offices; in their places commissions were appointed on which the German element of the population received a minority representation, and a clear demonstration was made thereby of how feeble was the vaunted strength of the "state-forming" German element.

With regard to the long and sinuous zone of German preponderance stretching on the outside of Czech territory all the way from Vienna along the Austrian, Bavarian, Saxon and Prussian boundaries, there grew up in November a peculiar, sometimes almost comical, situation.

German deputies to the Vienna Parliament from all this territory followed promptly the example of the Czechs and constituted themselves into a National Council of German Bohemia with headquarters at Liberac (Reichenberg). This is a city of some 35,000 people in northern Bohemia close to the Saxon line. It is an industrial city, with a strong Czech minority which is sure to be turned into a majority when the German pressure is removed. The extemporized National Council declared all the territory in which Germans, according to the last Austrian census were in the majority to be a new province under the German Bohemia, as part of the new state of German Austria. The difficulty was that the Reichenberg council did not have its own people back of it. Under its very eyes the population of Reichenberg rioted and plundered army stores of clothing and food. The Council issued orders and proclamations, but no one would obey them. Important state officials in cities as German as Teplitz and Komotau announced that they would obey orders from Prague and not from Reichenberg; the unfortunate council of German Bohemia declared them deposed and entrusted the execution of the orders to local committees of German patriots. That meant that the orders remained unexecuted.

The Czech National Committee observed a waiting attitude, for it knew that events were working in its favor. It made a formal demand upon all the district officials in Bohemian lands to accept the authority of the new Czech government in place of the old Austrian government, but where obedience was refused by German officials in territory with a German majority, the Czech statesmen did not employ force, even though they had it at their disposal. Slowly the opposition of the Germans crumbled. First the German dailies of Prague climbed on the band wagon and exhorted their brothers in Bohemia to make their peace with the new Czech Government and get good terms before it was too late. Then, one by one, the so-called German cities gave up struggling against the firm government of Prague. Some thought of all kinds of impossible expedients; the city of Karlsbad declared itself an independent republic, under American protection, but the Czech troops a few days later occupied the city and the new Karlsbad republic ended its brief life.

The logic of facts was too strong for the Germans of Bohemia. To remain united to German-Austria was out of the question, since they were separated from it by millions of Czechs. To join Germany was not a course that appealed to any hard-headed man, for the employers and the workingmen in the important industries of northern Bohemia realized that they must be protected from German industry by tariff walls; and the German farmers are attached to Bohemia and dislike the German Reich. Only the professional politicians of German Bohemia played the same kind of a game which has made everything German abhorrent to all mankind in the past four years. On November 10 the Provincial Government of German Bohemia endorsed an effort by the German-Austrian State Council to join Germany, expressing "the confident hope that the present political happenings would lead to a firm political union of Germandom in Europe." The same body sent a despatch to President Wilson, through the Swedish Legation, in which they protested against the occupation by Czecho-Slovak troops of cities to which the German Council made a claim. Even more futile were acts of the State Council of German-Austria in which Reichenberg politicians took part. This council prepared a State Declaration on November 14 in which they claimed for German-Austria all parts of the Czecho-Slovak lands which showed, according to the biased census, a bare majority of people with German as their "conversational tongue;" the council claimed also all cities with German municipal administration, even though they were surrounded by Czech territory and had already voluntarily submitted to the authority of the Czecho-Slovak Government. This Vienna Council even dared to lay claim to a partnership in the rule of the industrial district of Moravska Ostrava, although it is overwhelmingly Czech with a German and Polish minority. But nothing was said of the rights of the Czech minorities in the German territory, although in Vienna alone there are half a million Czecho-Slovaks.

If it were not for the Vienna Government of the German-Austrian State, an agreement would already have been reached between the Czecho-Slovak Government and the German speaking inhabitants of Bohemia. Even as it is, a majority of these Germans has by this time recognized the authority of the Prague Government, and in a short while even the outlying portions of the Bohemian lands will accept the changed conditions without compulsion. But Vienna is still making trouble for Prague in the approved manner of German propaganda, hoping to create discord among the Allies and set some of them at least against the Czechs. For weeks the despatches from Vienna were full of complaints about the heartless behavior of the new Czech authorities who would not permit food and coal from their territory to reach Vienna. The fact is that as to food Dr. Kramar, Czecho-Slovak premier, took care to provide for his own people first; all through the war the fertile fields of Czecho-Slovakia had to raise crops to feed the Austrian army and the Austrian capital, while the cities of Bohemia suffered more from hunger than almost any other part of the empire. Now the products of Bohemia go to feed the people of Bohemia first. That may be hard on Vienna, but the Czechs can hardly be blamed for looking first after themselves and not after their enemies.

The outcry made by Vienna about the lack of coal is equally ill-founded. There is not enough coal mined in Bohemia for the needs of Bohemian industry and for the domestic supply; in fact, the excellent sugar beet crop of 1918 is going to waste, because coal cannot be got to run the sugar mills. The Czech authorities agreed to give Vienna a certain quantity of coal, enough to prevent suffering from cold, but naturally not enough for all the manifold needs of the great city. But while the Czechs were faithfully performing their engagement in this respect, the German-Austrian government was sending arms from the Vienna arsenal through Bavaria and Saxony into northern Bohemia and Silesia and was stirring up the German population of these districts to attack the Czecho-Slovaks and occupy the coal mines. The city of Opava, in Austrian Silesia, received 500 rifles and five cannon from Vienna for the specific purpose of making war on the Czechs.

It will take some time before the German masters of Vienna will reconcile themselves to their new lot. They still imagine that being Germans, they are entitled to lord it over the Czechs and that they will induce the Allies to reëstablish in some form or another their ancient rule over the Slavs of the former Austrian Empire. They strive for this the more desperately because failure would mean personal bankruptcy for most of them. Without the Czecho-Slovak lands Vienna will fall from the rank of a great capital to the status of a small provincial city of a state of 6,000,000 people without agriculture and without important industries. It cannot be said that the Czechs contemplate Vienna's prospects with regrets. For three hundred years everything evil that afflicted Bohemia came from Vienna. Now Vienna will no longer live on Czech wealth and Czech industry; she must stand on her own feet.

A second great problem which had to be faced by the Czecho-Slovak Republic at once was the relation of the new state towards the Magyars. Slovakia, measuring more than one-third of the entire territory of the new state with about or fourth of the population, has been a part of Hu gary. Now the Magyars of Hungary held to their rule over their oppressed races mu more tenaciously than the Germans of Austr When rebellion broke out in Bohemia, it spre immediately to Slovakia; in many cases Magy officials and gendarmes turned over their autho ity to the Slovak National Council, while other places they simply ran away, fearin the wrath of the people. But in the majori of cases they held on to their power, hopin to save as much of Slovakia as possible for t Magyar state. In a few days the so-call democratic government of Count Karolyi Budapest picked up courage, and although first it had conceded to the Slovaks full liber of self-determination, it claimed that they mig have self-government, but would have to rema a part of the Hungarian state.

In pursuance of this policy soldiers were se to Slovakia, mobilization was proclaimed virtue of which Slovaks were drafted to fig their countrymen, and a few bloody encounte occurred between Magyar troops and Czech Slovak guards who entered Slovakia from Mo via to preserve order in districts abandoned Magyar authorities. The Czecho-Slovak gover ment was anxious to avoid a new war, althou it was considered necessary to call to arms se eral classes of recruits. Appeal was made Dr. Benes, the Czecho-Slovak Minister of Fo eign Affairs, to the Allies' general staff, and as result French officers in Budapest served noti on Count Karolyi that the Allied military lea ership ordered Czecho-Slovaks to occupy S vakia under the terms of the armistice. Th was the end of the threatened conflict betwe Czechs and Magyars.

If the new Czecho-Slovak Government had difficulties with neighbors, at any rate at ho things went on smoothly. The authority of t Czecho-Slovak National Committee, although had no armed force back of it, was obeyed mo readily and more unanimously than that of t old imperial government with its millions bayonets. The first care of the leaders in Prag was to fuse the government *de facto* in Prag with the government *de jure* in Paris. Ev before the revolution was accomplished, a de gation of the National Committee met Forei Minister Benes in Geneva and agreed upon co mon procedure. When the delegates return to Prague, a National Assembly was called t gether; since there was no time to have regul elections, the various political parties were i vited to send delegates to the Assembly in p portion to the showing made by them in t last general elections of 1911. When the Asse bly met on November 14, the National Comm tee presented for its approval a decree proclai ing Czecho-Slovakia a republic, and Thom Garrigue Masaryk its first president. Both d crees were approved amid unbounded enthu asm, and then a cabinet was selected by the A sembly consisting of sixteen ministers, with I Karel Kramar as premier. A call was sent President Masaryk, then in Washington, to co to Prague at once and take charge of the gover ment. The old royal palace at Prague was p in readiness for his reception.

Just now, worn by more than four yea of war, with its armies still in Siberia a France, with insufficient food and complete la of raw materials, the Czecho-Slovak Republic passing through a difficult time. But it will pu through, especially if the Allies help. The f ture of the new republic is bright, for with Ge man competition practically eliminated, Boh mia, the one industrial country in Central E rope, with plenty of coal and iron, with millio of skilled workmen, with numerous enginee and chemists, with an excellent banking syste with the friendship of Russia, Poland, Jug Slavia and Roumania, will make way in the ma kets of eastern and southeastern Europe.

Shadow Huns and Others

By T. EVERETT HARRÉ

Part IV

GENESIS OF HUN PROPAGANDA

ABOUT the middle of June, 1914, various professors, scientists, public officials and other persons throughout Germany were visited by agents directly representing von Bethmann Hollweg, the German Imperial Chancellor. These men were asked if they would be ready to answer the call of their government for foreign service in the event of war. The question filled them with amazement, with mingled emotions. Europe was tranquil; the international horizon was clear. Could *Der Tag* be at hand? Trained to obey their rulers without question, with tacit submission, their hearts beating high, these servants of the Kaiser answered to one man that they were ready. Within two weeks, on June 28, 1914, the Archduke Francis Ferdinand of Austria was assassinated at Serajevo. On July 10, 130 selected German professors, scientists, public officials and others were assembled at the Foreign Office in Berlin for instructions to act as directors of propaganda in North and South America, in China and Japan. Three weeks later they sailed from Copenhagen for New York in charge of Dr. Heinrich Albert. Thirty-two members of this party were destined for propaganda work in the United States. Among these was Prof. M. J. Bonn, a man of extraordinary suavity and cunning, whose especial mission was to round up American college professors, educators and publicists who might be induced to abet the Germans in their sinister efforts to poison American public opinion.

Facts concerning the inauguration of this special propaganda campaign, planned in Germany even before the Serajevo murder, were embodied in a confession made to the American Government by a German official sent over as one of the propagandists and who is now interned. Captain George G. Lester, of the Military Intelligence Division of the General Staff of the Army, testifying on December 13, 1918, before the Senate Committee investigating propaganda in the United States, declared:

"Many of them (referring to the 130 German agents) were experts and had been working for the propaganda in Germany, of which Pan-Germanism is an example, for fifteen or more years. I might add that since 1894 Pan-German propaganda has been systematically distributed from Germany in every country in the world. The exchange professorship idea, for instance, was German propaganda, and we got our share of that."

GERMANY'S "PEACEFUL OFFENSIVE"

While Germany, for a quarter of a century, was preparing her armies and manufacturing munitions for her intended onslaught upon civilization, she engaged at the same time in a "peaceful offensive" abroad which was designed to camouflage her baleful purposes and win for herself such esteem and admiration as would neutralize and disarm the indignation of neutrals when the time for her blow came. German agents and propagandists for more than a quarter of a century carried on a world-wide propaganda campaign exploiting Germany as supreme in social progress, industry, inventions and beneficent science. According to this propaganda, the German working class enjoyed higher wages and shorter hours of labor than existed elsewhere in the world; they were afforded ideally superior living conditions, picturesque homes, cheap food, and recreation; by means of the social insurance schemes, they were solicitously cared for in sickness and old age. There was no poverty in Germany; slums had ceased to exist. The Imperial Government was represented as a benignant paternal institution which had only the well-being of its beloved subjects at heart. The good German Kaiser lived only to serve his people, and the good German people devotedly loved their Kaiser. German justice was a thing to marvel at; German officials being gifted with unexampled virtues of impartiality, integrity and incorruptible rectitude. Political corruption was unknown in Germany! By the comparison, Americans were made to blush for our ballot box frauds, municipal scandals and graft on part of our officials. While Germany's secret agents and abettors glorified the Fatherland and exalted Teuton "efficiency" as something to be desired by all other inferior peoples, subtly, insidiously and cunningly they at the same time sought to belittle American achievements and hold our own institutions, our own Government, our own history in contempt. America was scornfully presented as a land of dollars, of wicked capitalists engaged in ruthlessly exploiting the working classes, of new-rich vulgarity, a country without art, science, literature, without traditions, or national morals. Our own early struggles for freedom were ridiculed; the making of the American Constitution was sordidly interpreted as an effort on part of Colonial plutocrats, including George Washington, to enrich themselves.

By comparison with Germany, all other nations similarly suffered. France was represented as degenerate and backward, and possessed of a maniac obsession for revenge upon Germany. Great Britain, controlled by an effete land-owning aristocracy, was retrograding and falling behind in commerce; the empire was threatened with dissolution. Beset, also, with an insane jealousy of the superior Germans, England, seeking to thwart legitimate German expansion, had conspired to ring Germany about with a combination of envious and hostile powers. Russia, "the land of pogroms," in alliance with France and England, was preparing to launch a war of Slavic aggression. Yet despite this combination of hostile powers, despite every wicked conspiracy, Germany, having only the good of humanity at heart, preserved the peace of Europe for forty years. So we were told.

THE "SECRET KEY" OF GERMAN PROPAGANDA

In this pre-war propaganda, as in the propaganda launched by Dr. Bernhard Dernburg after the outbreak of war, Germany was aided by many American college professors, editors, publicists, professional social "uplifters," and every breed of radical writers. The pro-German activities of not a few Americans—who, whether consciously or unconsciously, intentionally or unintentionally, have until recently been engaged in efforts calculated to aid and comfort the Huns—began long before the European war.

That phase of pro-German propaganda which has today taken the form of fostering distrust and suspicion of the Allies, especially of Great Britain, was actually launched in this country at the conclusion of the Spanish-American war. At the time Prince Henry of Prussia visited the United States, in 1902, the anti-British propaganda was under way. Prince Henry came to America primarily to consolidate American citizens of German birth or extraction into a body which should work in the United States for the interest of their Fatherland, and coincident with his visit there was organized throughout the country the organization of Old German Warriors, who were to train Germans in the use of guns. One of the purposes of this amalgamation of an alien citizenry in our body politic was to prevent our ever going to war against Germany by the threat of an uprising and revolution against us within our midst on the part of the "one-third" of our "German-American" population. Had these plans carried, as expressed by Emil Witte, "any war between the United States and Germany would be in the nature of a civil war."

Emil Witte, at the time of the visit of Prince Henry, was attached to the German Embassy at Washington as secret "Press Attaché." The plans of Germany to influence and control American newspapers and news agencies, and to alienate England and America, were disclosed in a book written by Witte, entitled "Revelations of a German Attaché," published in Leipsig in 1907. In this book, written for Germans, Witte says he drew his "income from the secret disposition fund in Berlin," and frankly went on to say:

"In entering upon my duties, I received general instructions to make every effort to make the papers keep silence which were antagonistic to Germany and to perform the miracle of turning them from bitter opponents to friends and admirers of the Emperor, *as well as also to make it appear that the real enemy of the United States was not Germany but England.*

"As it was absolutely necessary for the success of my mission that the nature of my relations to the Embassy should remain a profound secret, I was enrolled by the Ambassador as a special correspondent of the *Norddeutschen Allgemeinen Zeitung,* and in this character I associated with American journalists, whose acquaintance I made use of for the service of the Ambassador.

"The secret key for the German diplomacy in America at this time, after the Spanish American war, was animosity and envy against England."

INNOCENT "VICTIMS" OF THE GERMAN EVIL EYE!

Was this German propaganda whose inception antedated the war by more than fifteen years at all successful? Were any American writers or editors reached and influenced by the maladroit and furtive activities of such apostles of Teuton "kultur" as Herr Witte? How many Americans, perhaps without consciously realizing it, were subtly converted to the Teutonic point of view, to the belief that the Germans were a superior race, that Teuton militarism was justified, and that Teuton "kultur" was destined by rights to conquer the world? How many were poisoned against Great Britain and led to believe that the real enemy of democracy was not Germany but England? How many were seduced into the belief that the Prussian military autocracy constituted a splendid "representative and responsible" form of government, and that the progressive German nation was menaced by a combination of spiteful, jealous, degenerating, backward powers? How many American writers—men who would not knowingly sell themselves, who could not be corrupted or bribed—were duped and victimized through this propaganda scientifically carried on for many years? May not such conversion explain the extraordinary conduct and point of view of certain American editors who, since we entered the war, have opened them-

selves to censure if not grave suspicion? May this not make clear the policies of certain journals which have perplexed and vexed all right-minded and loyal Americans?

If it were found, for instance, that certain men whose attitude in regard to the war has been, to put it mildly, inexplicable, had long before the war lent themselves to what was essentially pro-German propaganda, who had in writing subscribed to the German policy of "blood and iron" and had justified Germany's wars of aggression, would there be any significance to that fact?

If it were found that certain editors, who have impugned the motives of the Allies and are at present seeking to stimulate popular suspicion and distrust of England and France, had before the war aided in the glorification of military Germany and in disparaging England and France, would that be at all significant?

If it were found that certain editors, who persistently advocated a peace of compromise with the Central Powers and who, since the armistice, have pleaded for magnanimity to the beaten Huns, had before the war exalted Germany over all other European nations and had preached that the European war, when it came, should be fought to a decisive result, would there be any significance to that?

If it were found that certain editors, now advocating internationalism, disarmament, freedom of the seas, the giving to Germany of foodstuffs and raw materials, and admission of Germany to a League of Nations, had before the war—and when Germany had most in prospect to gain from a successful war—preached that disarmament in Europe was undesirable and that war to a finish might be "a useful and justifiable engine of national policy," would there be any significance to that?

Would there be any significance to the fact that a point of view favorable to Germany when she was unbeaten changed so that it was favorable to Germany when she was beaten?

Would an editorial policy favoring a compromise peace with Germany when she had most to gain from a compromise peace, which championed the Bolsheviki when they played into the hands of Germany, which defended "conscientious objectors" and the I. W. W. leaders who had seditiously conspired to hinder the country in its war work, be at all explained by a pro-German point of view and an obvious pro-German inclination of sympathies before the war?

PUNISH ALLIED ATROCITIES BEFORE WE PUNISH KAISER, PLEADS THE *NEW REPUBLIC!*

Now, certain journals, conspicuous by reason of the very few number of their kind, have ever since the signing of the armistice harped upon the alleged "imperialistic" motives of the Allies. While they have sought in effect artificially to promote widespread distrust of the Allies and have slandered the leaders of the nations associated with us in the war, they have with unwonted zeal campaigned against the levying of any indemnities upon Germany, against any punishment being inflicted upon the Huns. Strangely reticent concerning the atrocities committed by those bestial and besotted Hun hordes, concerning the devastation of Belgium, northern France and Serbia, and the enslavement of Belgian women, silent concerning the conscienceless brutality and inflexible mercilessness of armies schooled for rapine and slaughter, these journals have lately risen up in moral indignation to protest against the "overwhelming body of punitive sentiment in the Allied world."

That weakly sheet of sentimental sophomoric sophism, the *New Republic,* especially, has been stirred to the depth of its cerebral shallows at the thought of punishment being inflicted upon the Kaiser and German leaders. Before punishing the Germans, who have been guilty of atrocities in the war, let the Allies even more severely seek out and punish those on their side who inflicted atrocities upon the Germans, pleads the *New Republic!* "If there have been criminal acts on our side, we ought to insist upon justice being meted out to their perpetrators, rather more strictly, perhaps, than to the enemy criminals." Otherwise, "the punishment will be vengeance, not justice." Could such saccharine-souled sentiments—of which the "contrite and repentant" Huns must gustily approve—possibly be inspired by any possible secret pro-Germanism?

In advocating a peace of compromise by negotiation with the Central Powers, in championing every Hun peace drive, in preaching the invincibility of Germany and the impossibility and undesirability of a decisive Allied victory, in espousing and championing Bolshevism, in defending disloyalists and opponents of the war, in efforts calculated to destroy our national morale and disrupt the harmony and confidence existing between us and the Allies, could it have been possible that the *New Republic's* course was dictated by a Teutonic process of mind? Could any editor of this "up-stage" organ of intellectualism possibly be classed among the "Shadows" of the Huns? Certainly not! The *New Republic* itself is authority for the rejection of so simple and casual an explanation. As a matter of fact, may it not be more than probable that the editors of the *New Republic* do not themselves know what is the matter with them? Merely pro-German? The explanation is a matter of deeper and more obscure psychology.

"INTERNATIONAL" PRO-AMERICANISM

The *New Republic,* which has for months "advertised" the alleged imperialistic and ulterior designs of the Allies, recently defended its course by declaring:

"The policy of the *New Republic* has always been pro-American in the sense of ardent loyalty to the ideals of international security and justice which have usually been the formative influence in American foreign policy."

Why did the *New Republic* champion the early German peace drives and urge peace by negotiation—in other words, a peace of compromise by submission to the Huns?

Why, don't you see, because of its extraordinary pro-Americanism "in the sense of ardent loyalty to the ideals of international security and justice."

It isn't clear to you? You can't just see it? Well, it was all very simple. America might help the Allies to the degree that they could not be routed, beaten, utterly crushed; but America, whatever she might do, could not help the Allies to the degree that they could beat Germany. Germany was invincible; therefore, was not the continued shedding of blood useless? Was it not the logical thing for the Allies to give in? Wasn't it better to truckle to the Huns than persist in a hopeless fight? Wasn't it the bravest and finest sort of pro-Americanism to urge that we give up in order to save our skins? Of course, from one point of view, Bolo Pasha, in undertaking to save the French by exploiting the hopelessness of their cause, was a patriot. Alas! Noble motives are too often misunderstood!

Just six weeks after America entered the war, in its issue of May 19, 1917, the *New Republic* undertook the "patriotic" service of telling Americans how hopeless their cause was. That was before the whole nation was roused to back the war, when seeds of discouragement and discontent found fertile ground. The *New Republic* declared that if Russia were not prevented from drifting out of the war there *"would at best be a hideously expensive stalemate," "a deadlock"* which *"could be broken only by the despatch of a huge American army to Europe—one so large that it could not be recruited, equipped and trained until the summer of 1919. Even then,"* hopefully suggested this "pr American" organ, *"it might be impossible transport it to Europe."*

The *New Republic* was inspired to draw picture obviously calculated to rouse and stin ulate American confidence and courage:

"We ought to look forward to three or fo years of fighting, to casualties of several million . . . . to an ultimate national war debt not far from $40,000,000,000, *and to a gener condition of extreme famine in all the basic su plies of food and materials."*

REVOLUTION IN U. S., THREATENED *NEW REPUBLIC*

A prospect manifestly designed to encourag enlistments and buoy up the spirit of the cou try! But, despite the hopelessness of ou cause, had our leaders not done right in cha lenging Germany?

"It is an appalling outlook, and it will go i with the men responsible for the governme which brings consequences of this kind upon t American people," continued this sheet, whic has today the effrontery to declare in advertis ments that "it insisted that the war must go o until Germany was beaten."

What it actually declared in May, 1917, wa *"The result would almost certainly be a rev lution in America far more bloody and drast than the revolution in Russia. A war conducte until 1920 on the scale required by a milita decision might bring peace with victory, but would also bring victory with suicide."*

What did this ardent "pro-American" orga propose?

"The final victory must be won by dipl macy."

The *New Republic,* on August 11, 1917, d clared:

"The American nation is fully capable preventing Germany from winning; it is n capable of assuring a military decision to th Allies." While the *New Republic* characterize President Wilson's Flag Day address, June 1 1917, as "a temporary aberration," it late boasted that "it has seen itself taken into th counsel of statesmen at home and abroad." O October 27, 1917, it asserted that its policy w the policy of President Wilson, and it declare that "he must seek for a peace by means diplomacy, irrespective of a military decision." What explanation is there for a course whic as the *New Republic* admitted, caused a larg part of the public to regard it as pro-German

What underlying convictions or motives i spired a policy which advocated a prematur peace, which represented Germany as invincibl and which, since "peace with victory" was d sively achieved, has concentrated upon attack ing the motives of the Allies and picturing th Allied statesmen and Mr. Wilson as being irr concilably at loggerheads? In "advertising the differences, the *New Republic* again protest that it was doing "a patriotic service." O course, as it admits: "The *New Republic* wa bitterly criticised for insisting on these differ ences during the course of the fighting and o the need of keeping the discussion of them alive."

A contributor to the *New Republic,* and a per sonal friend of its editor, Mr. Herbert Croly wrote to THE NATIONAL CIVIC FEDERATION RE VIEW complaining of the analysis made in thi series of articles of the *New Republic's* editoria course. He inferred that this analysis of pub lished utterances was "stretching decent con troversy to the breaking point."

A MIRACLE!—A BOOK IS RAISED FROM THE DEAD

The *New Republic,* throughout its vagariou course, has professed as its inspiring, directing and dominating principle a disinterested an impartial desire for "a peace of justice," peace in which there will not be sown seed of future wars. On this very pretext, i

as pleaded for liberality and magnanimity o Germany. On this basis, presumably, it as assumed to oppose the alleged "un-emocratic aims" of the Allied governments. ts advocacy of Bolshevism, its attacks upon the Allies, its special pleading for Germany, its spousing of the League of Free Nations pro-ram—with freedom of the seas, elimination of conomic boycotts, internationalization of rivers, anals, straits and railroads, limitation of na-ional sovereignty, et cetera, are all explained by colossal passion to see the peace of the world nade secure. Pro-German? The *New Republic* vas willing to pursue an admittedly unpopular ourse in order to bring about a "peace of ighteousness," "an enduring settlement . . . orged by negotiation," after a program which 'seeks rather to do away with the causes of war han to arbitrate controversies among nations fter they arise." The *New Republic*, militat-ng against "a new distribution of political and economic power among a group of self-regarding ations," aligns itself with those "who do not propose to allow a costly military victory to be frustrated by an even costlier political defeat." Its slogan is peace—to some it may seem "peace at any price"—but it is peace nevertheless.

Does any possible ray-like gleam of light re-vealingly bear upon the obscurities and inchoate subtleties of the *New Republic* policies?

Of the making of books, said a very wise man enturies ago, there is no end. Editors of, and writers for, the *New Republic* have indefatigably engaged in the precarious practice of writing books. It must be admitted that they have qualified at least, if only for minor roles, in a masque of dead authors. Among that multitude of books which are dead and buried, which have been interred under sod unmarked even by any grave-stone, by patient diligence and optimistic inquiry one book has been dug up and resur-rected. And, while it utterly lacks any arrest-ing brilliance, any vitality, any quality justify-ing resuscitation, it is a volume that is not with-out a certain, if temporarily timely, significance. There is every obvious explanation for its hav-ing "fallen flat," its utter unsung and unre-gretted demise. There is legitimate apology, however, for evoking it from the oblivion of the past. This volume is entitled, curiously, "The Promise of American Life," although it had no life in itself. It was published by the Macmillan Company in 1909. The author is Mr. Herbert Croly. Mr. Herbert Croly is the editor of the *New Republic.*

WREATHS FOR THE PRUSSIAN MONARCHY

In this volume the present editor of the *New Republic* sought at the time of its publication in 1909 to convey to American readers:

First—That England "industrially is being left behind by Germany"; that "the existing political, social and economic organization of Great Britain . . . is lacking in purpose, . . . lacking in brains, . . . lacking in faith"; . . . that "the British people . . . sold themselves to the privileged classes"; that "England's future as a nation is compromised by her fear of democracy"; that "popular bond-age is the price of national consistency"; and that "the result will be inevitably a diminution of the ability of the United Kingdom to hold its own in competition with its economic and polit-ical rivals."

Second—That "in France the effective vital-ity of the democracy has been very much low-ered by certain flaws in the integrity of French national life;" that "France is strong where England is weak, is weak where England is strong"; that "individual freedom has been sacrificed to economic and social equality, and this economic and social equality has not made for national cohesion." ("A nation or an in-dividual who wishes to accomplish great things must be ready, in Nietsche's phrase, 'to live an-gerously'—to take those risks without which no really great achievement is possible," declared Mr. Herbert Croly, "and if Frenchmen persist in erecting the virtue of thrift and the demand for safety into the predominant national char-acteristic, they are merely beginning a process of national corruption and dissolution.")

Third—**That "the Prussian monarchy . . . has created a national representative body; but it has not followed the English example and allowed such a body to tie its hands; and it has remained, consequently, the most completely responsible and representative monarchy in Europe."**

Having indicated the undemocratic and de-moralizing influences at work within England and France, Mr. Herbert Croly plunged into an impassionedly frank attempt to justify the course of the military Empire which had readily adopted Nietsche's plan to "live angerously, to take these risks without which no really great achievement is possible." In this volume, pub-lished in 1909, the present editor of the *New Republic* asserted that Germany was justified in making war upon France in 1870, and that that German aggression, despite the abuse of victory, was legitimate. Moreover, the present editor of the pacifist *New Republic*—which urged a peace of compromise by negotiation with Ger-many, advocated disarmament, which has dis-couraged any unifying nationalism and has preached a demoralizing internationalism—in 1909 declared pontifically:

"The democrats who disparaged efficient na-tional organization are at bottom merely seek-ing to exorcise the power of physical force in human affairs by the use of pious incantations and heavenly words. That they will never do. The Christian warrior must accomplish the evangelist; and Christians are not by any means angels."

WEATHER VANES "OF OPINION" AND ILL WINDS

Was it that "pious incantations and heavenly words"—such as the *New Republic* has edified us with ever since America entered the war—became increasingly efficacious as it became more certain that Germany would lose the war?

Was it that "peace by diplomacy," "an en-during settlement forged by negotiation," be-came only more desirably practical as the pros-pects of an Allied victory over Germany became more certain?

The *New Republic* has employed considerable printers' ink, and expensive newspaper adver-tising space, in endeavoring to exploit the League of Free Nations' program, the alleged purpose of which is to make future wars impossi-ble. With the promotion of the League of Free Nations the *New Republic* has propagandized for "consideration" to Germany. "Nothing can be done to Germany as the result of still more complete victory which will absolutely pre-vent her from coming back, and upon the treat-ment which she receives hereafter depends whether she will come back as a disturber of the peace or as one of its guarantors." "The Ger-man nation has stripped itself of all its pride and in effect prostrated itself before its con-querors." . . . Now that Germany is beaten, now that she may be made to pay for her crimes, in agitating against the alleged "undemocratic aims of the Allies," the *New Republic* ex-presses a feverish anxiety lest the Allies plant seeds of future wars.

But in 1909, while Germany was preparing for her intended onslaught for world dominion, Mr. Herbert Croly, the pacifist editor of the *New Republic,* said with calm assurance:

"War may be and has been a useful and justifiable engine of national policy."

Why, with Germany beaten, with the menace of German military aggression removed, has Mr. Herbert Croly and his youthful associates on the staff of the *New Republic* so radically changed their point of view?

The editor of this magazine which, like a dog vexed by the moon, has yelped at the victorious Allies and has whined against "justice . . . at the expense of Germany," in 1909, declared as his conviction:

"It (war) was, I believe, justifiable in the case of the two wars which preceded the forma-tion of the modern German empire. These wars may, indeed, be considered as decisive instances. Prussia did not drift into them, as we drifted into the Civil War. They were deliberately pro-voked by Bismarck at a favorable moment be-cause they were necessary to the unification of the German people under Prussian leadership; and I do not hesitate to say that he can be jus-tified in the assumption of this enormous respon-sibility. The German national organization means increased security, happiness, and oppor-tunity of development for the whole German people; and inasmuch as the selfish interests of Austria and France blocked the path, BIS-MARCK HAD HIS SUFFICIENT WAR-RANT FOR A DELIBERATELY PLANNED ATTACK. No doubt such an attack and its results injured France and the French peo-ple just as it has benefitted Germany; but France had to suffer that injury as a penalty for the part she had as a matter of policy played in German affairs. . . . It was inevitable, as Bismarck foresaw in 1848, that French oppos-ition must be forcibly removed, and some of the fruits of French aggression be reclaimed. THAT THE RESTITUTION DEMANDED WENT FARTHER THAN WAS NECES-SARY I FULLY BELIEVE, BUT THE PAR-TIAL ABUSE OF VICTORY DOES NOT DIMINISH THE LEGITIMACY OF THE GERMAN AGGRESSION."

NEW REPUBLIC EDITOR AND SCHRECKLICHKEIT

If Mr. Herbert Croly, in 1908 and 1909, con-sidered German aggression which "went farther than was necessary" legitimate, why, in 1918 and 1919, is he so vehement in his denunciation of the so-called "selfish aspirations" of the Allied "politicians clamoring for the satisfac-tion of nationalistic and partisan and class as-pirations?" Why should Premier Clemenceau's "peace settlement that will inflict exemplary punishment" upon the nation which plotted and began this war, be illegitimate?

Mr. Herbert Croly, in December, 1918, aligned himself in opposition to the party which he said "would impose a punitive peace, to be perpetuated by a formal or informal combina-tion of the chief Allied Powers, with their fron-tiers strengthened by strategic annexations and the Central Powers kept under control by dis-memberment, by naval and military restrictions and by economic burdens and discriminations."

In 1909, Mr. Croly, after a glowing tribute to Bismarck for forcing two wars, declared:

"A war waged for an excellent purpose con-tributes more to human amelioration than a merely artificial peace."

Was this not the identical teaching of the Prussian Junkers and militarists who for years taught the virtues and ennobling effect of war?

But, even in other respects, Mr. Herbert Croly and the Germans were alike in their argu-ments, harmoniously agreed in their point of view. How, and when, was Mr. Croly converted? It is, indeed, surprising to find in Mr. Croly's volume certain identical arguments which were employed by Dr. Dernburg and his associate propagandists in 1914. It is, in fact, startling to find that the present editor of the *New Re-public* antedated Dr. Dernburg by more than five years.

Having established to his satisfaction that the Prussian autocracy was "the most completely responsible and representative monarchy in Eu-rope," Mr. Croly went on to say:

"The modern German nation has been at bot-

PRACTICAL vs. VISIONARY LABOR PROGRAM

In this number of the *Review* will be found the Reconstruction program advocated by the American Federation of Labor. This program was prepared by five of the most representative men in the labor movement—John P. Frey, Editor *International Molders' Journal;* B. M. Jewell, President Railroad Department, American Federation of Labor; John Moore, President of District 6 (Ohio) United Mine Workers of America; G. W. Perkins, International President, Cigar Workers' International Union; and Matthew Woll, President International Photo Engravers' Union. It was unanimously endorsed by the Executive Council of the American Federation of Labor, the official voice of three million organized wage-earners.

In view of the efforts exerted by the intellectual Bolshevists of the United States to exploit the program of the Labor Party of Great Britain, we bespeak for the American program a careful reading. While it is sufficiently radical to please the real progressive minds of our country, its radicalism relates to concrete things and not to abstractions. There is nothing in it about the socialization of all means of production, distribution and of land. It does not declare for "government ownership and operation" of railroads, but says that the railroads should be owned, operated or regulated by the government. It does not declare for that much overworked, illusive proposal for the "industrial democratization of industry." In fact, it talks about those things that the labor men believe will help to make conditions better *now* for the wage earner and his family in the United States, leaving for the millennium most of those things descanted upon by the "high priest" of Fabianism, Mr. Sidney Webb, in his proposed British scheme. One finds in the American program none of the following phrases which are so frequent in the British plan:

"The individualist system of capitalist production, based on the private ownership and competitive administration of land and capital . . . will receive its deathblow. And the Labor Party refuses absolutely to believe that the British people will permanently tolerate any reconstruction . . . involved in the abandonment of British industry to . . . separate private employers. . . . What the Labor Party looks to is a genuinely scientific reorganization of the nation's industry . . . on the basis of the common ownership of the means of production; the equitable sharing of the proceeds among all who participate in any capacity and only among these, and the adoption, in particular services and occupations, of those systems and methods of administration and control that may be found, in practice, best to promote the public interest."

At the recent election in Great Britain, the people passed upon this "Heaven-born" program drafted by the three Socialists, Webb, McDonald and Henderson, and also upon McDonald and Henderson, and they did not leave enough of them to supply material for a decent burial. One reason why the British program never had any standing with the people in England is that the wage earners never had anything to do with drafting it. It was purely the product of the "parlor" Socialist mind. Mr. G. D. H. Cole, the English labor writer, in a recent article in the *Dial,* throws light upon this point as follows, and at the same time correctly characterizes the program itself:

"Labor and the New Social Order is not, in any real sense, the policy of British Labor. It is a program which has received, indeed, the official endorsement of the Labor Party Conference; but it is essentially something accepted by Labor and not something devised and believed in by Labor. It is in effect a series of resolutions drafted and proposed by Mr. Webb, and accepted in default of an alternative program. But such an acceptance does not go deep; and it is safe to say that, even to the majority of Labor candidates, Mr. Webb's Memorandum means and counts for very little.

"It is not a statement of a new program to fit the new conditions, material and spiritual; it is a clear and well-expressed re-phrasing of an old policy—the policy of the Fabian Society and of Mr. Sidney Webb. Eminently practical in its proposals, it is nevertheless vitiated by the fact that it turns for help always to the State, and ignores or under-estimates the vital forces of economic organization which exist and act, in the main, independently of the State."

The American Federation of Labor in its program gives strong reasons why it opposes an American Labor Party. Such a party has always failed in this country—and now it can be added that it has also failed in England. The objection of the trade unionists is based upon purely practical grounds. By helping their friends and opposing their enemies in the two parties, the labor movement of America has made great progress—whereas, as an independent party, it would have had only a few friends in Congress, if any, because its hand would have been against all the other party members; and if it had ever secured sufficient membership to become significant, the other two parties would have united against it, as they do now, when necessary, against the Socialists.

Following closely upon the overwhelming defeat of Henderson and his revolutionary program, the American Federation of Labor Commission, with Mr. Gompers at its head, arrives in London and begins arranging for an international meeting of trade unionists, which will convene at Paris and will work in close affiliation with the Peace Council. The Henderson Socialists and all the other socialists and "brain workers" of Europe will hold so-called "labor meeting" at Lausanne; but the trade union movement of England, Australia and Canada, as well as of France and Italy, has joined with the American labor movement—and as between the two schools of thought, the practical and evolutionary and the visionary and revolutionary, it is not hard to imagine which group will be listened to at the Peace Table.

AMERICAN LABOR MISSION

Five members of the Executive Council, American Federation of Labor, took passage Wednesday, January 8, on the Cunard steamship Campania, with the purpose, first, of attending a conference with representatives of British trade unionism in London, and later of acting in concert with trade union delegations of various countries in Paris during the sessions of the Peace Congress, a primary object being representation to the Congress of the economic principles and purposes of trade unionism in contradistinction to the political aims of the various partisans of Socialism in its many guises and under its confusion of party titles. The composition of this American mission from labor to labor is undeniable evidence that it really represents the labor which works, which is organized, and which is alive to the present practical interests of all labor. On these points the names and official positions of the five delegates are convincing: Samuel Gompers, President of the American Federation of Labor, also Vice-President of the International Cigar-Makers' Union; James Duncan, President Granite Cutters' International Association; John R. Alpine, President United Association, Plumbers and Steam Fitters; Frank Duffy, Secretary, United Brotherhood, Carpenters and Joiners, and William Green, Secretary-Treasurer, United Mine Workers of America. The five international unions of which these men are officials have a membership of more than three-quarters of a million men.

This delegation is enabled, by reason of the numbers in the American Federation of Labor now quite 3,000,000, and through the developments in industrial relations in the course of the war, to present to the Peace Congress and the world not only a clean record of patriotism and humanitarianism for labor, but also in consequence of the decisions of conventions, the views and demands of American wageworkers bearing on issues of the present turning-point in the history of the nations.

While not members of the Peace Congress these five representatives of American labor will stand ready and able to exercise on the Congress the influence which must spring from their testimony as to the ideals of American labor, which are not by any means such as will be put forth by the mixed deputations of professional men and others not wage-workers who claim to be spokesmen for the labor of the countries in which the political wing of radical reformers is strong and the economic wing made up of workers at manual occupations is comparatively weak.

This American trade union delegation will have a notable advantage over the "labor" delegations of every other country in having a clearly defined program. On the negative side, the American Federation of Labor wants no Socialist government, no social cataclysm, no Bolshevik upheaval, no sudden overturning of society; no change other than can be brought about through orderly progress in accordance with processes with which the citizens of a democracy are familiar. On the positive side, the Federation has its customary methods; it takes up with the thing at hand to be done; it does not search throughout all society, in every land, and among varied peoples, to make over at once a much-mixed world. One thing at a time; first things first; to each nation its own problems; for every government its own interpretation of democracy; for all classes a voice in maintaining justice—these broad principles outline the spirit of American labor. Whether or not these American delegates shall occupy high places among the theorists, utopians and propagandists to be gathered together in Paris, they will, of a certainty, pursue the plain course which has resulted in bringing the trade union movement of their own country to unity, solidity, and responsibility, affording a foundation for future advancement indefinitely.

UNABASHED IGNORANCE

Mr. W. Bourke Cochran is reported to have said in a public address: "I do not quite know what Bolshevism is. If it be what the word literally signifies—a movement of the majority—I am not afraid of it. I have never known the masses to be swayed by anything but a love of justice."

Mr. Cochran is by no means the first speechifier to approve Bolshevism without knowing anything about it. Among certain vociferous sentimentalists and sensationalists it has suddenly become the fashion to applaud Bolshevism. None of these professional advocates of successive "isms" know or care to know anything of the realities of Bolshevism. But that ignorance does not deter them from rushing forward to give it their doubtful recommendation.

The Bolsheviki derived their name from the fact that they happened to have a majority in a certain socialist convention held in Russia some years ago. They were, however, actually a mi-

prity of the Russian Socialists as was proved hen the Kerensky government came into power. y means of German aid and backing and by romises of bread and peace to the demoralized ussian people the Bolshevik minority ousted ıe Kerensky government by force and usurped ower. The entire Russian Socialist following, ıcluding both moderates and communistic ex-emists, was only an insignificant fraction of he whole Russian people. Just before the Bol-heviki came into power the Russian people had lected a Constituent Assembly, the first real arliamentary body ever elected in Russia. This he Bolshevik regime refused to allow to meet, ispersing it by bayonets and machine guns.

These are the grim facts, yet despite them Mr. ochran and others like him persist in spread-ng the impression that the Bolsheviki are a ıajority. It is not the first time in history that mere minority by violence and terroristic meth-ds has succeeded in imposing itself upon a ountry the overwhelming majority of which s opposed to it.

The Bolsheviki of Germany, called the Sparti-ides, used violence because of the very self-ıdmitted fact that they were a paltry minority. A well informed Socialist made this statement in he *New York Call*, of January 14, 1919: "The eal argument of the Liebnecht group is that the roletariat shall socialize industry before the lection for the National Assembly. The ground ıdvanced for this is that it will be in the in-erests of the majority of all the workers, al-hough but a minority are willing to fight for it." Just as the Liebnecht group were a mere minority in the German Socialist party, so, ac-ording to this Socialist writer, is the whole German Socialist party a minority of the entire suffrage of Germany—Socialists, he says, those comprising "only from 30 to 35 per cent of the total electorate." In other words, a minority of a minority deliberately set out to force itself and its theories by violence upon the great majority. This is exactly what the Bolsheviki succeeded in doing in disorganized Russia when they overthrew the timorous Kerensky.

Mr. Cochran can well afford to say that he is not afraid of Bolshevism. He is safely in America where law and order obtain and where the machinery of society is adequately functioning. In Russia—or at least those parts controlled by the Bolsheviki—the utmost chaos prevails. Industry has completely broken down, massacres are continuous, all except Bolshevik supporters have been disqualified from voting or being voted for, Soviets are run by terrorists and criminals, freedom of speech and of the press has been absolutely abolished, all property confiscated, and a mercenary army of Red Guards is employed to shoot down ruthlessly all who protest. The other day the cables reported that the Red Guard fired from rifles and machine guns into a procession of 10,000 starving people in Petrograd. So appalling is the disintegration and anarchy in Russia that the Bolsheviki cannot even provide bread—they can only provide bullets which they use mercilessly on any and all occasions.

If this is "the love of justice" which Mr. Cochran so lightly eulogizes, the masses of real Russians have shown what they think of it by trying to get as far away from it as they could. The once populous city of Petrograd, containing 2,500,000 population several years ago, has been reduced to 500,000 people, and other cities under Bolsheviki rule have fared similarly. Great masses of workmen have fled to the country districts with the one object of putting as great a distance as possible between themselves and the Bolshevik seats of power.

Discerning philanthropy can perform a real service to America by engaging a ship and giving free passage to Russia for all who prefer to live under the peculiar delights of Bolshevism.

NOT A NEW COMPLAINT

In a discourse on Americanization *The Public* emits this sneer: "So long as a foreigner is merely another bit of fuel to feed our industrial furnaces, securing no consideration and a very attenuated justice, we shall not make of him a fellow citizen."

This is as malicious as it is untrue. In every decade in American history somebody or other has made the charge that because of this or that defect in our laws or institutions America could not assimilate foreigners. Yet somehow America has been singularly successful in creating a solid body of citizenship from people who were of foreign birth. And this continued despite every advertised deterrent. Until the formation of our Republic freedom of religion was generally unknown in this country. Suffrage based upon property qualification was the law of the day. So was imprisonment for debt. Labor unions were once adjudged criminal conspiracies and so were strikes. The twelve-hour workday was common. Labor was regarded in practice and law as merely a commodity. Chattel slavery was a fixed institution. Naturalization laws were extremely onerous.

All of these and other conditions long since became obsolete. Yet even while they existed, great numbers of foreigners settling here became Americans. Similarly, the same process goes on now whatever other deficiencies may prevail. As the ancient injustices were done away with, so will the modern ones be rectified also. The Clayton Anti-Trust Law, passed by Congress in 1912, made absolutely no distinction between citizens and foreigners when it established the principle in law that labor was not a commodity, that it had definite rights as human beings.

PROPOSED IMMIGRATION RESTRICTIONS

At a meeting of the Reconstruction Committee of The National Civic Federation, held in New York on December 2, 1918, a sub-committee was appointed to consider various resolutions regarding the restriction of immigration to the United States. As a substitute for the various resolutions, the following report is made to the Executive Council of The National Civic Federation for further action:

1. The standards of living of the American workman should be maintained.

2. During the period of demobilization of our armies it seems probable that there will be an ample supply of labor in this country without further increase from immigration. Efforts should be made, not so much to increase the number of our working people as to see that those now here are employed on the kinds of work for which they are specially adapted. Through the government employment bureaus and other means special care should be taken to secure this adjustment of working men to the jobs so that there will be the added efficiency with the consequence of added earnings that comes from all men and women being so placed that their productivity is highest. In this way can standards be best maintained and improved.

3. In addition to the present restrictions on immigration in our immigration laws it is suggested that a plan be adopted through appropriate legislation by which the maximum annual immigration permissible from any people shall be a fixed per cent from that people who have already become naturalized citizens, together with the American-born children of that same people.

The percentage permitted should under present conditions be so low that there would be a decided additional restriction.

In order, however, that the needs of increased industry or the special needs of any industry requiring a particular type of laborers not now obtainable here in sufficient numbers may be supplied, provision should be made for a special commission with authority to raise or lower the percentage figure by executive action in order to meet such needs. This same commission should have the right to admit specific numbers of workmen in any special trade or profession when sufficient numbers cannot, in their judgment, be obtained here.

Such a commission should presumably be an ex-officio commission consisting probably of the Secretary of Labor, the Secretary of Commerce, and the Secretary of the Treasury, or some commission similarly constituted.

BRITISH LABOR REPUDIATES PACIFIST REVOLUTIONISTS

By A. M. SIMONS
(of the American Alliance for Labor and Democracy)

British labor is the first to speak since the great war began.

The election result carries encouragement and hope of a free world using its freedom intelligently.

Every pacifist intellectual, every swivel chair revolutionist was defeated.

Those Socialists and labor members who refused to betray the cause of democracy at the bidding of phrase-mongers, who saw in the war a real contest between antagonistic systems and not a doctrinaire discussion of imperialism were elected.

At the same time labor representation in Parliament was doubled and labor becomes officially the opposition party.

Never has labor been so carefully discriminatory in a great election. By its millions of votes British labor said that it wished a new society, that it endorsed the economic program of the Labor Party, that it desired the pressing of the program of housing and conciliation and education that is already revolutionizing British society.

But it refused to trust the carrying out of that program to the men and women who had betrayed the cause of labor and democracy in its greatest crisis.

The result is especially gratifying to American labor.

It was boasted by one of the would-be leaders of British pacifist laborism that the American labor and Socialist delegations had no effect in Great Britain. That statement has been widely spread by the Bolshevist pacifists in this country. At the election that would-be leader was retired to private life after many years in parliament. With him went nearly every person who agreed with him in opposition to the position taken by the American delegations.

At the same time nearly all those members of the Labor Party who stood with the American missions have been re-elected.

While I was in Great Britain last summer Henderson, MacDonald, Lansbury and their followers told me over and over again that the war would end in a draw, that the United States could not bring sufficient force to change the result and that British labor was standing solidly behind them in a demand that peace negotiations be begun. Like our own Socialist Party politicians they were always wrong.

The instinct of labor was right. It has rebuked those who wished their leadership upon labor.

The Independent Labor Party, with its membership of less than 50,000, has long been the tail that wagged the great trade union dog with 5,000,000 members. Today the dog has taken charge of the tail, and apparently has performed an amputation.

Many of these men and women have done valuable service for labor in the past. They are persons of ability and courage. But in the time of greatest test the world has known they failed. There are great lessons in this vote for all the world to read.

The Bourbons may learn from the fate of the reactionary opponents of Lloyd-George, who were practically wiped out, that there is to be no going back. His strength lay in that revolutionary reconstruction program to which he pledged support. The world is going forward.

But it is not going to leap into the air nor into an abyss. The group of editorial Bolsheviks who have sought consciously and avowedly to imitate the British Independent Labor Party and lead American labor into pathless forests of political phrases may now look upon the forecast of their fate.

American Labor's Reconstruction Program

DRAFTED BY THE COMMITTEE ON RECONSTRUCTION OF THE AMERICAN FEDERATION OF LABOR

THE world war has forced all free peoples to a fuller and deeper realization of the menace to civilization contained in autocratic control of the activities and destinies of mankind.

It has caused a world-wide determination to overthrow and eradicate all autocratic institutions, so that a full measure of freedom and justice can be established between man and man and nation and nation.

It has awakened more fully the consciousness that the principles of democracy should regulate the relationship of men in all their activities.

It has opened the doors of opportunity through which more sound and progressive policies may enter.

New conceptions of human liberty, justice and opportunity are to be applied.

The American Federation of Labor, the one organization representing Labor in America, conscious that its responsibilities are now greater than before, presents a program for the guidance of Labor, based upon experience and formulated with a full consciousness of the principles and policies which have successfully guided American trade unionism in the past.

DEMOCRACY IN INDUSTRY

Two codes of rules and regulations affect the workers; the law upon the statute books, and the rules within industry.

The first determines their relationship as citizens to all other citizens and to property.

The second largely determines the relationship of employer and employee, the terms of employment, the conditions of labor, and the rules and regulations affecting the workers as employes. The first is secured through the application of the methods of democracy in the enactment of legislation, and is based upon the principle that the laws which govern a free people should exist only with their consent.

The second, except where effective trade unionism exists, is established by the arbitrary or autocratic whim, desire or opinion of the employer and is based upon the principle that industry and commerce can not be successfully conducted unless the employer exercises the unquestioned right to establish such rules, regulations and provisions affecting the employes as self-interest prompts.

Both forms of law vitally affect the workers' opportunities in life and determine their standard of living. The rules, regulations and conditions within industry in many instances affect them more than legislative enactments. It is, therefore, essential that the workers should have a voice in determining the laws within industry and commerce which affect them, equivalent to the voice which they have as citizens in determining the legislative enactments which shall govern them.

It is as inconceivable that the workers as free citizens should remain under autocratically made law within industry and commerce as it is that the nation could remain a democracy while certain individuals or groups exercise autocratic powers.

It is, therefore, essential that the workers everywhere should insist upon their right to organize into trade unions, and that effective legislation should be enacted which would make it a criminal offense for any employer to interfere with or hamper the exercise of this right or to interfere with the legitimate activities of trade unions.

UNEMPLOYMENT

Political economy of the old school, conceived by doctrinaires, was based upon unsound and false doctrines, and has since been used to blindfold, deceive and defeat the workers' demands for adequate wages, better living and working conditions, and a just share of the fruits of their labor.

We hold strictly to the trade union philosophy and its developed political economy based upon demonstrated facts.

Unemployment is due to underconsumption. Underconsumption is caused by low or insufficient wages.

Just wages will prevent industrial stagnation and lessen periodical unemployment.

Give the workers just wages and their consuming capacity is correspondingly increased. A man's ability to consume is controlled by the wages received. Just wages will create a market at home which will far surpass any market that may exist elsewhere and will lessen unemployment.

The employment of idle workmen on public work will not permanently remove the cause of unemployment. It is an expedient at best.

There is no basis in fact for the claim that the so-called law of supply and demand is natural in its operations and impossible of control or regulation.

The trade union movement has maintained standard wages, hours and life in periods of industrial depression and idleness. These in themselves are a refutation of the declared immutability of the law of supply and demand.

There is in fact no such condition as an iron law of wages based upon a natural law of supply and demand. Conditions in commerce and industry, methods of production, storing of commodities, regulation of the volume of production, banking systems, the flow and direction of enterprise influenced by combinations and trusts have effectively destroyed the theory of a natural law of supply and demand as had been formulated by doctrinaire economists

WAGES

There are no means whereby the workers can obtain and maintain fair wages except through trade union effort. Therefore, economic organization is paramount to all their other activities.

Organization of the workers leads to better wages, fewer working hours, improved working conditions; it develops independence, manhood and character; it fosters tolerance and real justice and makes for a constantly growing better economic, social and political life for the burden-bearing masses.

In countries where wages are best, the greatest progress has been made in economic, social and political advancement, in science, art, literature, education, and in the wealth of the people generally. All low wage-paying countries contrasted with America is proof for this statement.

The American standard of life must be maintained and improved. The value of wages is determined by the purchasing power of the dollar. There is no such thing as good wages when the cost of living in decency and comfort equals or exceeds the wages received. There must be no reduction in wages; in many instances wages must be increased.

The workers of the nation demand a living wage for all wage-earners, skilled or unskilled—a wage which will enable the worker and his family to live in health and comfort, provide a competence for illness and old age, and afford to all the opportunity of cultivating the best that is within mankind.

HOURS OF LABOR

Reasonable hours of labor promote the economic and social well-being of the toiling masses. Their attainment should be one of Labor's pri cipal and essential activities. The shorter wor day and a shorter work week make for a co stantly growing, higher and better standard productivity, health, longevity, morals and cit zenship.

The right of Labor to fix its hours of wo must not be abrogated, abridged or interfere with.

The day's working time should be limited not more than eight hours, with overtime pr hibited, except under the most extraordinar emergencies. The week's working time shoul be limited to not more than five and one-ha days.

WOMEN AS WAGE-EARNERS

Women should receive the same pay as me for equal work performed. Women worke must not be permitted to perform tasks dispr portionate to their physical strength or whic tend to impair their potential motherhood an prevent the continuation of a nation of strong healthy, sturdy and intelligent men and wome

CHILD LABOR

The children constitute the nation's most valu able asset. The full responsibility of the goverr ment should be recognized by such measures a will protect the health of every child at birt and during its immature years.

It must be one of the chief functions of th nation through effective legislation to put an im mediate end to the exploitation of children unde sixteen years of age.

State legislatures should protect children o immature years by prohibiting their employ ment, for gain, under sixteen years of age an restricting the employment of children of les than eighteen years of age to not more tha twenty hours within any one week and with no less than twenty hours at school during the sam period.

Exploitation of child life for private gai must not be permitted.

STATUS OF PUBLIC EMPLOYES

The fixing of wages, hours and conditions o labor for public employes by legislation hamper the necessary exercise of organization and col lective bargaining.

Public employes must not be denied the right of organization, free activities and collectiv bargaining and must not be limited in the exer cise of their rights as citizens.

CO-OPERATION

To attain the greatest possible development o civilization, it is essential, among other things, that the people should never delegate to others those activities and responsibilities which they are capable of assuming for themselves. Democracy can function best with the least interference by the state compatible with due protection to the rights of all citizens.

There are many problems arising from production, transportation and distribution, which would be readily solved by applying the methods of co-operation. Unnecessary middlemen who exact a tax from the community without rendering any useful service can be eliminated.

The farmers through co-operative dairies, canneries, packing houses, grain elevators, distributing houses, and other cooperative enterprises, can secure higher prices for their products and yet place these in the consumer's hands at lower prices than would otherwise be paid. There is an almost limitless field for the consumers in which to establish cooperative buying and selling, and in this most necessary development, the

rade unionists should take an immediate and ctive part.

Trade unions secure fair wages. Co-operation rotects the wage-earner from the profiteer.

Participation in these cooperative agencies ust of necessity prepare the mass of the people o participate more effectively in the solution of he industrial, commercial, social and political roblems which continually arise.

THE PEOPLE'S FINAL VOICE IN LEGISLATION

It is manifestly evident that a people are not elf-governing unless they enjoy the unquesioned power to determine the form and subtance of the laws which shall govern them. Self-government can not adequately function if here exists within the nation a superior power r authority which can finally determine what egislation enacted by the people, or their duly elected representatives, shall be placed upon the statute books and what shall be declared null and void.

An insuperable obstacle to self-government in the United States exists in the power which has been gradually assumed by the Supreme Courts of the Federal and State governments, to declare legislation null and void upon the ground that, in the court's opinion, it is unconstitutional.

It is essential that the people, acting directly or through Congress or state legislatures, should have final authority in determining which laws shall be enacted. Adequate steps must be taken, therefore, which will provide that in the event of a supreme court declaring an act of Congress or of a state legislature unconstitutional and the people acting directly or through Congress or a state legislature should re-enact the measure, it shall then become the law without being subject to annulment by any court.

POLITICAL POLICY

In the political efforts, arising from the workers' necessity to secure legislation covering those conditions and provisions of life not subject to collective bargaining with employers, organized labor has followed two methods; one by organizing political parties, the other by the determination to place in public office representatives from their ranks; to elect those who favor and champion the legislation desired and to defeat those whose policy is opposed to Labor's legislative demands, regardless of partisan politics.

The disastrous experience of organized labor in America with political parties of its own, amply justified the American Federation of Labor's non-partisan political policy. The results secured by labor parties in other countries never have been such as to warrant any deviation from this position. The rules and regulations of trade unionism should not be extended so that the action of a majority could force a minority to vote for or give financial support to any political candidate or party to whom they are opposed. Trade union activities can not receive the undivided attention of members and officers if the exigencies, burdens and responsibilities of a political party are bound up with their economic and industrial organizations.

The experiences and results attained through the non-partisan political policy of the American Federation of Labor cover a generation. They indicate that through its application the workers of America have secured a much larger measure of fundamental legislation, establishing their rights, safeguarding their interests, protecting their welfare and opening the doors of opportunity than have been secured by the workers of any other country.

The vital legislation now required can be more readily secured through education of the public mind and the appeal to its conscience, supplemented by energetic independent political activity on the part of trade unionists, than by any other method. This is and will continue to be the political policy of the American Federation of Labor if the lessons which Labor has learned in the bitter but practical school of experience are to be respected and applied.

It is, therefore, most essential that the officers of the American Federation of Labor, the officers of the affiliated organizations, state federations and central labor bodies and the entire membership of the trade union movement should give the most vigorous application possible to the political policy of the A. F. of L. so that Labor's friends and opponents may be more widely known, and the legislation most required readily secured. This phase of our movement is still in its infancy. It should be continued and developed to its logical conclusion.

GOVERNMENT OWNERSHIP

Public and semi-public utilities should be owned, operated or regulated by the government in the interest of the public.

Whatever final disposition shall be made of the railways of the country in ownership, management or regulation, we insist upon the right of the workers to organize for their common and mutual protection and the full exercise of the normal activities which come with organization. Any attempt at the denial by governmental authority of the rights of the workers to organize, to petition, to representation and to collective bargaining, or the denial of the exercise of their political rights is repugnant to the fundamental principles of free citizenship in a republic and is destructive of their best interest and welfare.

The government should own and operate all wharves and docks connected with public harbors which are used for commerce or transportation.

The American Merchant Marine should be encouraged and developed under governmental control and so manned as to insure successful operation and protect in full the beneficent laws now on the statute books for the rights and welfare of seamen. The seamen must be accorded the same rights and privileges rightfully exercised by the workers in all other employments, public and private.

WATER WAYS AND WATER POWER

The lack of a practical development of our waterways and the inadequate extension of canals have seriously handicapped water traffic and created unnecessarily high cost for transportation. In many instances it has established artificial restrictions which have worked to the serious injury of communities, owing to the schemes of those controlling a monopoly of land transportation. Our navigable rivers and our great inland lakes should be connected with the sea by an adequate system of canals, so that inland production can be more effectively fostered, the costs of transportation reduced, the private monopoly of transportation overcome and imports and exports shipped at lower costs.

The nation is possessed of enormous water power. Legislation should be enacted providing that the governments, federal and state, should own, develop and operate all water power over which they have jurisdiction. The power thus generated should be supplied to all citizens at rates based upon cost. The water power of the nation, created by nature, must not be permitted to pass into private hands for private exploitation.

REGULATION OF LAND OWNERSHIP

Agriculture and stock-raising are essential to national safety and well-being. The history of all countries, at all times, indicates that the conditions which create a tenant class of agriculturists work increasing injury to the tillers of the soil. While increasing the price of the product to the consumer these conditions at the same time develop a class of large land owners who contribute little, if anything, to the welfare of the community but who exact a continually increasing share of the wealth produced by the tenant. The private ownership of large tracts of usable land is not conducive to the best interests of a democratic people.

Legislation should be enacted placing a graduated tax upon all usable lands above the acreage which is cultivated by the owner. This should include provisions through which the tenant farmer, or others, may purchase land upon the lowest rate of interest and most favorable terms consistent with safety, and so safeguarded by governmental supervision and regulation as to give the fullest and freest opportunity for the development of land-owning agriculturists.

Special assistance should be given in the direction of allotments of lands and the establishment of homes on the public domain.

Establishment of government experimental farms, measures for stock raising instruction, the irrigation of arid lands and reclamation of swamp and cut-over lands should be undertaken upon a larger scale under direction of the Federal government.

Municipalities and states should be empowered to acquire lands for cultivation or the erection of residential buildings which they may use or dispose of under equitable terms.

FEDERAL AND STATE REGULATION OF CORPORATIONS

The creation by legislative enactment of corporations, without sufficient definition of the powers and scope of activities conferred upon them and without provisions for their adequate supervision, regulation and control by the creative body, has led to the development of far-reaching abuses which have seriously affected commerce, industry and the masses of the people through their influence upon social, industrial, commercial and political development. Legislation is required which will so limit, define and regulate the powers, privileges and activities of corporations that their methods can not become detrimental to the welfare of the people. It is, therefore, essential that legislation should provide for the federal licensing of all corporations organized for profit. Furthermore, federal supervision and control should include the increasing of capital stock and the incurring of bonded indebtedness with the provision that the books of all corporations shall be open at all times to federal examiners.

FREEDOM OF EXPRESSION AND ASSOCIATION

The very life and perpetuity of free and democratic institutions are dependent upon freedom of speech, of the press and of assemblage and association. We insist that all restrictions of freedom of speech, press, public assembly, association and travel be completely removed, individuals and groups being responsible for their utterances. These fundamental rights must be set out with clearness and must not be denied or abridged in any manner.

WORKMEN'S COMPENSATION

Workmen's Compensation laws should be amended to provide more adequately for those incapacitated by industrial accidents or occupational diseases. To assure that the insurance fund derived from commerce and industry will be paid in full to injured workers state insurance must supplant, and prohibit the existence of, employers' liability insurance operated for profit.

IMMIGRATION

Americanization of those coming from foreign lands, as well as our standards of education and living, are vitally affected by the volume and character of the immigration.

It is essential that additional legislation regulating immigration should be enacted based upon two fundamental propositions, namely,

that the flow of immigration must not at any time exceed the nation's ability to assimilate and Americanize the foreigners coming to our shores, and that at no time shall immigration be permitted when there exists an abnormal degree of unemployment.

By reason of existing conditions we urge that immigration into the United States should be prohibited for a period of at least two years after peace has been declared.

TAXATION

One of the nation's most valuable assets is the initiative, energetic, constructive and inventive genius of its people. These qualities when properly applied should be fostered and protected instead of being hampered by legislation, for they constitute an invaluable element of progress and material development. Taxation should, therefore, rest as lightly as possible upon constructive enterprise. Taxation should provide for full contribution from wealth by a tax upon profits which will not discourage industrial or commercial enterprise. There should be provided a progressive increase in taxes upon incomes, inheritance, and upon land values of such a nature as to render it unprofitable to hold land without putting it to use, to afford a transition to greater economic quality and to supply means of liquidating the national indebtedness growing out of the war.

EDUCATION

It is impossible to estimate the influence of education upon the world's civilization. Education must not stifle thought and inquiry, but must awaken the mind concerning the application of natural laws and to a conception of independence and progress.

Education must not be for a few but for all our people. While there is an advanced form of public education in many states, there still remains a lack of adequate educational facilities in several states and communities. The welfare of the republic demands that public education should be elevated to the highest degree possible. The government should exercise advisory supervision over public education and where necessary maintain adequate public education through subsidies without giving to the government power to hamper or interfere with the free development of public education by the several states. It is essential that our system of public education should offer the wave-earners' children the opportunity for the fullest possible development. To attain this end state colleges and universities should be developed.

It is also important that the industrial education which is being fostered and developed should have for its purpose not so much training for efficiency in industry as training for life in an industrial society. A full understanding must be had of those principles and activities that are the foundation of all productive efforts. Children should not only become familiar with tools and materials, but they should also receive a thorough knowledge of the principles of human control, of force and matter underlying our industrial relations and sciences. The danger that certain commercial and industrial interests may dominate the character of education must be averted by insisting that the workers shall have equal representation on all boards of education or committees having control over vocational studies and training.

To elevate and advance the interests of the teaching profession and to promote popular and democratic education, the right of the teachers to organize and to affiliate with the movement of the organized workers must be recognized.

PRIVATE EMPLOYMENT AGENCIES

Essentials in industry and commerce are employee and employer, labor and capital. No one questions the right of organized capital to supply capital to employers. No one should question the right of organized labor to furnish workers. Private employment agencies abridge this right of organized labor.

Where federal, state and municipal employment agencies are maintained they should operate under the supervision of joint committees of trade unionists and employers, equally represented.

Private employment agencies operated for profit should not be permitted to exist.

HOUSING

Child life, the workers' physical condition and public health demand that the wage-earner and his family shall be given a full opportunity to live under wholesome conditions. It is not only necessary that there shall be sanitary and appropriate houses to live in but that a sufficient number of dwellings shall be available to free the people from high rents and overcrowding.

The ownership of homes, free from the grasp of exploiting and speculative interests, will make for more efficient workers, more contented families, and better citizens. The government should, therefore, inaugurate a plan to build model homes and establish a system of credits whereby the workers may borrow money at a low rate of interest and under favorable terms to build their own homes. Credit should also be extended to voluntary non-profit making housing and joint tenancy associations. States and municipalities should be freed from the restrictions preventing their undertaking proper housing projects and should be permitted to engage in other necessary enterprises relating thereto. The erection and maintenance of dwellings where migratory workers may find lodging and nourishing food during periods of unemployment should be encouraged and supported by municipalities.

If need should arise to expend public funds to relieve unemployment the building of wholesome houses would best serve the public interests.

MILITARISM

The trade union movement is unalterably and emphatically opposed to "militarism" or a large standing army. "Militarism" is a system fostered and developed by tyrants in the hope of supporting their arbitrary authority. It is utilized by those whose selfish ambitions for power and worldly glory lead them to invade and subdue other peoples and nations, to destroy their liberties, to acquire their wealth and to fasten the yoke of bondage upon them. The trade union movement is convinced by the experience of mankind that "militarism" brutalizes those influenced by the spirit of the institution. The finer elements of humanity are strangled. Under "militarism" a deceptive patriotism is established in the peoples' minds, where men believe that there is nobility of spirit and heroism in dying for the glory of a dynasty or the maintenance of institutions which are inimical to human progress and democracy. "Militarism" is the application of arbitrary and irresponsible forces as opposed to reason and justice. Resistance to injustice and tyranny is that virile quality which has given purpose and effect to ennobling causes in all countries and at all times. The free institutions of our country and the liberties won by its founders would have been impossible had they been unwilling to take arms and if necessary die in the defense of their liberties. Only a people willing to maintain their rights and defend their liberties are guaranteed free institutions.

Conditions foreign to the institutions of our country have prevented the entire abolition of organized bodies of men trained to carry arms. A voluntary citizen soldiery supplies what would otherwise take its place, a large standing army. To the latter we are unalterably opposed as tending to establish the evils of "militarism." Large standing armies threaten the existence of civil liberty. The history of every nation demonstrates that as standing armies are enlarged the rule of democracy is lessened or extinguished. Our experience has been that even this citizen soldiery, the militia of our states has given cause at times for grave apprehension. Their ranks have not always been free from undesirable elements, particularly the tools of corporations involved in industrial disputes. During industrial disputes the militia has at times been called upon to support the authority of those who through selfish interests desired to enforce martial law while the courts were open and the civil authorities competent to maintain supremacy of civil law. We insist that the militia of our several states should be wholly organized and controlled by democratic principles so that this voluntary force of soldiery may never be diverted from its true purpose and used to jeopardize or infringe upon the rights and liberties of our people. The right to bear arms is a fundamental principle of our government, a principle accepted at all times by free people as essential to the maintenance of their liberties and institutions. We demand that this right shall remain inviolate.

SOLDIERS AND SAILORS

Soldiers and sailors, those who entered the service in the nation's defense, are entitled to the generous reward of a grateful republic.

The necessities of war called upon millions of workmen to leave their positions in industry and commerce to defend, upon the battle fields, the nation's safety and its free institutions. These defenders are now returning. It is advisable that they should be discharged from military service at the earliest possible moment; that as civilians they may return to their respective homes and families and take up their peace-time pursuits. The nation stands morally obligated to assist them in securing employment.

Industry has undergone great changes due to the dislocation caused by war production and transportation. Further readjustments in industry and commerce must follow the rehabilitation of business under peaceful conditions. Many positions which our citizen soldiers and sailors filled previous to enlistment do not exist today.

It would be manifestly unjust for the government after having removed the worker from his position in industry and placed him in military service to discharge him from the army or navy without having made adequate provision to assist him in procuring employment and providing sustenance until employment has been secured. The returned citizen soldier or sailor should not be forced by the bitter urgent necessity of securing food and clothing to place himself at a disadvantage when seeking employment.

Upon their discharge, transportation and meals should be supplied to their places of residence. The monthly salary previously paid should be continued for a period not to exceed twelve months if employment is not secured within that period.

The federal and state employment bureaus should be directed to cooperate with trade union agencies in securing employment for discharged soldiers and sailors. In assisting the discharged soldier and sailor to secure employment, government agencies should not expect them to accept employment for less than the prevailing rate of wages being paid in the industry. Neither should any government agency request or require such discharged men to accept employment where a trade dispute exists or is threatened. Nor should the refusal on the part of any of these discharged soldiers or sailors to accept employment where trade disputes exist or are threatened or when less than the prevailing wage rate is offered, deprive them of a continuance of their monthly pay.

(*Continued on page* 18)

Shadow Huns and Others

(*Continued from page 9*)

om the work of admirable leadership on the art of officially responsible leaders; and among hose leaders the man who planned most effectely and accomplished the greatest results was tto von Bismarck." Bismarck was "a patriotic Prussian, who was exclusively, intelligently and nscrupulously devoted to the welfare (as he onceived it) of his country and his king." (By he same test, could Mr. Croly other than approve of the "intelligent and unscrupulous atriotism" of von Hindenburg, Ludendorf, von Bernstorff, von Papen, Boy-Ed and the captain f the submarine which sank the Lusitania?)

"Little by little the fertile seed of Bismarck's Prussian patriotism grew into a German semi-lemocratic nationalism, and it achieved this ransformation without any essential sacrifice f its own integrity," pursued Mr. Croly.

GIVING THE PROP TO PROPAGANDA

In an encomium, which rings with surprisngly virile enthusiasm on the part of a *New Republic* editor, Mr. Croly told how Germany began creating a navy, how railroads were bought by the government and managed, not for the benefit of stockholders, but for the benefit of the people; how the government spread improved methods of farming, and promoted industrial efficiency. "In every direction German activity was organized and was placed under skilled professional leadership, while at the same time each of these special lines of work was subordinated to its particular place in a comprehensive scheme of national economy. This 'paternalism' has, moreover, accomplished its purpose. German industrial expansion surpasses in some respects that of the United States, and has left every European nation far behind."

There may seem in this a familiar ring. It is exactly what the whole crew of propagandists, what Dernburg, Viereck, and others, have said —only Mr. Croly had the pleasure of saying it before them. Mr. Croly, born aloft on his Teutonic Pegasus, paened:

"THE PRUSSIAN MONARCHY . . . HAS REMAINED . . . THE MOST COMPLETELY RESPONSIBLE AND REPRESENTATIVE MONARCHY IN EUROPE. . . . . Germany alone among the modern European nations is, in spite of the temporary embarrassment of Imperial finance, carrying the cost of modern military preparation easily, and looks forward confidently to greater successes in the future. She is at the present time a very striking example of what can be accomplished for the popular welfare by a fearless acceptance on the part of the official leaders of economic as well as political responsibility, and by the efficient and intelligent use of all available means to that end."

Dr. Bernhard Dernburg, upon his advent in the United States in 1914, five years later, asserted:

"The Reichstag is a body elected on the most liberal ballot law that exists anywhere, more liberal even than the ballot law of the United States for the election of the President. THE GERMAN PEOPLE ARE REPRESENTED AS DIRECTLY AND DEMOCRATICALLY IN THE GOVERNMENT AS THE AMERICAN PEOPLE ARE IN THEIRS."

Dr. Dernburg merely re-echoed his Kaiser when he declared in 1914:

"Germany holds the record for keeping peace within and outside of Europe for the last forty-four years."

Mr. Herbert Croly probably considered himself an original thinker when he asserted in 1909:

"Her (Germany's) official foreign policy since 1872 has undoubtedly been determined by the desire to maintain the peace of Europe under effective guarantees."

When the time came for Germany to destroy the peace which she claimed to have preserved, she sought, like a coward and criminal, to shift from herself all blame. She sought to deceive the world by hypocrisy and lying. To this end she expended millions of dollars.

Dr. Bernhard Dernburg, in the course of his official defense, merely re-echoed his Kaiser when he declared that Germany "never coveted its neighbors' territory," that "the German military, as well as its naval force, have been created on purely defensive lines"; that "the sword was forced into Germany's hands," and that the war had been precipitated by the criminal and hostile alliance of Russia, England and France. England, explained Dr. Dernburg, was jealous of Germany's economic expansion; France was possessed by a passion for revenge.

"THE WICKED ALLIES" BEFORE THE WAR

Mr. Herbert Croly, having exonerated Germany of all blame for forcing the earlier war against Austria and that against France in 1870, as long ago as 1909 expressed the very arguments which Germany later used in trying to exonerate herself of any blame for starting the war in 1914.

"France," wrote Mr. Croly in his book, "has gradually built up a series of understandings with other Powers, more or less inimical to Germany. (Page 251.)

"Some Frenchmen still cherish plans of revenge for 1870; but candid French opinion is beginning to admit that the constantly increasing resources of Germany in men and money make any deliberate policy of that kind almost suicidal. France would lose much more by a defeat than she could gain from a victory, and the fruits of victory could not be permanently held.

"Russia still looks longingly toward Constantinople.

"The gradual growth of a better understanding between France, Great Britain and Russia is largely due to an instinctive coalition of these powers who would be most injured by an increase of the German influence and dominion; and the sense that Europe is becoming united against them makes German statesmen more than ever on their guard and more than ever impatient of an embarrassing domestic opposition. (Page 253.)

"She (Germany) is partly surrounded by actual and possible enemies, against whom she can make headway only by means of continuous vigilance and efficient leadership." (Page 252.)

The cue of the whole German propaganda launched in 1914 was that Germany had been compelled to take up arms in self-defense against these combined powers. Russia had lighted the fuse; England and France had connived against Germany. Russia represented the menace of Slav aggression which meant the break-up of Austria Hungary. "It was," said Dr. Dernburg, "the Pan-Slavic tendency that got the better of saner views of the Russian Czar that started the ball rolling. . . . The Pan-Slavic theory . . . is threatening to break up Austria and even wipe it off the European slate. . . . The national existence of Austria can never be arbitrated upon. The breaking-up of Austria-Hungary cannot be tolerated by Germany. Austria is the only aid that Germany has for the purpose of defense which can be relied upon. The breaking up of the Dual Monarchy and the absolute isolation of Germany would have made her an easy prey to her neighbors whenever they chose to attack her. . . . It was a necessity for Germany . . . to come to the help of Austria and protect her from destruction and dismemberment."

Mr. Herbert Croly, in 1909, gave voice to what became the cue of the official German apology in 1914. Said Mr. Croly:

"It is, as we have seen, the international situation and the national ambitions of Russia and Germany which constitute the chief threat to European peace. *Germany's existing position in Europe depends upon its alliance with Austria-Hungary. . . . The German, the Austrian, and the Hungarian interests all demand the perpetuation of the Hapsburg dominion.* . . . Whether the German, Austrian and Hungarian interest does or does not prevail, the fundamental national interests, which are compromised by the precarious stability of Austria-Hungary, are alone sufficient to make disarmament impossible. **Disarmament means the preservation of Europe in its existing condition**; and such a policy, enforced by means of international guarantees, would be almost as inimical **to the foundation of a permanent and satisfactory international system now as it was in 1820.** *The fact has to be recognized that the ultimate object of a peaceable and stable European international situation cannot in all probability be reached without many additional wars; and the essential point is that* ***these wars, when they come, should,*** *like the wars between Austria or France and Prussia, or like our Civil* ***war, be fought to accomplish a desirable purpose and should be decisive in result.***"

"A DESIRABLE PURPOSE"—GERMAN GAIN

If, in 1909, Mr. Croly considered the preservation of Europe in its then existing condition "inimical," why, in 1918, when the Germans were frantically eager to get peace on those terms, did he consider a return to the *status quo ante* condition of Europe so highly desirable?

In 1909, Mr. Croly recognized that **"The German Empire is the European power which has most to gain in Europe from a successful war."**

Was it that, when Germany had most to gain from a prospective war, "the preservation of Europe in its existing condition" was "inimical." Germany, we know, was plotting to dominate Europe, to absorb Turkey, extend her empire into Asia—the world is familiar with the story of the Bagdad Railway. At the time when Germany indubitably had "most to gain in a successful war," Mr. Herbert Croly advocated, as we have seen, that European wars when they come "*should . . . be fought to accomplish a desirable purpose and be decisive in result.*"

If, in 1909, when the Germans had most to gain from a successful war, Mr. Croly believed such a war should be "decisive in result," why, in 1917 and 1918, when the German prospects of victory waned, did Mr. Croly oppose the continuation of war against Germany until allied victory was "decisive in result?" Was "peace with victory" not the accomplishment of "a desirable purpose?"

Mr. Croly's *New Republic,* in May, 1917, asserted that "peace with victory would be peace with suicide." It threatened that if the American Government forced the war to continue against Germany until a military decision was reached, there would be a bloody revolution in America. The *New Republic,* which now advertises itself as having "insisted that the war must go on until Germany was beaten," repeatedly told the American people that Germany could not be beaten; that at best there would be a "hideously expensive stalemate." Was this, by any chance, "defeatism?" Mr. Croly's "journal of opinion," in August, 1917, at the time of the German offensive against Russia, asserted that America "is not capable of assuring a military decision to the Allies." What was it that Germany paid Bolo nearly $2,000,000 to tell the people of France?

METHINKS 'TIS A SMELL OF RATS

In 1909 Mr. Herbert Croly jeered at the efficacy of "kind words and noble sentiments," of the settlement of disputes by "congresses and amicable resolutions." In 1918, when the Germans, routed by the

successful Allies, were in panic retreat, when the imperial Government made its last frantic play for a "peace by negotiation," Mr. Croly's *New Republic* threatened the Allies, in case they rejected discussion, with treasonable "disaffection on part of the labor groups of France and Great Britain." Why, one asks again, was this violent opposition to waging the war to a "decisive result" in military victory over Germany?

After the Germans, beaten decisively, had agreed to the armistice terms offered by Marshall Foch, after a glorious "military decision" had been obtained by the Allies, the *New Republic* brought forth its peculiar hatching—the League of Free Nations proposition. It began furiously to advocate internationalism, limitation of national sovereignty, freedom of the seas, internationalization of waterways, equality of economic opportunities—by all of which abortive propositions Germany might benefit.

With a peace of victory secured and without "suicide" Mr. Croly's *New Republic* launched a widespread campaign urging final settlement by "kind words and noble sentiments," "by congresses and amicable resolutions," with a policy "for durable peace" to be "enforced by means of international guarantees"—all of which program Mr. Croly sternly repudiated in 1909, but which—being now heartily endorsed by the Germans and operating in their favor—he stoutly champions today. As alleged foes of this program, Mr. Croly's journal has carried on a campaign of abuse by implication against the leaders of the Allies. It carried this campaign into the daily newspapers, where, in full page advertisements, the American people were warned about the old-fashioned machiavellian statesmen who were possibly about to play their old game of power politics with nations as pawns. Why, in the hour of victory, is there a campaign of extraordinary scope and publicity which is obviously designed to antagonize the American people against the Allied statesmen, to create doubt, distrust, division between this country and the nations associated with us in the war? Why especially such a sneering and bitter impugning of the motives of Premier Clemenceau of France and Mr. Lloyd George of England? Does all this not smell strangely of the very "secret keynote" of German propaganda described by Emil Witte which was launched in Washington after the Spanish-American war?

NOISE FROM THE INTELLECTUAL BARNYARD

It is extremely doubtful if this mawkish, mealy-mouthed sentimental twaddle about "liberality," "magnanimity" and "mercy" to beaten Germany has had the effect intended upon men of fibre. It is doubtful, indeed, if Lloyd George, Clemenceau and Sonnino have taken a place even in the popular imagination with Ali Baba and his forty thieves, because they may not entertain such cooing-dove sentiments concerning Germany as the editors of the *New Republic*. One is inclined to suspect that the vast sums of money spent by the *New Republic* to "advertise the differences" of war aims between America and the Allies may have been more profitably expended—say for the relief of the widows and orphans of captains of German submarines. The *New Republic* may cherish the belief that it has "seen itself taken into the counsels of statesmen at home and abroad." But how seriously? How seriously, in all actuality, has the country been infected with this turn-the-other-cheek, beware-of-the-wicked-Allies, be-kind-to-the-good-Germans, pro-Bolshevik, class-revolutionary "pacifista?"

The crowing of capons is a very funny sound.

It is curious, however, *en passant*, to note that the editor of this sheet which opposed war to a finish and which now preaches tenderness and gentle consideration to the Huns, back in 1909—when he implied that France was threatened with "a process of national corruption and dissolution," and when, if that were true, Germany certainly had most to gain from a successful war—declared:

"A nation or an individual who wishes to accomplish great things must be ready, in Nietzsche's phrase, 'to live angerously'—to take those risks without which no really great achievement is possible."

That was the doctrine of the German Junkers and militarists. That was the doctrine of Treitschke and Bernhardi. That was the doctrine of von Hindenburg and von Ludendorf. That was the doctrine of those who condemned Edith Cavel. That doctrine was practiced by the captain of the submarine which sank the Lusitania. "To live angerously"—what that means in warfare we saw illustrated in ravished Belgium. That doctrine was spoken when the Hun Kaiser, in order to win the war speedily by "terrorizing the degenerate French," ordered the cutting of the throats of French women and children.

SERMONS FROM STONES OR "IVORY DOMES"

Miss Jane Addams has described the *New Republic* as "that wonderful journal, from which so many preachers are taking their sermons instead of the New Testament."

Are any Christian congregations compelled, by any chance, to hear sermons extolling the Russian Bolsheviki and condoning the crimes of the I. W. W.? Are any religious pulpits given to preaching the gospel of social discord and revolution? Are any churches being infiltrated with pro-German pacifism? Are the sentimentalities of any Christian congregations being played upon in the interest of poor, beaten, starving Germany? How many clergymen are re-echoing calumnies regarding the integrity and honesty of motives of the Allied statesmen?

American boys are returning home wounded—blind, legless, armless, suffering from the poison gasses of a diabolic foe; a foe that knew no "consideration," no mercy. These boys will be inclined very gravely to question the "pro-Americanism" which merely camouflages revolutionary Socialism. These boys will be inclined to look askance at editors who before the war and when "Germany had most to gain," considered disarmament undesirable, who then urged that wars be carried to a decisive result, but who, after we entered the war, have advocated pacifism and opposed war to a military victory over Germany. They will ask the reason why. These boys will dissect the species of "pro-American internationalism" which justified Germany's brutal war against France in 1870, which declared her aggressions legitimate, but which today spends itself in ignoble interpretations of the motives of the Allies. These boys will have a serious concern in the journals and persons who seek to negative the fruits of their hard earned victory by destroying internal order and social concord by the promotion of revolution in our midst.

Mr. Herbert Croly's associate editor on the *New Republic*, Mr. Walter Weyl, asserted in his book, "The End of the War:"

"The final war . . . will begin after the war. It will be a wider conflict than that which now rages and the alignment will be by classes and interests rather than by nations."

WHO PAID FOR THE "ADS"?

The *New Republic* took up the cause of the Bolsheviki and their shibboleth of "peace without annexations and indemnities" at the time the Bolsheviki traitorously sold out Russia to Germany. The *New Republic*, while it propagandized for an indecisive ending of the fight with Germany, at the same time preached Bolshevism and the Bolshevik peace terms here. The *New Republic* viciously attacked the American Federation of Labor, which loyally took a stand back of the war; it championed the disloyal labor elements which were for parleys with the Huns.

Since the defeat of Germany, Mr. Herbert Croly's *New Republic* has militated against any "new balance of power." It has frankly expressed its apprehension of "the machinations of Tories, the imperialists and the exponents of an international order founded on power instead of justice and good faith." It has advertised the coined phrase—"a return to that same sinister system of Power Politics which has bred every war in Europe for centuries," which refers to the machinations of the Allied nations. Directly, and by covert inference, it carried on a campaign—in full page newspaper advertisements, and within its own pages—impugning the motives of the leaders of the nations at war against Germany. "Soon or late the peace conference will gather," ran an advertisement. "What spirit will wield the gavel there? . . . Will it be the old and sinister philosophy which for generations has patched the peace of Europe and never made it secure?" Those who read the *New Republic* have become familiar with the slur about "diplomats" playing "their ancient game of chess with peoples as pawns, the game of military supremacies, selfish alliances, balances of power, strategic frontiers and economic barriers." Mr. Herbert Croly's *New Republic* openly accused the Allied statesmen of "measuring the value of the coming settlement, not in terms of a permanent international structure built purposely to provide a habitation for the spirit of justice and fair play, but in terms of the satisfaction of specific territorial and economic pretensions and grievances."

Why, when Germany is beaten, is a peace demanding reparation for wrongs done lacking in "the spirit of justice and fair play?" Why, when the Allies are victorious, are their demands "terms of the satisfaction of specific territorial and economic pretensions of grievances?"

Mr. Herbert Croly's mushroom "League of Free Nations Association" program differs, he says, from the old program of the League to Enforce Peace "in that it seeks rather to do away with the causes of war than to arbitrate controversies among nations after they arise." Such a League as Mr. Croly desires would not allow *"the victors to profit from the impotence of the vanquished."* In the *New Republic* of January 18, 1919, it is declared: "If the Red Terror did not hover in the background as a genuine alternative, there would be small chance of a liberal and democratic settlement of the war."

AS 'TWAS 'TIS NOT NOW—NEGOTIATION

At the time when beaten Germany has all to gain from any quixotic surrender of national rights on part of the Allies, by "equality of economic opportunity," by the internationalization of rivers, canals, straits and railroads, by freedom of the seas, demobilization of armies, by readmission into a League in which she shall have her a share of decision, Mr. Herbert Croly is for all these things. He is strong for all kinds of NEGOTIATION.

"The same people who formerly declared that if a decisive and humiliating defeat were inflicted on Germany the insuperable obstacle to a peace of righteousness would disappear, now insist upon the futility in this respect of Allied victory to accomplish the desirable political result. According to Clemenceau and his like," sneers the *New Republic* of January 18, "it is just as necessary to provide against future wars with Germany as if the war had ended inconclusively instead of with a decisive victory. . . . We agree with them as to the inability of force to accomplish positive and enduring political results. A triumphant army can be used by statesmen to dictate boundaries, indemnities and the like, but it cannot be used to dictate a stable peace unless the peace itself is composed of the stuff of the political righteousness. **An enduring**

tlement must be forged BY NEGOTIA-ON."

That is January 18, 1919. There you have it. t Mr. Herbert Croly, in 1909—when he con-lered disarmament undesirable, the preserva-n of Europe in its then existing condition as nimical," when he admitted that Germany d "most to gain in Europe from a successful ır" and was of the belief that the European ırs when they came should "be fought to ac-mplish a desirable purpose and should be de-sive in result"—delivered this opinion as to e settlement of "existing rivalries and enmi-es among European states" BY NEGOTIA-ION:

"These rivalries and enmities will not be dis-lved by kind words and noble sentiments. The deration of Europe, like the unification of ermany, will never be brought about by con-resses and amicable resolutions. It can be fected only by the same old means of blood nd iron."

If "kind words and noble sentiments" were ıtile at a time when Germany had most to gain rom a prospective war, why should Mr. Croly dvocate "kind words and noble sentiments," congresses and amicable resolutions" as effec-ive and all desirable now when Germany, hav-ng made an *unsuccessful* war, having employed "the old means of blood and iron," at a ost of ten million lives, the devastation of air lands, and agony immitigable, faces the enalty of her crimes?

"MACHINE GUNS AND FRIGHTFULNESS"

In 1909, Mr. Herbert Croly, in common with he Bernhardis and Prussian Junkers, preached he virtues and justification of war, and, in ommon with the German militarists, urged that wars should be decisive in result.

In 1919, in common with Dr. Dernburg and the lachrymose "kamerad chorus" wailing for pardon *und etwas zum essen* (or is it *fressen?*) Mr. Herbert Croly preaches the virtues of the Golden Rule.

He laments, in the *New Republic* of January 11, that President Wilson "has a poor chance of getting the peace he wants," that "he wants the Golden Rule substituted for the Lex Talionis, and there is no overpowering disposition on the continent of Europe to give him what he wants. . . . *The victorious statesmen . . . are callously resuming the old game of appropriating everything that an enforced respect for the opinion of mankind will permit, and of justifying the appropriation by words about rights, justice and civilization.*

"For the first time in political history," Mr. Croly declares, "the issue is being clearly drawn *between the friends and the enemies of international socialization.*"

Is "international socialization" Bolshevism? "International Socialism" means merely political action. Of "international socialization" Mr. Croly says: "The victorious march of these ideas will be costly, perhaps almost as costly as the great war."

Is this a bloody prediction of revolutions, civil war, wholesale killings—as happened under the Bolsheviki in Russia? Is this, by any means, a threat? Mr. Croly pursues the *New Republic's* unashamed favorite pastime of implying that its policies are the policies of President Wilson:

"The gospel according to Woodrow Wilson will probably have to employ **the same rough methods to overcome its enemies as did the gospel according to Jean Jacque Rosseau . . .** For the gospel according to Woodrow Wilson is capable of being **propagated by the machine gun and by frightfulness** as by the typewriter."

Is it not going far and beyond the bounds of decency brazenly to ascribe to the President of the nation the policies of ghoulish anarchy forced upon Russia by those brutal despots, Lenine and Trotzky? Is it not going to dangerous lengths to make a point, to interpret President Wilson as challenging and attempting to force down the throats of the Peace congress a program of "international socialization" which will be "perhaps almost as costly as the great war?" Audacity or madness has reached the limit of tolerance when it openly expresses the threat of using "the machine gun and frightfulness."

And, reading between Mr. Croly's lines, is it not indicated that "the machine gun and frightfulness" will be the alternative unless the Allies handle Germany with kid gloves? Did not the Imperial German Government, in the early days of the war, direct its agents abroad to "foment strikes," promote "separation movements and civil war?" Have we forgotten the s cret documents made public by Secretary Lansing? Can Germany possibly now be up to her old game in order to force the Allies by threat of internal revolutions, of widespread Bolshevism, to give her an easy peace? Is it impossible that some of the "innocent victims" of the earlier wily Svengalis of German propaganda are responding automatically to the masters of their souls?

Mr. Herbert Croly is self-confessedly a "victim" of the theory that the war was a "50-50 affair," and it seems, indeed, that he would not be averse to seeing Germany rehabilitated in the eyes of the world. He says:

"The former ruling classes of Russia and Germany were the chief culprits, but until Englishmen, Frenchmen, Italians and even Americans admit or are forced to admit their share of responsibility for the ruin of Europe there can be no stable reconstruction."

In other words, the former defender of Bismarckism and Prussian militarism today would shift upon the Allies—who rose and shed their blood as water, in defense—the blame for the despoilation of fair Belgium, the razing of beateous cities, the raping of Belgian women, the outraging and murder of little children, the enslavement of a guiltless people, for all the bloodshed, the horror, the bestiality, the utter ignobility, the causing of agony immitigable! *"Their share of the responsibility for the ruin of Europe!"* If this is not the mental callousness, the brutish logic of the Hun, the peculiar Hunnish inability to see right from wrong, then certainly reason and justice have departed from the realm of mankind.

Mr. Herbert Croly devotes a number of pages of his magazine of January 4, 1919, to an article entitled "Justice to the Devil," by an obscure professor of history in Middlebury College. The purport of this screed is obvious. The disloyal purpose is self-defeated by reason of an unconquerable sneering bitterness which betrays the animosity of a curdled spirit toward the victorious Allies. There is in this outburst of petty spleen the same protest expressed by Mr. Croly against "injustices" being inflicted upon Germany.

"Not that we wish to perpetrate any injustice upon our fallen foe," jeers Mr. Croly's contributor, "but, forsooth, he cannot be trusted to share decently the benefits of a just peace. We must hedge him about with iniquitous safeguards, lest he again seek to triumph over our just cause.

"The multitude of lies provided for the nourishment of public opinion in the United States, *seems to indicate* that the German Realpolitik included a lawless lust for Empire," continues the writer. "The Allies, and later the United States, professed and no doubt felt, a holy horror. That horror was somewhat tempered, to be sure, by the conspicuous lack of holiness in the nations who professed it."

Had an enemy-alien indulged publicly in such remarks there is little doubt as to what would have been his fate. Yet the *New Republic,* professing a unique brand of "patriotism," lends it pages to such propaganda as this:

"The great mass of American public opinion seems actually to be unaware that our side has in any important respect abandoned the principles of justice in dealing with our enemy. . . . *The aims and methods of Allied, and even American, propaganda and censorship, have not differed widely from the German.* . . . The task of enlightening American patriotism has been not only thankless but, since the passage of the Espionage act, unlawful. In our somewhat hysterical effort to secure unity of thought and action, we have made it probable that our abandonment of justice will outlast the period of the war.

"First by partisan groups and latterly by the government itself, the belief has been built up that this is a war of Huns against the Saints. . . . If our definition of Hunnishness include lust for empire, unscrupulous diplomacy and frightfulness, we can readily find a good deal more than fifty-six hundredths of one per cent of Hunnishness among the Saints." The writer infers that "it will be extremely difficult . . . to determine what the relative distribution of this deviltry has been in the recent war." "All evidences of like iniquities on our side" have been carefully suppressed, he says, and the result has been "a distortion of truth, an annihilation of perspective," merely the inspiring of soldiers and the general public with a "killing hate."

U. S. "NO LESS UNJUST TO RUSSIA THAN TO GERMANY!"

In an effort, about which no concealment is made, to clear the Germans of extraordinary atrocities, the *New Republic* contributor conjures up the atrocities committed in the Revolutionary War, the war of 1812 and the Civil War. "Frightfulness at least is a new invention of the Hun? Alas, no!" . . . he mocks. "Atrocities may readily be found without going outside the family. . . ."

After this astonishing attempt to befoul our own country and history by the implication that we had anticipated the unspeakable Hun in atrocities, the *New Republic* contributor asserts ambiguously:

"Evidence is rapidly accumulating that we have been no less unjust to Russia than to Germany."

In what were we "unjust to Russia?" By the sending of troops into Siberia? The *New Republic* has protested against that as outrageous injustice. In what have we been likewise "unjust to Germany?" By the sending troops to France to fight the Germans? Obviously!

Can the *New Republic* possibly be pro-German? Can it possibly be anti-Ally in its sentiments?

Or is its patriotism merely different from the commonly accepted variety, perhaps a unique, superior "international socialization" brand? The *New Republic* is constantly approvingly quoted by, and its articles reprinted in, the *New York Daily Call* and Viereck's so-called *"American Weekly."*

SHALL NATIONAL BOUNDARIES RESTRAIN THE MEETING OF CONGENIAL MINDS?

It may, of course, be mere coincidence that the point of view of the *New Republic* has strikingly altered, swerved and drifted in its course along lines similar to the trend of German and pro-German opinion. It may have been mere coincidence that, writing presumably in 1908 or early in 1909, when German agents were subtly at work disseminating the same ideas, Mr. Herbert Croly expressed such a strikingly Teutonic process of mind and point of view. Those German agents were insidious, cunningly beguiling, unsuspectingly subtle. May it not be that Mr. Croly, like other naive but sincere Americans—professors, social uplifters, radicals, et cetera—was reached without his knowing it; that, like many other innocent con-

verts, he was merely an unsuspecting victim? There may be only mere coincidence in the fact that certain arguments used by Dr. Dernburg and other official and paid German propagandists in 1914 and 1915 were similar to arguments for the German policy used by Mr. Croly in his book published in 1909. It may be only coincidence that arguments employed in Mr. Croly's *New Republic* at the present time for a League of Free Nations, for freedom of the seas, for generosity to Germany in the matter of supplying raw materials, as well as arguments against punitive indemnities and attacks upon the "unscrupulous purposes of the Allies" parallel sentiments expressed recently by Dr. Dernburg and Count von Bernstoff.

Count von Bernstorff, who once believed the war should "be fought to accomplish a desirable result and should be decisive in result" for Germany, in an interview with the Amsterdam correspondent of the London *Daily Express,* the other day declared he "endorsed" the plan for a League of Nations" and considered it "practical." Count von Bernstorff also declared that in the program of the League he saw "the only way to prevent war by a limitation of armaments."

Dr. von Bethmann-Hollweg, German Chancellor at the outbreak of the war, approving of a League of Nations, declared: "If the victor exploits the distressed conditions of the conquered, violates his body, compels him to employ his forces of blood and property in enslaved service, he can then boast his power, but justice will veil her head."

Mr. Herbert Croly's *New Republic,* in August, 1918, declared that "with the right kind of peace *Germany ought to get her share,* but not more than her share" *of raw materials after the war.* "A merely punitive policy, designed to treat Germany the more harshly the more completely she is forced to acknowledge military defeat would encounter in America not perhaps active opposition, but all the doubts and delays that characterize the negative side of American policy."

Dr. Bernhard Dernburg, writing in the *Vienna Neuwe Frie Presse* recently, said:

"*Germany needs raw materials* for the revival of her industries, *she needs credit* to cover her obligations, she needs a market for her products in order to pay off this credit and to create deposits abroad. Neither France nor England will or wishes to give it, for both are debtors, and a great part of the reason why they demand a war indemnity from us is that they have to free themselves from the United States. . . . The Allies in victory are at least as unscrupulous as Germany was charged with being in the war."

Mr. Herbert Croly's *New Republic,* of November 30, 1918, under the heading, "How is Germany to Pay," began ironically:

"Germany must make good the physical destruction she has wrought—that is the determination of multitudes in the Allied world. Germany must not find the road to rehabilitation easy. She must encounter difficulties in supplying herself with materials and in marketing her products. Indeed, if it can be compassed, she shall find no markets at all. That is, also, the determination of multitudes. And it is curious to note that those who would punish Germany by throttling her trade are almost to a man advocates of the heaviest possible indemnities. Everyone has smiled over the outraged plaintiff in a divorce case who not only insists upon a generous and reliable flow of alimony, but would like to ruin the business of her sinning husband [illegible]

THE WORLD IS THEIR OYSTER

"If Germany is to make reparation," continued the *New Republic,* "she must obviously transfer values to the countries she has wronged. What form shall the transfer of values assume? . . . We may dismiss gold as unimportant. . . . There is not in all Germany one-tenth enough gold for the purposes of reparation.

"If Germany is to make reparation it must be *through cash or through credits* translatable into cash or goods. Neither cash nor credits can possibly be had except as a result of export operations."

Dr. Bernhard Dernburg has just said:

"The Germans turn their eyes in expectation toward America and feel sure their expectations will not come to grief. . . . It is quite possible that America will transfer English and French debts to Germany in order to get her money, for America wants not destruction but justice. . . . A clever American policy can, and I think will, secure sympathy for us, thereby providing economic help for our German country now in collapse."

Dr. Dernburg clairvoyantly divined:

"In the question of the freedom of the seas there is a deep gulf. English and French aspirations cannot be reconciled with President Wilson's points."

"Did any divergence actually exist between the political objects for which President Wilson had pledged his countrymen to fight, and the political objects which the British, French or Italian governments planned to achieve in the event of victory?" asked the *New Republic,* and replied by saying that if divergences did exist "it was a patriotic service to advertise them."

"The forces which have opposed President Wilson's peace policy are the more formidable because they are international. . . . Yet," said the *New Republic* of November 9, "they have been conclusively defeated."

In its issue of January 18, 1919, Mr. Croly's sheet evinces a change of mind:

"The best existing chance of a stabilizing treaty depends upon the wearing down of the opposition of the Sonninos and the Clemenceaus. . . . Americans who are hoping for a peace which will act as a future bulwark against power politics, should . . . allow the President, if necessary, to wear out the opposition."

If, by "advertising" the divergences between President Wilson's points and the English, French and Italian aspirations the *New Republic* was performing "a patriotic service," was Dr. Dernburg not performing a laudable and patriotic service likewise?

May it not be that, in a sense, Count von Bernstorff, Captains Boy-Ed and von Papen, Dr. Rumely and Dr. Hale, Viereck and Major J. J. Dickenson, the $30-a-week informer, not to speak of poor Bolo, were "pro-American in the sense of ardent loyalty to the ideals of international security and justice?" That, in a sense, they were "friends of international socialization?"

(*To Be Continued*)

The Real Poland

(*Continued from page* 4)

which to support its purchases. The temperament of the people is such that there need be no fear of losses.

Apart from food, Poland today is in need of moral rather than material support. With insurrectionary Germany to the west, working in combination with Bolshevik Russia on the east, Poland is in danger of beng crushed between two giant forces. It is now serving a double purpose as a barrier to German aggression in Russia and a Bolshevik assault upon Europe, but there is a limit to its endurance. What is needed with all possible haste is a visible demonstration of the sympathy and the support of the Allies.

Labor's Reconstruction Program

(*Continued from page* 14)

Legislation also should be enacted which w give the nation's defenders the opportunity t easy and ready access to the land. Favorabl inducements should be provided for them to e ter agriculture and husbandry. The gover ment should assume the responsibility for t allotment of such lands, and supply the nec sary capital for its development and cultivati with such safeguards as will protect both t government and the discharged soldier a sailor.

CONCLUSION

No element in our nation is more vitally co cerned with the problems of making for a pe manent peace between all nations than t working people. The opportunities now befo us are without precedent. It is of paramou importance that Labor shall be free and unha pered in shaping the principles and agenci affecting the wage-earners' condition of life a work.

By the light that has been given to it t American Federation of Labor has attracted its fold over three millions of wage earners a its sphere of influence and helpfulness is gro ing by leaps and bounds. By having follow safe and sound fundamental principles a policies, founded on freedom, justice and demo racy, the American trade union movement h achieved successes of an inestimable value to t masses of toilers of our country. By adherin to these principles and policies we can meet a problems of readjustment, however grave in i portance and difficult of solution, with a feelin of assurance that our efforts will be rewarde by a still greater success than that achieved the past.

Given the whole-hearted support of all me and women of labor our organized labor mov ment with its constructive program, its love f freedom, justice and democracy will prove t most potent factor in protecting, safeguardin and promoting the general welfare of the gre mass of our people during this trying period reconstruction and all times thereafter.

The American Federation of Labor has a tained its present position of dignity and sple did influence because of its adherence to on common cause and purpose; that purpose is t protect the rights and interests of the masses the workers and to secure for them a better an a brighter day. Let us therefore strive on an on to bring into our organizations the yet unor ganized. Let us concentrate our efforts to or ganize all the forces of wage-earners. Let th nation hear the united demand from the labor ing voice. Now is the time for the workers o America to come to the stand of their union and to organize as thoroughly and completel and compactly as is possible. Let each worke bear in mind the words of Longfellow:

"In the world's broad field of battle,
In the bivouac of Life,
Be not like dumb, driven cattle!
Be a hero in the strife!"

The foregoing program was drafted by the Com mittee on Reconstruction, appointed by instructio of the Convention of the American Federation o Labor, held at St. Paul, Minnesota, June 10-20, 1919

The committee did not report on "Health Insur ance," because that subject, by action of the St. Pau Convention, was referred to a special committee.

The committee's report was unanimously endorse by the Executive Council of the American Federatio of Labor.

The United States Employment Service

ITS FUNCTIONS AS A WAR EMERGENCY MEASURE AND ITS FUTURE OPPORTUNITIES

By NATHAN A. SMYTH
ASSISTANT DIRECTOR GENERAL

(At the first in the series of weekly conferces upon subjects related to post-war social djustment problems, under the auspices of e Federation's Woman's Department, held on nuary 8, 1919, and at which Mrs. Coffin Van nsselaer presided, Mr. Nathan A. Smyth made e address which follows.)

THE war has not been altogether an instrument of destruction. Out of the process of welding a great fighting, structive machine, we have developed in me respects a new spirit, a new vision, d certain new instiutions. One of the w conceptions was a realization that not ly does the individual and social welfare of the tizens of the country but also the efficiency of e nation as a whole, depend upon the develoment of a wide-spread and efficient system of public employment service or what the English fer to as a labor exchange service. Prior to e war, the idea had made faint beginnings in is country. Some States had their State Emoyment Service. We had something here in ew York. Ohio had developed rather a good ne. Wisconsin, Illinois, and about ten or a ozen other States had certain systems of public nployment offices. None of them operated in onjunction with others and none were operating with any very great success, except in one two special instances. The United States Govnment itself, back in about 1907 I think, had ndertaken in a small way to find employment or immigrants and aliens, who were out of jobs, rough a subordinate part of the immigration rvice. That had developed rather gradually own to about 1914, when the great war had arted. They tried to put a little more life in that service at that time, and for a year two they worked out certain cooperative arangements with State services, and opened a w more Federal offices; there were relatively w throughout the country. They were not uch good and were rather looked down upon y everybody concerned.

The situation during the early months of 1918 rought the country to a realization of the fact hat we could not have national industrial effiiency essential to the creation of a potent ghting machine unless the Government itself ndertook to bring the worker and the opporunity together. The competition for labor had ade wages go skyrocketing; employers were tealing labor one from another; the turnover an up to 100 per cent a week in some places; he restlessness, the inefficiency, were some of he evils created by leaving the matter to the ncoordinated efforts of employers.

We had before us the experience in England, but in that respect, as in others, we did ot follow the lessons that might have been earned from other countries as rapidly as, in etrospect, one might have wished. In Washngton all through the early part of the year 917 until the Fall of that year, there were lans and efforts to make a real Federal employaent service. An appropriation of $250,000 was oted to create a Federal employment service. When you realize that the pay roll of the presnt employment service, about a year from that ime, is pretty nearly $5,000,000, you will see ow inadequate the $250,000 was even to make a eginning. Nevertheless the Department set out vith money in hand, feeling a new service had een started separate from the old Immigration Bureau and the thing to do was to start.

The President came along in 1917 with an allotment from his Presidential Emergency Fund, so that it came up to about $1,000,000, and that gave enough to go on until July 1, 1918, the beginning of the present fiscal year. During the year 1917 the coordinated State offices and the federal offices had been doing considerable business, so much in fact that it is quite remarkable that the necessity of it had not been more appreciated before, but nothing more had been done about it. They had had an average of a million applicants a year during that period.

In the Spring of 1918, the work of extending the employment service went on rapidly. It was realized that cooperative arrangements with State systems had to be made. There had to be a federal director in charge in every State, and offices opened in each if this service were to function in time to be of value during the war. Of course, as always happens where an organization must be built over night—a great deal of inefficient material crept in. Real employment service work, to be done rightly, is almost a profession, and should be entered into with something of that spirit. There was no body of trained employment service men in this country in 1918. A few had been trained in the State service, and only a few were of the right calibre even for administrative offices.

After the War Labor Policies Board was organized, it was agreed that all recruiting of unskilled labor for war work should be done through the United States Service. That program inaugurated by a Presidential pronouncement, took effect the first of August. A very rapid development was requisite in June and July to get ready to carry out that great undertaking. With that situation in mind, the Senate first waked up to the necessity of financing such a proposition and an appropriation of five and a half million dollars was given for that current fiscal year, with the understanding that if more were needed, there would be hope of getting it. And we do need more.

When the employment service took over the great task of finding the unskilled workers for war industries, incidentally supplying skilled workers for many, and furnishing almost all the ship yard workers in Boston and at the Hog Island Plant, it realized it would have to make an extension of its organization. The Government had gone ahead so fast in letting contracts, projecting plants, ships and every other thing that could make for a great war instrument two or three years from now, that it overran the available man power. A survey revealed a shortage the first of August of about a million common laborers, more serious shortage of skilled labor, and a great many plants not reported upon. The situation, when the armistice was signed, was serious. Almost every big government project was being held back. Believing there was enough man and woman power in the country if we could bring it all to bear on war work, we started to organize community labor boards of five members each, with a man and a woman, selected by the employers, usually the Chamber of Commerce or manufacturing association of the community; a man and a woman selected by the organized labor of the community; and a chairman selected by the United States Employment Service. Their purpose was to bring pressure to bear in the various communities upon the non-war and lesser industries to get more men; and to get women into all forms of work from which men might be released. The armistice came before full fruition. The women on the boards were to see locally that the conditions of work for women were proper. The Government could set general standards for women's work, but there had to be some machinery to see that they were carried out. We intended to have an assistant to the Federal Director in every State.

Apart from supplying men and women to war industries, the Employment Service carried on the task of helping the person who was out of a job to get one. It took under its wing an institution, the Boys' Working Reserve. The purpose of it was to induce boys to train and go out and work on the farms. Those boys were watched and in many places did magnificent work. That organization will be continued next year. It has proved a fine training for the boy himself.

During the Summer we developed the great farm labor movement. A great army of men was moved all up through the wheat field, starting south and moving along so that practically there was no loss from lack of labor for the crops.

The great problem with regard to women in war industries was not so much to get the women as to find proper jobs and fitting conditions. It was a subject of great delicacy in its relationship to men and organized labor and it was difficult to find out where extensions for women in industry might be made. The great national women's organizations, the National League for Women's Service, The Federation of Women's Clubs, and others were going to give us assistance and had all pledged their full cooperation.

When the armistice came the whole situation changed over night. We no longer had to provide labor for war work. We had to wait several weeks to learn the army plan of demobilization. Canceling contracts, however, began within a few days. Mr. Crowell fortunately stopped this and developed a policy under which contracts for war material would not be cancelled except under a plan jointly adopted and supervised by the War Industries Board and the Department of Labor. It was very necessary to cancel contracts in some form. For example, it is bad economics to go on making tanks at the present time. It is even worse to go on making poison gas. Many destructive implements that have no peace time use should not be manufactured after the war is over. Generally speaking the policy of contract cancellations has been rather wise, so far as possible, in view of the speed with which it had to be done. It was thought the kind of a concern that might shift from war to peace industry should have its cancellations so graduated that shifts would be made gradually and without release of employees. On the other hand, the munition plants, very much overgrown from any peace time proposition, with nothing that they could do inside of a great many years to take the place of the war work, had to be closed down, and generally speaking their cancellations were so ordered that the company could go on with the work it had in process, gradually easing off so that at the end of December in some cases and the end of January in other cases they would come to an end, the theory being the employees would go gradually.

We started in about one hundred and twenty-five characteristic communities to obtain weekly reports of conditions, to get a barometer of what might be happening as a result of these contract cancellations. At the beginning practically all of these cities were short of labor. That situa-

tion has changed so fast that last week's report had forty-five or forty-six reporting unemployment. Nevertheless, the unemployment taken by itself would not be very much greater than unemployment usually; not anything so serious as we have passed through many times in the last twenty years. It is nothing to worry about unless it gets worse before the Winter is over, the trend being so rapid.

Industry has not been very rapid in starting up this year. Manufacturers do not seem to be getting orders. Retailers are buying carefully and orders are not coming across. These are factors which make for considerable concern but as yet nothing alarming has developed. Then, to complicate that situation, we have the very rapid process of demobilizing the soldiers. I think either the process of contract cancellations or the process of demobilization could go on by itself all right but when they come together we face the real problem. The army decided to discharge the soldiers without reference to industrial conditions, and as to whether or not they had positions waiting for them. They are sent out with not much money in their pockets, no advance pay, and perhaps a lot of back pay yet to come, and their fare home. The army informed the Department of Labor that it might have a representative in each camp to endeavor to assist these boys in finding jobs. Like most orders from the General Staff, the general order was capable of a very narrow construction, and in one or two places was construed narrowly. The Department of Labor's representative in Camp Meade, for instance, is entitled to tell the Colonel what he knows about the industrial situation and the man who wants a job can come in and find out from the Colonel what he knows about it. In Camp Devins there was a liberal construction. Up to about two weeks ago, the labor representatives there, working with the finest spirit of cooperation from the camp officers, had gone over the whole situation with some eleven thousand men. They found about six thousand of them did not need assistance at all. They helped about five hundred men get their jobs back. They placed about one thousand in new jobs, and about another two thousand they sent off with cards to their agencies at home. It became necessary to devise means of taking care of the men after they left the camps. We had about eight hundred offices throughout the country. We had the labor boards in about sixteen hundred communities. We organized in different States on a different basis. In New York they are given a large territorial jurisdiction in one community labor board. It has always been our policy to let local matters be worked out by local authorities as far as possible. In other states they made more minute sub-divisions. Even those did not cover the country well enough to take care of the soldiers in all the places to which they might come back. We asked the Council of National Defense to come to our assistance with its separate branches numbering about one hundred and eighty thousand. Then for assistance we called on the Red Cross, Y. M. C. A., Y. W. C. A., the Hebrew Association, the Catholic Association, and several others. We organized a central cooperating committee and started a plan for a bureau for returned soldiers and sailors in every community of any size. In some communities, the bureau may be in the hat of the Postmaster; in large communities it must be elaborate; the idea being to get the jobs back for the boys as they come home. It is necessary to pool all the information as to positions that are open. There are a great many men who are being sent from one community to another and it was necessary to have the underlying network of the United States Employment Service offices, who transmit information as to local conditions first to State Directors and then through them to Washington, so that the resources of one community may be available to other communities in finding jobs. That work is well under way. Up to date, except for the largest cities, we don't seem to be encountering any difficulty with the returning soldiers. The influx of men in New York, for instance, who don't belong here, and who are looking for jobs here, instead of finding them back home presents the greatest problem. Just how long that rapid process of demobilization can go on without making for unemployment among soldiers I don't know. We are making every possible effort to make sure that knowledge concerning such jobs as are open to soldiers shall be so concentrated that they can find them. No employment service can actually create work.

With the transition from war to peace comes up the peculiar problem of woman, and woman's work. We struck it first in Washington, with stenographers and clerks there. We have been able to do a great deal in helping them get back positions at home. We find it with women let out of war jobs. That has caused serious disquietude.

Up to the first of November reports of the Employment Service showed that during the year something over two and a half million men and women had found places, a large proportion the latter half of the year, and for the last three or four months the average number of persons who applied at employment service offices, or offices of state services cooperating with us, and all part of the same system, has run up to one hundred and thirty-five or one hundred and forty thousand a week. Generally in employment service work an average of about seventy to seventy-five per cent. of reported placements has been found to be the normal average, and that has been about the average of our figures. In other words, something over one hundred thousand men and women a week have been finding positions through the branches of the United States Employment Service. An average, I should say, of about fifteen per cent. of those are women.

We drew the facilities of the employment service not merely to the skilled artisan and the common laborer but to those with highly professional training. Through this branch of public service reserve in the early stages of the war, a large number of trained engineers were located in army positions and secured commissions, and a lot of those officers are coming back now asking assistance. Early in 1917 we had learned that associations of college alumnae and others had organized offices for placing women. We have been making cooperative agreements with those offices, taking them over, making them free offices rather than fee-charging. So, we have been organizing a professional section, in cooperation with the Teachers' Bureau in the Department of the Interior and engineering societies and others of trained workers. At 42nd Street over one hundred professional persons a day in the last five or six days, have come in and we are actually beginning to get opportunities for them. It is a new line of work. It must be done for the officers. The American Training Camps Association, which secured so many officers for the army, will help to find positions for them. It is all work that had to be thrown together hastily. We are working hard with it and I think it is going to perform a very useful function. So far as the women are concerned, it is not particularly a demobilization problem although there are many trained women, who have had war jobs, to whom it is necessary to give assistance.

We are organizing handicap divisions in Boston and Chicago and in New York, chiefly for men from forty-five to sixty-five; some twenty-three thousand such men were placed in positions where they were able to earn a living. Special work can be done with the employer to get him out of the idea that there are no good men over forty-five. We shall handle in that divisi the men handicapped by industrial accide There are, of course, to be taken care of at t present time, the soldiers who have been wou ed. That work is primarily under the cha of the Federal Board for Vocational Traini which takes over the task from the Surge General's office. The Surgeon-General gets th back as well as possible physically. The F eral Board has a large appropriation from C gress out of which it is trying to train the m who have been wounded to some line of activi in which they will have an industrial and e nomic value.

Another interesting line of work is what call junior placement. It is, one might alm say, a crime for employment agencies and e ployment offices to be directing young men a young women to jobs without some real stu of what the capacities of that young pers may be. We are arranging to have junior cou sellors in all of our offices.

During this coming year we are going to e courage the movement that is represented by t Women's Land Army to put women on the far under their system. We are going to encoura very much the Boys' Working Reserve. In so places, in an experimental way, we are struggli with the question of domestic service.

A good deal can be done by bringing the a tention of employers to the fact that they shou concentrate their opportunities of work in a common pool because only by bringing the i formation together can we help persons to g jobs.

We have something now that we did not ha when the war started. Then, if work was scar in a community, it was difficult to find out wh positions might be available, with more app cants for work than jobs in one community, method of knowing what might be the situati in another city in the same State, or perhaps a other city in the neighboring States, and so o We had no way under which the employer, ru ning behind because he could not get worke might be brought directly in touch with worke in some neighboring community where the might be unemployment. We now have deve oped a great system but it is still in its infan so far as efficient working is concerned, sti manned by a lot of people who don't know the jobs, and who should be replaced as rapidly possible. Nevertheless, it is a system spreadin throughout all the country so that the man an the woman and the position may be brought t gether.

We are shortly going to face the question whether this new machine is going on or is t die out as soon as the readjustment is over. seems clear that the work of a National Emplo ment Service ranks among the prime gover ment undertakings. It is not paternalistic n a philanthropy. It is a thing that should exi in the best organized individual state. I cann conceive of any undertaking that has in it mor capacity for good, social and human and n tional, than that of the development of a grea service which will take care of the problems o unemployment. If the whole system is goin to fall to pieces for lack of funds we shall hav unemployment worse than can be imagined. hope Congress will give us the appropriatio necessary. The question will come up shortl At present the employment service is practicall a war emergency proposition. There is no stat ute creating any such organization. We go t Congress with a proposition to create as a per manent institution a national service, not a com pletely federal service. Most of us agree tha what we want is a federated system, that ther should be an inter-communicating chain of em ployment services, the federal government fur nishing the inter-communication and keeping u the standards. It seems to me a great nationa necessity.

Tyrrel Print, New York.

Vol. IV. NEW YORK, FEBRUARY 15, 1919 No. 9

WAR LESSONS IN LABOR PROBLEMS

TRUE CO-OPERATION BETWEEN EMPLOYER AND EMPLOYEE, COLLECTIVE ACTION WITH ADJUSTMENT BOARD AS FINAL COURT, WILL BRING PEACEFUL SETTLEMENTS IN INDUSTRY

(Speech Delivered at Eighth Annual Convention of the National Retail Dry Goods Association, New York City, February 12, 1919)

By V. EVERIT MACY

PRESIDENT OF THE NATIONAL CIVIC FEDERATION

IT is appropriate, while representatives of the various nations of the world are uniting to develop methods for the elimination of war between nations, that employers should be giving much thought to improving the relations between themselves and their employees. Americans have not only surprised themselves but have astonished the world by the power and effectiveness they developed during the past eighteen months. They have shown not only latent military ability but tremendous dormant industrial capacity.

What has been accomplished was owing to the fact that each individual held firmly the same aim, the same purpose, namely, to win the war. All personal desires were secondary to this one great thought. This unity of purpose welded the nation together and everyone co-operated with his neighbor for the common welfare. In this common aim and co-operative spirit lies the secret of our industrial as well as our military success. Only through a real desire for peace and this same co-operative spirit can the Peace Conference at Paris attain its end. If nations can find a peaceable way to settle their differences, certainly the prevention of strikes and lockouts is not beyond the reach of industry. It cannot be accomplished, however, without a sincere and earnest determination to maintain peace upon the part of all concerned. This includes a belief in the good faith of both sides.

V. EVERIT MACY

The war taught us many lessons. A particular point which I wish to emphasize is that we could not have made our common aim and co-operative spirit effective during the war without organization. The Government had to know on what supplies it could depend and when and where they could be obtained. This was comparatively easy in those industries where there were manufacturers' associations; where there were none, committees had to be appointed to speak for the industry. It was also necessary for the Government to know that there would be no interruption of industry through labor disputes, so it turned to organized labor for aid in stabilizing conditions, and Labor Adjustment Boards were established for the settlement of all disputes. It would have been impossible to have negotiated with each individual manufacturer and each manual worker. These agreements made by the Government with associations of manufacturers and with organized labor resulted in a greater industrial output than any one had believed possible. Organization is the foundation of modern civilization and is proportionate to the degree of civilization attained by a people.

There is such a thing as "labor capital" just as there is "cash capital." There is the difference between the two, however, in that "labor capital" cannot be separated from the individual possessing it. When those having cash capital began to organize into corporations and demonstrate the value of such co-operative action, it was natural that "labor capital" should seek to benefit in the same way by the formation of trade unions. It is just as absurd for employers to say they will not deal with trade unions as it would be for the workers to say they will not deal with corporations. Both forms of organization can be of great good or of great harm. It is not organization, no matter how large, that we wish to destroy, but merely the predatory use of the power gained through organization. In the past, too many employers' associations and too many unions have been organized as purely fighting machines. They have been like two standing armies facing each other, each waiting to resent an aggression by the other. The result has been what one might expect, i. e., the aggressive act has in time been made. Each side has often acted without thought of the welfare of the industry as a whole and rarely of the welfare of the nation.

The world moves on without regard to personal preferences and those who stand in the way of any well defined development, instead

of trying to direct its course are sure to be left behind in the race or are crushed out. Democracy means the collective action of the citizens. Why should we expect such collective action to be limited to political questions only? Conditions of industry affect as vitally the lives of our people as does their political status. One cannot therefore, with impunity, deny the right of collective bargaining to the workers. While the stability of a democracy depends upon the average intelligence of its citizens, its progress is much influenced by the wisdom of its leaders. We talk too much these days about our rights and think too little about our obligation. We cannot separate "rights" or privileges from obligations and responsibilities. They are the two halves that make the complete whole.

National labor leaders must take the responsibility of leadership and see to it that the local organizations accept the policies laid down by the national body, and abide by the agreements made by their national officers. Let me say here that every National Trade Union having an agreement with the Government during the war carried out that agreement to the letter, and that where, in a few instances, local bodies under unwise and radical leadership attempted to violate an agreement, the National officers invariably ordered their members back to work and when necessary, threatened to take away the local charters. There must not be the benefits from organization unless there is a willingness to accept its responsibilities. Local unions have had too much local automony and local officials have been allowed too much power.

On the other hand, the employers have been slow to realize that the wise handling of the human problem in labor is more difficult than the technical problems of manufacture and have left such matters to subordinates. Many foremen seem to think it more important to maintain their authority than to increase output. Few seem to realize that it does not require much suspicion of unfair treatment or unrest among their workmen to cut down the output of the individual workman and thus, where large numbers are employed, to change a profit into a loss. To get the best out of human beings is much more diffcult than getting the best out of material supplies. The detail application of labor policies should not be left to subordinates, but should be in charge of a member of the firm or one of the highest paid and best trained officials of the company.

At least half the hours a person is awake are spent in the shop. The conditions under which he spends these hours have a vital effect upon the welfare of himself and family and it is only natural that he should demand the right to be consulted as to matters of so much importance to him.

A method that we found most serviceable in the shipyards during the war was provided through a general shop committee made up of the chairmen of the various craft committees in each yard. Each skilled craft within the shipyard elected a craft committee of three members. In this way a dispute that concerned only one craft was kept within that craft for settlement and only such matters as concerned more than one craft came to the general shop committee. The craft committeemen were elected by secret ballot and every worker was guaranteed the right to vote without regard to his membership in a union. Naturally, however, those elected were, in a great majority of cases, union members, business agents and employers. No one having the right to hire or discharge, or who had a pecuniary interest in the work of the men under his direction was allowed to vote for craft committees. The best results were obtained where these craft committees were given responsibilities and dignity by the management. Where they were given a room and definite hours for meetings and where they were not only allowed but expected to handle such questions, as tardiness, slacking, etc.

Through such committees the management can place before the individual workmen some of the problems of the industry and show them their relation to such problems. The men can often thus be made to see that all decisions are not purely arbitrary but are related to and dependent upon larger questions, often outside the control of the particular firm. Shipyard owners as well as their employees often came to Washington to protest against rulings of the S. L. A. B., but after thoroughly discussing the rulings with them and showing them the conditions in the industry outside of their particular plant, and also the relation of their industry to other war work, they were generally fairly well satisfied. Frequently we would immediately acknowledge that a particular ruling was a hardship upon them and would, after having shown them the National problem, ask for their solution of the problem. In many cases they could offer no better ruling and under such circumstances went away perfectly satisfied to accept the particular hardship.

Every employer, no matter how smoothly his own business may run, is vitally affected by the acts of his competitors. This is as true of his labor situation as it is of his other business relations. It is therefore necessary, not only to have organized dealings with his own employees but to organize these relations throughout the industry, or at least within his competitive district. For this purpose it is essential for the employers to have a well disciplined association that will enter into agreements with the National officials of the labor unions. These agreements should fix the minimum wages and hours and conditions of employment for all members of the association or district. Such matters should not be left for individual plant settlement if industry is to be stabilized, but employers should be left free to employ individuals at rates above the minimum for special proficiency or special work.

By such district agreements industry can be stabilized as to wages and hours and the labor "turn-over" reduced. Fair-minded employers would be relieved of the competition of those willing to "sweat" their workers, for with wages and hours standardized, success will depend upon the efficiency of management and equipment. Real skill in management would then have the broadest opportunity to display its ability freed from unfair competition.

One of the greatest causes of the excessive labor "turn-over" during the war was the indiscriminate bidding of employers for labor. Until a uniform wage scale was put into effect in all shipyards on the Atlantic and Gulf coasts and Great Lakes, the constant shifting of labor back and forth between yards was destructive of all efficiency.

I wish to repeat that the shop committees must not be regarded as a substitute for the union. The employers, through their associations should agree with the National Unions on the larger questions, such as wages and hours. Outside of these general questions there are many local difficulties that can be cared for by the committee system, especially the detailed application of any agreement to a particular establishment. If the prevailing spirit of unrest is to be kept within safe limits, it must be given an opportunity of expression under sane, conservative leadership, such as is afforded through the inter-national leaders of the trade unions. The industrial disturbances that are now taking place in England are due to the fact that the strikers have taken matters into their own hands and in opposition to their national leaders, but at the instigation of the shop committees or local leaders. The same is true in Seattle where there are thirty thousand men on strike in the shipyards. Nothing but discord and anarchy results from the independent action of shop committees or local unions. The National Unions like the National Association of Employers, can view policies from a National standpoint. They have greater responsibilities and therefore give all questions more careful thought before acting. Local organizations cannot long survive if they act without the approval of the National bodies. It is therefore of the utmost importance to strengthen the hands of the responsible Trade Union officials. Otherwise we will have disorganization which will be taken advantage of by self-seeking radicals.

There are two points I wish to emphasize to a body of employers such as this: First, to urge upon you the necessity of taking an active interest in your association and not to leave the formulation of policies to the men who are the most aggressive and most persistent. Do not say "I had nothing to do with formulating a particular policy; I do not believe in it and therefore will do as I please." Take a real part in your organization. My second point is to be loyal to your fellow members and earnestly try to interpret in a fair spirit all agreements made with organized labor. I have talked with many employers, members of different associations, and almost invariably their complaint is that their fellow members do not abide by the spirit of the agreements made. By some technical interpretation, they seek to obtain special advantages for themselves. The greatest difficulties the Ship Building Labor Adjustment Board has had to meet, have been where employers have paid more than the scale provided in order to attract men from other yards, or with the employer who tried to place as many as possible in the lowest paid class. If the members of the employers' associations were as loyal to their organizations as the men are to the trade unions, there would be a much better chance of stabilizing industry. The present situation in Seattle is 60% the fault of the selfish employers who violated all orders of the S. L. A. B. and the Emergency Fleet Corporation by paying wages far in excess of the scale authorized, and 40% the fault of radical local leaders who thought themselves strong enough to defy the national officials of their unions.

Both employers and workers must give more thought to the unit cost of production. Low wages do not necessarily mean low costs. Low unit cost is more a question of efficient management than the wage scale. Given the same wage scale in all shipyards, the cost per ton of ships produced varied as much as 200%. The best guarantee of low cost production is the right spirit among your workers. No one can do his best if he feels he is being taken advantage of. One of the greatest benefits derived from the shop committee method of handling labor questions, is that it affords a prompt means of settling petty grievances, for delay only results in the difficulty being magnified. An imaginary grievance needs just as prompt and careful attention as a real one. We have all seen the trouble an imaginary illness can create and the same is true of an imaginary grievance.

Finally an adjustment Board should be provided by agreement between the respective organizations to which all questions not settled by the shop committees and management could be referred for final adjudication, and no strikes or lockouts permitted until the adjustment board has acted or failed in agreement.

With properly organized shop committees, for the handling of plant questions, with agreements between well organized employers' associations and national trade unions as to wages, hours and conditions of employment, and with an adjustment board, to act as a final court, an orderly method will be provided for the removal of much of the friction in industry and the peaceful settlement of all questions. The smoothness with which any plan will work will depend on the sincerity of the parties involved and the extent to which a real co-operative spirit is displayed.

If Not a League of Nations—What?

By OSCAR S. STRAUS

THE most colossal was in all history, after four and a quarter years of unparalleled ruin and slaughter, has been won by the combined democratic nations.

Is it conceivable that the statesmen of the victorious nations will be so unwise as to reinstate the errors of the past and show themselves incapable of translating their victory in war into victory for greater security for world peace than existed before the war began, and because of the existence of which Germany was able to project the war?

That is the all absorbing question which occupies the foreground and the problem which the Peace Conference about to be assembled at Versailles will have before it for solution.

The most significant result of the victory in this war is that for the first time in history the dominant power of the world is in the control of the free nations, and to them is given an opportunity to enthrone Right, not as the servant, but as the Master of Might, to be the arbiter between nations.

So as to make this new order effective we must give to Right the mechanism or institutions whereby she can assert her claims and enforce her judgments.

The failure to accomplish this result means a reinstatement of the age-long pre-war conditions of competitive armaments, with the world divided into two groups of militant camps, each by secret machinations extending spheres of influence over the Balkan and as well as over the ten or more mid-European nations to be carved out of the dominions of the Romanoff, Hohenzollern, and Hapsburg autocracies. Instead of making the peace of the world more secure it will be rendered far less secure than before the war began.

A WORLD LEAGUE OR BALANCE OF POWER

A World League has been an age long dream and a prophesy. The Balance of Power was a mechanism of the Congress of Vienna following the Napoleonic upheaval of Europe, in order to make autocratic power more secure in utter disregard of the rights of the people, their national sympathies and racial affinities.

It was followed by the Holy Alliance which under pious phrasing was a league of autocratic sovereigns to check and suppress the democratic aspirations of the people of the world.

A League of Nations as outlined by President Wilson, Lloyd George, Lords Cecil, Grey, and Bryce, by Taft, Bourgeois, and a host of others, has just the opposite purpose—to unite the democratic governed nations upon a basis of international right, to compel them to adjust their differences by conciliation, mediation, and in the courts of law.

The foundations of a League of Nations are already laid, cemented by the blood and suffering of our sons fighting shoulder to shoulder in the Argonne forest and in the trenches of victory. The tide of war which ran so strong against the allied nations was only turned after the Balkan and Gallipoli collapse, the Italian disaster, and the Russian breakdown, by the creation of a General Staff and a Supreme War Council.

Lloyd George himself bears testimony to this, as he appeared before the Council and made an all but threatening appeal to merge "their individual idiosyncrasies for a common end."

Objections are made by learned Senators and others that for America to enter a League of

OSCAR S. STRAUS

Nations would conflict with and abrogate our traditional policies as laid down by the Fathers of the Republic, embodied in Washington's Farewell Address, against entangling alliances, and by Jefferson, Madison and Monroe, respecting our continental policy as enunciated in the Monroe Doctrine.

If this were true, it would be unfortunate, but it is not true. Besides, each generation in a progressive nation, if it would escape the fate of China, must face the problems that confront it with the same wisdom and vision that the Fathers confronted the problems of their day.

For America to enter into such a grouping of Powers as referred to by Clemenceau and share in reconstructing the system of "balance of power," would constitute an entangling alliance, but to unite with the free and constitutionally governed nations, and with other nations as may hereafter qualify as such, for the adjustment of international differences on a basis of Justice and Law, as distinguished from a basis of militarism and war, is not an entangling alliance, but a concert of civilization against the rebarbarization of the world.

Washington viewing the conditions of the world in his day and the physical remoteness between this Continent and Europe, stated in his Farewell Address, that Europe had "a set of primary interests which to us have none, or a very remote relation."

He could not have foreseen that a war should break out on the Continent of Europe which would have for us a most vital interest, which involved America's right to the freedom of the seas, more than that, which involved her constitutional rights as a free nation.

Had Washington lived, who doubts but that he would have approved our entering the war and associating our might and power, money and men with the Allies in winning the war for liberty and democracy throughout the world no less than in America? That being true, is it not fair to assume he would approve our entering into a League of Nations to perpetuate that victory in making more secure the peace of the future?

As to the Monroe Doctrine, the President said: "I am proposing as it were that the nations should with one accord adopt the doctrine of President Monroe as the doctrine of the world; that no nation shall seek to extend its policy over any other nation or people, but that every nation should be left free to determine its own policy."

The objectors such as Senator Reed of Missouri, say: "What, do we propose to let the nations determine for us, our Asiatic immigration policy, our tariff, and other like policies?" The answer is, certainly not, no internal policy except the question of a reasonable reduction of armaments comes within the purview of a League of Nations which will seek to safeguard, and not weaken the right of self-determination of the separate national units constituting the membership of the League.

In the old world plan the relationship of nations was anarchistic as modified by entente alliances which in no way elevated the moral standard of that relationship; on the contrary they served to consolidate the baneful influence of anarchistic areas instead of creating a righteous concert among the nations.

THE CAUSE OF WAR

The motives underlying the causes of war divide themselves into two classes, defense and aggression. They are sometimes united, and often purposely beclouded.

It was Bismarck's expressed method always to harry a prospective enemy against whom Germany had planned to make war, so as to compel that enemy to be the aggressor. By such means Germany invariably claimed to be fighting a defensive war, and waived other nations aside. All her aggressions since 1864, and ending with the conquest and annexation of Alsace-Lorraine, were accomplished under this plan.

In the furtherance of this method under Germany's guidance Austria attempted the same tactics in her war upon Serbia. When Germany was appealed to to use her influence with Austria to adjust her differences with Serbia by peaceful methods, she waived aside the request, saying that it was an affair exclusively between Austria and Serbia.

I refer to these well-known facts which everybody is familiar with, to illustrate a condition that lies at the root of the evil.

The relationship of nations, especially in the launching of war between any two of them, should be put on the basis of criminal law, as distinguished from civil or municipal. In the civil law when two parties have a controversy in regard to their rights they go to the court or adjust it in their own way. On the other hand, if a person commits a criminal offence the crime is considered by all civilized states as a crime against the state, and the people of the State in their collective capacity try the criminal and inflict the punishment.

The policy that will control the world under a League of Nations will rest on the basis of the

(*Continued on Page* 9)

Why Russia Is a Vital World Issue

By HERBERT L. CARPENTER

(Mr. Carpenter is Chairman of the Executive Committee of the American-Russian League, a national body representing labor, farming, business, educational and social forces of the country, including several prominent members of the Senate and Congress. The League has co-operated with the government and Russian groups in dealing with the Russian situation.)

AS the Peace Conferences of the Allied Nations in Paris develop, the whole world is beginning to appreciate the significance of the great unsolved problems in Russia, and the need of learning some of the real facts about the causes and developments involved in Russia's invaluable contribution to the Allied Cause and in the struggle of her people for real freedom.

Why has Russia been brought to her present terrible condition? Why is there no precedent in history to guide the friends of Russia in their efforts to help her, or to indicate the probable outcome of the great struggle now going on throughout that land? What has brought about almost complete chaos in the life and government of that nation and a continued and constantly changing conflict between Russians of the various political groups and districts of Russia and Siberia, as well as with their foreign friends and foes? Why, after years of international interest and effort in behalf of Russia is there today a general and almost unreconcilable difference of opinion as to the justice and propriety of our past and present efforts to help the Russians help themselves establish an ordered, representative Government, and rehabiliate their economic life and save and educate their people.

Prussianism in Russia and German propoganda and money throughout the world against a free Russia were and are still the greatest enemies of the Russian people.

Up to this time the perplexing and complex situation involving Russia has been the subject of world-wide political intrigue and it would seem as though every disintegrating and destructive force known to man has had a hand in bringing about the present terrible chaos and starvation in Russia.

The time has arrived when the success of the world principles of justice and freedom, for which this country and the other Allied Nations entered the War, will largely depend upon a prompt and definite world understanding of the facts about Russia and upon united and effective action to save her people. Before an enduring world peace can be arrived at, the facts must be known and faced; the true developments of the past few years must be known; the real enemies of Russia must be driven from that land by the Russians themselves, and the destructive influences of Germany and her agents in Russia and throughout the world must be overcome through the combined efforts of all the Allies. The same world-wide, German-inspired propaganda is still desperately at work to befog the true issues at stake in Russia, and to prevent the 180,000,000 peasants, workers and other people of Russia from gaining their permanent and untrammelled freedom.

When War was declared by Russia against Germany, Austria and Turkey, she entered the conflict on a basis the magnitude of which was far beyond her financial, food and economic resources. Partly through misjudgment and largely through enemy intrigue, millions of vitally needed workers were mobilized into the Army beyond the demands of war or Russia's ability to maintain them, with the result that from the very outset Russia became crippled in her economic and productive strength.

HERBERT L. CARPENTER

For many years prior to the War, Germany and German agents had penetrated the Government and economic life of Russia and were well advanced in a scientific plan of intrigue to weaken and destroy the power of Russia in order that Germany might more readily get control of the great man-power and resources of all Russia, and turn them to her purpose of world domination.

With these conditions to face, with strong armies approaching from the West and South and already seriously undermined by her enemy from within, Russia fought one of the greatest struggles in all history against terrible odds. During the years of 1914, 1915 and 1916 Russia suffered unprecedented losses and sacrifices in the Allied Cause, which extended into almost every family throughout that great land. The noble struggles of the inadequately equipped and trained Russian Armies against the Germans and Austrians cost Russia greater losses than any other nation has sustained throughout the great War. She saved France and the Allied Cause untold losses and sufferings, and this, if for no other reason, must command for her people the help of the world at a time when she is weakened beyond self-preservation and as long as she remains the victim of the powerful, scientific, political and economic intrigue of the hundreds of thousands of German agents still striking at the vitals of Russian life and freedom.

The Russian Revolution of March, 1917, probably the greatest and most important in the history of the world, the delay of the Provisional Government to call the Constituent Assembly for the creating of a representative Government, the disorganization of the Russian Army, the Bolshevik Revolution of November, 1917, and the almost complete breakdown of the food supply, transportation and distributing systems, industries and all branches of the Government, have left the entire country in a condition of chaos and suffering and opened the door even wider to the sinister plans of Germany to force complete dissention and anarchy to a point where the Russian people will be compelled to turn to her German enemies for help, if th United States and the other Allies do not sen it quickly. It is evident that the German psy chology did not anticipate the Prussian Militar defeat in their plans in Russia, but it is equall evident that the control of the people and re sources of Russia was and is Germany's mos coveted prize and will be the last influence whic the remaining power of Germany will relinquish Recent developments indicate that the political scientific and economic forces of Germany ar still desperately at work to save the future o their country, through the carrying out of thei plans for the control of Russia.

Much has been said of the Bolshevik activitie in Russia and there seems to be much differenc of opinion as to their policies and activities o the past months. Regardless of any differences of opinion as to what Bolshevism in Russi stands for or represents as a popular force, ther is no question of the official facts concerning th acts of terrorism and mass-murder and the de structive political intrigue of many of the Bol shevik leaders and their German associates. I addition to any question of these acts of terror ism, the official avowed declarations and order of these leaders indicate that they do not want peace, but declare war throughout Russia and the world against any non-Bolshevik powers, s long as such war may have any probability of success. Such German-inspired leadership is a menace to the peace and freedom of Russia and of the world. Any general condemnation of the millions of peasants and workers of Russia who may have been forced to submit to the terrorism of a few leaders through their control of food and arms, or the failure to send help to such people would be most unfortunate. As the detrimental influences of the Germans are driven out of Russia and an opportunity is given to her people to select a representative Government to suit their own needs, and as relief in food, materials, and friendly protection from their enemies are sent to them, conditions in Russia will soon change for the better. Germany has been beaten in the West and on the Sea, but the cruelly unjust and yet intelligent and efficient efforts of the Germans in Russia have not yet been defeated. The machinations of the Prussians in Russia will go down as one of the greatest unpardonable crimes in modern history and the Great War will not be fully won until these crimes in Russia and their influence have been permanently destroyed.

The framers of the Armistice of November, 1918, realized the danger and character of the present German influences in Russia and provided in that armistice for the withdrawal of German troops and agents in the territories of Russia, Roumania and Turkey; it provided for the abandonment of the treaties of Bucharest and Brest-Litovsk and of the supplementary treaties, the restitution of the Russian and Roumanian gold yielded to the Germans or taken by that power, to be delivered to the Allies in trust until the signature of peace; the surrender of the Black Sea Fleets and access to the Baltic Sea, Danzig and the Vistula River, into Poland and Western Russia.

The carrying out of the terms of the armistice in Russia is vital to Russia, as well as to the Allies, and seems a pre-requisite to any effective relief to Russia by the Allies. Substantial progress has already been made and with the co-operation of all of the Allies and the Russians themselves to that end a great step will have been accomplished towards the solution of the Russian question.

Compulsory Health Insurance Legislation

ITS PRESENT STATUS SURVEYED AND LABOR'S POSITION OUTLINED

By WARREN S. STONE

GRAND CHIEF, INTERNATIONAL BROTHERHOOD OF LOCOMOTIVE ENGINEERS
CHAIRMAN SOCIAL INSURANCE DEPARTMENT THE NATIONAL CIVIC FEDERATION

WHILE President Wilson is endeavoring to secure freedom and individual liberty to the peoples of the world a nall group at home is striving to do away with ıese rights and privileges which have made merica the haven of the down-trodden, oppressed races. In the endeavor to have enacted ɔmpulsory health legislation, misrepresentation the attitude and desires of labor has been ıe of the tools employed. During the past two inters it took the form of bills for uniform ate legislation introduced wherever legislatures ere in session. Comment upon those two bills nd the one now offered for adoption in New ork State therefore covers the situation in so ır as the efforts to put through these destructve measures are concerned.

The first nation-wide effort in 1917 was anwered by the Social Insurance Department of he National Civic Federation in three ways:

(1) A memorandum was prepared by its Legislative Committee composed of Dr. Lee K. Frankel, Chairman; A. Parker Nevin (National Association of Manufacturers); and Hugh Frayne (American Federation of Labor), showing the weaknesses, shortcomings and dangers in the proposed legislation as represented in the New York Senate Bill No. 69, introduced by Mr. Mills, January 15, 1917. This critical analysis was distributed in all states where similar bills were introduced; where state constitutional amendments were under consideration; and where state commissions were studying the question.

(2) There was incorporated in the foregoing document the following resolution:

(*Offered By Timothy Healy,* President International Stationary Firemen's Union.)

WHEREAS, a nation-wide propaganda is at present being carried on in favor of Compulsory Health Insurance by the several states and the Federal Government; and

WHEREAS, the project is made to rest largely upon mere assertions and broad allegations regarding the unsatisfactory economic and health conditions of the country, which assertions and allegations are false and seriously misleading in essential matters of vital concern to all wage earners and the nation at large; and

WHEREAS, in support of this propaganda it is asserted and alleged that the social and sanitary progress of Germany and other European countries which have adopted compulsory health insurance has been far in advance of the corresponding progress of the United States, which is wholly false and seriously misleading, since, as a matter of fact, more pronounced progress in these directions has been made in the United States during the last quarter-century, and the social and physical condition of American wage earners is unquestionably superior to that of the corresponding labor element of European nations, as best indicated by the recent announcement of the United States Census Office that during the year 1915 our general death rate was the lowest on record, which may safely be accepted as the equivalent of a minimum rate of serious sickness prevailing among our wage earners at the present time; and

WHEREAS, such a system of compulsory health insurance would impose needless economic and other burdens and duties upon employers, employees and the general tax-paying public; bring about an entirely unnecessary enlargement of the police powers of the states; establish new and inquisitorial health functions to the serious disadvantage of the future progress of preventive medicine and the practice of medicine as a healing art; and

WHEREAS, voluntary agencies serving social insurance purposes, such as sick benefit funds of trade unions, or establishment benefit funds, or fraternal insurance societies, or group insurance, or other related forms of voluntary thrift, offer adequate facilities for further development in the future; and

WHEREAS, compulsory health insurance is strongly opposed by organized labor, which rightfully considers such a measure to be a menace to its economic interests and a needless interference with its personal freedom;

RESOLVED, That the Social Insurance Department of The National Civic Federation, composed of representatives of organized labor, organized industry and the interests of the general public, emphatically declares itself opposed to the contemplated legislation with reference to compulsory health insurance, as inimical to the best interests, present and future, of the workers of the nation.

(3) There also was circulated a full report of the proceedings of the January 22, 1917, Social Insurance Session of the Annual Meeting of The National Civic Federation, giving the attitude of organized labor and employers—the two elements principally concerned—against such "class legislation."

Despite the efforts to bewilder legislators and the public by claims to the contrary and by local efforts to dissuade labor, there has been no substantial change in its attitude of opposition.

While space does not permit publication of the various resolutions adopted by the American Federation of Labor year by year and reaffirmed at its last annual convention the attitude of its official mouthpiece, President Samuel Gompers, as set forth so recently as the January, 1919, *Federationist,* the organ of the A. F. of L., appears in the following statement made by him to the members of a committee appointed by that body to investigate social insurance. He said in part:

> There are many of our people, including workmen, who look to the Government of our country to do the things which seem so easy for the Government to do and which they imagine should be done by the Government. They do not recognize the pitfalls and the dangers which are entailed by conferring upon the Government the function of doing these things. To my mind, it is a grave danger to place in the hands of the Government the powers which would necessarily result from governmental compulsory health insurance with all the powers vested in the Government incidental to and in the enforcement of health insurance.

It may be of interest here to state that my own organization, the Brotherhood of Locomotive Engineers, at its last convention in May, 1918, unanimously adopted the report of its committee on compulsory health insurance, given below:

We, the Committee appointed to investigate the case of State compulsory health insurance, after giving all correspondence pertaining to this case due consideration, report the following:

First—We do not approve of any legislation that would compel our members to take out health insurance.

Second—We recommend that the Grand Body go on record as opposing any State legislation compelling our members to take out any such insurance, and that our State Representatives be notified to this effect.

We believe that if such compulsory legislation were enacted it would be injurious to our Organization.

(Signed) J. W. Gladden, Chairman Div. 160; H. E. Cowles, Chairman Div. 155; E. S. Pritchard, Chairman Div. 159; Chas. P. Miller, Chairman Div. 251; Chas. Hankins, Chairman Div. 784.

Advocates of pending compulsory insurance legislation link health insurance (no mention of "compulsory") with workmen's compensation as its "twin brother", confusing the layman who is earnestly desirous of aiding labor by helping to ameliorate conditions. Far more misleading was the published statement of a well-informed workmen's compensation state official in a recent issue of the Sunday *New York Tribune* when, in advocating compulsory health insurance, he stated that "most employers opposed the enactment of compensation laws" and argued that employers' opposition to "health insurance" is equally unmeritorious. But "most employers" did *not* oppose the enactment of compensation laws. In New York, for instance, employers generally favored the original Wainwright-Phillips bills. All that employers opposed was the movement in favor of state insurance monopolies. This aspersion upon employers is not warranted nor in accord with facts as shown by records of the Workmen's Compensation Department of The National Civic Federation where employers and representatives of labor, beginning in 1908, worked together always favoring some equitable form of compulsory workmen's compensation, holding the industry liable. An employer, Mr. August Belmont, was and is chairman of that department.

The trickery of the group of social reformers who are attempting to foist upon labor a pernicious system of compulsory health insurance was evidenced when effort was made to convey to the public the impression that Mr. Samuel Gompers had changed his position. This was done during his absence in Europe where he was rendering patriotic service last August. They revamped an address of Mr. Gompers published in the Official Bulletin of the Committee on Public Information and issued it as a press *statement of their own organization. This "made over" speech, originally addressed officially to members of the Committee on Labor, Advisory Commission, Council of National Defense, contained the inserted deduction that "this was regarded as the opening way for the early adoption of social health insurance" (again no mention of "compulsory" which that organization, the American Association for Labor Legislation, advocates). This was quite evidently a sinister, deliberate effort to mislead. Fortunately, a good trade unionist was at hand to protect the position of Mr. Gompers. His assistant in the Committee on Labor, Mr. Matthew Woll, President of the International Photo Engravers' Union, promptly issued a denial.

All admit that there is need for further development of voluntary forms of social insurance and improvements in methods and in state regulations, but such schemes should be in con-

*A photograph copy is in our possession.

formity with the principles of our Government and the spirit of our people. Labor will not welcome an undigested millennium cure-all.

The argument that compulsory health insurance will prevent sickness is offset by evidence to the contrary and by pleas for sanitary working conditions and prevention of illness through better health regulations and public health education.

As persistently as were efforts made throughout the country to secure the adoption of compulsory health legislation did the Social Insurance Department of The National Civic Federation circulate facts as to its true meaning. The general situation today in the main is encouraging.

In California, the referendum submitted to the people, for a constitutional amendment permitting such legislation, was defeated by a large majority vote.

In Massachusetts, several attempts to incorporate provisions for compulsory insurance at the recent Constitutional convention failed. Also the Commissions appointed to investigate the subject reported adversely.

In Illinois, the Sickness Insurance Commission, appointed a year ago, has not yet made its report. A campaign by the proponents is being waged at present in that state.

In Connecticut, a commission has held public hearings and it is understood will report against the proposition at this session of the legislature.

The Wisconsin Legislature has just defeated a bill providing for compulsory health insurance and has gone on record as willing to strengthen the existing health agencies.

The Ohio Commission which only began its work seriously in the late fall has presented a majority report recommending some form of compulsory insurance.

An analysis of the Davenport bill, now before the New York State legislature, has been made by P. Tecumseh Sherman, attorney and social insurance expert. His honesty and ability are recognized and honored by all elements. Mr. Sherman was a member of the committee having as the representative of the wage-earners, J. W. Sullivan, its Chairman; and as the representative of employers, Arthur Williams, which studied the national health insurance system of Great Britain in 1914, before the outbreak of the world war, reporting against it for the United States.

P. TECUMSEH SHERMAN CRITICISES NEW YORK BILL

Upon the pending legislation in New York, Mr. Sherman says:

"New York Senate Bill, Int. No. 73, 1919, introduced by Mr. Davenport, 'To Conserve the Human Resources of the State by Establishing a System of Mutual Health Insurance Funds under the Supervision of the Industrial Commission,' which is almost identical with Senate Bill, Int. No. 496, 1918, by Mr. Nicoll, is better than the Mills Bill of 1917, which was criticised and opposed by The National Civic Federation, in that it is free from the taint of poor-relief which characterized that earlier measure and emphasizes medical care more and pecuniary benefits less. Nevertheless, in my opinion, it is altogether objectionable and should be strenuously opposed.

"The objections to this measure are so multitudinous and fundamental or technical that it is difficult to present them with brevity. And this difficulty is augmented by the fact that the bill merely outlines a plan, leaving many of the most essential working details unformulated. But I will try to indicate some of the objections to it as briefly as possible.

"Briefly summarized, this bill would empower and direct the New York Industrial Commission to divide the State into numerous districts, none to contain fewer than 5000 insured employees, to organize a local sickness insurance fund and, in its discretion, any number of trade funds in each district, and to *compel* all 'employees' (except casual, domestic, and some public employees) and their employers to join the local or appropriate trade fund, subject, however, to the exception that membership in an approved establishment fund would be permissible as an alternative. Each local and trade fund, to be composed of the employees assigned thereto and their employers, would then organize, elect a board of directors, and, subject indefinitely to the approval, direction and control of the Commission, would adopt a constitution and raise contributions from its members sufficient to provide the benefits promised in the bill. The contributions would be payable one half by the employers and one half by the insured employees (except that for the most lowly paid employees the employers would pay two-thirds or all), and would be levied at rates sufficient to provide the benefits, the expenses of managing the funds, some reserves and a common guaranty fund. It is provided that the rate of contributions may be varied according to the sickness hazard of a trade or establishment, *but not according to the physical condition of the insured.* Within each establishment the contribution for each insured employee would be in proportion to his wages; but as a basis for contributions wages may not be considered to exceed $12 per week.

"The benefits promised are: (a) Medical benefits, consisting of medical and surgical treatment, and nursing attendance, when and as needed by an insured employee or any dependent member of his family, but for not to exceed 26 weeks in any one year in case of disability; and also all necessary medicines, medical and surgical supplies approved by the medical officer of the fund. (b) Hospital treatment for an insured employee, when approved by the medical officer of his fund, plus pecuniary relief to dependent members of his family while he is in the hospital. (c) Ordinary dental treatment for an insured employee. (d) Appropriate medical and surgical care during and after childbirth for insured women and the wives of insured men, plus pecuniary relief to insured women during eight weeks of confinement. (e) A cash benefit of two-thirds of wages (but not less than $5 nor more than $8 per week) payable to an insured employee, if disabled, beginning on the fourth day of disability and continuing during disability but for not to exceed 26 weeks in any one year. (f) A funeral benefit of $100 upon the death of an insured employee.

"As will be seen from the foregoing this bill provides for *compulsory* sickness insurance for practically all 'employees'. It will be well, therefore, to run through the elementary objections to compulsory insurance.

"(1). *The danger from an increase in bureaucracy.* This bill would add about a thousand political 'jobs' to those already existing, and would give the Industrial Commission unprecedented power and authority over the disposition of the incomes and earnings of employees and employers.

"(2). *The danger of communism.* If the state may thus decide how much of his income an individual shall set aside for sickness, place that amount in a common fund and then distribute the proceeds of the fund among the contributors in accordance with needs, there is no reason in principle why it should not provide in the same way for invalidity and old age, for widows and orphans, and for the food, clothing and housing of the people generally. In other words, this bill would be a step towards complete communism.

"(3). *The danger of personal tyranny.* Under this bill every employer *must* act as collection agent and accountant for and under the orders of one or more insurance funds, and *must* submit his payrolls to their inspection; and every employee *must* submit to have his wages 'docked' as may be decided by others for use in ways he may most heartily dislike. If measures like this should be multiplied we would all become helots of a political bureaucracy.

"(4). *The danger of weakening individual initiative and individual and family responsibility.* Clearly, if the State is to see to it that every person in need is to be well provided for individuals will have little motive to exert themselves for the purpose of making provision for themselves and their families. It is absurd to contend that there is not a serious social danger involved in thus shifting natural responsibilities.

"(5). *The economic danger from impositions.* Compulsory insurance herds into the same insurance funds along with the 'good risks' not only the bad physical risks but also the bad moral risks, from whom malingering and impositions are to be expected, and gives them legal rights to benefits on the same terms and conditions as the good risks. The inevitable consequence is that sick funds are burdened with the support of a class of parasites who prefer insurance benefits to work and wages. That is a demoralizing burden to impose upon the thrifty and industrious working people.

"(6). *The medical danger.* Compulsory sickness insurance brings the practice of medicine into politics and the effect on its quality certainly is not good.

"Compulsory insurance, therefore, is a dangerous medicine, to be resorted to, if at all, with reluctance and even then to be restricted in scope to those classes only by whom it is positively needed. Even an autocratic German authority —von Posadowsky—admits that to apply it generally would 'paralyze individual providence and the ability to care for one's self. Nothing could exercise a more harmful influence upon the character of a people.' And the same German authority holds that it should be restricted to apply only to 'the working people who are not self-sufficient, who work for others and feel incapable of caring for themselves.' In Germany nearly all wage-earners are in that low class. But certainly all 'employees' in New York are not. Therefore, even from the viewpoint of those favoring compulsory insurance, this bill is objectionable in applying compulsion to classes able and fit to care for themselves, instead of restricting its application to the submerged.

LIBERTY OF CHOICE DENIED

"But this bill goes far beyond mere compulsory insurance. It contemplates that the employee shall be compelled to insure in the particular sick fund prescribed to him by state officials. That would involve the suppression of all liberty of choice by the working people, a political monopoly of the insurance to the exclusion of all competition, the sacrifice of nearly all existing means of sickness insurance for the classes covered, and a serious risk of a collapse of the experiment, resulting in conditions far worse than they are now.

"Obviously a safer course would be to sacrifice no existing means of insurance but to allow a choice between all existing insurance carriers, regulating them as may be proper, allow other voluntary associations to be formed, and establish politically only such new organizations as may be necessary to fill gaps. Such is the program favored by the majority of the partisans of compulsory insurance at recent social insurance conferences and congresses. Why, for instance, should trade union funds and mutual benefit societies be barred from this line of insurance without a trial?

"This bill, therefore, is objectionable, not only because it resorts to compulsion and to compulsion in too broad a scope, but also because it would plunge headlong into the most radical, bureaucratic and least favored form of compulsory insurance.

VISIONARY PROJECT

"In this connection it should be emphasized at a state of general insurance cannot be rought about suddenly—in six months—by gislative fiat, as proposed in this bill. In Great ritain it was attempted to make health insurice general at once, by using preexisting inrance carriers; and the penalty was three ars of avoidable chaos and extreme dissatisction. In Germany the start was made on a all scope, using preexisting institutions as surance carriers, and the scope was gradually larged. But not for 30 years was it attempted extend the law to apply to farm and itinerant bor, and then only with special modifications itable to the new classes covered. But here is proposed to start in from the very beginng with entirely new insurance organizations d almost the widest possible scope. This ows that the bill is a visionary project, unlapted to practical ends.

THE NEEDY UNPROTECTED

"Although the scope of this bill is subject the objection of being too broad, as above plained, nevertheless it would still leave unotected large classes of the working people d those the very classes who most need the re of the State—namely, casual labor, those orkmen who have been more than seven weeks nemployed, those disabled by long continuing nesses, and those not disabled but needing nstant medical care. The last of these classes, is true, the bill does not expressly exclude om its benefits. On the contrary, it says that ey shall be admitted to insurance on the same rms as the good risks. But German experice shows that the sick funds would keep them t by persuading employers to refuse them nployment.

"This bill, then, although appearing to care r nearly all employees, would actually leave rge classes of the working people just as dendent as ever upon charity in sickness.

"In this connection, it should be noted that e self-sufficient working people ought to direct eir efforts in the line of thrift, savings, inrance, etc., principally towards providing for e greater misfortunes of life, i.e., long conued unemployment, long continued or peranent invalidity and premature death. Curnt medical care and ordinary short sicknesses n generally be provided for most efficiently, are other ordinary needs of living, out of rrent earnings, and do not often require inrance. It would, therefore, be a social mistke to treat a scheme for pooling the cost of rdinary, everyday medical care and the needs short illnesses, as social insurance, since it is ot true insurance at all because it lacks the sential element of providence for the future, d to over-emphasize it to the neglect of proiding against the risks of the greater misforines above mentioned. We should, therefore, rst take up the problems of unemployment, d of invalidity, old age and survivors' (life) surance, before 'fooling with' the comparavely unimportant matter of short sickness surance.

HIGH ADMINISTRATIVE COST

"Economically, I can imagine no scheme that ould yield a lower net return in proportion the cost than that which this bill contemlates.

"It may and undoubtedly will be argued that he proposed insurance could be administered or about 10% of the contributions because the erman sickness insurance societies are adminstered at about that rate. But the insurance arriers proposed in this bill would be more exensive to administer than the German carriers. nd the cost of administering the insurance arriers would be only a small part of the total cost of administering the insurance. In addition there would be the cost of supervision by the State, and the cost of collecting the contributions—which latter would fall principally upon employers. Speaking of the cost of collection, Sidney Webb, referring more particularly to the British law, says:

> Regarded as a means of raising revenue, compulsory insurance of all the wage earning population, with its elaborate paraphernalia of weekly deductions, its array of cards and stamps, its gigantic membership catalogue, its inevitable machinery of identification and protection against fraud, involving not only a vast and perpetual trouble for each employer but also the appointment of an extraordinarily expensive civil service staff, is, compared with all other taxes, almost ludicrously expensive to all concerned.

"And he goes on to estimate that the expense of collection would probably amount to between 20% and 25% of the revenue raised.

"It is true that this bill does not propose the card and stamps method of collecting contributions; but the cash remittance method it proposes would be equally if not more expensive. *Consequently the total expense of administering this plan of insurance may be estimated at somewhere between 35% and 45% of the contributions—although probably only 15% to 20% would be payable out of the contributions.*

BENEFITS QUESTIONED

"Moreover, the value of the medical service would be extremely low in proportion to its cost. The doctors would be heavily burdened with paper work, which would swell their charges far beyond what they would be merely for medical services. They would be more occupied with certifying to disability than with caring for health. And, as British experience demonstrates, the tendency would be for the panel physicians, working on contract and paid per capita or per visit, to restrict their true medical services to the most perfunctory consultations, to prescriptions and to the most ordinary treatments, leaving all special treatments, surgical operations, scientific diagnoses, etc., to be paid for extra or gone without. *That such a medical service would result in any net improvement in the public health is most improbable.*

"There is a point to be noted here in connection with the medical service, although it may appear somewhat out of place. There are those who believe that it would be of great social benefit if the people were subjected to medical discipline, somewhat as are soldiers in the army; and many of the public are led to believe that compulsory sickness insurance would be a step in that direction. But what is proposed in this bill would not. This bill does not require the insured to submit to medical examinations. It permits each insured to select his own physician and does not require him to follow even that physician's advice or directions. As British experience demonstrates, it would permit the continuance of vicious habits, without forfeiting the right to full insurance benefits during sickness due to such habits. It is true that the sick funds—if the Industrial Commission should permit—might make rules to the contrary. But no machinery is provided for enforcing any such rules. Nor could it be provided without increasing the cost of administration far above the level hereinbefore indicated.

"By the foregoing I do not mean to imply an opinion in favor of a medical despotism but merely to point out that the alleged advantages of such a despotism cannot rationally be claimed for the scheme of sickness insurance outlined in this bill.

QUASI-PAUPER MEDICAL SERVICE

"Now as to the amount of the contributions that would be required to carry out this scheme, in other words, the cost thereof exclusive of the expenses of collection falling on employers and the expenses of supervision falling on the State. There is no basis from which to make any reliable estimate of such cost, for the reason that there is no precedent of sickness insurance with any such liberal nursing, hospital, funeral and family medical benefits. From crude comparisons with foreign experience it seems possible that the cost might be kept down nearly to $35 per insured per annum (at present prices), if hospital and sanatorium cases and cases requiring surgical operations or treatment by specialists should be left to the care of free public and charity hospitals and clinics (as in Great Britain), if scientific diagnoses should be gone without or furnished free by a public health service, if home visits by the doctors should be limited to rare cases of extreme necessity, if the promised nursing service and provision of medical and surgical supplies should be cut to the bone, if isolated and itinerant workmen and those residing outside the districts of their respective funds, etc., should be largely neglected, and if a hard bargain should be driven with the doctors. On the other hand, if all the classes interested should be given what they would be led to expect and if the funds should truly pay their own way, the cost might reach as high as $150 per insured per annum. In practice it is probable that some sort of a compromise between these two extremes would be made, arriving at an average cost of somewhere about $45 per insured. But that would provide only a quasi-pauper medical service, far below the standards to which a large proportion of American employees are now accustomed, and with which service, consequently, they would never be satisfied.

"Almost nobody would be satisfied; and the membership of the funds would be split up into those demanding a better medical service at an approximately level rate of contributions per capita, into those demanding a better service but with contributions scaled in proportion to earnings, and into those demanding a reduction of the service in order to reduce the charge. Between these factions there would be continual contentions, supplemented by frequent appeals to the Legislature to amend the law as to the distribution of the cost and—as British experience indicates—for public grants in aid of this, that or another class of the insured not getting the promised benefits.

WOULD PROMOTE DISSENSION

"Another subject of contention would be the question whether the rate of contribution should be varied according to the special hazards of each trade or large establishment. Obviously those employed in the more healthful trades and establishments would be interested to favor such discrimination, whereas others would be opposed, and the issue would divide the members of each sick fund into warring factions.

"The foregoing do not by any means exhaust the causes of contention that would be created by this bill. Although it is proposed that the insured may each choose his own physician from a panel, yet specialists, surgeons, nursing associations, hospitals, etc., would have to be picked by the administrative authorities, leaving little if any choice to the insured individually. Improper influences would often enter into such selections and minorities would often have reason for profound dissatisfaction. German experience shows that one of the most bitter causes of dissension is the apparently innocent matter of choosing the hospitals.

"It is true that in voluntary associations great diversities of interests are generally reconciled and seldom interfere with harmony. But that

is because in voluntary associations the members are selected and bound together by some common ideals; whereas here it is proposed generally to herd together all or nearly all the wage earners within each district, of different standards of living, trades, races, religions and political ideals, regardless of the probabilities of agreement or disagreement. In the whole bill there is not even a suggestion of a safeguard for minority rights or interests.

STRIKES AND LOCKOUTS INEVITABLE RESULT

"Not only within but also without the insurance associations would this bill create novel causes of social dissension. There are various methods for the remission of and accounting for contributions by employers, some of which would be grievously burdensome to employers but easy for the insurance carriers, whereas others would be just the reverse. Surely there would be struggles and discontent on one side or the other over the choice. But the great cause of trouble would be the adjustment of the rate of charges by the panel doctors. The fixing of that rate would be a matter of collective bargaining between practically all employees in the State, their dependents and employers, on the one hand, and the doctors, banded and organized, on the other hand. If only the lowly paid wage earners were to be covered, it would be reasonable to expect the doctors to agree to some very low rate of charges. But with even the highest paid employees covered—i.e. nearly all the financially responsible patients except the capitalist and professional classes—the doctors would reasonably insist upon a fairly high average rate. But there would never be any mutually satisfactory voluntary agreement as to what should be such fair average rate; and continual disputes and frequent strikes and lockouts would be the rule, often necessitating coercive interference by the State in favor of one side or the other. Consequently, the rate of the doctors' charges would eventually become a matter to be fixed by the Government and fought over in general elections. In Great Britain, by catching the Government unprepared, the doctors won the first bout, imposing a rate of charges one-fifth greater than had been anticipated as the maximum, in return for a service so limited that it would be dear at any price. In Germany, on the other hand, the doctors have been ground down and kept perpetually discontented by hard bargains.

"It is difficult to believe that the practice of medicine would not be debased and deteriorated by such a condition, and that it would not be infinitely safer, socially, to keep the employment of physicians and their charges, as now, generally matters for individual rather than collective bargaining or agreement.

BILL INCOMPLETE

"I have said above that a multitude of details essential to the proposed plan of insurance are unformulated in this bill. Space and time forbid a presentation of them all, so I will content myself with three illustrations.

"It is provided that all 'employees'—with the exceptions hereinabove specified—shall be compelled to insure. But what is meant by an "employee"? Are high salaried railroad officials meant to be included? Probably not. But if so where and how is the line to be drawn with the statute silent on the point? On farms and in shops sons, daughters and other relatives often work for the proprietors, more or less regularly or intermittently, under all sorts of arrangements as to remuneration. Under what circumstances would such persons be deemed employees or not employees respectively? And what formula would be used to determine their rates of wages as the basis for contributions and sick pay? The bill is silent on these points. And yet these points would all have to be determined pretty definitely—by law and not by tentative rulings by the Industrial Commission—before the scheme proposed in this bill could begin to function anywise decently.

"It is provided that the proposed local and trade funds shall be corporations, each subject to a constitution to be adopted by its members, *but which constitution and every amendment thereto 'shall contain such provisions as the Industrial Commission may direct.'* It is being represented that this bill provides for democratically home-ruled insurance carriers; and such may be the intention. But the provision above italicized would empower the Industrial Commission to reserve all direction to itself, converting the local funds into mere agencies and thereby creating an intolerable political despotism. If it really be desired to reserve any rights of self-government to the funds and to limit the supervisory and regulative powers of the Commission, such rights and the limitations upon such powers should be formulated specifically.

"It is provided that each employee must belong to a local or trade fund within the district within which he *works*. But thousands of those who work in our cities reside with their families in other districts or outside the State. How are they to be provided with medical care? The bill leaves that for the Industrial Commission to determine later as it may choose. And how about trainmen, etc., who work in many districts, and those other persons—e.g. contractors' workmen and summer hotel servants—who work part of the year in one district and part in another? The bill makes no provision for itinerants' medical care or for transfer cards. In other words, all these large classes are to pay contributions from the start, but the difficult problem of how to provide them a medical benefit in return has not even been considered.

BURDEN ON WAGE EARNERS

"The provisions in the bill for compulsory contributions to the insurance by employers are the feature that probably appeals to the working people. In my opinion, however, such contributions would profit them little. In first instance the employers' contributions to the insurance would have the effect of an addition to wages; but in subsequent adjustments of wages such contributions would generally have the effect of holding down the wage rate *pro tanto*. For this and other economic reasons I believe that both the employees' and employers' contributions would in effect come out of the pockets of the employees, and that the proposed scheme of insurance should be weighed and adjudged by the working people upon that theory. If they accept a plan of insurance, otherwise unsatisfactory, upon the supposition that they will profit from a provision for employers' contributions, in all probability they will be grievously disappointed."

When Mr. Sherman's points are considered by the workers of New York State and they realize among other things that individuals traveling about will not receive insurance, even Germany with her methods not having worked this out, that trade union funds will be interfered with and that contributions, necessary to pay current cost, may be levied monthly without limit, they are not likely to support any such proposed legislation. A representative commission to investigate the entire subject for New York State should have unanimous approval.

Why Russia is a Vital World Issue

(*Continued from Page* 4)

Public opinion in all the allied countries seems now to be against any military or political intervention in Russia, whether directed against the Bolsheviki or any other form of Government, but public opinion in the various allied countries seems strongly in favor of existing friendly protection and material aid to such orderly governments as have or may be set up and to continue such aid, especially in view of its necessity, if economic relief and food are to be brought to the starving and suffering population, and the destructive influences of the common German enemies overcome. Even though the German military forces are removed from Russia, the political and economic armies of Germany must be overcome by the Russians before their freedom and future can be made secure. It would be unfair for the Russian people to consider our determined efforts to defeat German aggression in the East, as anything but friendly assistance to them.

Searching consideration and patient effort have been given to the Russian situation by the United States during the past year, but the limitations of war and international complications have prevented us from sending relief to Russia to the extent hoped for and have proven the inability of any single nation to render effective aid at least during the war. However, as a joint and united allied program is decided upon, the United States will probably be called upon to play an important part in sending food, supplies, machinery and technical assistance to Russia. The Russian people know that the United States is the greatest liberal democracy of the world and that we have less to influence our just and friendly interest in Russia than other nations and the friendly but determined efforts of President Wilson with the Allies, and particularly Japan, in the determination of a just and effective joint allied agreement and action in behalf of Russia will be one of our greatest contributions to world-peace and mankind. The United States is now particularly well equipped to furnish Russia with the most needed supplies, clothing and manufactured materials, etc., at fair prices, and in a manner to meet the wishes of the Russian people. We have large surplus supplies of clothing, shoes and other materials vitally needed in Russia and if these could be properly financed by our Government in the interests of the Russian people, it would help to fulfill our international and humane duty in Russia, as well as relieve the Labor situation in our own country. The Russians do not want gifts but they do want our educational help and materials of all kinds on a fair basis and time to pay for them dollar for dollar.

Our Government, including Congress, as well as many of our people, have recently received much information concerning Russia and if the people of the United States are to be expected to help, some action must soon be taken to clear up confused public opinion throughout this country. It would seem as though the time is at hand, if not already dangerously late, for our Government to make a frank statement of the history of our participation in Russian affairs and our present policy and the policy of the Allies, in so far as it can be properly outlined at this time. Nothing but such a statement will allay the dangerous misunderstandings which now exist and are developing rapidly or will defeat the propaganda which is still active throughout our own and other countries, to cloud the issues in Russia, the real attitude of our American people and our returning soldiers towards Russia and make clear the real danger and poison of what the American people know as Bolshevism, but which is probably least understood and most misused, of any word in our modern language. When the true story of the official facts which are in the hands of most of the allied governments is told, we will know more of what the German-inspired Bolshevik leaders in Russia stand for, and what is at the very foundation of the human emotions and the struggles of the masses of Russia, to safeguard their freedom from any possible return of the oppression under which they had suffered for generations.

The Labor Situation In Great Britain

(FROM OUR LONDON CORRESPONDENT)

GREAT BRITAIN is facing a labor situation more involved and uncertain than the United States can have any full appreciation of. This does not mean that Britain is in danger of any great industrial upheaval, but it means that there is great likelihood of erratic and localized developments that are not so likely to happen in a nation possessed of a thoroughly knit together labor movement of national scope and animated pretty much by a common purpose and a common set of ideals.

It is far from easy even to get an approximation of an idea as to what may happen here. It is a great deal easier in the United States.

In the United States there is more directness of speech, a greater clarity of expression. In the United States there is one American Federation of Labor—and when you know the Federation you know the American labor movement. When you know its program you know the American labor program.

In England you cannot go to any one point and say "This is the key to the labor situation." You cannot find any one great body of which you can say, "This is the British labor movement." You cannot find any set of ideals of which you can say with certainty, "These are the ideals of British labor." And in a great deal of your quest for information you are met with a circumvention that would make a Texas cowboy think the world had begun to turn backwards. Qualification, modification, circumambiation—they have specialists in those things over here!

You may have heard about British bluntness and directness. So have I heard about it. I have found some of it, also, but precious little in the labor political movement over here.

And it is to the political leaders that you are directed when you want to find out things over here. Imagine Sam Gompers telling you to go see the leader of the labor group in Congress for information about some phase of trade union action! Good night, Genevieve!

But to get information about the Lausanne International Labor Congress you had to go to the headquarters of the Labor Party, which is purely a political organization and which reminds one of nothing in the world more than Brisbane Hall in Milwaukee. You can feel doctrines in the air and see dogma on the doormat, though the British labor movement doesn't exactly specialize in dogma as the American socialist movement does. But it is a place that impresses you as loaded with learning and you wonder if somewhere around the premises there isn't to be found the magic key to all future mysteries, not to mention the present ones.

But to amble gently back to the matter of Britain's labor situation, which really should be broadened to include the whole industrial situation. It is possible to get some notions about the trend of events, though not possible to be very sure of verdicts on questions of broad application. Contemplating America is like contemplating the quiet of a Sunday afternoon after a day on a pitching sea, in comparison.

There is beyond all doubt a general, national determination to secure a shorter working day. Already the Engineers have got a 47-hour week, offered them by the employers and accepted. The London builders are demanding a 40-hour week, the 40 hours to be worked in five days. It is more than likely that a great many workers will be working less than eight hours a day—at least for a time.

There was one circumstance brought to light on January 5, in the British press that indicates a spirit of unrest that had not been believed serious before. Perhaps it is not serious now, but it is worth thinking about. Some 10,000 soldiers were gathered at Folkestone to be returned to France for service. These men wanted to be demobilized—or a great many of them did—and they were not satisfied with government progress. They held a great mass meeting in the streets at Folkestone and decided that they didn't want to go back to France. Many of them were absent without leave. They named a committee of nine to deal with the command and this committee was actually met by the commander and a compromise effected through which the leave period was extended seven days, with a promise of dismissal for all who could prove that civilian jobs waited them. The port of Folkestone was closed for a day or two and an official statement to that effect issued by the war office.

There is no ground to conclude, however, that Britain is heading for the rocks of rough house, for that is not in evidence at all. What is going to happen, so far as I can judge, is that there will be a radical curbing of the Powers of Have, as they are called, with an all-around better deal for the working population. J. R. Clynes, one of the conservative labor men in parliament, declares that more people must be better off and a few rich people less rich. That looks very much like a sane middle course. I say "sane" advisedly, for any attempt to maintain the industrial *status quo* would invite trouble that might be really serious. Britain needs the full productive capacity of her industrial machinery and she must have it if she can get it on any reasonable basis. She must have it for the very simple reason that she must create wealth to pour into the vast and yawning chasm made by four years of war and its accompanying destruction of useful and useable commodities.

It is no secret—or at least it is an open secret—that British manufacturers are worried with one worry that tops all others. That worry is about the possibility of getting maximum production. The great labor organizations have officially pledged themselves to maximum production and they are undoubtedly sincere, for the leaders are good enough economists to know that the national basket cannot be filled unless all chip in to help fill it. And the national basket is so big and so empty that it will require the full effort of all to do a proper job of filling.

British character is a pretty stable thing, however, and there is great store set upon that prime asset. As much as anything else it is that strong national character that guarantees sanity for the future. There may be here and there an outburst of hysterics, but it must never be forgotten that this old island has gone through four years of terrific war—four years in which the red hot iron has burned into the very soul, not only of the social structure, but of the individual.

One excellent indication of the British worker's feeling toward the problems of the future is found in the recent election. That election lends itself to all manner of speculative analysis, but one thing stands out clear and sharp. The pacifists and all who were tinged with pacifism or even remotely associated with it went down to glorious defeat. Liberalism was not defeated—pacifism was. Not a pacifist escaped. Henderson, with all his protestations of support for the war—and he has made them from start to finish—went down because of the company he has kept. They have a whole list of Ramsay MacDonald jokes on the vaudeville stage. Pacifism doesn't go in Britain. But that section of labor—and it is by far the greater section—which stands for progress and patriotism came romping home with double the former number of seats.

To be sure, only a fraction of the soldier vote was polled. Some say the percentage polled was as low as 27 per cent. But it does not seem possible to deny that what was polled constituted an indication of what the whole sentiment is, so far as the distinction between pacifists and bolsheviks and patriotic and progressive candidates is concerned.

What the future is going to develop is by no means certain. There may be eruptions. These may be large or small. No one can say. Much may depend upon how much muddling the British government does. But it is a good bet that the mind of the British people is bent upon getting back to normal life in an orderly fashion to build up what has been destroyed and lost and that whatever there may be that looks like impatience or disorder is in reality impatience over delay in resuming the normal and orderly course of human life—on an improved and more comfortable basis, but normal nevertheless.

Those who are Bolshevists pure and simple and would welcome an abrupt and complete overturn are just as small a minority as ever they were. The mind of the great body politic is sane and sound—absolutely British. There is a pretty fixed idea among the people about where they want to arrive at and while they may "muddle through" to a peace basis, just as they did a good deal of "muddling through" in the early stages of the war, they will arrive just the same in their own good time. And there is no use in trying to compare Britain with America, either, as our own home saviours are so fond of doing. British conditions and institutions are British and ours are American, and that's all the difference in the world. "Let them alone and they'll come home, wagging their tails behind them."

London, February 5, 1919—

If Not a League—What?

(*Continued from Page* 3)

criminal law, and the state that refuses to seek peaceful methods for the adjustment of its grievances and begins war, will be regarded as a criminal against the peace of the world, to be dealt with by the League of Nations under the provisions of their mutual agreement.

No plan that can be humanly devised will under all circumstances prevent war. The power of any nation to make war can no more be taken away from a free nation than the power to commit murder can be taken away from a free man, but the opportunities to make war and the occasions that bring about war can be immeasurably lessened, by enlarging the instrumentalities for the peaceful adjustment of international differences, by restraining the spirit of aggression by protecting the smaller nations in their national rights, and preventing them from being absorbed through the covetousness of their stronger neighbors. As Lloyd George pointed out, this will become the more imperative after this war because of the ten or twelve new nations in mid-Europe and in the Ottoman empire formerly under the yoke of the autocratic Powers and to whom must be given their independent rights as free nations.

SANITY OF REAL FARM ORGANIZATIONS

An unusually important conference was held in Washington, February 10 and 11, which seems entirely to have escaped notice in the daily press. It was the meeting of the National Board of Farm Organizations which association consists of nineteen national farm organizations, including The Farmers' Educational and Co-operative Union, The National Grange, The Society of Equity, and The National Dairymen's Association. There were 300 delegates, representing over 6,000,000 members and the discussion showed them to be practical, hard-headed men with their feet entirely on the ground. There were no ranting populists among them.

It is unfortunate that the press did not carry a comprehensive account of their proceedings because last November another body met in Washington, calling itself The Farmers' National Conference on Reconstruction in America and International Reconstruction, and its proceeding, which were of the most radical, Non-Partisan League type, were largely published, giving the impression that such wild demands were those of the real farm organizations. In fact, the November farmers' meeting bears about the same relation to the February one that an I. W. W. meeting bears to an American Federation of Labor convention.

The February meeting, or the meeting of the National Board of Farm Organizations, voted to send Mr. Charles S. Barrett to the Peace Conference at Paris to present the demands for recognition of agriculture. President Barrett sailed on the 15th and will meet in Paris representative agricultural leaders from other countries and it is expected that a joint presentation will be made on matters vital to the greatest of all industries—farming.

In sharp contrast to the radical demands of the Farmers' National Reconstruction Conference, i. e., government ownership of practically everything the farmers have to do with, the National Board of Farm Organizations did not call for government ownership of anything, not even the railroads. In fact, at a meeting in January, the National Board of Farm Organizations, after discussion, voted to "wait and see", while in the February meeting they rescinded even that action.

With this representative body of farmers feeling that way about it, and the American Federation of Labor in its reconstruction program recently issued, calling for government ownership or operation or regulation of railroads, it does not seem as though the American people were disposed to rush pell mell into anything very radical or revolutionary at this time.

Referring to Mr. Barrett's mission to the Peace Conference, it is worthy of note that in the proposed constitution of the League of Nations, while generous and proper recognition is given to the problems of labor, not one reference is made to agriculture notwithstanding the fact that 40 per cent of our population is on the farms. This oversight is all the more remarkable because even President Wilson in his comments on the draft, while speaking feelingly of the "people who go to bed tired and wake up without the stimulation of lively hope", who are to be served by the Bureau of Labor which it is contemplated that the League shall set up, entirely overlooks the farmer. The National Board of Farm Organizations, through President Barrett, will help to remedy that oversight and get proper recognition for this, the most fundamental of all industries.

BLESSING IN DISGUISE

The outbreak of Bolshevism throughout the country following the Mooney meeting in Chicago has proven a boomerang to the Reds and at the same time a cementer of the sane forces of capital and labor.

First, there was the magnificent squelching by Ole Hanson of the impudent attempt to turn Seattle over to a Soviet government by the I. W. W. forces. Then there followed in quick succession the turning upon the Reds by the trade unions in Lawrence, Mass., Paterson, N. J., Bisbee, Arizona, and other cities where strikes had been forced by Bolshevist mobs. In all these places the American Federation of Labor organization at once saw that not only was the good name of labor at stake but even the life of the unions, while the employing classes as quickly perceived that their interests were closely allied with those of the unions, because it was evident that if the union leaders lost control of the trade union organization only chaos could result.

Exactly the same situation developed in the recent strikes in England and Ireland. For a time it looked there as if, through the functioning of the Shop Steward system, an incipient Bolshevism, the rank and file in the union world would repudiate their national offices. This same danger was threatened in Seattle and the other cities in this country, but the madness of the hour passed and the atmosphere is now all the clearer.

An illustration of the wholesome reaction from this Bolshevist uprising is contained in a dispatch from Chicago, dated February 13, 1919:

> A joint appeal by silk manufacturers and labor leaders of 40,000 striking textile workers in the East, calling on the National War Labor Board to standardize the hours of work in the silk industry and expressing a common purpose to counteract the activities of the I. W. W. and other radical elements was made at today's session of the War board.
>
> The appeal was regarded as epoch-making, in that it is the first instance of employers and striking union men combining in a move to oppose the ultra radical elements by having a governmental body fix standard hours for work.
>
> The board was asked to give immediately a basis for temporary resumption of work so that the strike may be ended pending a final decision of the board. A temporary work week of from 40 to 44 hours was suggested.

Also from Springfield, Ill., comes news that Governor Lowden has just held a conference at the capital between officials of the Illinois State Federation of Labor and officials of the Illinois Manufacturers' Association, looking to the making of a joint program for bettering industrial conditions, while the New York Chamber of Commerce and the New York State Federation are forming a Joint Committee on industrial relations, all of which may mean, that, so far as this country is concerned, the attempt to precipitate Bolshevism may prove a blessing in disguise.

A NEW KIND OF EXPLOITATION

While Bolshevik agitators are vehemently denouncing what they term capitalist exploitation, Herr Richter, police president of Berlin, and a noted Socialist, comes forward to declare that society is menaced by a new kind of exploitation. "We have progressed," he recently said, "from exploitation by the capitalists to exploitation by the proletariat, with the distinction that the capitalists were accustomed to reckon more than six weeks ahead."

Kurt Eisner, the Socialist premier of Bavaria, likewise says: "The Bolshevist idea is to replace the present régime by the dictatorship of the proletariat, which is much worse than capitalism."

This is the first time such acknowledgment have ever openly been made by Socialist leaders. Yet no sect has more consciously and deliberately practised exploitation than professional Socialist theorists and politicians. An organization representing real labor like the American Federation of Labor has devoted its efforts, and successfully, to lessening injustices and promoting better conditions along lines of practical accomplishments.

This policy aroused the keenest antagonism of Socialist professional theorists. Insisting that misery was increasing, they were self-interested in seeing it increase in order to justify their set theory and augment their following and vote. As the Socialist party represented itself, although fictitiously so, as a proletarian party this was a particularly cruel form of exploitation of the very working class for which it professed to stand. The leaders of that party sought to aggrandize themselves in the exploiting of the vast mass of workers by ridiculing or deterring immediate measures for improvement of the workers' conditions. Thus they hoped to enlarge the area of discontent, accentuate dissatisfaction, and profit politically in consequence.

But since the rise of Bolshevism, concepts have very much changed. Sobered by the terrific perils to all of the productive and decent elements of society of the anarchism underlying Bolshevism, many Socialists have seen a large new light. This, of course, does not apply to the fossilized variety or to Socialist party leaders like Berger and others who have long regarded the Socialist party as their proprietary possession, and who, fresh from their pro-German activities, have veered to Bolshevism. Having completely lost the respect of all Socialists of principle once aligned with them, these demagogues now appeal to the dregs of society, expecting from those purlieus a new and more pliable following that will make up in quantity for the loss of the quality that quit their party in disgust.

But on the conscientious, rational Socialists Bolshevism has made a profound impression here as well as in Europe. It has caused them to revise many of their former theories and tactics, and influenced them to a willingness to work with the moderate and conservative forces of society. The widespread slaughter famine and chaos inflicted on Russia by Bolshevism have proved an ineradicable lesson. They now lucidly see how a mere violent faction, usurping the name of the proletariat, have brutally, remorselessly, tyrannically exploited all classes, including the great body of real workers. This has been the result in Russia where Lenine and Trotzky's armed slum barbarians have destroyed all industry, treated Russia like a conquered country and have pitilessly shot down or starved professionals, skilled workers and peasants alike. A more ghastly exploitation was never known. The horrible mockery of it all is that it has been done under the pretense that it was necessary to efface capitalist exploitation. The Bolsheviki pretend to be an industrial proletarian government, although there are virtually no industries left or craftsmen to operate them. Great numbers of people have been butchered and greater numbers have died from starvation. And what actually is the Bolsheviki regime? A political autocracy headed by a voluble group of power-mad theorists who never did a day's manual work or any other kind of work except mouth work. Even the German Socialists, accustomed as they have been to autocracy and exploitation, refused to have these kinds introduced and used summary methods in disposing of those who tried to establish them.

HE LATEST EVELOPMENT N STRIKES

To the I. W. W. and their pupils the Bolsheviki, the bourgeoisie have seemed to be easy victims. For years in this country the . W. W. have lumped all professionals as bourgeoisie. Anybody who did mental work was, ccording to the I. W. W. proscription list, a ourgeois. The Bolsheviki in Russia, led in nany instances by agitators who had belonged o the I. W. W. here, adopted this category and cted on it. Sneering at the professionals as uperfluities in the industrial organization, the . W. W. habitually threatened to dispose of hem as influential factors and compel them to o menial work, anticipating no serious diffiulty in doing this. Their plan has been to delare a general strike, followed by force, against ll other classes, and by hurling themselves into upremacy to reduce all the other classes to mpotent subservience to their so-called revoluionary industrial government.

This scheme was based upon the idea that the ough-neck laborer should rule, and that the rofessional classes were unorganized, passive, nd could be overcome without resistance. The vould-be I. W. W. dictators were sure that the rofessionals had no way and could find no way f striking back at them. Themselves alone, the . W. W. leaders fondly believed, were in comnand of a militant solidarity of organization, gainst the impact of which all other classes vould be powerless.

But recent events have sharply dispelled this llusion. The professionals have shown that hey, too, can strike and successfully. In Dusseldorf the Sparticides, who are the I. W. W. f Germany, got in power and at once proceeded to override and intimidate the professionals. Great was the amazement of the Sparticides when the entire professional classes of that city went on strike in reprisal. The cables report that officials, clerks and other employees in the service of railways, posts, telegraph, telephones and service lines, technical staffs of industries, physicians, dentists, school teachers, lawyers, bankers and many other professional groups all spontaneously and resolutely went on strike. In fact, the whole of the so-called bourgeois classes joined in a strike which at once closed down a vast variety of industries and essential social functions. Such a development had never been dreamed of by the ranting revolutionary theorists who quickly found that if their plausible flow of talk could move mobs it could not run industries and professions.

The decisive result was soon seen. In the contest of brains against mere brawn, brains, of course won, and speedily, too. The very next day after the strike was declared, the Sparticides conceded most of the points demanded, and released bourgeois delegates who had been imprisoned as hostages.

Russia has had the dire misfortune of being the experimental charnel house of the Bolsheviki. But at the same time events there have been an unforgettable object lesson to the peoples of other countries. In illiterate Russia the professional classes were comparatively small, and meekly fell back before the Bolsheviki, only to find themselves the special objects of hatred, degradation and slaughter. In other countries where the number of professionals is much greater, the Bolsheviki are not by any means going to have the easy road to power and terrorism that they had in Russia. In many European countries they are already finding arrayed against them a resolute, vigilant coalition of all the sane elements of society, radicals as well as conservatives. Here in America a similar coalition is rapidly assuming tangible shape. Indeed, among the most effective opponents of Bolshevism are balanced radicals. Having an intimate perception of its theories and a firsthand knowledge of the characters leading it, they are under no mistaken idea as to what it means.

"PACIFIST" INSTIGATORS OF CLASS WAR

To those carefully observing the course of the general run of pacifists the effrontery and fraud of their pose have long been self-evident. But to the body of the people who have not closely followed their careers and serpentine activities, these have not been so clear. Even in ordinary times successive affairs so engage public attention that the memory of previous happenings gradually fade into haziness. During the great war, with its big events fast crowding upon one another, this tendency was even more marked.

No intelligent patriotic American has forgotten that there were sinister groups of self-styled pacifists who sought to frustrate our preparations and hold us back from fighting for humanity. But as time recedes, the personnel of those groups and their evil ramifications are more or less lost sight of. This is a species of public forgetfulness that these careerists calculate upon.

Before the war many of these identical "pacifists" were preaching war and the necessity of war. They spouted it not merely occasionally but incessantly. True, the war they urged was not an international war. It was, however, a far more destructive kind of war, without any of the salutary results that have followed such an international war as that against German autocracy. The kind of war that these individuals preached and promoted was class war, the deadly onslaught of one class against another. Theoretically the class war that they urged was a war at the ballot. But practically, as they well knew, a systematic stirring up of hatred and the inflaming of every malevolent prejudice and passion, was certain, unless sufficiently counteracted, to provoke sanguinary explosions of violence. Has not this been the culmination in Russia with its consequent dreadful slaughter and chaos? In Germany, too, class war teachings have resulted in pitched battles in the streets. The whole class war theory is inextricably bound up with violence. This fact was well recognized by the I. W. W., which acting on that theory and dropping all pretenses, boldly declared their contempt for the ballot and their determination to gain mastery of society by force.

For years such leading propagandists as Morris Hillquit, Victor Berger, Eugene V. Debs, Kate Richards O'Hare, James H. Maurer, Rose Pastor Stokes, Bill Haywood, Scott Nearing, and many other leaders or near leaders of the Socialist Party, were working overtime agitating the class war. So were Elizabeth Gurley Flynn and other leaders of the I. W. W. This particular aggregation was out in the open, pursuing their course with directness. But there were other groups that were spreading the class-war appeal by methods not quite so conspicuously direct but by no means so indirect as not to make their efforts notorious. There were pastors of churches like the Rev. John Haynes Holmes, Rev. Norman M. Thomas, and the Rev. Irwin St. John Tucker; members of college faculties like Jessie W. Hughan, Harry A. Overstreet and Vida D. Scudder, and a number of self-styled "intellectuals" who, in addition to their magazine effusions, turned out with the most mechanical regularity books in which they deftly pushed the class war propaganda.

When, however, the United States was confronted by the critical alternative of seeing democracy perish or going to war, all, or nearly all of these groups, and their motley trail of followers, suddenly discovered that they were "pacifists." To them the fomenting of a class war sundering society into implacably hostile divisions was a justifiable and highly proper "social" duty. But a war to preserve and extend civilization and free oppressed peoples was denounced by them as "a conspiracy of profiteers" and proclaimed by them to be "anti-social". For one class to fight another was, according to their creed, a proof of superior, militant "class consciousness." But for all classes to unite in an unavoidable international conflict was a wicked use of force which interfered with "the orderly processes of evolutionary development." One upon the heels of another they came with their tremolos on the iniquities of war. Always presenting themselves as benign lovers of peace and good will, the whole purport of their outcry showed that they were interested in promoting in this country the very kind of war that Germany was intriguing to bring about here—a class war which would disrupt our unity and paralyze our strength.

A number of members of these groups are in prison or on the way there following conviction for sedition or violation of the espionage law. But there are others who although skirting close to sedition, contrived to avoid its penalties. Among this latter band are leaders who, while goading addled followers to committing outright sedition, had a very careful eye to their own security.

Now that the war is over, these self-same groups, reinforced by other so-called pacifists, have boldly laid aside the mask that they wore, and are more virulently than ever preaching the class war, either openly or by sympathetic interpretation. No longer, now that the need for dissimulation has passed, do they pass themselves as exponents of peace. The class war is their aim and goal. Who can forget the sanctimonious garb of benevolent pacifism with which Oswald Garrison Villard enwrapped himself during the war? There, among other organizations to which he belonged, was the "Fellowship of Reconciliation",—a conjuring name indeed! And what has Villard's periodical *The Nation* been doing recently? Extenuating Bolshevism to make it palatable to Americans, concealing its horrors, and on the whole, stopping just short of the point of actually recommending it. The Bolshevism which has rent and ruined Russia becomes in the pages of *The Nation* a fine and wonderful movement. The very crew that immediately before or during the war formed such organizations as the "American Union Against Militarism", and "Collegiate Anti-Militarism League", the "Liberty Defense Union" and other puerilities, are now, in general, the same who are extolling the Bolshevik Red Guard Army and the mandates of Lenine and Trotzky decreeing mass conscription and iron discipline. Conscription was an indefensible "invasion of rights" when ordered by the American Government, but it becomes highly commendable when the terroristic Bolshevik autocrats of Russia decree it. In this country refusal to do military service was hailed by the aforesaid crowd as "conscientious objection", but the summary shooting down of all who decline to be soldiers for the Russian Bolsheviki is represented as a justifiable disposal of "counter-revolutionists".

With rare exceptions, the chief characters now overtly or slyly inciting armed revolution have revealed themselves craven. Glorifying "martyrdom" in prison, they have themselves tried in every possible way to squirm out of occupying a cell. They adroitly make declarations that tend to provoke others to violence, but are the very first to disclaim responsibility for it and its consequences. They invidiously write and circulate a line of propaganda that may well lead to mob excesses, but would fly with celerity from any scene of personal danger to themselves. And when any cause that they have espoused comes under the weight of popular odium or is permanently registered as an infamy, they are quick to assert most indignantly that their implication has been "misunderstood." Safety first is their inflexible motto.

Shadow Huns and Others

By T. EVERETT HARRÉ

Part V
THE PLAGUE OF PROFESSORS

TOWARD the close of that great novel of the war, "The Four Horsemen of the Apocalypse," by the foremost living novelist of Spain, Vincente Blasco Ibanez, there is a picture of more than ordinarily poignant significance. Don Marcello Desnoyers, the aged father of a soldier who has given his life for France, views in silent sorrow the burial fields where, under crosses and faded flags, lie buried the brave men who had fallen, and where, too, in deep trenches marked off by fences of wooden strips, had been interred the carcasses of countless Huns. Standing there under the colorless sky of a winter morning, the bereaved father meditates upon the war, and upon the monstrous Teuton philosophy which underlay and inspired Germany's treacherous attack upon the world.

His eyes resting upon those plots where the Huns were buried, the old man muses thus:

> They were the soldiers who carried books in their knapsacks, and after the fusillade of a lot of country folk, or the sacking and burning of a hamlet, devoted themselves to reading the poets and philosophers by the glare of the blaze which they had kindled. They were bloated with science as with the puffiness of a toad, proud of their pedantic and all-sufficient intellectuality. Sons of sophistry and grandsons of cant, they had considered themselves capable of proving the greatest absurdities by the mental capers to which they had accustomed their acrobatic intellects. . . What a shame that there were not here, too, all the *Herr Professors* of the German universities—those wise men so unquestionably skillful in altering the trademarks of intellectual products and changing the terminology of things! Those men with flowing beards and gold-rimmed spectacles, pacific rabbits of the laboratory and the professor's chair that had been preparing the ground for the present war with their sophistries and their unblushing effrontery! Their guilt was far greater than that of the *Herr Lieutenant* of the tight corset and the gleaming monocle, who in his thirst for strife and slaughter was simply and logically working out the professorial charts. While the German soldier of the lower classes was plundering what he could and drunkenly shooting whatever crossed his path, the warrior student was reading by the camp glow, Hegel and Nietzsche. . . He, with the professors, was rousing all the bad instincts of the Teutonic beast and giving them a varnish of scientific justification. . . The *Herr Professors* had proved to their countrymen that such sacking incursions were indispensable to the highest civilization, and that the German was marching onward with the enthusiasm of a good father sacrificing himself in order to secure bread for his family.

What Vincente Blasco Ibanez discerned is, as the world today knows, absolutely true. It was the *Herr professors,* the spectacled savants of the great Hun institutions of learning, who prepared the way for those bestial, blood-besotted hosts which for a time threatened to sweep Europe and menaced the free nations of the world.

PHARISAICISM AND PEDANTRY

While Imperial Germany during forty years was preparing her military machine, manufacturing cannon and training soldiers, the *Herr professors* were engaged in preparing the minds of the German people by preaching the necessity and nobility of war, by justifying utter ruthlessness and conscienceless cruelty in war, and in making the German people united under their masters by an especial appeal to their racial fatheaded vanity. It was the *Herr professors* who filled the mind of Germany with a bloated, bigoted conceit, who led the stolid, beer-driking, bully-spirited Huns to believe that they were superior to all other peoples and were destined to rule the world. It was the *Herr professors* who intoxicated the mind of this heavy-fleshed, obese-brained race with the belief that they were the chosen people of modern times, whose Kaiser, their Moses, was in alliance with their tribal god, and for whose delectation was destined the promised land—domination over all the nations of the earth. It was the *Herr professors* who schooled this people, natively lacking in fine sensibilities, to such barbarity and pig-hearted cruelties as have shocked and sickened the world. Before these people became murderers in fact, the *Herr professors* of Germany made them brutes, egotists and murderers at heart.

Nor was the baleful work of the *Herr professors* in preparation for the intended war, confined to Germany. What Ibanez so vividly analyzed is more than ordinarily significant to us in America.

While Germany within prepared her armies for war, she engaged at the same time in propaganda adroitly designed to prepare the ground among the peoples whom she intended to assail. She sought, as I have pointed out in a preceding article, to win for herself such admiration and friendship among neutral nations as would paralyze their indignation when the time for her intended blow came. For twenty-five years her agents carried on propaganda picturing Germany as supreme in science, commerce, industry, art, and social progress. And while these agents magnified the advancement and humanitarian achievements of Germany, they sought at the same time to disparage the social and industrial conditions, as well as belittle the institutions and achievements, of other nations. Nowhere in the world was this propaganda carried on with such intensity as in the United States. American writers, many perhaps innocently, were intrigued into abetting this ulterior propaganda, and wrote books in which they extolled the progress of the Fatherland. And other American writers, as well, abetted the even more inimical, more insidious and subtly dangerous propaganda which was calculated to undermine confidence in our own institutions and the loyalty and allegiance of our own people to our Government. In all this propaganda Germany enjoyed the aid of a large and obliging portion of the *Herr professor* fraternity.*

THE INVASION OF AMERICAN EDUCATION

The German propaganda was essentially scientific. There is no use trying to blind ourselves to the fact that it was extraordinarily able, shrewd and astoundingly effective. In mapping out propaganda to be carried on among other nations, the best brains of Germany were devoted to a careful study of the psychology of the peoples they intended to reach. They sought to learn exactly through what mediums, by what methods, and by what appeals, different peoples might be influenced. They sought, in order to play upon them, to understand national and racial partialities and prejudices. In the United States, for instance, believing there existed a latent, anti-British sentiment which had carried down from the war of the Revolution, they made that the keynote of propaganda begun after th Spanish-American war. These maladroit agent sought to understand the methods of preparin and distributing news and thus debauch pub lic opinion. They sought to use as part of thei machinery American schools, universities an colleges.

They calculated—and can we say they wer wrong?—that in order effectively to poison pub lic opinion in favor of Germany they must begi with the mind when it is young, and they sought consequently, to enlist in their aid America educators and professors who controlled th training of American youth. They sought, pri marily, to turn American schools and universi ties into sources of Hun propaganda. With pro fessors preaching the glories and beneficen achievements of Germany, and the superiorit of German Kultur, was begun that effort t undermine American public opinion and moral which was designed ultimately to render th American people supine and unresisting unde intended German aggression.

When Dr. Dernberg undertook to direct th efforts to poison American public opinion in th interests of Germany in 1914 scores of *Herr pro fessors,* of American birth and citizenship, re sponded to the call of the Huns. They were busy bodies in frantically busy days. They proved themselves generally a fish-hearted crew who incapable of any high enthusiasm, any burn ing belief in noble ideals, any moral sens of right and wrong, took opportune refug in a position of alleged academic neutrality, a intellectual aloofness from which they assumed to see both sides and impartially weigh th causes, the issues, the ideals and merits of th nations at war. That very pose was dishonest, for so far as their bloodless arteries could b stirred, they were out and out rankly pro-Ger man. Germany had flattered their vanity; Ger many had given them degrees; Germany had given them the materialistic philosophy on which their famished were-wolf mentalities thrived. Was there any faintest glow of moral indignation in them against the atrocities of the Huns, any moral resentment against that scientific destruction and slaughter, that maltreatment of little children and raping of defenseless women?

BY THEIR FRUITS YE MAY KNOW THEM

This gang of pro-German professors, pretending to an intellectual neutrality, joined in efforts to exonerate Germany and swing this country against the Allies. They turned out books; they turned out pamphlets—most of which were published out of funds of the Imperial German Government; they wrote articles and flooded the contributors' columns of the newspapers with letters. They presided at public meetings and debates and themselves held forth in forums. They were here, there and everywhere.

They tried to prove that the guilt of starting the war did not lay with Germany but with the wicked Allies—did the American *Herr professors.*

They tried to prove that Germany had committed no wrong in the invasion of Belgium, but that England and France had violated Belgian neutrality first, by secret agreements, et cetera—did the American *Herr professors.*

They assailed our so-called neutrality and sought to show that we were unneutral to Germany by permitting England to hold up food stuffs destined for Germany, and by supplying the Allies with munitions—did the American *Herr professors.*

They engaged in propaganda and other in-

* The intelligent patriotism of the majority of professors in our colleges and universities, and their splendid work during the war, serves by its fair contrast to bring into unenviable relief the activities of those who, both before and after our entry into the war, failed to live up to the highest ideals of Americanism and of American educational institutions. No class of citizens have more indignantly resented the pro-Germanism and tepid "loyalty" of the class characterized as "*Herr professors*" than the great body of 100 per cent. loyal American educators themselves.—T. E. H.

igues designed to force an embargo on all ilitary supplies to the Allies—did these Ameri- in *Herr professors.*

They justified the sinking of the Lusitania nd unrestricted submarine warfare and re- eated parrot-wise all the German arguments stifying the use of the submarine as reprisal or the "illegal" British blockade—did these merican *Herr professors.*

They opposed our going to war with Ger- any over the unrestricted use of the submarine eapon and lent themselves to various German, erman-financed pacifist agitations—did these merican *Herr professors.*

And even after America entered the war what id many do?

They engaged in various activities calculated render us impotent in the conduct of war gainst Germany. They sought to convince eople that we should have nothing to do ith "mere matters of European politics." hey endeavored to prove that the draft was nconstitutional, and defended the so-called conscientious objectors." They enlisted in the id and defense of the I. W. W., when leaders f that organization were on trial for seditious onspiracy. They arrayed themselves on the ide of the Russian Bolsheviki and endeavored o encourage and promote Bolshevism, anarchy nd revolution—which are one and the same hing—in our midst. They have aligned them- elves with the forces which aim at national lisintegration.

They have been notorious pacifists.

WEASELS OF THE WORLD

Since the signing of the armistice, many of hese American *Herr professors* have side-tracked hemselves into another propaganda which was conceived in and promoted from Berlin—that which brought about the ruin of Russia and that by which Germany even now would destroy every nation on the face of the globe. This gentry are now Bolshevists, internationalists, revolutionary radicals, pacifist Socialists, teach- ers of radical "social research," et cetera. Pacifists so far as fighting Germany was concerned, they are now advocates of that "class war" which, Mr. Herbert Croly avers, may be as bloody as the war which has just closed. Friends of Germany from the days antedating the war, they are today active foes of the institutions upon which American peace and security depend. The most extraordinary thing about this whole business is that, after America entered the war, many of these anti-American pro-German pundits managed to crawl into jobs and other important positions in the Federal and State Governments. Just as, after America entered the war, there was an exodus of Greenwich village freaks to Washington so was there an influx into Government departments of many *Herr professors.*

Before—and since—the great war, the activities of many of these scholastic "stuffed shirts" were peculiarly insidious. Much of their propaganda was not outright pro-German. Even more effective than open German propaganda so far as the German interests were concerned, was that which undermined the foundations of American national life, American morale, American ideals, American belief in the principles on which our democracy is built.

To the world German agents before the war pictured England as being in decline, ruled by an effete aristocracy, threatened with revolution and disaffection in her colonies; France as being degenerate, effete, dilletante and dissolute. Likewise, did German agents picture the United States as the land of dollars, a country without ideals, where the working classes were exploited by capitalists and where the Government was in the hands of corrupt grafting politicians. So long as the people of England were not convinced that the day of England was over, so long as the people of France were not debauched with the conviction of their own degeneracy, no especial harm was wrought. But what about ourselves? Did we escape all harm from propaganda designed to destroy our self respect, our confidence in American institutions, our belief in American ideals and American integrity, our veneration for our heritage of liberty?

PROPAGANDA OF THE DESTRUCTION OF FAITH

It has been said that men need not fear those who seek to destroy the body so much as those who seek to destroy the soul. That is one of the eternal truths. And what Imperial Germany, the arch-betrayer of civilization, sought chiefly to accomplish toward the carrying out of her purposes was the destruction of the soul of the nations of the world.

No such wrong can be wrought against any man as the destruction of that man's faith in what is moral, right and just.

No such theft can be committed against any man as the theft of that man's ethical beliefs. Destroy a man's convictions in all national and religious ideals, in all humanitarian and spiritual principles; take away all his moorings by confusing his mind with theories about motley forms of "liberalism" camouflaged in deceiving idealistic phrases; reduce all life to this man as absolutely materialistic; interpret all human motives as selfish, all historical movements as economic; arouse and foster in him all the meaner passions, envy, discontent, a desire for gain; put him in conflict with his fellows, destroy his idea of good, and you will have made that man worse than a helot, a weakling swayed by his lowest passions, an agent of social disagreement and strife, the helpless prey and unknowing tool of any unscrupulous force seeking to seize national power through anarchy and international power through national disintegration and collapse.

Had imperial Germany been able to destroy in the spirit of the American people those national ideals which they have cherished, their belief in the principles out of which our democracy was conceived, or had her agents imposed upon us the gross materialistic philosophy of self-interest and "economic determination," Germany need never have feared America as a foe. The Germans, in fact, believed their propaganda had been successful and, as von Papen expressed in a letter to his government, they believed that the United States, dominated by money-greed and lacking all chivalrous ideals, would surrender shamefully to Germany over the submarine issue rather than go to war and risk the loss of dollars. The Germans, and their still active agents as well, have failed to understand American psychology or to gauge the temper of the American spirit. What marked American troops abroad was a dauntless spirit, an intrepid courage, a heroism whose flame was fed by no selfish "economic" interests, no lust for material conquest—it was, in fact, that spirit of knightly chivalry, of spiritual zeal for a cause that is right which has illumined the brightest pages of the world's history from the beginning. Theirs was the inspiration of crusaders who fight for a sacred faith. The informing spirit of this country in the world war will make America a shining name forever.

It is that spirit of the nation which Germany and her agents sought to break before the war. It is that spirit which certain sinister forces, having no visible connection or interests with Germany, are seeking today to destroy.

SAPPING THE SOURCES OF MORAL RESISTANCE

In a book entitled, "The German Conspiracy in American Education," by Capt. Gustavus Ohlinger, of the United States Army, just issued by George H. Doran Co.,* the author says:

"Just as Germany planned her own educational system with reference to her military power, so she sought, as a part of her higher strategy, to enhance her superiority by insinuating herself into the moral and intellectual life of foreign countries. If she could introduce her agents into the native education, there disseminate doubt as to the validity of native traditions and with regard to the adequacy of established institutions, replace national spirit by a shallow cosmopolitanism, and foster an admiration of Kultur to the disparagement of national achievements—then she could sap the very sources of moral resistance."

The Senate Committee which is investigating German propaganda in the United States, on January 24, 1919, made public a "Who's Who" of pacifists and radical intellectuals alleged by the Military Intelligence to have led in organizations opposing the war. The list contains sixty-two names, including many of the professional uplift clan, and twenty-six educators. This list is illumining. There are a number of names of educators which it might well have contained, but among those mentioned was:

> BEARD, Prof. Charles A., formerly of Columbia University; member Intercollegeiate Socialist Society, lecturer Rand School of Social Science, New York.

Prof. Beard indignantly protested to Chairman Overman of the Senate Committee against the inclusion of his name, and, declared:

"I am not and never have been a pacifist. . . . When Nicholas Murray Butler, Assistant Secretary of War Keppel, and Elihu Root were manipulating the Carnegie peace millions issuing pacifist pamphlets by the thousands, organizing pacifist societies in our colleges . . . *I was teaching the truth that war has been one of the most tremendous factors in the origin of the State and the progress of mankind."*

The doctrine that "war has been one of the most tremendous factors in the origin of the State and the progress of mankind" is simonpure Hun doctrine.

If, at the time that Dr. Butler and other distinguished and loyal Americans were "pacifists"—ergo, the time before Germany dealt her treacherous blow to civilization, and when no normal men dreamed that there could possibly occur such slaughter as the German General Staff had scientifically planned—Prof. Beard was teaching that "war is one of the most tremendous factors in the origin of the State," etcetera, he was teaching in America what Bernhardi and Treitschke had taught in Germany.

BELLIGERENCY BEFORE, AND PACIFISM AFTER, THE WAR

Save for the blood-thirsty, the Hun-hearted, the sinister preachers of sedition and social disintegration, all of us before August, 1914, were pacifists. Many of us believed that in our day such a war as Germany unloosed was impossible. There is a difference between men who were pacifists before German aggression struck at the core of American rights and American honor, and that mongrel breed who justified war so long as Germany had all to gain from war and who became pacifists only as our controversy with Germany approached the climax. Is it not markedly significant that the German apologists, German sympathizers, Socialists, radical intellectuals and preachers of the class-war became pacifists and anti-conscriptionists only when the United States launched its full force against the Huns? If Prof. Beard so staunchly believed in war, why—in a text book for use in public schools—did he so bitterly assail the "hypocritical Allies" for forcing the war to continue?

Prof. Beard, in 1913, through the Macmillan Company, New York, published a volume entitled "An Economic Interpretation of the Constitution of the United States." According to

*This book will be reviewed, in connection with a further expose of the pro-German activities of American educators, in the next issue of THE NATIONAL CIVIC FEDERATION REVIEW.

educators with whom I have talked, this volume by Prof. Beard has exercised a considerable and widespread influence upon American students and teachers.

If Prof. Beard's doctrines have exercised any considerable influence upon American students and teachers, has that influence been healthful? Has it been calculated to make better citizens of American students and teachers? Has it afforded them the highest conception of the moral inspiration of the Federal Constitution, of the idealistic principles upon which American Democracy is founded?

THE GOSPEL ACCORDING TO MARX

There are two schools of philosophic, of religious or ethical, thought in the world. The one is spiritual, the other materialistic. The one teaches that as a man thinks, so he is; that the only reward of value is the spiritual reward; that to contemplate the commission of wrong constitutes guilt; that men shall strive toward the true, the beautiful and good; that the soul of man is immortal and that a divine power governs the universe. The other teaches that man is a beast, actuated solely by passions and gross desires; that motives of gain alone inspire the action of men and nations; that actions alone count; that as men will inevitably exploit one another it is justifiable for races superior in craft to use any means to a desired end; that might is right; that the "kingdom of heaven," so called, is of the earth. Nearly all of the religions of the world, of the earliest, were based essentially upon the instinctive desire of mankind to approach nearer to God; with all their dross of superstitions, they sincerely essayed to make clearer to man the mystery of God, the way to his heart's desire. Confucius, Buddha, Plato, Marcus Aurelius sought to understand and interpret—and thus inspire and guide man onward in his struggle toward his attainment of—the Ultimate Good. And all that the ancient religions, the teachers and prophets, sought to divine, found its supreme expression in the teachings of One who taught that men shall love one another irrespective of race and creed, and that the pure of heart alone shall inherit the heavenly kingdom which is within them. It was this philosophy which has guided humanity toward a greater realization of righteousness, of true liberty and justice, the highest achievements which have been of joy and benefit to the world. As it applies to individual conduct, so there is in this philosophy the ultimate keynote for constructive social progress, for lasting peace among nations.

Side by side with this philosophy, there carried on the other, crassly materialistic, wholly unhumanitarian, inimical to the general good of mankind, which, often in terms of idealism, has tried to lure men to anarchic revolt, to social disintegration, that those who possess its arcana might gain power and profit. That philosophy was imposed upon the people of Germany, and it was the philosophy which underlay Germany's purposes in the world war. That philosophy found expression, in greater or less degree, in the manifesto of Karl Marx. It has been the *vade mecum* of the Bolsheviki in their betrayal of Russia. It is the destructive seed which is being sown in this country through various extreme and subtly camouflaged forms of liberalism and radicalism today.

ICONOCLASM OF IDEALS

Prof. Charles A. Beard, in opening his volume, "An Economic Interpretation of the Constitution of the United States," flatfootedly rejects that school of historical interpretation, represented by Bancroft, which recognizes a "higher power operating in human affairs." He repudiates Bancroft's belief that in the struggle for the Constitution there was "the movement of divine power which gives unity to the universe, and order and connection to events." Shall we say Prof. Beard jeers at Bancroft for saying: "However great may be the number of those who persuade themselves that there is in man nothing superior to himself, history interposes with evidence that tyranny and wrong lead inevitably to decay; that freedom and right, however hard may be the struggle, always prove resistless."

Prof. Beard, like the German Socialists and the Russion Bolsheviki, is an admitted materialist.

Had the German Government scientifically and deliberately sought to undermine the belief of Americans in the ideals and moral principles governing the framing of the Constitution, in the intrinsic principles of liberty and justice inspiring the makers of that document, had it sought to destroy in Americans all reverence for the fathers of the country and hold them and the foundation of our history in disrepute it could not have planned a more scientific and deliberate method than that embodied in this book by Prof. Charles A. Beard, formerly professor of Columbia University, at present lecturer for the Rand School of Social Science and director of the Bureau of Municipal Research.

Were the framers of the American Constitution, as we have believed, inspired by lofty ideals? Is the American Constitution a document based upon moral principles?

"*Every fundamental appeal in it,*" declares this fellow Beard, "*is to some material and substantial interest.*"

The school children of America have been taught to venerate George Washington. What sort of interpretation of George Washington would school teachers influenced by Beard give to the children of the land?

George Washington, as one of the members of the Constitutional Convention, according to Charles A. Beard, was not "disinterested."

George Washington, says Beard, was one of "the land speculators and promoters" of his day.

George Washington, in other words, was a Colonial plutocrat, one of those who helped to frame the Constitution for their own profit, who were actuated by self interest, a member of that class which exploits "the poor and disinherited." George Washington not "disinterested"!

The document embodying the principles of American freedom, according to Beard, was inspired by the desire of money-grubbing, unidealistic Colonial plutocrats to enrich themselves.

JUSTICE—"ABSTRACT STUFF"

Prof. Beard manifestly is inclined affectionately to regard that "school of historical interpretation which . . . may be called the Teutonic, because it ascribes the wonderful achievements of the English speaking peoples to the peculiar political genius of the Germanic race." Prof. Beard describes the thesis of this school thus:

"The Teutonic peoples were originally endowed with singular political talents and aptitudes; Teutonic tribes invaded England and destroyed the last vestiges of the older Roman and British culture; they then set an example to the world in the development of 'free' government. Descendants of this specially gifted race settled America and fashioned their institutions after old English models. The full fruition of their political genius was reached in the creation of the Federal Constitution."

Prof. Beard apparently classes himself in an even more modern, more advanced and untrammelled "school of historical research not to be characterized by any phrase."

After an examination of this pretentious pedant's work, it certainly could not be characterized as idealistic or patriotic.

The various promoters of camouflaged German, pacifist, and revolutionary propaganda have all, at some time or another, inadvertently self betrayed themselves, and, once you hit upon the secret keynote of their activities and bring a small wee revealing light of understanding to bear into the recesses of their crafty, subtle and pharisaical minds, much becomes clear. Commenting upon a summing-up by J. C. Carter of the analysis of legal evolution, Prof. Beard naïvely drops this revealing phrase:

"Law is made out of some abstract stuff known as 'justice'."

Any mind that would designate justice as "made out of some abstract stuff" certainly is not the sort likely to appreciate the finest moral ideals. Imperial Germany, planning for ruthless world subjugation, giving itself to the most bestial and terrifying program of scientific atrocities, was certainly of the mind that "justice" is merely abstract stuff.

The Germans believed, of course, in "economic determinism."

So does the guiding spirit of "The New School for Social Research."

"It will be admitted without controversy," says Prof. Beard in his volume, "that the Constitution was the creation of a certain number of men, and it was opposed by a certain number of men. . . . Suppose," he continues, "that substantially all of the merchants, money lenders, security holders, manufacturers, shippers, capitalists, and financiers and their professional associates are to be found on one side in support of the Constitution and that substantially all or the major portion of the opposition came from the non-slaveholding farmers and debtors—would it not be pretty conclusively demonstrated that our fundamental law was not the product of an abstraction known as 'the whole people,' but of a group of economic interests which must have expected beneficial results from its adoption?"

COLONIAL CAPITALISTS AND THE CONSTITUTION

Prof. Beard with Machiavellian suggestion asks:

"Did the men who formulated the fundamental law of the land possess the kinds of property which were immediately and directly increased in value or made more secure by the results of their labors at Philadelphia? Did they have money at interest? Did they own public securities? Did they hold western lands for appreciation? Were they interested in shipping and manufactures?"

Prof. Beard answers:

"Washington, of Virginia, was probably the richest man in the United States of his time, and his financial ability was not surpassed among his countrymen anywhere. He possessed, in addition to his great estate on the Potomac, a large amount of fluid capital which he judiciously invested in western lands, from which he could reasonably expect a large appreciation with the establishment of stable government and the advance of the frontier."

As if no higher motives inspired George Washington than an expectation of material profit when he lent his aid to the making of the Constitution!

In other words, Prof. Beard cannot conceive of men as being inspired by any other motives than the sordidly selfish. Prof. Beard cannot conceive of nations being moved by high ideals, of wars being waged for great causes of human liberty and justice. Man is a debased physical brute, impelled by gross carnal cravings, without high principles or unselfish ideals! Prof. Beard, subscribing to the Marxian doctrine of the "economic interpretation of history," must seek, as an explanation of every human action, for some ignoble selfish motive. Prof. Beard has occupied positions of confidence and trust, and has asked for recognition and a hearing as

educator representing the highest American-n. Is Prof. Beard's interpretation of history id the actions of mankind exalted? Is it vilized, in the highest sense? Is it Christian? Is it possible that American history and the olitical and social phenomena of our day are ing interpreted to young America by rank aterialists, atheistic and unchristian bigots, en whose only message to their kind, to the owing mind, is subtly disguised Marxian revo-tionary doctrine—the religion of the belly-d?

GEORGE WASHINGTON A "GRAFTER"

Allan L. Benson, former Socialist candidate r the presidency, wrote a book called "Our ishonest Constitution," in which he declared at the Federal Constitution was the work of what today would be called grafters."

Former-Socialist candidate Benson admits at Prof. Beard's book constituted a chief urce of authority for his unpraiseworthy at-cks upon the fathers of the country. When harles A. Beard was quizzed by the New York tate Bar Association, he shiftily evaded a direct nswer, declaring that he had not tried to read enson's notorious volume and that he could not undertake to give any attention at all to hat use other people make" of his own book.

Did Prof. Beard, albeit in more euphonious id less courageous language, not also imply, s did Benson, that "the sacred document was rawn up in part by a group of grafters?"

Of George Washington, Beard went on to say: "Washington was also a considerable money-nder and suffered from the paper money perations of the Virginia legislature. . . . le held $6,246 of United States securities."

"It seems safe to hazard a guess," continues rof. Beard, "that at least $40,000,000 gain ame to the holders of securities through the doption of the Constitution."

Alexander Hamilton, says Beard, "had little art in the formation of the Constitution, but : was his organizing ability that made it a real nstrument bottomed on all the substantial in-erests of the time."

Prof. Beard says "the land speculators and romoters . . . embraced all the leading men f the time—Washington, Franklin, Robert Mor-is, James Wilson, William Blount."

Robert Morris "was an effective representa-ive of the land operators, the holders of securi-ies, the dealers in public paper, and the mer-antile groups seeking protection for manufac-ures. Before and after the adoption of the Constitution, he was busy interesting his col-eagues in every kind of enterprise that prom-sed to be profitable."

Prof. Beard dogmatizes:

"It may be shown that the 'general good' is he ostensible object of any particular act; but he general good is a passive force, and unless ve know who are the several individuals that enefit in its name, it has no meaning. When t is so analyzed, immediate and remote bene-iciaries are discovered."

Doubtless Prof. Beard, with his peculiar ualities of mind, would interpret the Christian ospels according to this rule.

FRAMERS "NOT DISINTERESTED"

Of the framers of the Constitution, he goes on o say:

"The overwhelming majority of members, at east five-sixths, were immediately directly and ersonally interested in the outcome of their abors at Philadelphia, and were to a greater or ess extent economic beneficiaries from the adop-tion of the Constitution."

Prof. Beard asserts of the framers:

"Personalty invested in lands for speculation was represented by at least fourteen members, . . . personalty in the form of money loaned at interest was represented by at least twenty-four members; . . . personalty in mercantile, manufacturing and shipping lines was represented by at least eleven members; . . . personalty in slaves was represented by at least fifteen members."

Prof. Beard concludes:

"It cannot be said, therefore, that the members of the Convention were 'disinterested.' On the contrary, we are forced to the profoundly significant conclusion that they knew through their personal experiences in economic affairs the precise results which the new government that they were setting up was designed to attain."

The Constitution, asserts Prof. Beard, "was an economic document drawn with superb skill by men whose property interests were immediately at stake; and as such it appealed directly and unerringly to identical interests in the country at large. . . .

"The rich and wealthy worked for the Constitution to prevent the loss of their debts.

"There were no such immediate personal gains to be made through the defeat of the Constitution as were to be made by the security holders on the other side. . . .

"It seems safe to hazard a guess, therefor, that at least $40,000,000 gain came to the holders of securities through the adoption of the Constitution and the sound financial system which made it possible. . . .

"It appears, nevertheless, that the Constitution was not 'an expression of the clear and deliberate will of the whole people,' nor of a majority of the adult males, nor at the outside of one-fifth of them. . . .

"Every fundamental appeal in it is to some material and substantial interest."

The state conventions acting upon the ratification, declares Beard, "do not seem to have been more 'disinterested' than the Philadelphia convention; but in fact the leading champions of the new government appear to have been, for the most part, men of the same practical type, with actual economic advantages at stake.

"The movement for the Constitution of the United States was originated and carried through principally by four groups of personalty interests which had been adversely affected under the Articles of Confederation: money, public securities, manufactures, and trade and shipping.

"The first firm steps toward the formation of the Constitution were taken by a small and active group of men immediately interested through their personal possessions in the outcome of their labors.

"The Constitution was not created by 'the whole people' as the jurists have said; neither was it created by 'the states' as Southern nullifiers long contended; but it was the work of a consolidated group whose interests knew no state boundaries and were truly national in their scope."

In other words, the Constitution of the United States was born out of a capitalistic cabal, a conspiracy of the "aristocrats" against "the poor and disinherited."

Says Beard: "The revolutionary nature of the work of the Philadelphia Convention is correctly characterized by Prof. John W. Burgess when he states that had such acts been performed by Julius Caesar or Napoleon, they would have been pronounced coups d'etat."

This Prof. John W. Burgess, quoted approvingly by Prof. Beard, studied history, public law and political science at Gottingen, Leipsic and Berlin. He was the first American exchange professor to go to Berlin, where he was colossally honored by the presence of the Kaiser at a lecture and decorated by the Hun Emperor with the Order of the Prussian Crown.

In a report on Benson's and Beard's books made by a committee of the New York State Bar Association in 1916, this opinion was given:

BEARD SCORED BY BAR ASSOCIATION

"Prof. Beard's condemnation of citizens, either of the ten bankless states, or else of the three States which had but one small bank apiece, as not 'disinterested', because they invested part of their savings in declining public securities, is as unwarranted as treating as unworthy or unethical a savings banks or trustee who successfully invested below par in three and one-half per cent or four per cent New York City bonds or other gilt edged three and one-half or four per cent bonds during a bond market depression. No European investor will be condemned in history as unpatriotic because he invested at market rates in the war debt or neutrality debt of his nation during the present war or else later during the financial depression inevitably following the treaty of peace."

On the same grounds on which he sought to disparage the makers of the Constitution, Prof. Beard might assail every American citizen as "not disinterested" in desiring to win the war over Germany because they had invested in Liberty bonds!

Whether it was so intended or not, Prof. Charles A. Beard's book was identically in line with that propaganda whereby Germany planned to undermine the morale and spirit of the nations she planned ultimately to challenge and whose rights she intended to assail. Germany sought to conquer nations not only through her armies, but by breaking their spirit. Charles A. Beard has given himself to nothing less than an effort to destroy his own country's soul.

Is Charles A. Beard, therefore, a man who should be permitted to teach students in social research, to influence teachers who in turn will form the minds of American childhood?

In 1915, while the German propaganda instituted by Dr. Dernburg was in full swing, I was told by one of the directors of the propaganda bureau at 1123 Broadway, that it was Germany's intentions to continue her propaganda after the close of the war and to secure absolute control of American public opinion.

"It is our purpose and intention," said this man in effect, "first of all, to secure control, so far as we can, of concerns publishing text books for use in public schools, and likewise to mobilize and influence all writers of school text books. We propose especially to control the preparation of school histories, so that American children will not be taught that Germany began this war, or was guilty of unwarranted atrocities in this war. We shall see to it that American children are instructed so that the blame for this war will be placed where it belongs." My informant smiled narrowly. "The Americans do not love the British," he went on, "and they are inclined to like the Germans. By controlling the preparation of school histories, we can begin to make Americans from the time they are children see the German point of view. We want the friendship of America, and that friendship will be necessary in our plans for commercial recuperation which will have to be done through the economic elimination of England."

BEARD TEXTBOOK THROWN OUT OF SCHOOLS

Just how far did the German agents go in "influencing" the writers of text books for use in the American schools? To what extent was the propaganda of Prof. M. J. Bonn, who had held the Jacob H. Schiff professorship at Cornell, and that of the German University League successful? How many of our *Herr professors* obligingly lent their pens to the German cause?

Prof. Charles A. Beard, in collaboration with Prof. James Harvey Robinson, wrote a school text book, published by Ginn & Company, entitled "Outlines of European History."

Part II of this volume last September was thrown out of the public schools of Seattle, Washington, because, according to the Text Book

Committee of the Seattle School Board, it was filled with flagrant pro-German propaganda. Ginn & Co., through their agent, Albert E. Shumate, admitted in a letter to Superintendent Cooper of the Seattle Public Schools, that the company "set about revising all of their text books, so as to remove anything that might be construed as 'pro-German propaganda'" and that, even before they had learned of the agitation in Seattle against Beard and Robinson's book, they had withdrawn the objectionable volume. They promised an "'expurgated' edition so revised that no reasonable person will accuse them of being in any way pro-German or un-American."

In this precious volume, insidiously sent broadcast as a text book for the instruction of American children, the two American *Herr professors* declared:

"Whoever might have been responsible for beginning the war, Germany has been the first to propose to end it. *The Kaiser could say exultantly that the Allies had at last cast off the mask of hypocrisy and plainly revealed their lust of conquest.*"

Commenting on this deplorable volume by Professors Beard and Robinson, Judge Thomas Burke, of the Text Book Committee of the Seattle School Board declared:

"Entirely apart from the School Book Committee and acting solely on my own responsibility as a citizen deeply interested in the welfare of the Public Schools, I can not let this occasion pass without calling attention to the danger of underestimating the influence for good or evil of the school history according to its character.

THE ENEMY IN AMERICAN SCHOOLS

"Next to the home, the school room is the place where love of our country and its noble ideals, admiration and reverence for its illustrious founders and preservers who wrought so disinterestedly and successfully in the cause of justice and liberty, take deepest root and make the most lasting impressions on the hearts and minds of the youth of the land. Hearts and minds thus imbued in early years will constitute in years to come at once the glory and the real defense of the country. The public school is the Ark of the Covenant of the Republic.

"It is little wonder, then that for some years, even before the German war, the common enemy sought and secured an entrance there. He knew that if, unobserved, he could, from the vantage ground of the school room, direct the education and form the ideals of young America, that sooner or later the country would be at his mercy. And so it came to pass that German propaganda in text book and teaching became rife and rank from the Atlantic to the Pacific.

"To be forewarned is to be forearmed. We know now what the enemy has been up to in secret for many years. It is our duty to the children of the land to seek out this enemy's hiding places and drive him hence and to see to it that he never enters there again. The danger arising out of the situation created in this school district by the attempt to introduce Robinson and Beard's 'Outlines of European History, Part II,' has been removed for the present by the withdrawal of the books for revision and expurgation."

Remarking upon the complaisant readiness, nay alacrity, with which the obliging authors went about "expurgating and revising" their volume after its pro-Germanism had been detected and exposed, Judge Burke said:

"The authors seem to be ready to change their views on historic subjects, holding themselves in readiness to rewrite their book to meet the market. This is one of the surprising results of the criticism of the work here and elsewhere. It reminds one of the case of a school teacher who applied to a country school board for a place as teacher in the district school. In the course of the examination the directors said: 'Now some people think the world is flat; other people say the world is round. What is your view?' To which the versatile candidate replied: 'I am prepared to teach either view, flat or round, to suit the District.'

"It is needless to say that this is not the spirit in which a school history worthy of the name should be written."

Professor Charles A. Beard while at Columbia University defended those so-called "conscientious objectors," Professors Cottell and Dana, who were under fire. Prof. Beard found it convenient to resign from that institution.

AN IDEAL COLLECTIVE CONTRACT

Many commercial organizations have passed resolutions and many large capitalists have publicly declared that labor and capital should come together in joint conference to work out practicable methods for dealing with each other, but the Bethlehem Shipbuilding Corporation went beyond the talkfest stage and put the proposition into actual operation.

Early this year, as the result of many conferences between the officers of that corporation and the Metal Trades Department of the American Federation of Labor, the following agreement was reached:

AGREEMENT made this Seventh day of January, 1919, between the Bethlehem Shipbuilding Corporation, Ltd., a Delaware Corporation (hereinafter called the Company) and the Metal Trades Department of the American Federation of Labor (hereinafter called the Department).

WITNESSETH:

That whereas, the Department is an organization composed of National and International Unions (hereinafter called the Unions) affiliated with the American Federation of Labor, many of the members of the said unions being in the employ of the Company in its various plants, and

Whereas, the Company recognizes the said Unions collectively as a suitable agency to represent its employees in questions arising as to wages, hours of labor and general working conditions, and

Whereas, the Department is authorized by the express consent of each Union which is a member of the Department to enter into an agreement with the Company providing for the relations of the Unions with the Company—

Now, therefore, it is agreed as follows:

(1) The Unions shall select a committee of five members (hereinafter called the Internationals' Committee) which shall represent the Unions in questions arising between the Unions and the Company.

(2) The members of the Internationals' Committee shall be selected in such manner, for such terms, and with such provisions for alternates as the Unions may from time to time determine.

(3) The Internationals' Committee may appoint agents, delegates or officers who shall have such authority in dealing with the separate managements of the plants of the Company, or with Employees' Committees in such plants, or on behalf of such Employees' Committees, as shall be expressly conferred by the Internationals' Committee.

(4) The Internationals' Committee, or any member thereof, or any person expressly authorized by said Committee shall have access to any plant of the Company on the business of the Internationals' Committee, in accordance with rules and regulations agreed to by the Internationals' Committee and the Company's Committee.

(5) The relations of the Unions with the Company and with the separate managements of its plants, (including in the term *Unions* all departments, councils, federations, central, local or other organizations affiliated with the American Federation of Labor, and all agents or officers thereof) in matters affecting wages, hours or labor or working conditions are to be carried on exclusively through the Internationals' Committee, or in accordance with the rules of said Committee from time to time established, and not otherwise.

(6) It is understood that the employees will select local or plant committees that will function in the same manner as provided for in the Shipbuilding Labor Adjustment Board awards subject to such changes or modifications as may from time to time be agreed upon by the Internationals' Committee and the Company's Committee.

(7) The Company shall appoint a committee of five members (hereinafter called the Company's Committee) to meet with the Internationals' Committee at regular intervals and otherwise subject to the joint call of the Chairmen. The members of the Company's Committee shall be appointed in such manner, for such term and with such provisions for alternates as the Company may from time to time determine.

(8) The Internationals' Committee and the Company's Committee shall jointly hear or consider all grievances or other questions affecting wages, hours of labor or working conditions which have failed of adjustment, and any other matters as to which such joint consideration will tend to avoid misunderstandings, or will improve the condition of the industry and of its employees. Any officer representing a Union shall have the right to be present at a hearing in the subject of which the interests of his organization are specially concerned, or to confer with the Committee, sitting jointly, on any question which in his judgment requires consideration or adjustment.

(9) The Internationals' Committee shall pay the compensation and expenses of its own officers, agents or delegates, but the Company will pay the reasonable compensation and expenses of its employees for time actually spent in service on craft or other Committees in accordance with provisions and rules from time to time made and agreed upon by the Internationals' Committee and the Company's Committee.

(10) A National or International Union, any of the members of which are employees of the Company, and which is not a member of the Department, may become a party to this agreement by notice to the Department and to the Company of its intention to conform to the provisions hereof. Any such union may withdraw from the agreement upon notice to the Department and the Company. Either the Department or the Company may terminate this agreement at any time by giving thirty days' notice in writing.

IN WITNESS WHEREOF, Bethlehem Shipbuilding Corporation, Ltd., has caused these presents to be signed and its corporate seal to be hereto affixed by Eugene G. Grace, its President, and Joseph W. Powell, a Vice-President, and the Metal Trades Department of the American Federation of Labor has caused these presents to be signed by James O'Connell, its President, and A. J. Berres, its Secretary, all on the day and year first above written.

BETHLEHEM SHIPBUILDING CORPORATION, LTD.

The Reign of Ruin In Russia

BY unanimous vote of the United States Senate, the sub-committee of that body, headed by Senator Overman, which has been investigating German propaganda, was recently instructed to investigate Bolshevism and Bolshevist propaganda in this country.

Albert Rhys Williams, who styles himself an accredited agent of Lenine and Trotzky; John Reed, who was appointed "Consul-General at New York" by the Bolshevik regime; Santeni Nuorteva, head of the Bolshevik publicity bureau in New York City, and a few others, have been the most active of the official Bolshevik propagandists in this country. Although none of them has been in Russia recently or has any accurate personal information of actual recent or present conditions there, all of them have been spreading the most enthusiastic assertions of the wonders they describe as having been wrought by the Bolshevik regime. That their assertions are absurd inventions has already been shown by the specific testimony, published in THE NATIONAL CIVIC FEDERATION REVIEW, of an array of responsible witnesses who not long since returned to this country from Russia and who were in close contact with affairs there. Excepting two or three who have gone to Siberia, these witnesses are all available for a call by the Overman Committee. But there are many other witnesses who still more recently came out of Russia and are still in Europe. The testimony of these fully confirms that of the others, and further shows the anarchy and chaos that Bolshevik theories and tyranny have brought.

LENINE, LIKE AN ORIENTAL DESPOT

M. Titoff, a Moderate Socialist, and a member of a Russian delegation which recently arrived in London from Odessa to acquaint the world with the actualities of Bolshevism, gave out this interview:

"No words can adequately express the utter artificiality and unreason of the whole system. The Tzarist régime pales into moderation beside it, and the only parallel to it that can be found is that of some Oriental despotism or the wild imaginings of some stage drama.

"To take Lenine, for instance. He lives hidden away in the recesses of a huge pile known as the Kremlin, which is garrisoned by Lettish soldiers and searched regularly and constantly from end to end for fear of lurking conspirators.

"And from this stronghold issue orders which have to be obeyed as law, no matter whether they apply to institutions, classes, or individuals."

As an example of Lenine's autocratic capriciousness, M. Titoff told of a lady whom he had known personally, and who was formerly a singer at the Opera House in Petrograd. Lenine one day suddenly ordered her to the Kremlin to sing to him; but by the time she arrived, he had changed his mind, and she was made to sing to the drunken Lettish guard instead.

In the Bolshevist world without, M. Titoff explained to the press representatives, it is the same story of unreason and caprice. With the whole non-Bolshevist press suppressed and the right of meeting, even in private houses, abolished, freedom, whether collective or individual, is unknown, and as for the redress of wrongs, there is none.

The lowest of the rabble, said M. Titoff, can enter the house of any citizen at any time and do with him what he will. To appeal to the tribunals that now are called "courts of law" is only to insure further spoliation, for the invariable rule in such a case is to rule against the complainant on the ground that he had more possessions than the other man, and on that ground alone.

"Indeed," M. Titoff declared, "with industry at a standstill, the state bankrupt, the land unsown, the urban population starving, none but the rabble and the heavily paid horde of Bolshevist officials and soldiery now adhere to, or stand to profit by, the Bolshevist régime.

"And the rabble and the Bolshevist mercenaries are for all practical purposes synonymous terms, for the bulk of the latter are drawn from the lowest class of society.

"Except in the case of this class, which naturally is the only one that can derive any profit from such a state of affairs, the Bolsheviki maintain their hold on the population merely by virtue of force of circumstances, or by the alternate use of bribery or coercion. Thus, in case of the bourgeoisie, many of them have had to take service under the Bolsheviki merely to save themselves from utter starvation, to which the bourgeois class has been deliberately doomed by the Bolshevist administration.

"Again, another favorite device employed by the Moscow Government is to seize upon relatives of its political opponents, and to hold them as hostages.

"Many a strong man is thus prevented from lifting a finger against the established order, or is even compelled to take office under it lest his family should pay the penalty for his refusal with their lives or worse.

A DISILLUSIONED WORKING CLASS

"This, for instance, is the case with many officers in the Red army, whose lot, even apart from this fact, is as unenviable as it well can be. Each officer, namely, has attached to his person a Bolshevist commissary, armed to the teeth, and who, being liable to be shot himself for any offense committed by his charge, is by no means slow to use his revolver on the slightest pretext. The working class population, meanwhile, has become disillusioned by the manifest gigantic failure of Bolshevist economics, and the almost universal misery they have brought in their train.

"Like the bourgeoisie, however, the workers have had to take refuge in the Bolshevist ranks from the starvation that prevails without, while others of their number are kept quiet by dint of the liberal use of paper money, which the government prints in huge quantities.

"The government, for instance, frequently subsidizes such industrial enterprises as are still struggling along, while the work people discharged from those that have already closed down are paid their wages several months in advance from the government funds."

As for the peasantry, M. Titoff reports that the initial hold which the Bolsheviki secured over it by their distribution of the land, has now been effectually undermined. In the first place, the peasant's one idea, now that he has the land, is to keep it, and the Bolshevist régime fails to come up to the standards of order and stability necessary to secure that end.

In the second place, the Bolsheviki, in the country as in the towns, have systematically exalted the lowest class at the expense of those above them, so that the small farmer class now frequently finds itself at the mercy of the laborers and is alienated from the government in consequence.

"Finally," continues M. Titoff, "the dreams entertained by the peasantry of the new era of prosperity have been rudely shaken by the arbitrary fixing of corn prices, and a system of forced sales and confiscation. The result is that the peasant is concealing what stocks he can, while also refusing, in view of the general uncertainty, to sow his fields afresh—a fact of sinister significance, not only to Russia, but to a considerable part of Europe also, and therefore, in the present circumstances, to the world at large."

TERRORISM AND FORCE TO INSURE SUBMISSION

Asked how it was that, in such circumstances, the Bolsheviki are still able to maintain themselves in power, M. Titoff declared that, just as Czarist Russia was kept in a state of perpetual torpor by the sale of vodka, so now Bolshevist Russia is kept under the spell of the reign of terrorism and force.

In Central Russia, it is physically impossible for any section of the community to take action, for the Bolsheviki are the only element in possession of arms and equipment of any kind, thanks mainly to German solicitude on their behalf. This summer alone, for instance, Germany supplied some 800,000 rifles to the Bolshevist troops. Moreover, the mainstay of the Bolsheviki's power is the horde of Letts and Chinese enrolled under their banner. Every regiment of the Red army has incorporated in it a battalion of these men, who need only a word of command to shoot down without further ado any who show the slightest sign of revolt.

Similar alien detachments are posted throughout the provinces ready to strike down without hesitation any who would attempt to move against the established order.

It is these Chinese and Letts, too, who carry out the wholesale executions of all and sundry who come under the Bolshevist ban, and who in fact terrorize the whole population into submission. It is only in southern and northern Russia and in Siberia where the Bolsheviki have never succeeded in thus consolidating their power, that it has been possible to organize any kind of resistance, and those efforts have been hampered hitherto by lack of arms and equipment, from which the population of central Russia has suffered, and from the difficulty of coordinating the steps taken in each region.

SYSTEMATIC STARVATION OF HATED CLASSES

How the Bolsheviki have been deliberately, systematically underfeeding or starving all but their following of manual laborers and Red Guards is shown by the facts given in the Bolshevik official organ, the *Prodovolstvie Severa*. The official decree of the Food Commissariat, there published, gave orders to the effect that in Petrograd from October 15 "until further alteration" the daily ration of bread will be as follows: Class I, three-eighths pound; Class II, one-eighth pound; Class III, one-sixteenth pound, and Class IV, none. Potato rations (per week): Class I, four pounds; Class II, three pounds; Class III, one pound; Class IV, one-half pound.

"The classification of rations according to classes is a specimen of Bolshevist justice," says Ariadna Tyrkova, in the second of a series of special articles on Russia which were forwarded from London to the *Christian Science Monitor*. "The first class includes persons engaged in manual labor. The second includes employees, board and public school teachers, etc. The third category is composed of engineers, lawyers, doctors, professors, and members of the liberal pro-

fessions in general. The fourth category includes persons living on income derived from property (it is hardly likely that there are any now) and shopkeepers. The last two categories are condemned to go constantly hungry, as it is scarcely possible that anyone can subsist on one-half pound of potatoes a week. However, when the Red army manages to requisition some corn from the peasants somewhere or other, then occasionally even the fourth category get one-sixteenth pound of bread.

"It goes without saying that all who can are escaping from Petrograd. The *Prodovolstvie Severa* for the 19th of October says that in January, 1918, Petrograd had 2,693,000 inhabitants, and by August only 1,513,000 were left. The population is steadily diminishing and by September there was a further decrease of 16 per cent., this diminution varying to a considerable extent according to the class. The first class shows no decrease. The second shows a decrease of 24 per cent., the third of 47 per cent., and the fourth has almost disappeared, the decrease amounting to 85 per cent.

"But it is a mistake to use the word 'escape.' It is no easy matter to leave Petrograd. There are permits to obtain from the committee, money is necessary, and no small amount, as without bribery it is difficult to stir, and it is far more probable that the bulk of persons represented by these statistical data have simply perished of starvation. But the official paper is evasive in mentioning their disappearance, merely saying that 'there is a decrease of so many.' This expression assumes still more significance when it is stated that 'the decrease in the number of young children is very perceptible, amounting to as much as 73 per cent.' Apparently that decrease took place between June and September. But even before that, from January to August, of the 130,000 children under three years of age, only 35,000 remained, while of the 328,000 children under 12, only 191,000 were left. It is to be hoped that even half of these 'children' were got out of Petrograd by their parents. The other half have undoubtedly perished."

In the same Bolshevik organ there was an order of the Bolshevik Government to get ready grain for shipment to Germany. This order called upon all Bolshevik officials "to get ready to render energetic military and alimentary assistance to the working classes of Germany and Austria-Hungary." That was in October, before the Allied nations had agreed to an armistice with Germany. Since then the famine in Petrograd and other Russian cities has reached far more horrible proportions, vast numbers dying from starvation. These victims include Americans and other nationalities as well as Russians. Only a few days ago the Joint Centenary Committee of the Methodist Episcopal Church issued a statement in New York City that it had received information that W. D. Childs, an American, and for many years chief representative of the Western Union Telegraph Company in Russia, had died of starvation in Petrograd.

ONLY DESTRUCTION; NO CONSTRUCTION

"The Bolsheviki are destroyers," said Madame Catherine Breshkowsky, "the mother of the Russian Revolution," who is now in the United States, after having fled from Russia, where the Bolshevik régime threatened her with death. "Ruination is their motto. There has been no construction. Russia has 180,000,000 people and 80,000,000 are illiterate. They never knew the relations of their own country. They never knew there was a Little Russia, a Siberia, or any other of the various parts of their own country where they did not live. They were never permitted to take any part in the government. How can such people proceed to such liberties as they strived for?

"I believe our future depends on the inclination of organizations and their conceptions of democracy. Russia needs a good system of education. There are 2,000,000 orphans in Russia. Another 2,000,000 children are fatherless. It is my business and that of my heart and my conscience to devote my life work in aiding them.

"There are no factories, no mines or mills left. There is no iron for blacksmiths to forge horseshoes. The price of a spool of thread is 20 rubles (normally $10) and it cannot be obtained even at that price, for there is no thread. There is no paper on which to print an alphabet for their children. I pray that in America I may find the money whereby these 4,000,000 children may be supplied with alphabets. They will have to be printed in America.

"Russia is in need of good teachers and good craftsmen, good carpenters and machinists, in fact good men in every craft. Before we have good industry we must learn, and it is to this country that we are looking."

AN AMERICAN RADICAL'S DISGUST

A disillusioned former Bolshevik sympathizer who has just come out of Russia is Robert Minor, a well-known American cartoonist and illustrator. Mr. Minor was for many years a strong socialist adherent in New York, and more latterly has been a believer in the I. W. W. theories. The *New York World*, on February 3, and succeeding days published a series of articles signed by him and cabled from Berlin. Inasmuch as Mr. Minor was admitted to have an interview with Lenine, which interview Lenine knew was to be published in other countries, the question occurs whether Lenine was not cleverly using the occasion to create abroad an impression that he calculated would be to the advantage of his régime. Russia under Bolshevik misrule is in such a chaotic state, lacking goods of any kind, that to sustain their régime, Lenine and Trotzky must furnish essential commodities which can only be obtained from other countries. These will not do business with a country run by a régime based on murder, pillage and repudiation of debts. It is now to the paramount interest of Lenine and Trotzky to try to spread the idea in other countries that their régime is not at all the dangerous affair that it has been represented. Their aims would be advanced if they could have other peoples believe that the Russian business men are actually, although not nominally, in charge of industry. They could thus present themselves as an orderly government, with whom it is safe to do business.

These comments are in order without questioning Mr. Minor's good faith in the premises.

While Messrs. Williams, Reed, Nuorteva and Company have been regaling meetings here with imaginative yarns about how the proletariat had dispensed with the "bourgeoisie" and were effectively running Russia, a very different state of affairs has developed there, according to Mr. Minor. Lenine and Trotzky have now had to go to that very "bourgeoisie"—or what has been left of it—for the necessary ability to restore the factories wrecked by the incapacity or despoiling of Lenine and Trotzky's proletariat. Says Mr. Minor:

FEARED MORE THAN THE CZAR

"As Lenine talked to me he kept hitching his chair nearer to mine until his knees touched mine, and his finger waved under my nose. I really felt submerged by his personality, which seemed to fill the room.

"The tiptoeing stenographers and the sentries about him are seemingly treated as his equals, but it struck me they held him in greater awe than they had ever felt toward the Czar.

"The interview was in the Kremlin, ancient seat of the Czars. As I came away two smart limousines drew up and deposited several well dressed men of the business type. This class had been lying very low only a few months ago. They are of the type the Bolshevik creed denounces as 'bloodthirsty minions of predatory capital.'

"There is a difference now. The business types ride in fine automobiles as before, live in fine mansions, and are again managing the old industries, with more authority than ever before. Now they are 'People's Commissaries'—servants of the proletariat—and the iron discipline of the army under red flags has been developed in order to protect them against all annoyance. A rose smells as sweetly to them under any other name.

"The Bolsheviki won the support of the lowest-paid laborers by declaring for equal pay for all work. As soon as they felt sufficiently strong they contrived devices for raising the incomes of those 'doing unusually important work.'"

Mr. Minor added that the "inflammatory Revolutionary language" which the Bolshevik leaders have been using to other nations, is simply intended for home consumption. Lenine and his associates have already abandoned many of their theories, including that of repudiation of debts on foreign loans. They really, Mr. Minor says, want to come to terms with other nations. He declares that instead of having established the communism and industrial "dictatorship of the proletariat," which they would have revolutionists in other nations believe they have effected, the Bolshevik régime has now come to what is in fact actually government ownership. Mr. Minor's articles exposed the pretensions, tricks, cant and humbuggery by which Lenine, Trotzky and associates have deceived their rabble following. They have established what they all along so vehemently denounced as a "capitalist product," namely, a political state. It is of the most despotic order of centralization, with themselves as autocrats. This arbitrary political power, Mr. Minor lets it be understood, they have determined to maintain at all costs.

Shadow Huns and Others

(*Continued from Page* 16)

Prof. Charles A. Beard came to the defense of the teachers of the DeWitt Clinton High School, New York City, who were accused of unpatriotic teaching, and were subsequently dismissed. At a meeting held in the school on December 15, 1917, a letter from Prof. Beard in defense of the accused teachers was read. In this letter Beard attempted to project into the matter the question of racial prejudice, actually making the charge that the disloyal teachers had been suspended because they were Russian Jews.

Prof. Charles A. Beard's name was mentioned some time ago in a list of people who were to be sent to Europe by the Young Men's Christian Association "to give instruction in citizenship and municipal government to soldiers in order to return to America imbued with high civic standards and better equipped for participation in government." Is the man who so grossly "interpreted" the founders of the Republic and the authors of the fundamental principles of American Democracy likely to be able to imbue American soldier boys "with high civic standards?" Could those lads, who fought the brutal Hun with a glory in their eyes, who were baptized in a fire of real patriotism, learn aught of ideals from a man who villified the Allies, accusing them of "hypocrisy" and "lust of conquest?"

Shall the children of America receive the purest and loftiest interpretation of the history

(*Continued on page* 19)

The Revival of Hyphenism

(*From Bulletin of the American Friends of German Democracy*)

THAT which we have predicted, and against which we have repeatedly cautioned, is now developing into an evident reality; those elements who were prompted by their own material interests to be careful since the law had bidden them silence, and who had been hiding in the storm cellar ever since, are again raising their heads. For them the storm, the war, is past, and now they think that they may slip back again into the old life. The great lessons of the war have apparently passed over their heads without any visible effect.

The recent annual gathering in the *Deutsches Haus in Rochester, N. Y.*, of a well known charitable organization styling itself "German-American Society" furnishes an example. The assembly evidently was, according to the description of the German-language press, well attended, as though an effort had been made to create the impression that now, after the war is over the German spirit would make every attempt to reassert itself. The President, Mr. C. J. Hos, made a great speech, in which he divided the "German-Americans" into three classes. In the first class he placed the "super-patriots", who "from super-patriotism for the land of their birth invoke the worst evils upon the land of their choice, at least according to their irresponsible chatter." These the speaker condemned as men who were worthy neither "of their new, nor their glorious old fatherland."

In the third class, in which the speaker placed himself, belonged those who have kept their oath of loyalty to their new country, "but who have not ceased to love their dear old home, who have held fast to all that which binds them to that sacred land, and who proudly proclaim their origin from that beloved soil, their German fatherland, at all times. These form the best material of American citizenship, and will, there is no doubt whatever, be respected and appreciated by all the truly fair minded, cultured and unprejudiced Americans."

It is, however, the second class who have incurred the full weight of Mr. Hos' displeasure. For this class contains all those who "from cowardly fear have immediately thrown off every memory, family connection and tie of affection for their old fatherland, which should bind them to the land which once was their all. . . . I maintain, that whoever can forget his fatherland is not worthy of ever having possessed it." Further: "Of those *pitiful heroes* belonging to the second class we have a few among our membership. Two of them resigned their membership, and announced their desire to have nothing more to do with the society." The names of these people, President Hos explained in conclusion, would shortly be made known.

Who are those "pitiful heroes"? 100 percent Americans! One of them belongs to the most active members of the American Friends of German Democracy. *They* did not hesitate, to be sure, to tear that Germany from their hearts which made war on America, which was completely under the thumb of the Kaiser, of militarism, of the Prussian spirit of autocracy, and to acknowledge no other feeling of patriotism except that which is in the heart of every true American. It is possible that they have made greater sacrifices of soul than gentlemen like Mr. Hos, in being absolutely true to their oath of allegiance; but they did not hesitate for a moment to take their stand with America, and with America alone, with all that they possessed. That is the reason why they are now insultingly called 'pitiful heroes". Insulted by those who would like to return to the old condition of hyphenism—now that the war is over. Insulted by those who still speak of the "glorious old fatherland" with exaggerated pathos, who surround it with a halo of sentiment which has no shadows, but who, when speaking of their new fatherland, do so in words that express "only just enough of love". Insulted by those, who bought Liberty bonds, it is true, but at no loss to themselves, for it was no sacrifice for the well to do, who served their country only when the law demanded it. Insulted by such people were those who gave everything, and who sought no other return than that which true love of country brings.

What happened in Rochester is by no means an isolated case. Exactly like such gentlemen as Herr Hos the "old leaders" are raising their voice, and are coming out of their hiding places in New York, in Chicago, in Buffalo, in Pittsburgh, in Detroit and everywhere. Blind as they were up to April, 1917, they continue, and imagine in their ignorance that with the armistice everything will slide back into the old rut. They seem unable to grasp the fact that American public opinion today, and for years to come will keep a sharp lookout for those who formerly were wont to talk of the duty of the German-American to unite the "glorious old fatherland" with the new, by means of the hyphen. They remind us strongly of the old leaders in Germany, the Bethmann Hollwegs, the Bernstorffs, the Zimmermanns, who are already eager to resume control in the new Germany as well.

German societies, if they wish to maintain themselves further, will have to purify themselves, will have to take the standpoint of one hundred percent Americanism—or disappear. Least of all, are they to assume the right of branding those who, during the last two years, have supported unceasingly, without any mental reservations whatsoever, the American war and peace aims. In the future it shall be one of *our* tasks to expose mercilessly all those who dare to raise again the old banner of the one time German-American National Alliance. In this we appeal to the public opinion of Rochester, through its press, not to permit men to be insulted who are 100 percent American, and who have proven that for them there exists no "glorious old fatherland" or a "new fatherland", but only the one—America.

BERNSTORFF NOT PERSONA GRATA

(*From Bulletin issued by the American Friends of German Democracy, Franz Sigel, Pres.*)

Count Johann Bernstorff will *not* be a member of the German Peace Commission in Paris. That seems, according to the latest reports, to be certain now; and that may be regarded as a proof that the Peace Commissioners will represent the *new* era and that only.

Anything else, a compromise in which a Bernstorff would have played a prominent part, would by all means have been disastrous to the new Germany. It is only surprising that it is still possible today to consider a Bernstorff seriously at all. The leaders of the present Germany could not possibly be so blind as not to know what an impression the pliant tool of the branded German propaganda in America would make on the Allies and especially on the representatives of the United States if this Count would appear in Paris and, wearing an innocent mask and wrapped in garments of spotless white, with his polite smile would address the Conference: "Here I am again. My name is still Bernstorff, but today I no longer serve the 'most gracious sovereign', the Kaiser,—during the night from the 11th to the 12th of November I became a republican. To Hell with the Kaiser! Your humble servant! . . ."

Bernstorff is quite capable of it. With an arrogance which is unique he has had a great deal to say in Berlin in the past weeks and, like his former companions Bethmann-Hollweg and Dr. Zimmermann, has granted interviews about everything under the sun, has wished the Kaiser would go to the devil and has actually imagined that the world, which has already pronounced him guilty of a share in the great crime, will be deceived by his smooth manners, will forget what he once was and will accept his love for democracy at its face value.

It will not be fully believed that Germany has shed her skin, that she has purged herself and become converted until she has relentlessly relegated to permanent oblivion the men who led her astray.

With what false conceptions of America Germany and German-Austria still deceive themselves about the true situation is proven by a notice taken from the "Wiener Arbeiterzeitung," according to which the "Vienna Bulletin", a publication which is intended for the English and the American press, announces that "in Viennese liberal (!) circles it is intended to induce German-Americans, who play an important role in political life, to hold lectures in Vienna about the republican form of government, republican institutions, etc." Invitations would be extended to the "'Republican' member of Congress William Sulzer (!) and the Democratic Congressman Richard Bartholdt!"

Aside from the fact that neither of these two men still are members of Congress, that the latter is not a Democrat and the former not a Republican, could the "liberal circles" not have hit upon anyone else besides Sulzer, who was forced to leave political life in the most ignominious manner, or Bartholdt, who was dragged into the abyss by the German propaganda of the defunct German-American Alliance and who brought the statue of Steuben to Potsdam and to the Kaiser in exchange for the statue of Frederick the Great?

The "Arbeiter-Zeitung" which calls the whole thing a "swindle and gossip of the coffeehouses" is correctly informed. If Americans of German descent are to inform the Germans on the other side on the principles of democracy it will be neither the Bernstorffs nor the Bartholdts or Sulzers, but men who for years past, when the others were still adherents of the Kaiser or greedy politicians, stood in the front ranks of the opponents of Prussian autocracy.

Shadow Huns and Others

(*Continued from page* 18)

of their country, or shall they be corrupted with the "Teutonic" interpretation of "economic determination?"

Prof. Charles A. Beard is one of the moving spirits of "The New School for Social Research," which is being advertised in the New York papers and which announces it has already acquired ownership of a building in which it is starting. Among the lecturers announced are Prof. James Harvey Robinson, Prof. Thorstein Veblen and Robert Bruere, who were all involved in an effort to raise $50,000 in June, 1918, for the defense of the I. W. W. leaders on trial in Chicago for seditious conspiracy.

Are people who defended the "conscientious objectors" and the criminal I. W. W. who sought to hinder the country in its conduct of the war against Germany, desirable instructors for the youth of America in efficient democracy, social research and economic readjustment?

Prof. Charles A. Beard still holds his job as Director of the Bureau of Municipal Research and Public Training, New York.

The French Socialists and the Bolsheviki

(EDITORIAL FROM THE JANUARY, 1919, "AMERICAN FEDERATIONIST")

By SAMUEL GOMPERS

THE political party which claims to represent French labor has indorsed Bolshevism; strong influences are at work within the Co dération Générale du Travail working in same direction. The French anti-war fanatics and pro-Bolshevists practically obtained control of the French Socialist party at the end of last July. At that time and up until the very day of German defeat, the slogan was "Peace Without Victory" and a compromise with German Kaiserism and militarism. At the National Congress of the party in October their control was re-affirmed and the official party organ passed from the hands of the so-called pro-war politician Renaudel, into the hands of the anti-war politician, Longuet, the grandson of Karl Marx.

In spite of all that the French Socialist party could do to prevent it, the war was continued until the German defeat which brought with it the German revolution. Did the socialists then confess their tremendous blunder or wrong? Not in the least. On the contrary, they claimed that Germany was not defeated by the valiant and heroic armies of the world's democracies, but by an impending German revolution due to the Soviet agitation in that country. They took the armistice as a sign of the failure of democratic internationalism and the victory of Soviet internationalism!

The armistice had not been signed three days when the executive committee of the French Socialist party met and passed the following amazing resolutions:

> The French Socialist party welcomes the German Republic and the taking over of the power in Prussia and the Confederated States by the working class.
>
> As in the Russia of the Soviets, Socialism has appeared in all Central Europe as the proper liquidator of the political and social situation left by the war.
>
> The party thus sees justified the confidence which it has always had in the action of peoples.
>
> Considering that certain of the conditions of the armistice leave the sharply defined fear that the Allied Governments have the intention of further extending the criminal military intervention against revolutionary Russia, the party declares that it will appeal to all the forces of the French proletariat to prevent the Socialism which is being born in Russia, as well as in Germany and Austria, from being crushed by coalitions of foreign capitalisms.
>
> The party urges the French working people most rigorously to rally to the support of their unions and Socialist groups, to sustain their class journals, and to keep themselves ready to make Socialism triumph in France as it has in the other countries of Europe.

This resolution which betrays not only France, but also the democratic League of Nations now in process of formation at Versailles, is as remarkable for what it says as what it omits to say. The only revolution it recognizes in Russia is the counter revolution by which the Bolsheviks overthrew the democratic government of Kerensky and by force of arms dissolved the constitutional assembly. It is assumed that the new government of Germany will be of a similar character and it is demanded that the Socialist minority, representing less than twenty-five per cent of the French people, should bring about a Soviet revolution in France!

All the achievements of the democratic revolutions of the past in France, America and England are ignored or perverted. It is held that there is precisely the same need for revolutions in those countries as there was in Russia and in Germany when the Czar and Kaiser were thrown out! There never was such a thing as a Declaration of Independence, or a French declaration of the rights of man. The universal suffrage of France, England and the United States is ignored as if it had never existed. The growing power of Labor in America, as well as in France and England, is implicitly denied. The assumption is that Labor and the masses generally are in the same position in the world's great democracies today as they were under the Kaiser and the Czar.

If this is not treason to democracy and treason to internationalism, then we would better take the word "treason" out of the dictionary.

Since the Peace Conference is being held in France, the French situation has a new importance, and deserves close attention. While the Longuet faction controls the party there is a strong opposition and the party is split down the middle, but unforunately politicians are almost as common in the so-called pro-war opposition as they are in the controlling pacifist element. It is especially unfortunate that even the most able and honorable Socialist leader, Albert Thomas, formerly Minister of Munitions, signed the Renaudel resolution. Cachin, formerly a strong pro-war man, has now become the editor of "L'Humanité," under the thumb of Longuet. Other leaders of the pro-war faction like Sambat, formerly a member of the war cabinet, are still less reliable. Even the group of forty, composed of Socialist members of the Chamber of Deputies who opposed the war under the leadership of Varenne and Compere-Morel, are apparently tied hard and fast to the principle of "party unity."

It is under this banner of party unity that the politicians have flourished. The party is obviously divided not into two, but into many groups of politicians who change their position from day to day. But it is always possible to justify any position whatever under the pretext of party unity—"my party, right or wrong," and party unity implies absolutely blind and unthinking support of the Socialist International.

Thus, loyalty to this "International" replaces loyalty to Labor.

The last hope of the French working class is with the Confédération Générale du Travail. Jouhaux, the Secretary of the Confédération, who partly followed Longuet against the American Federation of Labor at the Inter-Allied Conference of London, in September, now shows some signs of suffering from an over-dose of this Bolshevism. He has recently issued a scathing denunciation of revolutionary phrases, appealing for a positive program of reconstruction.

Further evidence of a return of wholesome common sense and of a sound labor instinct is given by a proclamation issued jointly by the Confédération Générale du Travail and the Socialist party during the armistice negotiations. This proclamation originated with the pro-war wing of the Socialist party and the Confédération Générale du Travail. It was adopted by the whole party, however, and then by another important political organization called the Union Républicaine.

Here is the importance of this resolution. It developed for the first time in several months a co-operation between labor organizations and other honest and radical democratic elements. But an even greater significance arises from the fact that merely because the Union Républicaine —a non-Socialist organization—signed the manifesto, the Socialist party met and the pacifist wing obliged it to pass a resolution attempting to withdraw the proclamation. However, the Confédération Générale du Travail refused to join in the withdrawal and the manifesto was posted all throughout France. This proclamation has a high value as showing the attitude of the Confédération Générale du Travail on peace terms. We, therefore, reproduce some of its important statements:

> The organizations which represent the most active forces of labor and democracy declare their entire agreement with the fundamentals formulated two years ago and the acts accomplished in the last fortnight by President Wilson. To employ the expression of the Confédération Générale du Travail, we declare that he has formulated the guarantees necessary to bring to the allied countries "the certainty that the injuries which have been done shall be repaired, that the peoples at present subject to the law of force shall be liberated, that the possibilities of a fresh war shall be definitely eliminated."
>
> This conception, common to our democracy (which has arisen from the French Revolution) and to President Wilson, excludes all ideas of conquest and annexation as it rejects any peace by the abandonment of justice.

The pro-Bolshevik element in control of the Socialist party wished to withdraw this proclamation. They have never dared to make open attack on President Wilson or to repudiate him in any important feature. They profess, hypocritically, to follow him. But at the same time they conduct a ceaseless agitation in favor of the Russian Soviets and of a Soviet revolution in France! They are fully aware that Mr. Wilson has personally vouched for the documents showing the secret alliance between the Bolshevik of Russia and the Kaiser and they know that he has successfully appealed to all civilized governments to repudiate the same Soviets. But they still profess to follow the leadership of President Wilson.

Longuet's daily organ, "Le Populaire," contains almost daily columns of defense of the Soviets and of all of their deeds and policies. Of course, about once a month Longuet writes a pro-Bolshevik article in which he is careful to state he does not indorse absolutely everything the Soviets do, but he is well aware that his paper daily gives the opposite impression, namely, of an indorsement which is not only unqualified but fanatically enthusiastic.

It is evident that these French Bolsheviki are in earnest as to their proposed insurrection. Nobody can doubt that they will take the first favorable opportunity—if any opportunity occurs—to attempt it.

The next few weeks will show whether the sane and loyally democratic elements in the French Federation of Labor will be able to resist this mischievous movement. At the beginning of the war the French Confédération Générale du Travail not only supported this war for democracy by an overwhelming majority but agreed to an International Labor Conference at the end of the war from which all politicians, whether socialist or non-socialist, shall be excluded. The French Socialist party has never secured any indorsement of the French Federation of Labor as having the sole and exclusive right to represent the working people politically. If the French Federation is true to its own highly creditable past of the last quarter century and especially to its splendid record during the first three years of the war, it will yet be able to foil this mad movement which can only result in putting back French labor for many years and possibly in wrecking the League of Nations which President Wilson is striving so desperately to bring into being.

BOLSHEVISM PROBED BY SENATE

SUMMARY OF THE TESTIMONY ADDUCED BY THE OVERMAN COMMITTEE SHOWS CONDITIONS WORSE THAN ANARCHY EXISTING IN RUSSIA AND THAT THOSE IN CONTROL INTEND TO IMPOSE THE RULE OF FORCE ON THE WORLD

At the hearings before the Senate Committee investigating Bolshevism, which occupied most of February, here was unfolded the story of he betrayal and ruin of Russia by he Bolsheviki, under Lenine and Trotzky. It was an appalling re-ital—that testimony of witnesses, including United States Government representatives, clergymen, bankers, educators, Americans and Russians, who had observed the reign of crime and mass murder in Russia first hand. That story of the destruction of a great nation, of a people utterly betrayed and undone by a small group of furious fanatics, is unparalleled in human history. As bloody despots, Lenine and Trotzky stand unique among all the brutal oppressors of mankind.

Just what happened in Russia was accounted by a number of eye-witnesses, including the venerable "grandmother," Catherine Breshkovskaya herself, and each of whom gave his own observations, his individual report of Russia's tragedy. Except for a few witnesses—and those chiefly self-confessed paid employees of the Bolsheviki—the witnesses confirmed one another. The corroborative evidence proved irrefutable. It was clear "the truth about Russia" was at last being made known. In a spirit of impartiality, the Senate Committee called the chief defenders and press agents of the Bolsheviki, including Jorn Reed and Albert Rhys Williams. Mr. Williams, in his testimony, freely admitted that wholesale horrors had occurred, and, under cross examination, acknowledged that he could not disprove the testimony of those who had preceded him and who had beheld, under the rule of the Bolshevik, such terrorism and oppression as had not existed under the rule of the Czar.

Where the Bolsheviki control, according to the witnesses, government has ceased to exist in Russia. Even Socialism, as we interpret the word, is opposed as bitterly as so-called capitalism. The Bolshevist rulers maintain their autocratic sway by means of armed criminals to whom they give unlimited license to prey on the people, and by a well-armed, well-fed aggregation of Letts and Chinese who once served in the Russian army.

CATHERINE BRESHKOVSKAYA

All social laws have been broken down by this tyrannical force. Conditions beggaring description prevail. No man's life, no woman's virtue, is safe beyond the whim of the Red Guard. Trial by courts is a mockery. Starvation is rife. Murder is so common it passes unnoticed. Religion is banned, and the so-called "levelling of intelligence" idea fast is depopulating the country of those who might hope to save it.

That the Bolshevists are endeavoring to destroy the governments of other countries was brought out by the Overman Committee. Millions of rubles are being printed and scattered broadcast in this effort. Seizure of the great Russian gold reserve, of the crown jewels and works of art, and of the Rumanian gold reserve sent from Jassy for safekeeping, forms the basis of this paper currency even at a heavy discount, and finances the propaganda work in other countries.

No man possibly can foresee the outcome. In the early days of Bolshevism the nobility and landed proprietors lost everything. Now the armed criminal minority is attacking the working classes, the small business men and the thrifty peasants. The Senate hearings brought out the fact that less than ten per cent of the population favor Bolshevism, yet because of their terrorist tactics the Bolsheviki are able to dominate the other ninety per cent of the people.

David R. Francis, Ambassador to Russia, who returned on the George Washington with President Wilson, in a statement made in Washington on February 26, said:

"Bolshevism succeeded because it came just at the time that the soldiers were being demobilized and when the people were wearied with war. It could not have succeeded at any other time in my opinion. It gained headway because it promised the end of war, also land and bread, and now the people are realizing that these promises have failed to materialize. It is difficult to distinguish between the various brands of socialism in Russia. There are so many slight differences.

"Lenine is the brains of the Bolsheviki. Trotzky is not such a power. He just plays to

the circumstances, and again and again lands on his feet."

Ambassador Francis said there could be no doubt that German money was used to enable the present Bolshevist Government to gain control.

"They used their money to corrupt Russia just as they would have used money to overthrow the governments of America, of France, or of England," he said. "They are opposed to everything that is of the nature of an organized government. They call all governments capitalistic."

He was convinced that the Bolsheviki were sending money and propagandists into all countries. They were coining rubles without any thought of the value or consequence and were selling them to the best advantage. This money was finding its way into other countries.

"Until there is a solution for that problem," continued Mr. Francis, "I do not see how there can be any peace for the world. If something is not done to save Russia, the Germans are certain to gain control of the country and its people and Germany with her soldiers and the soldiers of Austria would become a powerful force again. Something must be done to save Russia."

BABUSHKA'S TALE OF HORROR

Catherine Breshkovskaya, "the little Grandmother of the Russian revolution," and familiarly known as Babushka, furnished heartrending word pictures of her native land. She was forced to leave Russia by the Bolshevik régime and is in this country to enlist aid for the restoration of order and adequate relief of the suffering women and children. Among other things she testified:

"Our greatest, deepest, most immediate need is the creation of conditions under which the Russian people will be able to convoke an All-Russian Constituent Assembly. Russia will never be quiet and satisfied until her representatives, freely chosen by the entire population, will establish a Constitution for the State, will lay the foundation for a stable, democratic government, insuring laws that accord with the will and desires of the Russian people. The demand for a Constituent Assembly was one of the main aspirations of the Russian revolution. It was on the eve of its realization when the Bolshevist revolt, in November, 1917, tore out of the hands of the people the beautiful possibility to make laws for themselves, to trace the path for their future, to construct a new life in accordance with the interests of the masses, to strengthen peace and insure the common welfare. The Constituent Assembly, elected by the entire Russian people on the basis of universal, direct, equal, and secret suffrage, was dispersed by the Bolsheviki with bayonets.

"The opportunity was lost, and our masses, simple-minded, naïve, and credulous, tired out by their past misfortunes, became a prey to the base and rapacious instincts of selfish, ambitious and merciless people. Under the circumstances, Russia faces a long and cruel struggle with all the evil which has entered her life. She has to suffer all the pains inevitable in the conditions of a people clearing its way to a better future. Many opposing forces bar this way; they check the normal course of events and make the people suffer and suffer more in their struggle to get the right issue out of the insurmountable chaos.

"Flooded with tears and blood, Russia moans and cries out to the world. She is a living body, and her tortures cannot be looked upon coldbloodedly as an extraordinary, never-before-witnessed experiment in social evolution. She is alive, and every pore of her body is shedding blood."

Frightful pictures of Russian conditions were drawn by Dr. W. C. Huntington, who was the commercial attaché of the American Embassy

WILLIAM C. HUNTINGTON

in Petrograd in 1916. He was especially careful not to cumber the committee's record with hearsay evidence, and offered many documents in substantiation of his assertions.

Here are some of the things Dr. Huntington showed conclusively.

He produced a copy of an order addressed in September to all Soviets in Russia which called for the slaughter "en masse" of all persons who failed to support the Bolshevist régime. He said that executions were as a rule carried out at night and in darkened places like cellars, the firing squads using Maxim silencers.

Three letters were read into the record by him, all of them from a person of the highest standing, who is still in Russia and whose name for that reason was not disclosed for publication. These letters painted a terrible picture of conditions in the Russian capital.

Dr. Huntington said that at the present time not more than 8 per cent. of the Russian people were in favor of the Bolsheviki. They were held in submission, he added, by terroristic means and by a mercenary force of soldiers made up principally of Letts and Chinese. He said that he left Moscow on August 16 last, accompanied by officials of other allied nations, in each instance the nation concerned leaving one official behind to care for its affairs and nationals. In the case of the United States, the official left behind was Consul General Poole.

"I was ordered to Russia in 1916 by the United States Government," said Dr. Huntington, "as the Commercial Attaché of the American Embassy. My mission was to aid, as far as I could, in the development of Russo-American trade relations. I took up my quarters in the American Embassy at Petrograd and was in constant touch with Ambassador Francis and his staff, and so had unusual opportunities for observation."

Dr. Huntington was present during the entire time of the transition of Government from the control of Kerensky's faction to the Trotzky-Lenine group of agitators.

LEADERS HATE AMERICA

"Is it not true," asked Senator King of Utah, "that the Bolshevist leaders who led the treason against the Allies hate America as much as they hate any of the other Allies?"

"Yes, that is true," was the answer. "It is also true that the Bolshevist group accepted German money to use for propaganda purposes. They were, of course, ready to handle Germany in their own way just as Germany was ready to use them to the best advantage. It was a case of two crooks, each using the other to gain a end."

"Why did they hate us so?" asked Senato Overman.

"For two principal reasons. First, becaus we are not a Soviet Government, and, secondly because we went into the war," Dr. Huntingto replied.

In answer to a question Dr. Huntington tol of the executions of persons who met the dis pleasure of the Soviets.

"It is an absolute reign of terror, is it not?" Senator Overman asked.

"Yes, and the Bolsheviki do not attempt t deny that such is the case," was the answer "They admit it and then try to justify th actions taken."

"Is there any freedom of the press i Russia?"

"Absolutely none. The only papers that ar permitted to be published in Russia are Bolshe vist papers. All others are suppressed.

"At the present only those who are listed a among the proletariat are permitted to vote. The children of the others, it is stated, may be permitted to vote when they become of age provided they take the Bolshevist viewpoint."

"What about the nationalization of industries, of the factories?" was asked.

"In nearly every instance," Dr. Huntington replied, "these factories have come to grief. When the decree of nationalization was issued the factories were placed in charge of committees of workmen. Then came factions and friction and quarrels between them. One would have supplies, another would not, and the result is that few if any factories are running now.

"The principal industry left in Russia now is printing paper money. I have seen the complete overthrow in Russia of all that we know in human life as it exists here at home. I have seen a condition of absolute chaos in all human relations develop in Russia. I have seen conditions attained that amount to nothing less than a reign of absolute terrorism.

"Those in authority take any measures they see fit no matter how unscrupulous. Men and women are held as hostages. Their army is made up principally of Lettish mercenaries and Chinese. They are also using some Austro-Hungarians. To the so-called army have been added other citizens who are forced to serve through threats against their wives and little children.

"The armies they are reported to have are not fired by loyalty to a great cause but are to a large extent made up of men whose condition is such that they have joined in order to be clothed and fed."

Dr. Huntington said that 85 per cent. of the Russian population was of the peasant class and that 7 per cent. of the population were workmen. This 92 per cent., he said, no longer sympathized with the revolution and was held in check by the terrorist machine.

WHAT MR. SIMMONS SAW

Probably the most detailed report of the horrors of the Lenine-Trotzky régime was given by R. E. Simmons, an agent of the Department of Commerce. He was a victim of Bolshevist methods; saw things first hand, and was able to get reports from many parts of the country. Mr. Simmons also succeeded in bringing out valuable Soviet documents that prove the object of the whole movement is a breakdown of all existing law in favor of a small armed minority.

Fragmentary press reports of Bolshevist terrorism and the testimony of other witnesses to the same end were verified absolutely by Mr. Simmons. He left Archangel last November, It took the committee two days to hear all he wished to say.

Even he, accredited to the American Embassy, was cast into prison for two weeks and was liberated only through the intervention of the Swedish Consul General as the American

plomatic officers were helpless. Most of Mr. immons' narrative to the committee is worthy being reprinted and scattered broadcast as dicating just what Bolshevism means.

Among other things he said:

"The Bolshevist revolution has as its object ie putting into power of a few over the many. he worst feature of their program, and this eature is always emphasized, is that of the pirit of class hatred. In every corner of Rus- a these people are preaching the religion of ass hatred.

ATTACKING MIDDLE CLASS

"In Petrograd I witnessed on one occasion ie undressing of a refined woman by several oldiers of the Red Guard. It was in the Nevsky rospekt at about 6:30 p. m. I heard the cream of the woman, who had been taken into side street, and saw the soldiers steal the lothes from off her body. The forcible disrob- ng was accompanied on the part of the soldiers ith insulting language. This was just one case nd most of the women subjected to these in- ignities were women not of the aristocracy, but f the middle class.

"Bolshevism is directed against every decent an, woman and child who will not bow down o the dictates of Trotzky and Lenine. In other vords, they are now fighting the very class that n the beginning they said they were struggling o put on top and in control. They are fighting lay and night now to put on top not the pro- etariat as we know it but the very scum of umanity.

"And they are working with all the devil- shness they have to spread their doctrines hroughout the world. As late as November 18 last Lenine said in Moscow, and I have a opy of the statement with me, that they had ympathizers with great organizations behind hem in Scandinavia, in Germany, in England, and in France. He also named this country as ne of the targets they were aiming at.

LENINE THREATENS TO CRUSH U. S.

"'The power that has crushed Germany,' he said, 'is also the power that will in the end crush England and the United States.'

"On another occasion and within the last few weeks, Lenine said that this year will decide whether or not Bolshevism is to triumph in other parts of the world.

"And I have the information, given to me in Petrograd, that already the agents of Trotzky and Lenine have been sent to this country, and that they have in operation a central bureau of propaganda somewhere in this country. This propaganda is false and at the same time insidious. I have been astounded at some of the people who are willing to take it seriously. Only a few days ago I was at the La Salle Hotel in Chicago, and a Major of the United States Army told me that they had found a great mass of this treasonable stuff in a camp where large numbers of American soldiers are being demobilized."

"Do you know of any agents who have been sent here by the Bolshevist Government?" asked Senator Wolcott.

"I heard in Petrograd that a man known as Albert Rhys Williams was one of them. I heard him speak in the shadow of the Capitol a few nights ago, in which speech he lauded the Bolsheviki. This man, I was informed, was employed by the Bolshevist Government and was sent here to organize their propaganda bureau. If I gave my authority it would mean the death of certain persons in Russia. It was of the highest. I know of agents who were sent to Denmark, Sweden and other European countries.

"In the first prison I was in I came in contact with a great many people and I talked with them and got their stories. I had expected to find that most of the prisoners were of the nobility or else were men of considerable means. Such, however, was not the case. They were for the most part of the middle class, mechanics, printers, shopkeepers, peasant farmers, loyal soldiers, merchants, etc. I talked with them all and fully 80 per cent. of them did not know why they were in prison. They had simply been arrested and no reasons given.

"The head of the committee that condemned these men was a Lett named Peters. He had lived in England at one time and, with a man named Eiduk of Vologda, is considered the most bloodthirsty monster in Russia. The Italian Consul General in Moscow told me that on one occasion he saw Peters sign the death warrants of seventy-one men without even taking the trouble to see what their names were or to find out what they were charged with.

"While I was in jail twenty-three men were taken out of the cell in order, it was said, to make room for twenty-six other men who had just been arrested. The twenty-three were never heard of again.

WOMEN FORCED TO DIG GRAVES

"I wish to state that it is through the use of arms that men and women are compelled to work at any labor that the Bolshevist authorities assign them to do. Great numbers of these people are old or frail, persons utterly unfit for such work as they are forced to do at the point of bayonets or guns. They are lawyers, office men, and other persons whose work in normal time was of what we may term a mental nature. The women suffer the same fate. They are forced into the heaviest sort of manual labor. Many are used to dig graves, and I have heard of many who were forced to dig the graves of their own relatives and friends who met the displeasure of the Bolsheviki.

"In Petrograd one day I saw one of these gangs at work in the street breaking with pickaxes the frozen snow. In this gang was a young woman of evident gentle breeding and of frail physique. I offered to help her, but she declined to be an object of charity. She told me everything her family possessed had been appropriated by the Bolsheviki and she had to dig ice out of the streets or perish. It was the only kind of work that the Bolsheviki would permit her to do. This is the case of great numbers of others of the same class."

In answer to a question by Senator Overman, Mr. Simmons told of the hunger conditions in Petrograd, of people dying in the streets. He corroborated the testimony of previous witnesses regarding this phase of Russian horror.

"A few words more regarding the Red Guards," he continued. "The ages for service in the Red Army are from 16 to 52 years. As I have stated, it is a force organized by force and at the point of bayonets.

"Another phase of Bolshevism and one not hitherto referred to at this hearing is what the Bolsheviki call the 'Levelling of Intelligence.' This forms one of the most ghastly effects of the system. Persons, under the regulation, who are considered to have more intelligence than is considered healthy for the cause of Lenine and Trotzky are arrested, thrown into prison, and I am certain in great numbers of instances put to death simply because they were considered of higher intelligence than the leaders approve of. This one phase should indicate to any thinking man or woman in America what Bolshevism is and what its spread means to the civilized world."

REVOLTING TREATMENT OF WOMEN

Of most intense human interest, no doubt, is the Bolshevist attitude toward women, and here Mr. Simmons offered most conclusive evidence of the attempts to break down all moral and religious law. He furnished the committee copies of two Soviet decrees.

The first decree read by Mr. Simmons was dated March 15, 1918, and was issued by the Anarchist Soviet, which was charged by Lenine and Trotzky with the Government of the City of Saratov.

The second decree, read by Mr. Simmons, was issued by the Soviet of the City of Vladimir.

A similar "project of provisional rights in connection with the socialization of women in the City of Hvelinsk and vicinity" has been published in the Local Gazette of the Workers' and Soldiers' Deputies, Mr. Simmons said.

"Gentlemen," added Mr. Simmons, as he finished reading the Vladimir decree, "these documents speak for themselves. God and morality are unknown to the Bolsheviki, and everything that makes life decent and worth living is in jeopardy if this thing is permitted to go ahead."

TELLS OF THE HUN'S SHARE

Germany's connection with the Bolsheviki was placed squarely by Mr. Simmons in his testimony when he said:

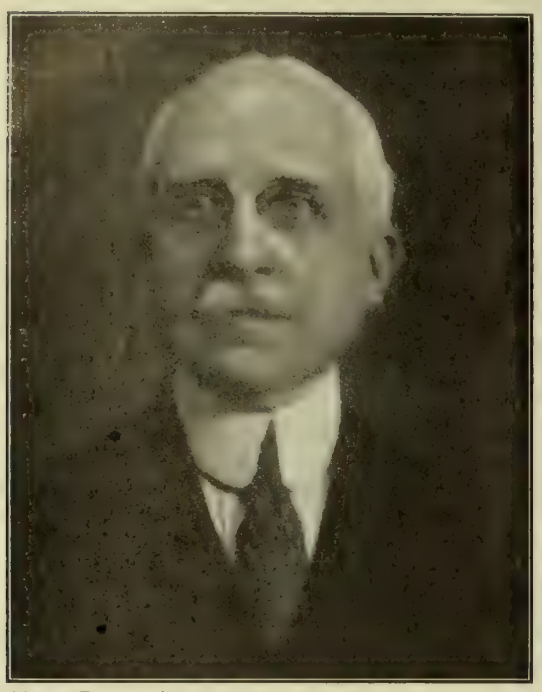
"All of the terrorism that reigns in Russia, I believe to have been instigated officially in Germany. I am convinced that Lenine and Trotzky were put in power by Germany. The fact that I am now to disclose I am certain has never appeared in the public prints. My informant is the man who acted for von Bethmann-Hollweg the former Imperial Chancellor. His story was told under oath in the office of the American Consul General in Moscow.

"In 1914, when the war started, this man was in Germany. He is a Russian and a Socialist. The Germans would not permit him to leave the country. He is a conservative Socialist, one who advocates evolution instead of revolution. He swears that one day when in Berlin, he was approached by an agent of the German Government, who told him that the Imperial Chancellor desired to see him.

"When he saw the Chancellor he was informed that the Imperial Government was desirous that he go to Switzerland and make a study of and later report to the Chancellor regarding the various Socialist groups then making their headquarters in that country. The German Government, he was informed, particularly desired reliable information regarding the most radical of those groups. He was told that Germany stood ready to place 5,000,000 marks to the credit of the proper group, which group was to send its agents into Russia for propaganda work.

LENINE EFFECTED GERMAN PLANS

"The Russian selected for the mission to Switzerland, before accepting the proposition, consulted with an American who was in Hamburg and was advised to accept. So he went to Switzerland and mixed with all the various groups and subsequently made a 300-page report to the Chancellor. In that report he stated that the group led by Lenine was by far the most radical, but recommended that it should not be selected because, he said, he was certain that chaos and anarchy would follow in Russia if they gained the upper hand.



"This man was commended by the German Government for his report, and was himself permitted then to return to Russia, where he affiliated himself with the Kerensky faction. Subsequently Lenine left Switzerland, and, under German protection, crossed Germany and entered Russian territory.

"Whether or not Lenine actually entered into an understanding with the Germans I am not in a position to say. He did, however, do the very things that Germany at that time desired to be done. In subsequent writings I think that Lenine almost acknowledges that there was an understanding. I also think that the facts go far toward proving the truth of the Sisson papers. I have also been informed on the highest authority that proof exists that the Bol-

Housing of Workers in a Manufacturing City

EFFORT TO SOLVE PROBLEM ON LASTING BASIS—LIQUID HOME INVESTMENTS—LOCATION—SURROUNDINGS—SIZE—STYLE—EQUIPMENT—MAINTENANCE AND COST

(Aime Dupont.)

PHILIP HISS,
Chairman Housing Section, Committee on Labor, Advisory Commission, Council of National Defense.

(When Mr. Samuel Gompers, Chairman of the Committee on Labor, Advisory Commission, Council of National Defense, inaugurated the movement to relieve congestion in munition making and shipbuilding centers due to the advent of large numbers of new workmen, soon after we entered the war and authorized an investigation of conditions to be made by Mr. Philip Hiss, Chairman of his Section on Housing, Bridgeport naturally received especial consideration because of the vast number of contracts placed by the Government in that important manufacturing city. The majority of the employers were associated together, in the Bridgeport Housing Company, in a joint effort to improve conditions for the wage earners. When Mr. Hiss reported that local capital would be unable to meet the cost of housing under abnormal war conditions, Mr. Ham and other members of his company, including representatives of banking and manufacturing, were several times called upon to testify, both before the Advisory Commission, and the Housing Committee of the Council of National Defense of which Mr. Otto M. Eidlitz was chairman. At the first hearing, held at the request of Mr. Gompers, Mr. Daniel Willard, Chairman of the Advisory Commission, asked: "Why does not the manufacturer house the workers himself from motives of economy?" It was shown that in placing contracts, government officials had only one concern,—an agreement on the part of the producer to deliver at the stipulated time, that, as usual, the responsibility of housing was left with the employer, and that one reason why he had not given greater attention in the past to making comfortable homes available was the vast amount of capital necessary to start even a modest development. How to finance such undertakings and the disposition of the government houses erected as the result of the efforts above-mentioned are serious problems for future solution. Mr. Ham especially emphasized the former at a recent conference on post-war social readjustment problems held under the auspices of the Woman's Department of The National Civic Federation, the chairman of the program for the day being Miss Gertrude Robinson Smith. Additional articles on the subject of housing will follow. The necessity of giving consideration to improved housing conditions is receiving world-wide attention as evidenced by a recent address made by Mr. Bonar Law at Glasgow when he said, in expressing his faith in the ability of the people of Scotland successfully to combat the Bolshevist element: "The only danger of anything approaching revolution in Great Britain was if the conditions of life became intolerable and whatever the risk from a financial standpoint, the housing problem had to be dealt with."—Editor).

W. H. HAM,
Manager Bridgeport Housing Company.

HOME OWNERSHIP AND LABOR MOBILITY

By PHILIP HISS

BROADLY speaking, a building program allowing the industrial worker to purchase his house on terms slightly above the renting price, extending over a period of thirty to fifty years, as in England, is a safe method of financing home building in this country. It is necessary to construct a house that will last from fifty to sixty years without excessive repairs, and care must be taken to choose a locality which will remain fit for habitation during a similar period.

A man should not be tied to a given plant by the purchase of a home. To give the worker the full benefit of ownership in a community so that he can exercise all civic rights, and his wife and children may enjoy socially what only a fairly permanent residence can afford, and yet permit him to be free and not a "slave" as has been suggested, I believe he could purchase shares in a homes company, to be formed on terms just both to the seller and the purchaser, and yet the stock could be disposed of as easily as stocks on the Exchange and be just as liquid. The worker need not own his house. It is his while he is in it; but he may own shares in the homes company and when he wants to move the company can take back the shares for which he has paid. I do not mean the company which employs him.

It is my opinion that the Federal Government should be placed in position, by proper legislation, to advance money to communities, companies or individuals for the stimulation of home building for the industrial communities. In facing the housing of employees, it is necessary for the employer to consider a cost almost as great as that of the plant itself. For example, a manufacturer with a factory costing $2,500,000 and employing 1,000 workers, could not provide for proper housing for less than the cost of the plant. It is not always convenient to capitalize such a housing development. Therefore the Federal bill, embodying the foregoing ideas, which has been presented to the House of Representatives, should receive favorable consideration. Precedence for such legislation can be found in the Federal Farm Loan Act and the Good Roads Bill of the Department of Agriculture, where similar advances were made to communities or individuals. The problem of the disposition of the government-owned houses may result in the prolongation of the Bureau of Industrial Housing another year, carrying it through a period during which peace housing legislation may be enacted.

The urgent necessity of a great housing program as the first thing to be considered was advanced by David Lloyd George at the inception of the campaign in connection with the recent general election in England.

HOUSING — DEMOCRACY'S BALANCE WHEEL

By W. H. HAM

THE need of a new method of handling homes for workingmen is very apparent and the modus operandi should be thoroughly considered by careful thinkers along the line of proper financing. My somewhat new theory of ownership in securities, I hope may contribute something toward the solution of the problem in a permanent way for several generations. It is not worth studying if it is hopelessly left for each generation to take up anew.

SAFE INSTALMENT LIQUID HOME INVESTMENTS

To have a permanent investment in homes, amortized by the slow process of the continual drop-wearing-away-the-stone variety, would be ideal. If the investment is permanent, safe and natural, it will be liquid.

Loans on homes are sometimes paid and sometimes not, and still we consider home investment problems as most important in our progress toward Americanizing our new people. We must standardize loans and payments. We must relate the money part of the workingman's home to some better form of payment plan than is now common.

If we are to try seriously to solve the home problem fairly for him who invests and who lives in the home, we must probe deep into these attributes of home—location, size, style, surroundings, materials, equipment, maintenance and cost.

LOCATION

Where shall the man getting forty cents an hour live? When this same man gets fifty cents an hour, will he demand a different location for his home? Is the location any handicap to the ambitious worker in his effort to advance? When he ceases to be a wage earner in the sense that John Mitchell defines "wage earner", will he be obliged to move anyway?

Is society of such a form that the man and woman and boy and girl are stamped with the locality or not? Why do the nice young women, who come to rent our small houses, tell us that

ey like the house very much and it certainly pretty, but "you know I don't want to live on e east side, my friends are all on the west le. Why don't you build one just like it on ch and such a street?" and I have been prom- ng them all along that I would, and now by e help of the United States Government I ve done so.

Now that part of it seems to be settled in ridgeport and we have houses in all parts of e town and I believe it is fairly well deter- ined that friendship consideration is neces- ry in regard to location, but can the man ho earns forty cents an hour live next door to e man who earns sixty cents an hour if the rroundings are studied properly? Can their ildren play together?

Suppose we have built the pretty little home the west side of town, how long will a nice tle place on the west side be a nice little ace? Will the transfer of business change all is part of town? We must ask ourselves first all this question: "How can we fix a part town so that it will stay fixed for a period 10, 20, 30, 40 or 50 years?" If we are to ake a permanent investment, we must do this om the standpoint not only of the protection values but from that of continuity of senti- ent surrounding the home.

ZONING RECOMMENDED

I see no alternative for a successful conclu- on of a proper housing movement except to ne our cities. We must call in the doctor who n zone us right or we shall make a mess of it. ow many zone doctors do you know? Is it the rchitect, the town planner, the engineer, the ty alderman, the politician, the committee om the Chamber of Commerce, or a lot of omen who fix things, who are to be called to cate successfully the man and his family by is fireside which can remain where it was origin- lly until the elms grow to full size in the yard?

SIZE

How big is a house to be—just to fit the bride nd groom who have both worked in the chain actory? Will the same size, which is necessary ow, fit the same couple when their grandchil- ren come to visit grandma for Thanksgiving inner? In my boyhood home a family with mbitions solved this problem by adding an ell the house for each child and the house ad- anced from the cottage which it was 30 years go to a possession of more than seven gables.

Shall we require the same treatment with ur permanent homes? Must the house change size or shall we move the family to a house hat fits in the same locality and surroundings? Ve have studied this with the result that it is he "house of eight children," additions hav- ig been added when needed.

STYLE

What style house will last and be in good taste for 100 years? Will the mansard or the Mid-Victorian or the Queen Anne satisfy those who dictate styles in houses and also satisfy those to whom styles of houses are dictated? I remember all three of these styles and their abandonment since I was a boy. Is there anything in your father's house that is just right for you, or did your grandfather have better judgment? How about your great-grandfather? Or shall we build a "bungle" house? Shall we follow some magazine until the permanent American style sets in? Have we an architect style doctor who will wager his last dollar on a single type of house which will suit himself for thirty years and at the same time maintain its value in the mind of others? Why did the wealthy man in the last of the eighteenth century, about 1780, change the style of house from that of his grandfather, which had been built several hundred years and by everybody of his acquaintance, to that of the grandfather of Achilles, formerly of Athens. I mean, why did the heavy Doric building of the Greek Revival period spread like measles in the United States among the home builders?

It was the effort of a young architect of Paris to convince the older architects of a mistake they had made which caused a new form of building, exterior and interior, for the wealthy man's home in most of our cities. This student at the Ecole des Beaux Arts was granted leave of absence with funds to visit Greece and measure some of the excavated columns of the old temples on the Acropolis. On his return he made the startling statement that the Greek had no measured enthesis to his column, but that the line drawn by the Greek was a free-hand line independent of mathematics. This was contrary to the belief of architects, and a second student of ability was sent to check the measurements. His findings confirmed the position of the first student, and as a result of the controversy there was published a popular book on the orders of Greek Architecture. This reached America and found our carpenter architect ready for the new line of models and decorations for his buildings, and the important change from the house of the old English and American Colonies to the temple of the Greek God was made. The small house was copied from the big house as is always done, and the working man's home thereafter followed the order of the Greek temple for a period of thirty to forty years. It is pretty hard to say what we are going to have in buildings. The brownstone fronts of 1850 were considered just right in New York and marked social position. However, when Oscar Wilde said they were inartistic, you stopped building them.

We are treading on explosive ground when we establish in our minds anything in the form of a permanent style, but we have certainly this problem as a part of the housing movement in connection with a permanent investment.

Roofs of houses are their hats and umbrellas. Philadelphia, New York, Boston and many other cities just frankly left off the hat and used an umbrella only. Boston had a hard time getting over the hat or roof idea and put on a sort of visor for a cap. Why did we stop building roofs, anyway? New York would answer that she was building so high that a roof was not seen from the ground and, therefore, was of no use, but for the small houses which we are discussing, are we going to have roofs or not? Philadelphia has omitted them frankly.

MATERIALS

Materials for construction are troublesome. The newly discovered processes of building are innumerable. If you observe carefully in New England, every town, you will find, has one octagonal house, usually built of stone. All the others are either stone, brick or wood. But an inventor brought out a machine which would make metal lath so fast that they had to sell it some way and then some architect, who could not resist his client, put it on the outside of a house and we had a near-stone house, called stucco. The first fellow who did this was honest and galvanized the lath and got his final pay on the contract before the lath began to rust, but the painting member of the building trade had been injured because he had lost the right to paint the exterior once in three to five years and, therefore, he invented the method of painting the lath and that used up paint and kept the lath from rusting, at least while it was in transit, and the bars were all down for the building of stucco houses cheap and they are built that way.

Edison told us how to build a house in twenty-four hours, by casting the walls, floors and the doors and the windows, beds, etc., all in a form that was used across the street for a neighbor's house, *i. e.*, uniform. The wild fire of tangled thought on housebuilding by bond salesmen who had not made good and other promoters has hardly been quenched by the sane builders. Some concrete houses have been built, about 90 per cent. too many. However, we must lay a wager on the proper materials with which to build five billion dollars' worth of homes in the next two or three years. I am not ready for the monolithic house.

INTERIORS

Let the material man and the inventor scrap about the walls, roof and partitions. It is what is in the house that makes a home. The little bride, who had an electric chafing dish given her, must have the socket under the table on her

Two-family houses under construction. United States Government housing.

Connecticut Development. Built around children's playground. Also used by men and boys for small games and soccer football. Cut shows front view group dwellings, 2, 3, 4 and 5 rooms each. Occupied by 140 families. Central heating plant. Workmen walk home to lunch.

side, the pretty green cord cross the rug to save cutting a hole in it, and it must be arranged so as not to trip her up; she asks us why we don't make such things without a string to them anyway, and the answer is: "They will do it before long." She also wants to know: "Why does my light in the front hall get dim when I use my washing machine? How can I get the grease out of the sink? The electric door opener won't work when it rains? The furnace heats the cellar too hot and when the wind is in the East, I can't heat the dining-room, if I have the draft shut the way my husband makes me run the furnace. I wish you would take the old thing out, anyway, and let me heat with electricity."

PLUMBING

Equipment in a house is a big job with all the new things. When I went to college we had no plumber north of Manchester, N. H. Society demanded bathing thirty years ago, and think of all the trouble in home building since! Seventy-five per cent. of the houses in the United States have no plumbing and no hope of getting any until the manufacturers can catch up making fixtures for the other 25 per cent. Be that as it may, the new house, which is the working man's home, will have all the plumbing it will hold.

SURROUNDINGS

"Let's go out in the garden, that is the only way to enjoy our home," says the young bride. Shall we go and see what was unbelievable five years ago by half of the English-speaking people? That is a kitchen garden on a city lot with enough vegetables to last all winter, by proper canning and drying, thanks to the women's part in the War Saving program. "Oh, yes," she says, "my architect was all right, but you know he didn't plan the garden, the ground planner did that; he found the soil good and by making a curved street let the sun in. It is very nice and the lady across the street is just as fortunate as I am."

COSTS

My feelings would dictate that the bride be left with her house and garden and with no thought of repairs and no bills to pay but the problem, which hits 90 per cent. of us, is one that is connected very closely with money and payments. Does all of this cost so much that we cannot afford it? This question spoils lots of home dreams. What can we afford for home life in America?

BRIDGEPORT'S METHOD

Can we make up our minds to build a home that will last until it is paid for or until the elms grow to full size in the yard? If so, we have to choose, as I did in Bridgeport, Conn., in connection with the building of 1,000 homes for workingmen, materials, style of architecture, and location. I use brick for the exterior because the brick house that was built in Portsmouth, N. H., 100 years ago is in good condition today and salable at 100 cents on the dollar and brick has been used since Babylon was small. If you will let the mason alone and not mix him up with curtain patterns he will lay it just right if you get the brick just as soon as it comes from the kiln. It costs about $150 more per family for brick than wood—about $125 more for a good slate roof than for wood shingle. Let us have a roof. Cost is the only reason that we avoid one and the only questions that are fair to ask are whether we need one and can afford one. We are building in Bridgeport 750 homes with roofs and 332 without. These 332 are in apartments three stories high.

Let us locate in various parts of town and be careful to surround ourselves with such natural barriers that we have proper restrictions and enough people to see the kind of houses we are building and by and by copy them. We may have a new style like our great grandfather would have built before he ran away from the historic house of the colonies to follow the Greek Temple.

FINANCIAL PLAN

Let us sell a piece of land and put it in the deed that this land shall be thus and so for 50 years, and build a house to cost about $5,000. If we figure out that someone must have 4½ per cent. on his money during 50 years and make up our minds to put a sinking fund aside in some savings institution at a proper interest rate, it will pay off the indebtedness incurred in 50 years. Home bonds at 4½ per cent. interest, with a sinking fund, ought to be on the market in every city if a home can be built that will stay put long enough to have the advantage of the sinking fund method of retiring the money.

Let us build a brick house, with a slate roof, follow the style of our colonial ancestors and lay a 50-year wager that it will remain by having it in the deed, and put the burden of proving that we were wrong up to the next generation with the statement that it suited us and let the fellow, who works in the chain factory making automobile tire chains, and his wife who did, too, until the baby came, live in that house and pay the cost of interest and repair charges, taxes and other reasonable expenses and buy the investment. If he makes a success and finds it necessary to make a change to increase his earning capacity and wishes to s his investment, another man will come along buy it.

This kind of an arrangement will allow us start the young married couples in a smal number of rooms in group houses with three a bath for the first two or three years, and th have four rooms and later five or six; if t family demands a more open method of livi on account of children, the bonds can be turn in toward equity in a separate house.

I want to quote from Dr. Tucker, Preside for a long time of Dartmouth College, in l very careful thesis on the mind of the wa earner. He says: "Mobility is, in the earl stages of the development of the wage earn the source of his strength. He can eas change to his interest. No advantage can taken of his fixity. He can put himself, wit out loss, into the open market. He can av himself at once of the highest market price, pr vided his change of place does not affect i juriously his fellow workers in the union, exception of growing concern. But in the mo advanced stages of labor, the wage earner gai the privilege of localizing himself, and in doing he takes a long step in the direction full and free citizenship. A good deposit in savings bank adds to his social value but th value is greatly enhanced by exchanging it f a good house."

LIQUID HOME INVESTMENTS

The purchase of the home too large for earl occupancy and the demand of added incom from some source to support the investmen should be studied in such a way as to allow th worker to find himself before tying him dow with a hard bargain on a house, and it is fo this reason that I have emphasized strongly th liquid character of the home investment. Th time has come, in my opinion, to offer to th new investor a share in ownership of propert on a basis which will be easy to acquire, startin with $10. We can stimulate saving quicker b offering an attractive investment in liquid for and it will be liquid if it is worthy of a marke The advantage of salability must be made clea

PAY ROLL AND DIVIDEND OBLIGATIONS

In Bridgeport we have apartments, ro houses, independent houses. Playgrounds fo every apartment group and proper surround ings for the homes are arranged so that both th front and rear of the houses are made livabl inside and out, with every window letting i sunlight. We may be able to show the new in vestor, the wage earner, an opportunity to bu

Shadow Huns and Others

By T. EVERETT HARRÉ

Part VI

ROM GERMANISM TO BOLSHEVISM

OVERNOR W. L. HARDING, of Iowa, was recently appealed to by a combination of patriotic bodies of his state to consider his intention of disbanding the Iowa tate Council of Defense, because, according to aders in the war saving stamp and war relief ommittee movements, pro-Germanism had rung up in various sections since the signing the armistice. From other States have come milar reports. So flagrant has been the propaanda designed to estrange the United States rom Great Britain that the American Friends German Democracy, an organization comosed of loyal citizens of German birth or exaction, undertook a campaign against these isidious efforts.

In his book, "The German Conspiracy in merican Education,"* Captain Gustavus hlinger, formerly of the Military Intelligence f the United States Army, pertinently delares:

"Let us not delude ourselves into thinking hat German propaganda has been extirpated. efore the hot blast of public indignation it ent under cover, merely to await its opporunity. That opportunity has now come. With he signing of the armistice the strain of war as been relaxed, and public opinion, until reently concentrated upon obtaining an overhelming victory, is again disintegrating. The ation followed unquestioningly the leadership f the President in the prosecution of the war gainst Germany. Now that hostilities have een suspended, the terms of peace are slipping nto the arena of public debate and into the ield of practical politics. The pro-German gitator, the German agent, the spy, the radical ocialist, the Bolshevist and others who use amouflaged theories only to mask their true urposes, are again lifting their heads. Again politicians are placating the German vote for rivate gain. Unless the nation maintains its igilance and is as single-minded in its peace ims as in the prosecution of the war, the sacrices of the last four years may prove to be nerely the introduction to an even greater ragedy in the future."

KULTUR IN AMERICAN EDUCATION

Captain Ohlinger's volume is, one of the most dequate and illumining exposes of the German ropaganda, especially as it concerned the corruption of the founts of learning in the United States, published, and his sound warning of the dangers which confront us in the future is ased upon first-hand information of German ntrigue. The German conspiracies which inolved the destruction of factories, bridges, railoads and ships, the warfare which Germany nade against us within the confines of our own hores, are not considered by Captain Ohlinger o dangerous as the effort which Germany nade through nearly a quarter of a century to ndermine American morale by the Germanizng of American education. "Bridges, canals, actories and ships are mere physical properies, easily replaced," says Captain Ohlinger. 'Our public education, on the other hand, represents infinitely higher values. In a very practical sense our schools are the citadel of our ational strength."

An understanding of Germany's scientific ropaganda program, antedating the war by wenty years, is valuable in that it makes more lear insidious activities calculated to create social disintegration which are carrying on at the present time. In these activities, as in the others, certain American professors are playing no inconsiderable part.

In 1881 Germany engaged in her first organized effort for the spread of Kulturpolitik when there was formed "The General School Alliance for the Preservation of Germanism in Foreign Lands." The declared purpose, according to Captain Ohlinger, was "the preservation and promotion of Germanism among the thirty million people of German blood dwelling outside the boundaries of the Empire. The School Alliance established schools and libraries in foreign lands, kept in touch with those already in existence, and, where necessary, rendered financial aid. It maintained a teachers' bureau for the purpose of supplying German-trained educators wherever needed."

The Society was a few years ago merged into the "Society for Germanism in Foreign Lands," and the Imperial Government contributed annually one million marks toward its support. In 1910 there were in foreign lands 5,240 German schools, of which 491 were in the United States. In Southern Brazil—a country which Germany had marked for future aggression—there were more than 600. Captain Ohlinger quotes a German propagandist, occupying a high position in an American university, as saying:

"The spirit of German Kultur must finally seize upon the entire educational system of America. We must practice Kulturpolitik in the highest and noblest sense."

"Not only North America, but the whole of South America must become the bulwark of Germanic Kultur," declared a Pan-German in 1906.

"The war between Germany and the United States began nominally on April 6, 1917," comments Captain Ohlinger. "In reality Germany had begun her scheme of subjugation at least twenty years ago."

"For forty years," declares President William W. Guth of Goucher College, "Germany has so influenced our own scholars and given many of them such a twist mentally, that they have been unable to see how favorable they have been to ideas and opinions purely German."

THE KAISER'S "EXCHANGE PROFESSORSHIPS"

Prince Henry visited the United States in 1902. In 1904, in line with their purpose of "converting" American professors, the Kaiser shrewdly established what was known as the "exchange professorship system," whereby Teuton professors visited America and American professors were invited to Germany. American professors who visited Germany found themselves overwhelmed with ovations and honors. They were flattered, kow-towed to, and taken to the bosom of the Hun savants. They were most graciously received by his majesty, the Kaiser, and decorated with decorations. They were allowed to lecture in the venerable ivy-grown Hun institutions of learning. Their plain brown-sparrow wives were thrilled to suffocation by receptions and overpressing social excitements in Hun university towns. After they came back to America these *Herr professors* were never the same. After the intoxication of an exchange professorship the American *Herr professors* wrote books, many books, exalting Germany and German progress. They wrote articles, multitudinous articles, and lectured. They preached Hun propaganda in their courses at college; their gratitude was indefatigable, colossal!

After the great war broke out not a few responded, as Imperial Germany calculated they would, and took part in propaganda justifying Germany of any wrong and in trying to exonerate Germany of every atrocity.

There was John W. Burgess, for instance, Prof. Burgess had fared innocently forth to the Fatherland as the first exchange professor. Imagine, if you can, the professor's gratification, his totally inebriating joy, at finding that his Majesty the Emperor had condescended to come to listen to a lecture. Former Ambassador Gerard informs us that the Emperor was manifestly bored during Prof. Burgess' talk, that his Imperial Majesty fidgeted and shuffled uneasily in his chair, and that he was visibly distrait, inattentive, during the visiting American's long discourse. Prof. Burgess, however, was probably unaware of any disinterest on part of his gracious Majesty. At any rate, his lecture could not have been altogether unpleasing or unacceptable, for lo and behold, the modest professor found himself decorated with the Order of the Prussian Crown! It was remarked by associates that after his return to the States Prof. Burgess was never quite the same man. He had acquired a dignity, an atmosphere, something that put him above and apart from those envious petty professors who had never been decorated by the Kaiser with the Order of the Prussian Crown.

ORIGINALITY IN PRO-GERMANISM

After Germany started the war Prof. Burgess wrote books trying to justify Germany. In these books he employed the familiar secret "keynote" of German propaganda by attacking Great Britain. Why was America pro-Ally? Prof. Burgess' explanation was naive and novel. It was, for a professor, freshly and indutiably original. For a professor, it showed an actually new viewpoint, which in itself was refreshing. As the offspring of such a seasoned brain it was infantilely young—a conception as unswaddled as a bouncing hour-old babe. Into British society given "in its decline" to "idleness, fox-hunting, horse-racing, gambling, drinking, cheating, debt-making, mendacity, cant, hypocrisy, unchastity, unfaithfulness" had married the "daughters of American parvenus." So wrote exchange-*Herr-professor* Burgess. These daughters of American parvenu millionairedom "became the prey of a broken-down, impecunious, title-bearing aristocracy, both in Great Britain and France." By the beginning of the twentieth century, according to *Herr Professor* Burgess, "an American smart set had been organized on the British and French models, especially upon the British model. It bought its clothes in Paris. It did its shooting on the moors of Scotland. It drank and gambled in London. It brought this sport life with all its extravagance over to Puritan America." Prof. Burgess, exalted in all the glory and prestige of a decoration accorded by the noble ruler of that superior, moral, non-drinking people, the Germans, went on to declare: "It (the American smart set) has become a power in the land and it wields its power mercilessly. . . . It regards this great war as its own. It denounces anyone who is not pro-British or pro-French as pro-German. It waxes wroth over Prussian militarism, Belgian neutrality, and Hun atrocities. It has never yet manifested the slightest consciousness of the deep underlying causes of the war nor of the great purposes the war may be intended to subserve." So, you see, debauched pro-Ally American smart society and "the pro-British American press" accounted for the prejudice against the superior Germans! It is interesting to note, apropos of Burgess' ex-

* Published by George H. Doran Co., New York.

traordinary explanation, that Count von Bernstorff also accounted for anti-German sentiment on the ground that American smart society was pro-British. Prof. Burgess, however, is but one example of this mothy-brained clan who were either too spiritually blind or so effectually Teutonized that they could not see the clear issues and ideals of the war.

Soon after the establishment of the first exchange professorships between Harvard and the Berlin University, according to Captain Ohlinger, "the Kaiser offered to extend the scope of the agreement to other universities in America and Germany. Columbia took advantage of the offer in 1905. James Speyer endowed still another exchange professorship at the University of Berlin. In 1912 Jacob H. Schiff presented the German Department at Cornell University with one hundred thousand dollars as a foundation for the promotion of German Kultur in America. In 1911 Wisconsin citizens of German descent raised a fund of thirty thousand dollars and gave it in trust to the regents of the state university 'for the maintenance of a professor's chair, to be known as the Carl Schurz Memorial Professorship.' The University of Chicago also instituted an informal exchange of lecturers."

"It is more than doubtful," comments Capt. Ohlinger, "that the exchange professorships contributed in any way to scholarship. . . . But they did aid German purposes."

"YELLOW TICKETS" FROM THE HUNS

But there were American professors who had never been honored by an exchange professorship who were just as grovellingly and servilely tools of the Huns. Of course, many of these had studied in the superior German universities, where their trembling virgin minds had been ravished by colossal German learning. There, too, they were kindly given Ph.D's., L.L.D's., and other degrees. After this intellectual debauchment, yellow-ticketed with Hun degrees, what could they see that was worth while in their own barbarian country, what that was admirable in unimperialistic American institutions! These pro-Germanized pundits naturally could regard American history, the American struggle for freedom, the American government, all American ideals and institutions only with a lofty supercilious, superior scorn.

They were probably sincere in what they wrote and said—maybe. Let us at least credit them with that. Masterly hypocrisy and cunning was above their mental calibre. One would not even accuse them of having been bought and paid conscious propagandists. They were, however, only the more effective so far as German interests and German plans were concerned, by reason of their perverted zealotry, their oblique academic sincerity.

In order to mobilize the *Herr professor* fraternity in the United States, Germany organized in America the German University League, the head of which, Otto J. Merkle, was arrested at the point of a revolver and subsequently interned. The purpose of this League was to carry on a scientific propaganda through the colleges and universities of the country, to keep in touch with American educators who were sympathetic with Germany, and to be able quickly to pull the strings when any especial propaganda stunt was to be pulled off in the interest of Germany through available instructors of American youth. The membership list of this organization affords a valuable index to the exponents of Germanism in American institutions of learning and reveals the startlingly widespread ramifications of the sinister Hun intrigue in our midst.*

The German University League sought to create the impression, says Capt. Ohlinger, that it represented, more truly than the administration, the American people, and thus sought "to turn the sharp edge of our diplomacy." After the American Government, on April 18, 1916, had sent a note denouncing the torpedoeing of the Sussex and Germany's submarine warfare, this League sought to neutralize the effect of the American note by sending a wireless message to the rector of the Friederich Wilhelm University of Berlin, in which it was implied that the American people would not stand for war against Germany over the submarine issue. The League deluged the educational institutions of the country with pamphlets defending Germany's course in the war. Through various persons, and under various aliases, it sent letters to the correspondents' columns of the daily press. It organized meetings and lectures.

PRAYS THAT AMERICA BE FORGIVEN FOR HOSTILITY TO HUNS

At one of these meetings an American historian in a speech eulogizing everything German, said he would have felt himself "a traitor to the University of Berlin," had he ignored the invitation to talk and, incidentally, boost Hun Kultur. During a nine-months' visit to Germany, ending immediately before the outbreak of the war, he said that almost everything he saw had struck him more than favorably. About Germany there was nothing to criticise. He was inspired to an almost unprofessorially enthusiastic description of superior German education. What struck him most "was the care and devotion with which the least ray of childish intelligence is hunted down and fostered." He paid his tribute to Germany's "deathless devotion to duty, real interest in the welfare of all the people."

"When I think of what our country could gain by a clear comprehension, by a frank and generous recognition of all that Germany has done for civilization, by a fervent study of her methods and a proper adaptation of them to our needs, instead of by a blind unreasoning hostility as bitter as that of the Jacobins to the aristocrats in the French revolution, I feel like going on my knees and praying to God: 'Father, forgive them, for they know not what they do.'"

That was said after the Lusitania had been sunk, and the American speaker was Ernest Flagg Henderson, a Ph. D. of the University of Berlin.

A professor from Columbia declared that: "As a professor of history I felt that, since the facts underlying this war had not yet been sufficiently ascertained, it would be wise to suspend one's judgment." Speaking presumably for the *Herr professor* fraternity, he said: "We have long since recognized the great debt that we of this country and many others owe to the German fatherland." He spoke of the exchange professors as "intellectual ambassadors." He went on: "We have two great nations in the world: The United States of America and the United States of Germany."

This professor holds a job of considerable importance at Columbia University. After the outbreak of the war, he presided and talked at meetings in the defense of Germany, and, indeed, was almost as busy as Prof. M. J. Bonn himself. This ubiquitous Dryasdust's very amiable and really charming wife lent herself to various Hun pacifist intrigues, and even went so far as to offer to act as go-between for the passing of money from German agents to professional pacifists. What were the motives? By ingratiating themselves with Imperial Germany, through mean and ignoble activities against the Allies, the lady, so she once confided, believed that her spouse would make himself acceptable as ambassador from the United States to Germany when the war should be over!

GERMANISM IN SCHOOL BOOKS

"The most insidious of all forms of German propaganda was that conducted through text books used in the public schools and the fact that much of this propaganda was produced unconsciously and innocently by American born scholars is convincing evidence of ou shortcomings in not insisting upon educatio in political and institutional history," declare Capt. Ohlinger. A reading book for beginner in German produced by a native America teacher in a Chicago high school was found to b filled with glorifications of Germany. In a other school reader was found a tribute to th Kaiser which could hardly have been surpasse by the most zealous Pan-German. In a tex book prepared by a Cornell professor man pages were devoted to enconiums of Willia II. There was this typical paragraph:

"Although the German Emperor is a soldie through and through, it would be a mistake t consider him a monarch anxious for war. . . ."

German militarism was defended. "In orde to maintain its position, Germany dare not giv up this army, and it stands now at the beginnin of the twentieth century as the first militar power of Europe."

Of course, German education was presente as superior in every way. "The instruction a the American universities is based largely o German investigation and a large part of th professors at many of our colleges have spen at least one semester at a German university."

The writer evinced no reservations whatever as to Hun greatness. "Germany still maintains its leading place in the field of art and science."

In an English speller, used in the fourth, fifth, sixth, seventh and eighth grades of the Chicago public schools, was a tribute to the Kaiser, in which an episode of his boyhood was related, with the following comment:

"One may say unhesitatingly that a boy capable of such an action has the root of a fine character in him, possesses that chivalrous sense of fair play which is the nearest thing to religion that may be looked for at that age, hates meanness and favoritism, and will, whenever possible, expose them. There is in him a fundamental bent toward what is clean, manly and aboveboard."

Pursuing her underground propaganda work systematically, scientifically, for nearly a quarter of a century, Germany, as Capt. Ohlinger shows, made unsuspected inroads into American education—into grade schools, high schools and institutions of higher learning.

Upon the conclusion of peace, Germany will be confronted by the problem of recuperation, of rebuilding her commerce and finding markets for her goods. Before she faced military defeat, in 1915 and 1916, Germany planned a tremendous after-the-war propaganda, especially aimed at destroying friendship toward England in the United States, South America and other countries to the end that Germany might usurp British trade. At present German propaganda is carried on intensively. That propaganda seeks to create antagonism toward England and to sow seeds of dissension among the Allies. When peace is concluded what form will Hun propaganda take?

BOLSHEVISM INVADES SCHOOLS

Germany, after the conclusion of peace, will profit by the creation of social unrest, or the precipitation of revolution, in any country so long as she herself remains intact. Disturbances of the normal economic conditions of countries, strikes affecting production, will inevitably accrue to Germany's benefit. Germany has not, as we know, been touched by the war; her industries are intact. While France and Belgium are engaged in rebuilding, Germany can plunge into manufacture on a vast scale. Her propaganda organization has not been destroyed; its ramifications still extend into China, Japan, South America, Asia. Nor have all of her secret agents in the United States been interned. Can Germany be depended upon, when peace is made, to desist from secret, under-

Why the American Socialists Shunned the Berne Conference

The American Alliance for Labor and Democracy has sent out the following statement, ceived from its correspondent in Paris, giving ie reasons for the refusal of loyal, patriotic merican Socialists to participate in the Interational Socialist Conference held at Berne, witzerland:

o the Workers and Fundamental Democrats of the Allied and Neutral Countries:

There has been summoned for Berne, Switzerand, beginning February 3, a so-called internaonal conference of Socialists and labor deleates. We have refused to attend this conerence and we desire to warn you to give no ountenance or support, for the following reaons:

We believe it to be fraudulent and dishonest conception and unrepresentative in make-up.

It was originally proposed as a conference of itizens of the Allied countries. By a device hat we cannot approve, this purpose was covertly altered so as to include subjects of the nations ith which our countries are still at war. While, therefore, the Interallied Peace Conerence is yet in session and before it has admitted to any conversation any representative f the Teutonic powers, it is proposed that we hall sit side by side and face to face with such epresentatives, call them comrades, and in this ublic way condone the hideous and unforettable crimes against humanity and democracy ommitted by their governments; condone them efore there has been the least indication of reret or any fixed purpose not to repeat them.

This we decline to do.

We observe that among the principal movers or this conference are persons that while the war was actively carried on, opposed the particiation in it of Great Britain and the United States, gave to the autocracies arrayed against he democracies their moral aid and support and ought to bring about a peace at times when peace would have ensured the triumph around the world of autocratic imperialism and the suppression of the democratic principle. We say that persons of this record cannot arrange a conference that we will attend.

We observe also among the promoters of this conference gentlemen whose records and recent experiences suggest that the occasion is deemed opportune for fresh adventures on the political field and the regaining of lost constituencies. We have no interest in furthering personal ambitions or political expedients.

We observe that some of the British delegates, though recently repudiated by working class constituencies at the polls pretend to speak for British labor, though the General Federation of Trade Unions of Great Britain, with nearly a million members, has no representation, and we are for this and other reasons obliged to think that the pretense of speaking at this conference for the British working people is unfounded.

We observe that the Italian Socialist Reform Party, which under the leadership of Bissolati, is making such a valiant fight against Italian imperialism, is not represented in this gathering. We observe that the Belgian Socialist Party and Labor Union, by an almost unanimous vote, decided to have no connection with it. We observe that the great American Federation of Labor, the sole voice of organized labor in America, with more than 3,000,000 members, has repudiated this meeting. Plainly, therefore, it is in no way the voice of labor and the democratic reform movement in these countries, and to call it international or deem it significant is an error.

We observe further that the forty Socialist delegates in the French Chamber who loyally supported the cause of Democracy throughout the war have only under protest allowed certain of their members to attend the conference, and these pledge themselves to repudiate it unless the Scheidemann group from Germany is excluded.

We observe that approximately one-third of the membership of this conference is recognized by the Bolshevik chief of Russia as Bolsheviks in good standing. We hold that the cause of democracy and labor reform should not be compromised by mixing it with Bolshevism or with Germanism.

We are quite well aware that at all previous Internationals of this pretension the voting has been so managed by a scandalous misuse of power as to put the entire control practically in the hands of the German delegates, their lackeys and allies. We have every reason to believe that this is a meeting designed to redeem by diplomacy and secret propaganda the defeat Germany suffered on the battlefield. That its real purpose is to hamper and obstruct the Peace Conference. That it is designed to enable Germany to avoid the payment of the indemnity she justly owes to Belgium and France for the ravages she has caused. That it is designed to turn away from her the scorn and condemnation she has earned from mankind by putting forward the insidious plea that this was a capitalistic war for which all nations were equally to blame, in the face of the demonstrated fact that it was a war brought upon the world by German militarism and German lust for domination.

With such a conference we can have no part, and the loyal and thinking peoples of all these countries should be on their guard against its proceedings and outgivings.

For the Social Democratic League of America

William English Walling, Secretary.

Justness of French Claims

The New Republic, which editorially attacked the claims of France to the Saare Valley, has not as yet seen fit to publish the following letter which was sent to its editor by Mr. Charles Robinson Smith, under date of January 20, 1919:

To the Editor of the *New Republic*:

Dear Sir—You probably did not intend it, but your editorial paragraph of the 18th on the Saare Valley is calculated to seem offensive to our French allies.

You say that the French claim to this valley is based on "pure sophistry", that the Saare was German territory in 1815, when the Prussians took it and that it had been "German territory since time immemorial"; and then you seem to feel that you have given this claim its coup de grace when you add: "The real reason why France wants the territory is because it contains coal mines, etc."

I assume you wish to be fair, Mr. Editor, especially to our friends the French. So will you not look at the facts more closely?

The greater part of the Saare Valley in question had been an integral part of Lorraine from "time immemorial"; and Lorraine had been linguistically French from "time immemorial." Lorraine had never in any but the most technical sense been German. Prior to 1761 when it came peaceably by treaty and inheritance to France it had had its own rulers—the dukes of Lorraine. These dukes for some centuries had been held by a loose tie of vassalage to that loose aggregation known as the Holy Roman Empire—which some call German. This empire was said to have been neither holy, nor Roman, nor even an empire—so perhaps it is proper to call it German. But so loose were ties of vassalage that in earlier years and for centuries these same dukes of Lorraine were also vassals of the dukes of Champagne, who in turn were vassals of the kings of France.

That part of Lorraine which included Verdun, Toul and Metz fell to France in about 1557. The rest, including the Saare Valley, had to wait until 1761. The French had spent the best part of six centuries in redeeming French provinces, one after another, from foreign or local rule and in the making of a great nation out of French speaking people. Lorraine was thus among the last of these French provinces to join the French State.

In 1815 the Saare Valley in Lorraine was wrenched by the Prussians from Lorraine and from France avowedly for strategic purposes, because it contained the fortress of Saarlouis, as well as for commercial purposes.

And so, if after 140 years we are to restore Prussian Poland to the Poles—why in the name of justice should we not after only 100 years restore to Lorraine and to France a part of her territory that had belonged to Lorraine from "time immemorial"?

Shall we refuse now this restoration merely because the Saare Valley contains valuable coal mines? Rather this fact seems to furnish one more powerful reason for such restitution. The Germans have deliberately and wantonly destroyed most of the coal mines of France—and the cession of the Saare Valley will thus not merely effect a restitution of stolen goods but a reparation in kind. Had the Saare Valley never belonged to France—the claim of France to its coal fields could now be justified on grounds of reparation alone.

For four years this war has been fought to secure restitution and reparation as two of the essentials of a permanent peace.

Most of us desire equally with the *New Republic,* the adoption of conditions essential to a permanent peace with as little occasion for rankling left over as possible—but we must be on our guard, lest in our anxiety to spare the finer feelings of the Germans, we do something to hurt the feelings and the interests of Germany's victims, our friends.

Yours very truly,

(Signed) Charles Robinson Smith.

New York, Jan. 20, 1919.

Shadow Huns and Others

(*Continued from page 8*)

hand aggression; from underground efforts to destroy the internal peace of rival nations?

By what we know of Germany's activities in the past, we should be on guard in the future. Is there any significance to the fact that Socialist teachings have been insidiously introduced into our public schools? That public school lecture rooms have been used for the propagation of various insidious forms of radicalism? Is there any significance to the fact that American educators who formerly glorified Germany and defended her in war, have now become preachers of social revolt camouflaged in velvet phrases? Is there any significance to the fact that the former pro-German professors and other propagandists are now internationalists, that the former pacificists are now Bolshevists?

Dr. John L. Tildsley, Assistant Superintendent of Schools of New York, recently declared that the Bolshevik propaganda had invaded the public schools, and that the Board of Education intended a campaign to counteract this insidious influence.

"We are thoroughly alarmed at the situation that has developed," said Dr. Tildsley. "It would be folly to deny its gravity.

"For some time we have been aware that agencies outside the schools have been systematically training schoolboys in Bolshevik doctrines. However, the school authorities have no right or power to dictate what pupils shall do, where they shall go, what they shall read or think outside of school hours.

"What we can do, though, is to present them with a truly American view during school hours of precisely the problems which the Bolsheviki now distort in order to influence these immature minds."

THE NATIONAL
Civic Federation Review

Office: Thirty-third Floor, Metropolitan Tower
1 Madison Avenue New York City

RALPH M. EASLEY, Editor

Published Twice a Month **Two Dollars a Year**

The Editor alone is Responsible for any unsigned article or unquoted statement published in THE NATIONAL CIVIC FEDERATION REVIEW.

THE NEW YORK HARBOR STRIKE

In another part of this issue of the REVIEW will be found the award in the so-called "New York Harbor Strike" made by V. Everit Macy, the arbitrator selected by the War Labor Board. At the time of this writing it is very clear that the award will not be accepted by the men and that they will again go on strike, while it is also evident that the employers are not satisfied with the decision, although they would doubtless accept under protest. This is a good illustration of the impossibility of finding any method or machinery that will absolutely prevent strikes.

The War Labor Board, composed of six employers, selected by the National Industrial Conference Board, an organization consisting of eighteen manufacturing associations, and six representatives of labor, selected by the American Federation of Labor, was completed by two neutral members, one selected by each side represented. The employer group selected William H. Taft as their neutral representative and the labor group selected Frank P. Walsh.

When the Harbor strike occurred in January President Wilson, after all efforts at mediation had failed, cabled from Paris, urging the men to submit the question to the War Labor Board and return to work. This appeal was complied with. The War Labor Board held an exhaustive hearing but could not agree upon an award. Thereupon, as provided by the rules of that Board in such a contingency, the names of ten arbitrators suggested by President Wilson were placed in a hat and the name of V. Everit Macy was the one drawn to be the arbitrator in this controversy.

The reading of Mr. Macy's award will show with what painstaking care he dealt with the subject and to the layman not accurately informed about the practical working of the industry, it sounds very reasonable.

In this particular case arbitration is likely to prove a failure and, if so, it will doubtless be cited as a conspicuous example of the failure of arbitration in general, of collective bargaining and especially of the operation of the War Labor Board. But the fact is that the War Labor Board has dealt successfully with nine-tenths of the controversies that have been referred to it—and there were hundreds of them. This the Board did through mediation, however, and not through arbitration. Those who are familiar with arbitration believe in making use of it only as a last resort. It is better than a strike, the weakness being that it is almost impossible for an arbitrator to render a decision that will satisfy both sides. In the case of mediation, when both sides agree to a proposition, even if it is not all that they want, they will stand by it because they made it themselves.

The history of industrial arbitration parallels the history of international arbitration. As there is no form of industrial arbitration that will absolutely prevent strikes, so there is no form of international arbitration that will absolutely prevent war. Senator Knox greatly stressed this point in his attack upon the League of Nations; but neither he nor any one living can or has been able to devise a scheme whereby all wars or all strikes can be absolutely prevented. They can only reduce them to a minimum and that result is worth all the cost and all the effort that the friends of conciliation and mediation are putting forth both in the industrial and in the international field.

REPEAL OF WAR EMERGENCY LEGISLATION

Mr. Clarence S. Darrow, in an article prepared for the American Alliance of Labor and Democracy which is published in this issue of THE NATIONAL CIVIC FEDERATION REVIEW, contends that all war emergency legislation should be repealed. With the general argument advanced by Mr. Darrow as to the repeal of emergency legislation most sensible Americans will presumably agree. These war acts were passed to meet situations arising in critical times, when the fate of the nation, at war with an unscrupulous foe, was at stake. With Germany beaten, therefore, shall not all legislation aiming at the suppression of individuals and movements engaged in activities calculated to aid that foe, be categorically repealed?

Unfortunately that intrigue which imperial Germany herself sponsored for the defeat of Russia, and ultimately the distintegration of all other nations, was not ended with Hun defeat. We are not today menaced through any opposition to the selective draft enforcement or efforts designed to weaken the military operations of the United States. Legislation aiming at the arrest and imprisonment of opponents of the draft is therefore obsolete. Acts providing for the incarceration of pacifists who opposed the continuance of war against Germany are likewise out of date. However, the Bolshevik propaganda which Germany financed with the purpose of eliminating Russia from the war, persists, and most of the leading exponents of the propaganda of social separation movements and civil war are the very people who opposed the enforcement of the draft and the waging of war to a military victory over Germany.

Mr. Darrow's analysis of the justness of war emergency legislation contrasts strikingly with the biased logic of the hare-brained ultra radicals who contended that any restriction upon their loose-tongued disloyalty violated constitutional rights. Mr. Darrow pertinently points out that self preservation is the first law of individuals and of nations. If, for the preservation of the nation, it was necessary to apprehend those whose activities, if successful, would have meant German victory, is it not just as urgent now that means be taken to render inert the forces which aim at the overthrow of constituted government and the disintegration of society?

There is a widespread feeling that German propaganda collapsed with the military defeat of Germany. The scientifically organized machine perfected under von Bernstorff has, it is true, been wrecked. But is German propaganda ended? Have we nothing further to fear from the machinations of the Huns? Will it be safe for the nation to rest on its oars? Mr. Harré, in an article in this issue of the REVIEW, quotes Capt. Gustavus Ohlinger, formerly of the Military Intelligence of the United States Army, as declaring that since the signing of the armistice German propaganda has again raised its head; and that the nation must be vigilant against the new intrigue which now especially aims at the promotion of social or class war within the nations which have vanquished Germany and whose true purposes are marked in camouflaged theories. If for the purposes of winning the war, it was necessary to curb pacifists, pro-Germans, and opponents of the draft, is it not now just as expedient, for the preservation of the life of the nation and the weal of society, to enact such measures as will adequately dispose of those who preach class hatred and who would precipitate class war?

Mr. Darrow pleads for free discussion. He argues against the smothering of opinion. Free discussion is the right of free men. The arbitrary suppression of public opinion would be intolerable. No one will contend, however, that the right of free speech permits a man to advocate the murder of specific individuals in a soap box speech. It would be just as extreme to include in rightful free discussion the fanatics who preach class war, which means class murder. By what has happened in Russia we know what Mr. Walter E. Weyl implies when he writes of the "final war" which "will begin after the war . . . which will be waged until separate interests within each nation are completely extinguished" and which Mr. Herbert Croly sanguinarily predicts may "be costly, perhaps almost as costly, as the great war."

With Mr. Darrow we believe that emergency legislation designed to prevent "danger threatened from a foreign foe" should be repealed when that danger is removed and when all purposes have been served. But what about self protection from the danger of internal foes? Compared to the underground secret organization which is today industriously working toward the disintegration of society, which directs the insidious Bolshevik propaganda, the German propaganda of Bernstorff, Dernburg and von Papen was comparatively simple. Relaxed from the terrible tension of the war, luxuriating in grateful relief because of the end of the bloodshed and the killing, shall we laxly permit the forces which wrought the ruin of Russia to have free play in our midst? Repeal purely war measures as their usefulness has ended by all means. But a new emergency has arisen, and self preservation is at stake. A salutary movement was begun when the authorities recently undertook to deport alien I. W. W.'s, anarchists and sundry Bolshevik. That movement will have an adequate conclusion only when such legislation is passed as will denaturalize and expel from our midst all persons seeking the forcible overthrow of our government and the abrogation of the Constitution.

FACT VERSUS SELF-INDORSEMENT

One of the strangest manifestations of human credulity is the ease with which some people gullibly accept representations at their face value. This applies to politico-economic experiments as well as to dubious stock issues. Just as many people have been blithely exchanging their Liberty Bonds for spurious stocks about which they did not even take the trouble to inquire, so others are parting with their common sense for political prospectuses that have no more relation to reality than bogus stock has to tangible property.

A pamphlet entitled "Soviets At Work" by Premier Lenine of the Bolshevik Government is being assiduously circulated in this country and enthusiastically glorified by Bolshevists as proof of the success of the Bolshevik regime. It is characteristic of the self endorsing propaganda enterprise of Lenine and Trotzky that hardly has their experiment started when they already talk and write books about its success.

Other founders of governmental systems in the past, such as the American Republic, for instance, had all they could do to get their undertakings in working order, without having the time to write books about it. They also had the ability and honesty to know that any experiment whether in the field of politics, economics or science had to be given a convincing test before its creators could claim it to be successful.

Lenine and Trotzky, however, differ from all other founders of systems in that they continually prove themselves more concerned with their doctrines than with the results of those doctrines. To them the mere holding of a theory is sufficient, results are immaterial.

Lenine's "Soviets At Work" is reminiscent of another book published some years ago entitled "Socialists At Work." There a most beauteous picture was drawn of the Socialists of Europe and especially of Germany who were depicted as standing as a bulwark against despotism, war and reaction, and the air of cer-

tinty about it carried conviction to many persons who read that book.

But in action, as all the world knows, the Socialists of Germany supported the bloodiest war in history and blindly followed autocracy and reaction in their very worst forms.

So with Lenine's "Soviets At Work." The undisputed testimony from every source shows that neither do the Soviets work nor does their system work. In bookish theory Lenine presents the captivating idea of a self-disciplined proletariat running all industry. Authentic testimony from many trustworthy sources shows that the so-called dictatorship of the proletariat has resolved itself into nothing more or less than fierce persecution of real workingmen as well as the bourgeoisie, of Socialists as well as avowed reactionaries, and that although Bolshevik Russia is nominally under the decrees of Lenine and Trotzky it is actually run by armed mobs who ignore or change those decrees whenever it suits their pleasure. The phrase "dictatorship of the proletariat" was taken bodily from the Socialists, yet no factors are being more bitterly persecuted in Russia today than Socialists. That phrase—the dictatorship of the proletariat—has come to mean not the working proletariat but, according to Oskar Tokoi, recently Bolshevik Prime Minister of Finland, the very scum of the population that happens for the time being to support the Bolshevik regime. Even Professor Lomonosoff, a pleader for the Bolshevik Soviets, describes it as a mob that tomorrow may turn into Black Hundreds.

What effect on such a conglomeration has Lenine's bookish urgings of the necessity of "thorough and universal organization and discipline" and of "absolute submission to the will of the Soviet director during work?"

Throughout Russia whenever the mob does not like the rules of the local Soviets it overthrows the Soviets and elects others.

The elements in general that allow themselves to be taken in by such a production as Lenine's "Soviets At Work" are the same who were taken in by Germany's claims of its invincibility and its self-arrogated title to world domination. On paper, too, Germany assured the world that she had the best and most effective governmental and social organization run in the most admirable order. These claims were widely believed but events have shown what a sham they were and on what quicksand they rested.

For decades after the formation of our American Republic it was still regarded as an experiment. But the Bolsheviki had hardly got in power before their advocates here were claiming for it the most positive success. It would be interesting to know if the same large claims would be made if the Bolsheviki did not have an enormous propaganda fund at their disposal.

LAW NEEDED TO DEPORT ENEMY ALIENS

Comprehensive legislation providing for the deportation of enemy aliens is one of the first duties of the new Congress. With more than 5,000 interned and thousands of others under surveillance, it is imperative that the statutes should cover their cases fully. Should peace come before the necessary laws are passed, the government would be compelled to release these dangerous persons. Those actually held have displayed their enmity toward American institutions; their prompt deportation should follow as a matter of course.

The Department of Justice and Department of Labor are in accord on this subject and have drawn a bill which would empower the Secretary of Labor to deport such interned aliens as he sees fit. It also permits him to deport any enemy alien convicted of crime during the war.

No complete list of either the imprisoned or of the interned ever has been made public, the government holding that such information would help the Central Powers reconstruct their spy system here. But there come to mind handily the names of some of the more notorious offenders, every one of whom should be ousted from the country forthwith. There is Dr. Karl Muck, for instance, former leader of the Boston Symphony orchestra, whose part in the Hun conspiracy was so vile as to be unprintable; and there is Kuhnhardt, another musician, from Cincinnati. Then there are Adolph Pavenstadt, Hugo Schmidt and Carl Heynen, financial representatives of Germany; and Paul Koenig, chief of German spies in America. Frederico Stallforth, associate of Rintelen who plotted to stop munitions shipments by blowing up ships, is trying now to gain his release on the ground that he is a Mexican citizen. He too should be assisted across the border never to return.

Certain legislators seem to think the so-called Burnett bill providing for deportation, gives too much power to the Secretary of Labor. Senator Hardwick of Georgia, and member of the Senate's Immigration Committee, wants a jury trial to decide the fate of the interned. A careful reading of the bill shows that it applies only to those aliens interned or convicted in wartime. With such limitations, the Secretary could do no injustice even if he deported all, and he could rid the country of many dangerous rascals with little red tape and at slight expense.

PLOT TO DISRUPT A. F. OF L.

An important side light on the recent attempt to "Sovietize" Seattle is contained in a private letter that was sent to a number of the leaders of the Mooney conference held in Chicago in January last. This conference, while pretending to be only a movement to work for the release of Mooney, was really an ambitious scheme designed to break up the American Federation of Labor. The discovery of the plot prevented the attempt, which, although it could not have succeeded, shows clearly what is in the minds of the radical element of the labor movement in the West.

The letter follows:

"We will have representation at Chicago of about 3,000 delegates from the American Federation of Labor. I understand from the best authority that Samuel Gompers will instruct the Eastern delegates to stay away from Chicago. This will play right into our hands. The convention will be composed of and controlled by the ultra radical element of the A. F. of L. that will vote for the adoption of the new preamble endorsed by the Washington Federation of Labor.

We will be able to show that the two factions of the A. F. of L. are irreconcilable, and therefore we can slide through a motion to withdraw from the A. F. of L. In so doing, every radical faction west of the Mississippi will join us. We will be able to pull every organization west of Chicago, which will represent over 1,000,000 members of the A. F. of L.

The I. W. W., the Socialist and non-partisans and the Bolshevists will endorse our preamble and we will be able to control the entire West, and we are able to keep the conservatives away from the Chicago Convention.

See Duncan and Green, who have been written to, and I think a slate can be arranged that will win. Long live the Washington Federation for adopting the radical step that will give us complete control of the West. Seattle has always revealed a fine spirit, and we can expect to be the majority party in industrial circles of the West in the next six months.

Further, industrial freedom is rapidly materializing. It has been a hard uphill struggle, but in a few weeks the battle will all be over but the shouting.

Wire me, or if you think that dangerous, write me a letter addressed to Holler, and tell me just what opposition Warren is giving in distribution of literature. It is not against any law, and we will make him live up to the law, or know the reason why. I will write again in two days."

BOLSHEVISM VS. DEMOCRACY

(From Speech Delivered at the Luncheon of the United Waist League, Hotel McAlpin, Monday, January 27, 1919)

By NICHOLAS MURRAY BUTLER

The war has brought several new and strange words to the English language. One of the newest and most strange is Bolshevism. This word came into use as a Russian word about 1905, and was applied to the policy or teachings of those Russian revolutionaries who wished to overthrow, not only the autocracy of the Czar, but the whole modern social and political order. It denoted the maximum program not only of political but of social revolution.

Bolshevism was in the hands of cunning and determined men who saw their opportunity when, following the overthrow of the Czar, Russia was feeling its way toward a new and popular form of government. The great masses of the Russian people are illiterate, easily swayed, and widely spread over a vast territory. When, a few months ago, I asked the famous Mme. Botchkareva to tell me what the Russian people were really thinking, she made this striking answer: "Everybody in Russia is so busy talking that nobody is thinking about anything."

While others talked about what ought to be done, the Bolshevists acted. By forcibly seizing a few strategic points in the scheme of government, they were able, though a pitiful minority of the whole people, to paralyze opposition to their authority and to put themselves in positions of official responsibility. That the result has been a horrible orgy of murder, violation, theft, arson and destruction, no one who is in possession of accurate news from Russia can doubt for a moment.

Bolshevism is at war with civilization, and in particular with democratic civilization. It is now the chief enemy of democracy left in the world. It teaches dominance and control by a group or class. It proscribes capacity, training, thrift and service, and it denies any such thing as citizenship with its equality of opportunity and its equality before the law. Bolshevism bears precisely the same relation to democracy that chaos does to order. Each is the antithesis of the other. In the United States, to their everlasting credit be it said, the great labor organizations have stood like a rock against Bolshevism and its teachings. Americans owe a very great debt to Mr. Samuel Gompers and those who have been associated with him in the conduct of the American Federation of Labor for their clear vision and keen understanding of what Bolshevism is and means. Neither the man who works or the man who has saved can expect any quarter from Bolshevism unless he accepts its degrading and anarchistic doctrine that might makes right, and that the least competent shall organize government and set the pace for the state. In this country we are blessed—or otherwise—with a few parlor, editorial and academic Bolshevists, who, without in the least comprehending the significance of what they are saying or writing, and with the safety of their own skins and incomes guaranteed by other people, profess sympathy with the teachings and aims of these mad and murderous autocrats. But the heart of the American people is clear.

In Russia Bolshevism is the counter-revolution. So long as it continues to distress that unhappy country the Russian people will be prevented from securing the untold benefits of a stable, just and republican form of government in succession to the hateful despotism of the Romanoffs, now happily gone forever.

Russia Seen By British Trade Unionist

CLASS HATRED AND SOCIAL DEGRADATION PUNISHMENT FOR DISPLEASING SOVIETS—ENTIRE TRADE UNIONS BOYCOTTED FOR SLIGHT OFFENSES

A PICTURE of conditions in Russia, by an English workingman, who was in Russia from the time of the outbreak of the revolution until last January, is given in the *Westminister Gazette* in an interview, entitled "The Truth About Russia." As the *Westminster Gazette* generally is regarded as a paper with a strong leaning toward pacifism and as its informant is a trades unionist, only just arrived from Russia, the interview is attracting great attention. The article was cabled to the *Philadelphia Public Ledger* and is reprinted herewith by special permission. The *Westminster Gazette* says:

"There has lately arrived in England a witness of the internal condition of Russia whose testimony is, we believe, more veracious and impartial and likely to have more weight with the mass of the people than any official account given by middle class Russians who have escaped from the country. This is H. V. Keeling, who alone probably of all Englishmen has seen the Bolshevist movement from within and can report of his own knowledge what the Russian working class thinks.

"Mr. Keeling went to Russia five years ago to teach the workmen of a Russian firm which had acquired British patents of certain new processes of the lithographic and printing trades. For twenty years previously he had been a member of the British Trade Union. He was admitted to membership in the Russian Printing Trade Union and thus spent all his time as a workman among workmen.

BECAME USEFUL TO SOVIETS

"In 1918 he went about the country opening workshops for repairing all sorts of things. In this way he made himself so useful, not to say indispensable, that the Soviets insisted on his remaining in the country. In October last he was appointed to the position of chief photographer of the committee on public education, presided over by Lunacharski, whom he describes as an amiable visionary with his eyes shut to the realities of the Bolshevist régime. How Keeling finally got out of Russia and the extraordinary adventures and hairbreadth escapes he had at the frontier of Finland cannot be told yet. The main fact is that he was in Russia for the whole period of the revolution until January 9 this year.

"Mr. Keeling is still a young man and, although his experiences have bitten deep into him, he has been carried through by his remarkable vitality and intelligence. He speaks with singular impartiality of what he has seen and heard.

" 'The population,' says Mr. Keeling, 'was originally divided by the Bolshevists into four categories which exactly turn upside down the social classes of other countries. These are first, manual laborers; second, clerical workers, provided they employ nobody; third, every body who has employed anybody from a small householder employing one servant to a manufacturer employing a thousand hands; fourth, all former idle rich, princes, aristocrats, landowners and courtiers of every description.

DEGRADATION IS THE PENALTY

" 'The penalty for failing to please the Bolshevists is to be degraded from the class in which you get some food to the class in which you get scarcely any. In the last few months there has not been anything like enough for the first class and scarcely anything for the others. Class IV, the former rich, I should say, has disappeared. They have either got out of the country or been starved to death or shot or have turned themselves into workmen in order to get food.

" 'I cannot tell you more, for nobody knows. Other classes are those that get some food and those that get hardly any officially. To get food you must be in with the Bolshevists, and then they put you into the first class. It is very difficult to get there and very easy to get out. They degrade you for slight reasons which you cannot discover and then you starve. Whole trade unions have been degraded because they opposed the Bolshevists or offended them somehow.

" 'One has cards and coupons,' says Mr. Keeling, 'but all private trading is forbidden and nearly all the shops in Petrograd are shut.' There are a few hundred municipal shops, and you are supposed to receive half a pound of bread a day; potatoes, butter, meat and sugar are fixed at reasonable prices; but as a matter of fact for a long time past nothing has been sold but bread, and even that failed for seven days in December.

SIX DAYS WITHOUT BREAD

" 'I have been six days without bread, three days without anything to eat except the so-called public dinner, which consisted of watery soup, a small piece of salt fish and one-eighth of a pound of bread. Sometimes they offered me oats, as if I were a horse, when there was no bread. All children are in the first class, for the Bolshevist idea is that all children should be charges of the state while their parents go to work, but the children are starving in great numbers.

" 'If you are not in the first class or are degraded from it you have to prowl about and try to get food secretly; but this is a punishable offence, for which sometimes people may even be shot. People go to the country, taking anything they think the peasants will take in exchange for food and get a bag of flour or a few potatoes. But it is illegal to go out of town without a permit or to buy anything when you get there, so the Red Guard stop them and search them as they come back, and if they find anything confiscate it and often arrest the people and carry them off.

" 'I saw a woman who had gone to the country and got thirty pounds of flour from her own native place for her children, who were starving. She was seized by the Guard at the station when she was trying to get back, and they took it from her, although she fell on her knees and implored them with sobs to let her keep only a few pounds.

" 'Then when she found it was no use she threw herself under a train and was killed.

WORKMEN'S PAY $500 MONTHLY

" 'It makes it worse that you have quantities of money in your pocket but can buy nothing, I have had rubles worth £600 ($3,000) in my pocket and have not been able to buy a piece bread. You don't trouble about money. You pay 5 shillings ($1.25) a lump for sugar if you can get it. A workman's wages are £100 ($500) a month at the old values, but though he can still buy a watch for £5 ($25) he cannot buy a roll of bread for £50 ($250). People who have food will not sell it for rubles because they are worth nothing and there is nothing to buy with them, so the Bolshevists cannot get food though they are trying to and having fights with the peasants in consequence.

" 'I believe myself there is enough food in Russia to keep every one alive for the last harvest was good, but it cannot be got and it is all being hoarded and concealed.

" 'Nine-tenths of the people who keep in with the Bolshevists have to pretend to like them and would do anything to get rid them if they knew how, but you have to remember the Bolshevists are clever, feeding the people who are likely to fight. Every man who joins the Red Army is sure of his own food, also gets food for his wife and children. The army is fed before any one else and out of all proportion to the other classes. Even workmen get nothing until the army has had enough, so large numbers of men join the army for the sake of getting food and then have to keep at it for fear of losing their food. Besides if they try any tricks they not only are punished and shot themselves but their wives families and parents are starved.

MANY SPIES EMPLOYED

" 'A man will stand almost anything rather than see his wife, children and parents starved to death and the use they make of this kind of coercion is devilish. Soldiers have to be careful for there are lots of spies among them. Then besides the regular Red Army there is a special picked army which gets everything it wants, food or anything else, and all these men know if they don't fight they will starve, so they fight to save their own food and to prevent their wives and children from starving. That is their way of keeping alive.'

" 'How can men at the top, Lenine, Trotzky and the rest rest?—Lenine at all events is supposed to have some intelligence and humanity—sit there and let this go on? Are they devils or maniacs?' Keeling was asked.

" 'Suppose you would say they are quite sane according to our notions, but as things are they cannot help themselves and could not stop it if they choose. They have made monster areas helpless. Bolshevism is, in fact, become a vested interest for its privileged class, and Lenine and Trotzky are obliged to go on feeding a few, starving the many and shooting objectors.'

"Asked how men could be found who would go on day after day administering this diabolical system with this spectacle of helpless misery under their eyes Mr. Keeling said:

" 'Most of them are quite young, some notorious bad characters, many mere boys whom we should call hooligans. One boy of 17 I knew was a commissary with the power of life and death over forty villages. He goes about with a pistol, and one day thrust it in my face, threatening to shoot me on the spot. I knew how to deal with him, but the Russian peasants do not. As seen, such lads are terrorizing whole districts.'

"Keeling admits frankly that he was attracted by the Bolshevist idea, and hoped at one time it might be good for Russia if not the world in general. He was asked what has happened to the Russian people?

" 'Is Bolshevism as black as it is painted, and if it is, how can the whole nation submit to it?' He said in answer: "The Russian people are starving, and when you are starving you do not think about other atrocities; you think about nothing except just food to keep yourself alive. You do not trouble much whether you are going to be shot yourself or whether other people are being shot. You are collecting food like an

imal. I left Russia six weeks ago, but even w I cannot get over the habit of thinking out my food, and every day I find myself ndering where the next meal is to come from.'

"Keeling expanded on this idea. And on the e side millions of people too absorbed with e ravening thought how to get food for themves, their wives and children to think of anying beyond the moment, too exhausted to reit; on the other hand, a favored few relatively ll fed persons prepared for any violence or uelty to save themselves from losing their ivilege and slipping into the vortex of famine. r, whatever may be in the original idea of lshevism, as Keeling explained, it is simply at it confers upon some and denies to others e privilege of eating and that all its other eds of violence and cruelty are as nothing the supreme cruelty of withholding od. Keeling went on to explain the sysm, describing it without color or emotion, as living in that world he had come to take its rrors for granted.

"'The peasants have got rid of their landrds and sat down and divided the land,' conued Keeling. 'They have quarrelled a good al, but on the whole did it sensibly, each takg a bit of the best land, then another a bit of rse, and so on, but while there was plenty land for one village, there was nothing like enough in another, so the distribution was very unequal and there was great discontent. Instead of having the splendid time they hoped for, they find there is nothing to buy and they are always being worried and threatened by the Bolshevists. They have no tea, no vodka, no tobacco; they feel the loss of tobacco especially, and seem to walk about in a dazed condition, like men used to drugs, who had suddenly to go without. Peasants have implored me to give them tobacco.

"'Peasants work only just as much as they must to keep themselves alive. The next harvest is likely to be very bad and then famine, which now exists in the towns, will begin to spread over the country, and one dare not think what will happen then.

"'My own belief is they, Lenine and Trotzky, know the game is up, but do not know how to get out of it or what to do. The slightest sign of weakening and they are done. So they simply go ahead, grinding out everybody they think dangerous. Even the advanced Socialists are beginning to speak of Czardom as the good old times. No one is safe. It used to be thought they did not shoot Jews, for so many of them are Jews themselves, but two acquaintances of mine, both Jews, were shot a short time before I came away, and they had done nothing except to try a little private trading.

"'It is terrible to live in Russia these times. As you walk in Petrograd you never see any one laugh or smile; men and women are like shadows; little children are so wasted they seem to be all eyes. All the time people are disappearing; nobody knows what becomes of them. Five years ago Petrograd had a population of 2,400,000; now there are scarcely 700,000.

"'I have no personal animosity against the Bolshevists. They treated me as well as they could, but I am a working man, a trade unionist and I don't like to hear British working men talking as if Bolshevism was a great and splendid experiment to be copied by other countries, or as if they were helping the working people of Russia by saying no to all proposals now before the Allies for dealing with it. I want to convince them it is not a question of politics or theory, but just a question of humanity on which we have got to do our duty and help. There is enormous suffering and misery which we ought to stop if we can.

"'I want to say also that it won't do the Socialists any good to mix up with the Bolshevism and make people think that if socialism is tried it must end in wholesale murder and starving millions of people to death, but that is what will happen if the working people confuse socialism with Bolshevism and suppose that socialism must support the Bolshevists.'"

Repeal of War Emergency Legislation

By **CLARENCE S. DARROW**

(From the Bulletin of the American Alliance for Labor and Democracy)

THE prosecution of the war called forth a large amount of legislation. In the main, these laws were such as are ually passed in times of war. The rules for r are not the same as the rules of peace and ither with or without the war is the conduct people the same.

When a country is engaged in war, there is time to doubt or argue. The great mass of ople are ordinarily with the government and ile they are fighting foreign enemies, they ll not allow enemies at home to annoy or rass them, or otherwise obstruct such action is necessary for the protection of the coun. If the mass of people believe in the policy war they are always intolerant of propanda by words or writing that is calculated to lp the enemy or divide their own ranks.

If the law takes no notice of it, the people will event seditious language without law. This s done repeatedly during the War of the Rellion. It was common during the War of the volution when the sympathizers with Engnd were mobbed, hanged and forcibly driven m the country. In the removal of Vallanngham from the North, as wise and human a esident as Lincoln set the example for this nd of action. The first law of individuals d of nations is self-preservation, and every eans will be taken to accomplish this result.

Much legislation has been passed since our r began which seriously interferes with the eedom of speech and the press. Many men e now in jail, some under long sentences, who ve been convicted of violating these laws. No ubt a large number of these men were conentious and honestly did not believe in the r, but an individual who is attacked, defends mself without regard to the question of ether his attacker is conscientious or not. e may be insane, but this furnishes no reason r permitting him to take life. A country likese in a state of war is not able to ask quesns as to whether a man conscientiously obcts to a course of policy, or whether he symthizes with the enemy. He is necessarily dged by his words and acts, for the first effort the government is to preserve itself.

There can be little quarrel either in logic or in law with this proposition. It is done by all people, whether they be monarchists, republicans or Bolsheviki. In its last analysis it is the law of self-preservation and nothing else.

It is perfectly obvious that laws that are meant for the prosecution of war may be the most mischievous in times of peace. This country was formed on the idea of broad religious and political tolerance and a wide freedom of speech and the press. A large part of our progress and welfare in the past is due to this freedom and toleration. If laws passed during the war are to be applied to times of peace, the governing power will be able to make freedom of speech a mockery.

Nothing is perfect, and no thinking person would claim that our constitution, our laws or our institutions should not be changed and modified as time goes on. It is of the first importance to progress that there shall be free discussion of all political and social schemes that might result in change. To say that we should take institutions as they are, put on the lid and refuse open discussion, would, of course, mean that the present is good enough and the future should be no better. If it were wise to do it now, it would have been equally wise in the middle ages or any period of the world's history. Persecution and witchcraft and despotism would then be as common as in the dark ages.

When peace is finally declared the first and most important act of Congress should be to take off the lid, remove the restriction of free speech and a free press.

The policy of organized labor has always been to allow the widest freedom of debate. Organized labor is always looking toward the future. Its effort is to improve the conditions of those who need it most, change laws and institutions wherever needful that the common lot may be easier. This cannot be done except by free debate. Of all the people in the world, the trade unions are the last ones that can permit any permanent abridgment of the freedom of speech and the press. Organized labor has always made itself clearly understood upon this issue, which is of the first importance to the development of individuals.

Our present laws, if enforced against labor organizations and those who desire social change, would result either in sending most of the leaders to jail or in revolution. Of course, they were never meant for any such purpose. They were meant for the war and the war only and the danger is that people may forget their purpose and let them linger to obstruct the world after the need is gone.

If under free open discussion, the majority of the people in this country want something, they ought to have it. If the world cannot stand up against Bolshevism and meet it by free speech and a free press, then Bolshevism has the right to rule. It would then be time to try it out and see if it can succeed.

To smother any opinion is at once a confession that it may be true and that it cannot be met by open discussion and fair argument. Our institutions have cost too much to permit them to be destroyed on account of the war. It will not do to make a war fought for democracy result in autocracy. There can be no danger from this if the question is understood and the people act promptly to repeal war legislation when the war is done.

If it is right to repeal war legislation, it is also equally just and pressing that a general amnesty should be given to all of those who are now suffering under this sort of legislation. Everyone knows that large numbers of these men are conscientious and it is intolerable to think that men are in jail on account of their conscience, when there is no longer need that they should stay.

The labor unions did their part in this war. Without them it would not have been possible to bring the United States Government to that solid support that made victory possible. As they were patriotic in times of war, it is equally certain they will be patriotic in times of peace, and from the nature of things they are the ones who first of all should demand the repeal of this legislation and that amnesty be given to all these prisoners. This does not mean that the laws were wrong, or that it was not necessary to send conscientious men to prison during the war, but it does mean that the purpose of the war has been served and there was no thought or feeling of vengeance in any of these prosecutions, but only the purpose to protect the country when danger threatened it from a foreign foe.

Award In New York Boatmen's Case

MARINE WORKERS AFFILIATION OF NEW YORK HARBOR *VS.* THE RAILROAD ADMINISTRATION, SHIPPING BOARD, UNITED STATES NAVY, WAR DEPARTMENT, AND RED STAR TOWING AND TRANSPORTATION COMPANY, V. EVERIT MACY, ARBITER

THE questions submitted to me, acting as arbiter for the War Labor Board in the case of the "Marine Workers Affiliation of New York Harbor *vs.* The Railroad Administration, Shipping Board, United States Navy, War Department, and Red Star Towing and Transportation Company, may be divided as follows:

A—Was the War Labor Board, in hearing this case, acting in place of the former New York Harbor Board, and therefore limited as to what matters it could consider by an award of the New York Harbor Board, dated July 12, 1918?

B—Request for the eight-hour day,

C—Increase of wages, and changes in classifications,

D—Changes in conditions of employment,

E—The question as to whether the findings should be retroactive in application.

LIMITATION OF QUESTIONS TO BE ARBITRATED

In the President's telegram of January 11, 1919, requesting the Board to "Take up the case" and to "Proceed to a finding" no limitation as to what the Board was to consider was made. (Exhibit A.) The various Departments of the Government, in a letter dated January 11, 1919, asked the War Labor Board to act and stated "We desire to assure you that we will gladly submit *any* interests which we may have in this controversy to your Board and will abide by such decision as you make." (Exhibit B.) The Marine Workers Affiliation fixed no limitations to the questions to be placed before the War Labor Board.

It is obvious, therefore, that none of the interested parties considered that the War Labor Board was acting as a substitute for the New York Harbor Board, and they apparently had no intention of limiting its jurisdiction. On the other hand, the War Labor Board was specifically authorized to consider "*any* interests in the controversy."

In the last paragraph of the award of the New York Harbor Board, dated July 12, 1918, the following paragraph occurs:

"This award shall be effective as of June 1, 1918, and shall be in full force until May 31, 1919, unless in the judgment of the Board conditions warrant a change prior to the date thus fixed for expiration."

Some of the members of the War Labor Board contend that nothing has happened since June first, 1918, to "warrant a change" in the award of July 12, 1918. With this opinion I cannot agree. The effect of the armistice on the industrial and commercial life of the country is too obvious to require further demonstration. At the time the award was made the nation was at the height of a period of rising prices, necessitating increased wage scales, and a serious shortage of labor existed which required for the national safety the working of long hours. Since the signing of the armistice the entire situation has been reversed. Pending necessary readjustment of our National life to a peace basis we are passing through a period of falling prices, over supply of labor and there is no longer a need for excessive hours if an industry can be readjusted to a shorter workday.

In addition, the employers of the Port of New York, with one exception, who were parties to the award of July 12, 1918 and who control 60% of the harbor craft, refuse to allow the functioning of the Board as provided in the award. Had the New York Harbor Board functioned as provided in the award and had they decided that nothing had occurred warranting a change, then all parties would naturally be bound to have accepted such a decision. As the New York Harbor Board failed to act as provided in the award and as the War Labor Board was not asked by the two parties submitting the case to interpret the award of July 12, 1918, but to consider the entire situation,

I therefore find that the question of wages and hours of the members of the Marine Workers Affiliation of the Port of New York who are employed by the Railroad Administration, the Navy, the Army, the Shipping Board, and the Red Star Towing and Transportation Company are properly before me, acting as arbiter for the War Labor Board, and that acting in that capacity I am not limited by the award of July 12, 1918.

REQUEST FOR AN EIGHT HOUR DAY

The desirability of limiting the working day to eight hours has been recognized by Congressional enactment for all Government Departments and on all direct Government contracts, by most State Legislatures and Municipalities, by the Railroad Administration, and is the prevailing custom in many of our largest industries. Such a general acceptance of the principle of an eight-hour workday has not been obtained merely through sentiment. The nation has come to realize that its security demands that its citizens have a reasonable opportunity for family life, a reasonable amount of leisure and a proper standard of maintenance. In view of this recognition the nation has the right to demand of its able-bodied citizens eight hours' service, for six days in the week, in some useful effort. Good citizenship requires that this service be rendered either voluntarily or for pay, according to the financial needs of the individual. The right to an eight-hour day carries with it the obligation upon the part of the individual to render better service during the fewer hours for no right can be obtained without its corresponding obligation.

Some industries in their operation have inherent disadvantages, such as unusual danger to life and limb. In such industries it is recognized that the workers should be compensated for this risk and therefore a higher rate of wage is paid than obtains in less hazardous occupations requiring the same degree of skill. In such cases the danger is regarded as part of the expense of conducting the industry and is passed on to the consumer in the price of the service rendered or the article produced. In some business the fire hazard is greater and the rate of insurance is high; this is also an expense of production and is consequently paid indirectly by the consumer. Excessive hours are as dangerous to good citizenship as are noxious fumes to the health of workers. There may be certain occupations in which the straight eight-hour day is inherently impossible, if so the basic eight-hour day should be the standard and to pay for overtime regarded as a legitimate expense and a just charge to be borne by the public. It would seem, therefore, that the burden of proof that an eight-hour day is impossible in an industry lies on those who deny its practicability as well as upon those who request its installation. The workers in a dangerous occupation or in one requiring undue hours should not be compelled to carry the bur den alone.

The New York Harbor Board has divide the harbor craft into the following classes:

Ferry boats,
Tugs, other towing vessels, and steam lighters,
Lighters, covered barges, and hoisters,
Coal and grain boats, scows and dumps
(For the purpose of this award th same classification is followed).

FERRY BOATS—The ferry service is a con tinuous service throughout the twenty-fou hours with no very serious variation in the num ber of boats in use for the sixteen hours be tween 5 A. M. to 9 P. M. The boats alway leave and return to the same point on fixe schedules. An eight-hour work day is conse quently practical in this service.

I therefore find that all workers employed o ferry boats, operated by the owners appearin in this case, shall be employed for eight hour a day only for six days in the week, and i unusual circumstances when required to worl beyond eight hours they shall receive time an one-half for all extra time worked.

TUG BOATS, OTHER TOWING VESSELS AND STEAM LIGHTERS—The evidence pre sented showed that many of these boats wer engaged on long hauls requiring more tha eight hours for the round trip, or were in con tinuous service during the twenty-four hours that they already employed two crews; and tha as a rule they were operated on a more or les regular schedule. It is reasonably practica therefore, for the crews on these boats to b employed on a forty-eight-hour week. The thir crew remaining on shore when off duty.

I therefore find that all tug boats and othe towing vessels, and steam lighters under th jurisdiction of this award, now using two crews shall employ these crews on the basis of a forty eight-hour week, no crew to work more than a double shift in any twenty-four hours, and tha for all hours worked in excess of forty-eigh hours in one week, the crews shall be paid a the rate of time and one-half. If the boat is engaged in continuous service an additiona crew shall be employed to form a third shift.

SINGLE CREW BOATS—The several thou sand pages of testimony and the many exhibits presented at the hearings before the War Labor Board and before me as arbiter give little exact information as to the effect a change in th hours of employment would have on the com merce of New York Harbor or on the earning capacity of the crews on the harbor crafts. The evidence submitted is largely composed of what seem to be exceptional cases. It is almost wholly based on the abnormal conditions that have prevailed in the port of New York since the beginning of the war, in 1914. Both sides have contented themselves with general statements. One side claimed that 75 per cent. of the men could be placed on an eight-hour day without difficulty and that there would be no shortage of skilled workers, but gave no suggestions as to how this could be accomplished, other than in the case of ferry boats and boats employing two crews, nor the number of skilled workers available. The other side made a general denial of these statements and produced certain figures showing that a shortening of the hours would result in increased costs. No facts were pre-

ented to show percentage of the various kinds f work done by the tugs and lighters in the larbor. Nothing showed the average length f haul for the various types of boats, except or that type of boat for which an eight-hour ay or a forty-eight hour week has been awarded bove. There was no evidence showing the pres-nt amount of overtime beyond ten or twelve ours now required of the crews. There was no vidence to show that owing to the character of ne work performed, some boats could work on n eight-hour schedule and others on a sixteen-our schedule. There was evidence that there as too much work for all craft in the port to e limited to an eight-hour day, but is there ufficient work for a sixteen-hour day? If not, an it be placed on a ten-hour basis? A wage cale with punitive overtime provisions cannot e determined with justice to the workers or the ublic without a real knowledge of the condi-ion of the industry, and the number of hours equired to do the necessary tasks. There is othing gained by limiting the working day ithout a punitive provision for overtime. On he other hand, in fixing the basic working day nd wage scale, it is necessary to know approxi-nately whether overtime will be the exception r the rule. If it is known beforehand that vertime will of necessity be the normal condi-ion, then the punitive provision for overtime s merely another method of securing a higher vage scale in compensation for excessive hours nd loses its punitive purpose. Such a condi-ion requires special regulations for overtime vork.

A careful study is required of the conditions nder which these boats having only one crew erform their work, especially where they have o regular schedules. This can be obtained by n investigation of the boat's log. Another natter to be determined is how the delays caused y wind, tide and fog can be minimized in their ffect upon overtime work if the hours should e reduced.

It was stated that these boats doing a mis-ellaneous business without definite runs were ever far from shore and could easily run in nd change crews. Under most favorable con-litions it would probably require an hour's ime, to run in, change crews, and return to work. This would mean half an hour's pro-luctive time lost on each crew; in case of de-ay by wind, fog, or other causes, not only would punitive overtime of time and one half e paid the crew on board the boat, but the waiting crew would also have to be paid for the same period. This would actually result in a cost of two and one-half times for all over-time. Another complication is that it would be very difficult for the waiting crews to know where to join their boats. A boat might ex-pect to be near a given point at a certain hour but be seriously delayed by weather conditions or traffic, and it cannot communicate with the shore to change the place of meeting. In addi-tion, what would become of a tow while the tug was changing crews? Would it anchor or could it be towed to shore? In either case it would seriously congest the traffic.

Much stress was laid on the fact that the boat owners were paid regardless of conditions. This seemed to be true, but the crews were also at the same time receiving their wages regardless of conditions. It seemed to be forgotten how-ever, that all payments to the boat owners, as well as to the crews, come out of the gen-eral public purse. Boat owners have no source of money to draw upon except as it is paid by the public.

Each industry has its advantages and disad-vantages and no one method of operation, no matter how desirable, can be made to apply to all industries alike. The public has a right to know that they are not being asked to pay unreasonable prices, or being put to unrea-sonable inconvience, beyond that required by justice, in order to force all industry, under a single rule of employment. Justice to all parties, including the public, so far as it is possible of accomplishment should be the only universal rule.

Because twelve hours has been the custom is no reason why, with careful investigation of the facts, that a lesser number of hours might not be discovered to be advantageous, and desirable. Any industry that requires a working day of ten and twelve hours must show affirmatively the necessity for the continuance of such hours.

The commerce of the port of New York is too important to the city and nation to war-rant any arbiter in hastily reducing the work-ing day from ten to twelve to eight hours with-out having before him the full facts as to the probable result of such a change. As above stated, the necessary information is, at present, entirely lacking. I find, therefore, that the working hours for the tugs, towing vessels, steam lighters, lighters, covered barges, and hoisters, under the jurisdiction of this award and at present operating with only one crew, should remain unchanged until the first of July. In the meantime I would recommend that all interested parties in the harbor cooperate with each other in establishing a commission, not ex-ceeding ten in number, to carefully study the above problems and, if possible, for them to recommend what changes in the work day are advisable, how such changes can be made and the probable effect on the port of New York. This will require the detailed study of the daily logs of hundreds of boats.

This commission should be composed approxi-mately as follows: Two representatives of the Government Departments, including the Rail-road Administration; three private employers and five representatives of the Affiliated Marine Workers. If they fail to agree, on or before June first, as to the facts or upon recommenda-tions, then each side shall report their findings to the War Labor Board for a final decision. Such an investigation can best be made by the voluntary cooperation of the parties concerned. If such cooperation is not obtainable the welfare of the city and nation cannot be sacrificed by stoppage of work in the harbors and an inde-pendent commission must therefore undertake this task. I find that if such a commission is not voluntarily organized, as suggested above, and an investigation begun by the first of April, then the War Labor Board shall itself name a commission to make the investigation and re-port, and such commission shall report back to the War Labor Board by June 1, 1919, in order that the War Labor Board may then take final action before July 1, 1919.

REQUEST FOR INCREASED WAGES

Just as the armistice has resulted in a con-dition favorable to the reduction of the work-ing day to eight hours, it has also created a condition unfavorable to an increase in wage. The representatives of the men explained that they did not present to the New York Harbor Board, in June 1918, a request for an eight hour day for patriotic reasons, because they realized that the war necessitated their working regu-larly long hours. There is nothing in the rec-ord, however, that shows that at the time they presented their demands for increased wages in June, they did not ask for the full wage desired. If there is any change in the cost of living between July 12, 1918, and the present time, it is probably in favor of the men, although there is no authentic data on which to base an accurate opinion. Owing to the different sea-son of the year certain commodities may be higher and others lower than on July 12, 1918, but as the seasons change these variations ad-just themselves.

It is a fair assumption that the unanimous opinion of the Harbor Board, as expressed in its award of July 12, 1918, and the unanimous opinion of the Railroad Administration Board, fixing the wages of certain harbor workers, ef-fective September 1, 1918, represented a proper wage scale considering all conditions at that time. Representatives of the men were parties to both of these unanimous decisions. It is cer-tainly, therefore, necessary for those asking an increase now to show convincing proof that the desired increase is justified. In order for in-dustry to revive on a peace basis it must be stabilized. This cannot be accomplished during the next few months if wages are to be radically changed, either up or down. Constant readjust-ment only delays the return of normal condi-tions.

It must also be remembered that if the em-ployees receive the same wage for eight hours' work as they did for twelve hours, that while they receive no increased income the labor cost to the industry is increased fifty per cent. The only offset to this higher labor cost is greater production per hour than previously prevailed. The records do not show how the efficiency of the harbor crafts can be increased by shorten-ing the work day. An increase of thirty-five per cent. in the labor charge, due to reduced hours of work in operating the harbor crafts would in itself be a heavy burden to carry and precludes granting an increased wage at the same time.

INCOME NOT OUT OF PROPORTION

The annual income of the marine workers is not out of proportion with the annual income of workers in other occupations, requiring equal skill and intelligence. A fact to be considered in comparing the wages of the marine workers with other trades is that these men are usually employed on a monthly basis, the year round, and consequently there is little or no lost time. In addition, many of them receive an allowance of seventy-five cents per day for board and lodg-ing, while others receive free rent.

There is little, or no evidence in the records as to the wages now being paid in other ports for similar services. We cannot assume that the cost of moving freight in the port of New York has no relation to the cost in other ports and an unwarranted cost might easily result in di-verting freight, thus reacting unfavorably on the marine workers of New York. This subject should also be studied by the above suggested commission.

No convincing proof was presented for chang-ing the classifications of the occupations as shown in the award of the New York Harbor Board of July 12, 1918. Little evidence was presented by the men to justify the reclassifica-tion, as shown in their requests. It is fair to assume the unanimous award of July 12, all parties familiar with the details of the tasks having a voice in that award, represents a bet-ter classification and a fairer differentiation be-tween occupations than an arbiter unfamiliar with the details could possibly work out from the unrelated requests by the various crafts.

HERE IS THE FINDING

I therefore find that no wage increase should be granted and that the wage scales in the award of the New York Harbor Board, dated July 12, 1918, and those in the award of the Railroad Administration Board, dated Septem-ber 1, 1918, shall remain in effect during the life of this award. That those employees whose working day is herein reduced from twelve hours to eight hours shall receive the same monthly wage for the eight hours as they formerly did for twelve hours. Also that the employees whose week has been reduced to forty-eight hours shall receive the same monthly salary as previously. No findings are herein made for occupations not mentioned in the New York Harbor Board award of July 12, 1918, or for occupations not contained in the order of the Railroad Adminis-tration Board of September 1, 1918, as practic-

ally no evidence was submitted relative to these additional classifications.

WORKING CONDITIONS

TUG BOATS AND OTHER TOWING VESSELS AND STEAM LIGHTERS:

A—Twelve hours shall constitute a day's work where one crew is now employed.

B—Six days, or forty-eight hours for boats having more than one crew, shall constitute a week's work. The day off to be determined by the employer.

C—Work on week days in excess of twelve hours a day, or six days a week, for boats with one crew, or 48 hours a week for boats with more than one crew shall be considered overtime and paid for at the rate of one and one-half times the regular rate.

D—Double time shall be paid for work on the following holidays—New Year's Day, Fourth of July, Labor Day, Thanksgiving Day, and Christmas Day.

E—Double time shall be paid for work on Sundays unless the employee has already had one day's rest in seven, or will have one such day in the current swing of his shift.

F—Crews are entitled to pay on Sundays and holidays for only the actual number of hours that they are on duty.

G—In order to determine the hourly rate for men on a monthly wage multiply the number of hours in the working day by three hundred and thirteen, and divide this product into the monthly wage multiplied by twelve.

H—In the case of those men who, owing to the shorter work day, need no longer be boarded by the company, or who may be boarded only part of the week as may occur in the case of those working on a forty-eight-hour week, seventy-five cents a day shall be added for each day they are not so boarded, or twenty-five cents for each meal not provided by the company in cases where shifts are changed between meals. This provision does not apply to the crews of ferry boats, tugs, and steam lighters now receiving the hourly rates contained in the order of the Railroad Administration Board, effective September 1, 1918, as hourly rate received by these men provides for them to board themselves. This provision applies only for six days a week, unless the employee works an extra seventh day.

I—One week's vacation with pay shall be allowed each employee who has been in the service of the company for a period of one year or more.

J—Carfare is to be paid by the employer when boats change crews at other than designated points.

FERRY BOATS:

A—Eight hours shall constitute a day's work.

B—Six days shall constitute a week's work.

C—All overtime on week days shall be paid for at the rate of time and one-half.

D—Double time shall be paid for work on the following holidays—New Year's Day, Fourth of July, Labor Day, Thanksgiving Day, and Christmas Day.

E—Double time shall be paid for work on Sundays unless the employee has already had one day's rest in seven, or will have one such day in the current swing of his shift.

F—Crews are entitled to pay on Sundays and holidays for only the actual number of hours that they are on duty.

G—In order to determine the hourly rate of pay for men on a monthly wage, multiply three hundred and thirteen by eight and divide the product into the monthly wage multiplied by twelve.

H—One week's vacation with pay shall be allowed each employee who has been in the service of the company for a period of one year or more.

LIGHTERS, COVERED BARGES, AND HOISTERS:

A—Ten hours shall constitute a day's work.

B—Six days shall constitute a week's work.

C—All overtime on week days shall be paid for at the rate of time and one-half.

D—Double time shall be paid for work on the following holidays—New Year's Day, Fourth of July, Labor Day, Thanksgiving Day, and Christmas Day.

E—Double time shall be paid for work on Sundays unless the employee has already had one day's rest in seven, or will have one such day in the current swing of his shift.

F—Crews are entitled to pay on Sundays and holidays for only the actual number of hours that they are on duty.

G—In order to determine the hourly rate of pay for men on a monthly wage, multiply three hundred and thirteen by ten and divide the product into the monthly wage multiplied by twelve.

H—One week's vacation with pay shall be allowed each employee who has been in the service of the company for a period of one year or more.

I—All carfares in excess of ten cents to be paid by the employer to men living within the Metropolitan district, and all carfares to be paid by the employer when the men are on the company's business.

J—The Captain shall receive one dollar and fifty cents for each night he is required to be on his boat for the purpose of watching or towing.

SCOWS, DUMPERS, COAL BOATS, AND GRAIN BOATS:

The Captain of these boats shall receive one dollar and fifty cents for each night that he is required to be active for at least one hour after six P. M. in the loading or discharging of cargo.

RETROACTIVE REQUEST

Throughout the hearings before the War Labor Board and also at the hearings before the arbiter, the representatives of the Marine Workers Affiliation emphasized the fact that the request for shorter hours was not to be taken as an indirect method of raising wages. It is impossible to return the hours that have already passed by any award and as no increases in the wage scales are granted there is nothing to be gained by making a retroactive date for the findings here made. It will require a few days to secure the additional men necessary to man the ferries and other boats for the crews of which an eight-hour day is provided. In order not to inconvenience the public the findings contained in this award shall not become effective until March 1st, 1919, and shall remain in force until peace is declared or otherwise until July 1, 1919. During the month of June the commission or the War Labor Board can prepare a carefully adjusted scale of wages and a comprehensive regulation of hours and conditions of employment for all marine workers in the port of New York.

I recommend that the War Labor Board will follow its usual methods for settling any disputes that may arise in putting this award in operation.

(Signed) V. Everit Macy.

Jan. 11, 1919.

PARIS

Mr. J. P. Tumulty,
White House,
Washington.

Please send the following to Messrs. Taft a Manly, National War Labor Board:

"I have been informed by the Secreta of Labor as to the serious situation whi has developed in the port of New York a the strike of marine workers which serious cripples the movements of troops and su plies. Consider this a very grave emergen and understand that it has arisen becau the parties to the controversy failed to ma a joint submission to the National W Labor Board.

"I earnestly request that you take up th case again and proceed to make a findin I appreciate the honesty and sincerity the Board in announcing on Wednesda that it could not promise a final decisio in the controversy without a formal su mission from all parties, but I am sure th the War and Navy Departments, the Shi ping Board and Railroad Administratio and any other governmental agencies i terested in the controversy will use all t power which they possess to make your fin ing effective, and I also believe that priva boat owners will feel constrained by ever consideration of patriotism in the preser emergency to accept any recommendatio which your board may make. Although th National War Labor Board, up to the sig ing of the armistice, was concerned solel with the prevention of stoppage of war wor and the maintenance of production of ma terials essential to the conduct of the wa I take this opportunity also of saying that is my earnest hope that in the presen period of industrial transition arising fro the war the Board should use all mean within its power to stabilize conditions an prevent industrial dislocation and warfare."

Woodrow Wilson.

EXHIBIT B

Washington, January 11, 1919.

Gentlemen:—

In reply to your inquiry as to the attitude o our Departments regarding any decisions tha may be made by the National War Labor Board in regard to the controversy now going on a the port of New York, should your Board, in ac cordance with the President's request, reassum jurisdiction over the controversy, we desire t assure you that we will gladly submit any in terests which we may have in this controversy t your Board and will abide by such decisions a you may make.

Benedict Crowell	Josephus Daniels
Acting Secretary of War	*Secretary of the Navy*
Walker D. Hines	John A. Donald
Director-General Railroad Administration	*Acting Chairman Shipping Board.*

The National War Labor Board,
Washington, D. C.

Bolshevism and Shop Stewardism

By A. M. SIMONS.

UT of the desperation, misery and neurasthenia of the war was bred the plague of Bolshevism. Today it threatens to rob the world of democracy and e victory gained upon the battlefields. Bolevism is not easy to describe or define. Inllectually it is a cross between Greenwich illage and the New York Ghetto. The men id women who have led the movement in ussia have been largely a product of these two vironments.

Bolshevism is not a phase of the labor movent. It is catastrophic. This differentiates sharply from the genuine labor movement, hich grows only as it slowly gains power and hools its members to use that power. Bolevism is the autithesis of democracy. One eks in vain to find in all the writings of rotzky any advocacy of real democracy. Bolevism seeks to gain power for its leaders by a *up d'etat*. Just as the Czar, and all other aucrats, political and industrial, always claimed exercise their power for the benefit of their bjects, so Trotzky and Lenine always referred their autocratic domination as the "dictatorip of the proletariat."

This autocracy has developed a peculiar sysm of administration through the workshops. his system has been evolved into a philosophy the followers of Bolshevism. We are inrmed that it represents a "new and higher" cial order. As such, it is worshipped by a new lt in many lands, and has become a menace to ery nation into which it has penetrated.

This scheme, already the parent of chaos and arvation in Russia, is based upon what has en christened the Soviet. Although claiming velty, it differs little fundamentally from the d "autonomous group" of Bakunin and the narchists, and the tottering structure built pon it betrays the same disregard of democracy id majorities that have always been characterstic of anarchy.

In its baldest form Bolshevism holds that the orkers in any industrial plant should form an ganization, with its own shop committees. hese are to seize the industry, elect a committee supplant the owners and then choose repreentatives to join with similar representatives om other industries to constitute the governent of the country. The old political governent is to disappear. The central congress of epresentatives from the various industries is to ke its place. Conditions of labor are to be etermined by each shop committee, or Soviet, bject to some not-yet-defined supervision of the ntral congress.

The scheme is an old one, although it has been idely hailed as an invention of Lenine's. It is ractically identical with that of the I. W. W. justice to the I. W. W., it must be said that did not propose suddenly to exclude a large ction of the population from all voice in the overnment, or expect to wipe out all forms of overnment as they were wiped out in Russia lmost overnight.

The fact that the plan lends itself to all sorts f half-baked theories of anarchy, "direct acon", syndicalism, sabotage and industrial atastrophism, has caused it to spread widely. t has been assisted in this dispersion by the raise of sympathetic "intellectual" radicals of very variety. These have praised Lenine as the ost wonderful of modern statesmen, although e has failed in everything toward which he imed.

One of the most pernicious phases of Bolshevm is the so-called "shop stewards'" movement f Great Britain. In ordinary times the shop stewards are the petty officers of the union, whose only function is to see that the provisions of union contracts are observed and that any complaints are transmitted to the union headquarters. When the war came union officials in England made agreements limiting the power of members to strike during the war. Thereupon the shop stewards took it upon themselves to incite the members to violate such agreements. The shop stewards formed an organization of their own within the unions, controlled by boys under draft age, slackers, conscientious objectors and various exempt classes. The rank and file was composed of persons new to unionism, of women, children and old men—people who knew nothing of union tactics.

This shop stewards' organization was responsible for a large percentage of the strikes during the war. The membership of the unions flouted the authority of their own elected officials; they felt no responsibility for, nor obligation to keep the contracts made by these officials and became an easy prey to every sort of fad.

So far the movement had not become definitely Bolshevist. It was only irresponsible, erratic and incapable of understanding the powers and limitations of union democracy. It still needed the Bohemian faddist and intellectual element. This was furnished by the leaders of what is known as "guild Socialism". This, again, is but one of numerous sprouts from the old anarchist root. It proposes an organization of industry along the lines of the old guild groups. The resemblance to the Soviet scheme is not hard to detect.

This Guild Socialist movement is supported almost entirely by "intellectuals". It has more "literature" than experience. Like every ready-made social scheme it catches the support of those who have never helped to build the slowly growing structure of democracy. When Russian Bolshevism made its appearance, this class in England, as in nearly all allied nations, was captured by its specious Utopianism and fine-sounding phrases. The Guild Socialists were largely pacifists. They had espoused pacifism along with other fads. In the shop stewards' movement they saw an opportunity, for the first time, to hitch all their schemes to a real labor movement.

There were times during the war when the activity of this movement threatened the success of the Allied arms. It is difficult to give figures concerning its strength. Those that are commonly given are contradictory and indefinite. A better estimate of its dangerous power is afforded by the fact that during the last year of the war there was scarcely a moment during which some strike for which it was responsible was not in progress. The followers of these tactics assured me that a majority of the organized workers of Great Britain were behind the shop stewards and ready to revolt against union officials and organized society. It is only certain that the strength of the movement was sufficient seriously to interfere with the prosecution of the war, to disintegrate some of the unions and to threaten chaos in case of an industrial crisis.

The same tendencies are found in Italy. They have gathered around the *delegates des ateliers* in France. The philosophy of Bolshevism has obtained a large following among pseudo-intellectuals in the United States. Each of these piffling players with industrial problems seems to fancy himself in the position of dictator, wielding the power of an ignorant, aroused and desperate proletariat.

The ending of the war brought about a sudden spread of the movement. The seizure of a multitude of industrial cities, of great factories, of ships in the German fleet, and the exclusion of a whole section of the population from any voice in the new government, speak far louder than any formal disavowal of the extent to which Bolshevism has captured Germany. If it attains power it will only bring about utter confusion and famine, which is already at the door.

Finland, where the attempt of labor forces to form an orderly government, ruled by labor, was crushed out in a bloody massacre by German autocracy, aided and abetted by German Socialists, is turning also to Bolshevism now that the defeat of Germany has removed the terrorism of the White Guard. Sweden, so long under German influence, whose Socialists, with the exception of Branting and his followers, flirted with German autocracy and condoned the treaty of Brest-Litovsk, is now threatened with a Bolshevik outbreak.

Switzerland was threatened with an outbreak of Bolshevism last August. Geneva was in the throes of a general strike, in which the regular unions were largely disregarded and Socialist officials were flouted.

Austria seems to be swept by Bolshevism. At a time when its failure is becoming more and more evident in Russia, it has found favor in half the world among the desperate and the ignorant upon the one hand and the cleverly ambitious would-be dictators upon the other.

Up to the present time it has obtained small hold among actual workers in the United States. The existence of a powerful trade union movement steadily gaining power and privileges for its members is the first bulwark against Bolshevism. The second is the existence of broad democratic institutions that permit social progress to advance as fast as the majority wills. A third obstacle is the mental attitude arising from a knowledge of the possibilities of democracy and the practice of its privileges.

Bolshevism, like other fine-spun theories, flourishes among those who know least of democracy. In Italy Bolshevism was rampant among those who were most inexperienced in industrial management. It was entirely absent in the great productive cooperatives, which the defenders of Bolshevism instanced as examples of the successful application of one phase of their theories.

If the nations of the world, and the powerful industries within the nations, disregard the provisions made for the distribution of the essentials of industry which have been created during the war, and enter into a mad scramble for steel, copper, rubber and the comparatively scarce metals necessary for alloys and high-speed tools, then, when prices have sky-rocketed and again fallen, we may expect a panic. An industrial crisis, with demobilization of military forces to add to the problem of the unemployed, would breed Bolshevism as slums breed tuberculosis.

If to such a condition we add the effort to smash the organized labor movement during the war, we can rest assured that angry, unorganized labor, led by hair-brained, would-be Trotzkys, will cry out that the time has come to "strike upon the job," stay in the factory and drive out the boss.

On the other hand, if we realize that this war has brought us through the hardest part of the social revolution that lies before the modern world; if we continue the conscious organization of society through which we mobilized for war; if we retain the machinery for industrial adjustment which has grown up in the midst of war and which nations like Great Britain are adopting, then we can progress steadily and democratically into whatever social changes the majority of the people shall decide are desirable.

Housing of Workers In a Manufacturing City

(*Continued from page* 6)

a share in this real property and acquire it by slow steps for Bridgeport's manufacturers are awakening to the fact that every dollar earned from dividend owes some share of that dollar to some plan for home building. Most of the wide-awake manufacturers have indicated their willingness to put into our building program some share of each dividend. It is true that every dollar earned in every payroll has a certain number of cents' obligation to the financial plan that relates to the home and the amount of this from the payroll earned by a man with a family is about 20 per cent. for each dollar. The amount from the dividend is not definite, depending upon the number of men employed and other factors. Let these two forms of return from labor and capital be combined and produce houses as fast as they are needed and 20 per cent. of the payroll be put into the ownership of homes. Every dollar earned from dividend has an obligation to support Americanization and, as far as our knowledge goes, no better way can be found to invest money in this direction than in some added effort toward homes for the working class, assisting a new investor to own his home. The high wage of today and tomorrow and from now on will give the worker not only the opportunity that comes with the increased income but also the duties and obligations that follow closely. If the great cities are to be the homes of the industries, then this idea can be realized in only a partial degree through suburban homes. But if the industries are to seek out or establish smaller centers, then the wage earner has the opportunity to become more distinctly and more conspicuously a citizen. There are in a town like Bridgeport two sources of capital wealth only—the first the payroll and the second dividend. If we find the right proportion of each to apply to the home problem as an investment, automatically we shall have a sufficient number of homes.

CONSTRUCTION SCHEMES

We find in our closely developed sections of Bridgeport—and it is true of many of the small cities—a large amount of wood construction in areas densely populated and in what is known as the three-decker type. The cost of land affects the density of population. If three families are housed on a lot 50 x 100 feet, there will be little light on the side of the house except in the top story and little advantage from the backyard. We have developed a new type of 3-story home with a density double that of the old three-decker and have so arranged the grouping that there is double the light and air space. This is done by using the two-room deep arrangement and by facing the building units on courts and play grounds.

Heating the house is a very serious difficulty and we have undertaken to prove the advantage of central heating. It can't be safely said that this is the cheapest form of heating the average family in the working class today because the average family does not occupy the whole of the house and therefore does not heat it all. Unless a heating system is very elastic, it is difficult to allow people to live in a partially heated house supplied by a central station. The time will come when heat will be sold by the slot meter the same as gas. We have been successful in heating a group of 86 families with a central plant through the severe test of last winter and are building two additions.

Our introduction of a row house with access to the street from the kitchen may very well apply to all forms of houses in a concentrated part of a city where alleys have never been installed. We offer our development, known as Seaside Village, as a challenge to the architects of America. If the house can be built of brick with a slate roof and the family can have a yard in front and a garden in the rear and we can curve the street so as to let the sunlight in and avoid the monotony of the continuous rows of houses by a few changes here and there, then we can maintain our style of architecture given to us by our forefathers and can make the home surroundings attractive. We are testing our apartment development. Both schemes are needed in a growing city.

THE SOCIAL VALUE

May we not look into the home of the Greek and the Hungarian, or the Slav or our artistic Pole, after he has moved into one of our villages, and hope to find neatness and pride and love of America growing just a bit faster than when he lived on Turkey Hill, a settlement of 1,000 houses built by the inhabitants with lumber "borrowed, begged or stolen," some decent in appearance, but tuberculosis rampant and Bolshevism growing rapidly? As long as the woman wears a shawl on her head it is all right, but as soon as the children enter school they become ashamed of Turkey Hill. They pass my house every day going to the dump to gather things from the ashes. I heard one boy say about us at the bottom of the hill: "We are down among the rich people now and must be careful." We have been housing all nationalities—140 of them—for a year and a half now, and know how vast is the response to the a tractive home life. We must break up our nes of nationalities and mix them and let them a vance. Let us deal fairly with these new pe ples and get away from pushing off to the da alley those who have been taught to live on litt We shall find it good business to see to it th he who advises the new American is not lookin for a double profit.

Can Bridgeport offer a better introductio into our city, to the man and his wife with n English and no antagonism to us when he a rives, than a three-room flat in Seaside Villa and let him learn that to go forward he mu speak English and be American?

I am a builder by training and I love maso ery, but the pleasure in building is greatly e hanced by knowing that when I have finishe the structure and planted the hedge and t flowers, the little lace curtain of home will han in the pretty window. *The home of the workin man is the balance wheel of Democracy.*

HIGHER STANDARDS SET

To sum up the work in Bridgeport: The have been built by the Remington Compan about 700 houses, designed by an architec These are all of durable construction, bric walls and slate roofs with very few exception and are Philadelphia style with flat roofs. T Bridgeport Housing Company has built a proximately 250 homes independently and now assisting the Government to build 850 a ditional home units. Variation in room nun bers is from two to eight and the feeling whic is prevalent in Bridgeport is that a new orde of things has begun. This will go much farthe than the housing of the middle working cla for the lower paid worker will of necessity b allowed to take the old house abandoned by h higher paid brother worker when the new hous are occupied and the opportunity will be a hand to revamp and better the unproductiv dark tenements for the use of the lower pai worker. Our rented home units will set standard of fairness in the matter of relatio of landlord to tenant which will reach far b yond the 2,000 home units which I have d scribed. The effort of the housing movemer has brought about another startling result whic will affect the future of the appearance of th town very largely. One of the biggest saving banks in Bridgeport has issued among its rule that no loan shall be made upon any new hous unless the same is designed by an architect. I this rule becomes general in our savings bank we shall certainly have different appearin cities ten years from now.

At left—Entrance Apartment Building designed for the newly married. Near park. Room arrangement permits plaintiful supply light and air. Doors and windows screened. Roof garden. At right—7-Room Brick Cottage. Original Cottage 5 rooms, 2 added. 8 Children.

Bolshevism Probed by Senate

(*Continued from page 3*)

viki entered into an alliance with the Gerns to fight the Allies in the north and the echoslovaks in the west, and in that same reement Germany agreed not to interfere with work of the Soviets.

'On one occasion after Lenine and Trotzky ne into power, Bruhebevich, the secretary of nine, made the statement that German arery and German soldiers had passed 'around trograd on their way north.' ''

BOLSHEVIK SAME AS I. W. W.

Rev. George A. Simons, superintendent of Methodist Episcopal Mission to Russia since 07, was another witness thoroughly familiar th the country and in a position to learn ings first hand. His sensational testimony rred comment all over America, especially at portion in which he told of the leading parts ing played by Russians who once had been in is country, in the Bolshevist horrors.

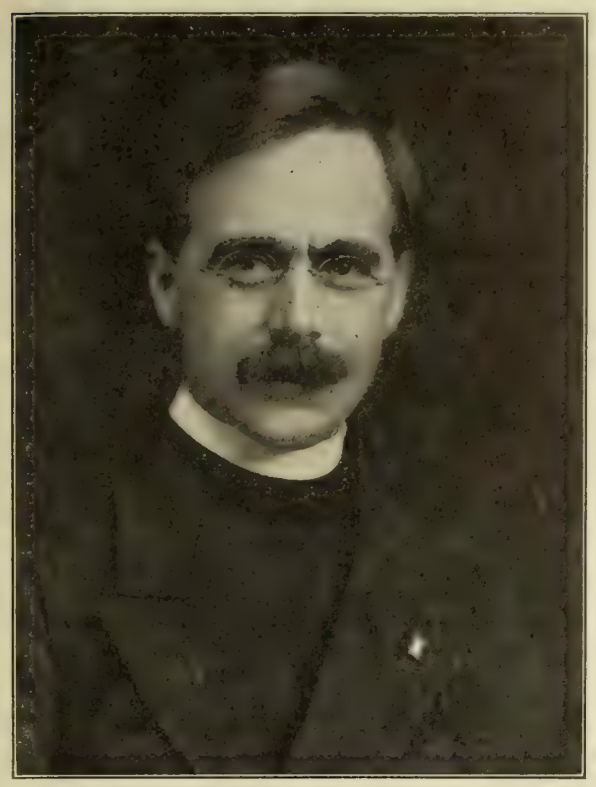
It was absolutely impossible, he said, for any an to understand what was going on in Russia less he saw it with his own eyes. He told of wholesale murder of innocent civilians, the traging of young girls by the Red Guard, the izure without legal process of all property, the ing together of helpless people and throwing em into a river to drown, the absolute suppession of free speech and a free press, the icial starving of those who do not indorse lshevist teachings and programs, and the nding of huge sums into other countries to stir disorder.

Replying to a question, Dr. Simons said that all essentials the aims of the I. W. W. and the lsheviki were the same.

Russia, so far as civilization is concerned, is pictured as a dead land. Dr. Simons pointout that at the time of the revolution Petroad was a magnificent city of 2,300,000 populaon. Today it is a city under the spell of aos, with a population estimated, he said, at s than 800,000.

That the Bolshevist group in Russia is spendg millions of dollars in propaganda in other untries was again asserted. In this connection ajor Lowry Humes, the Judge Advocate in arge of the examination of witnesses, proced an official translation of a Bolshevist overnment order appropriating 2,000,000 bles for propaganda purposes in enemy, iendly, and neutral countries.

Dr. Simons said that the Bolsheviki were holly anti-Ally, though attempting to disguise at fact so as to have a refuge in the United ates when their régime fell. ''They have a al affection for Germany,'' he testified, ''as s been proved time and again.''



Dr. Simons here told of his visits, disguised a workman, to the meeting places of the lsheviki. He said that in conversation with e ignorant masses of the movement he found at few of them had any idea what Bolshevism ally was.

He told of the haranguing of these people by itators who traveled about the city in trucks. any of these agitators, he added, he recognized New York East siders he had met in Petrograd who had been pointed out to him.

''To what was due more than to anything se the success of these Bolsheviki?'' asked enator King.

''To the cleverly worked-out program of terrism and to the advocacy of the slaughter of hat they call the capitalist class. The whole uestion might be summed up in their slogan: The security of the proletarian cause lies in utting a gun in the hands of the workmen.' ''

Dr. Simons told of witnessing the murder f two young men in front of his office in Petrorad, the killing taking place a few minutes

REV. GEORGE A. SIMONS

before Ambassador Francis, who was his dinner guest that night, arrived at his home.

Asked to estimate the number of persons who had been murdered by the Bolsheviki, Dr. Simons replied that it was in the thousands, but that no man could at this time even approximate the number of the victims.

''The Bolsheviki never investigate. They kill on the spot, as a rule,'' he added.

BOLSHEVIK PROPAGANDA ABROAD

''You have heard,'' said Senator King, ''of the I. W. W. here in America. I will ask you if you see any difference between that organization and the Bolshevist organization in Russia?''

''I am strongly convinced that in all main essentials the aims of the Bolsheviks and of the I. W. W. are identical. Minister of Posts and Telegraphs Zorin, who lived eight years on the east side, told me once that they expected to get Germany after Russia, and after Germany they would tackle the United States.''

''That's a big job,'' remarked Senator Nelson.

''Do you know the extent of their appropriation for propaganda in other countries?'' asked Senator Overman.

''I do not know the total, but we know that millions of rubles were appropriated for that work, a great deal of it for the work in India and China. They are also very active in England.''

''Can you tell us anything of the treatment accorded the so-called bourgeoisie or middle classes?'' Senator Nelson asked.

''Thousands upon thousands of them have been starved to death,'' Dr. Simons answered. ''I have seen the walking shadows of these dying human beings in the streets of Petrograd. Thousands have dropped dead in their tracks. I have seen them myself. I have seen some of the finest men of the old days standing starving in the streets and with outstretched hands begging a few kopecks. I have been in the homes of the best people of Petrograd, in which there has been no bread for weeks. When I say the better class, I mean the people who believe in a clean handkerchief and a white shirt.''

William W. Welsh, of the Petrograd branch of the National City Bank, painted a gloomy picture of Russia under the Bolsheviki in his testimony before the Overman committee. His was the first testimony to connect directly agitators from this country with the existing reign of terror. Mr. Welsh said that in Petrograd he met many of the agitators who went to Russia from this country and who gained power in the Bolshevist Government.

''A great many of these men,'' he said, ''came into the bank to get their American money exchanged for Russian money. I talked with them and I never met one who would admit that he was a naturalized American citizen. Most of them had been in the United States anywhere from three to ten or twelve years. They had no use for the United States. They said there was no freedom over here and that they had come back to Russia to be free. Don't confuse these men with our laboring men, for the honest laboring man, who owns or rents a decent home, who owns a piano, a phonograph, and has good clothes and furniture in Russia would be placed in the bourgeoisie class. Over there, as things are going now, the man who wears a clean shirt or the woman who wears a hat is a bourgeoisie. I have been on street cars in Petrograd and have heard Bolsheviki taunt other women passengers because they happened to be wearing a presentable hat. They sneer at them as 'you women who wear hats.' There are in this country at this moment great numbers of persons who say they sympathize with Bolshevism, who, if they were in Russia, would be placed among the enemies of the Bolsheviki and marked for starvation.''

''Did the crowd of agitators from the New York east side and other parts of the United States become officials in Russia?'' asked Senator Nelson.

''Yes, practically all of them, except such as were real sincere revolutionists. They were later labeled bourgeoisie.''

Ralph M. Dennis of Chicago, and Robert F. Leonard of Minneapolis, were two witnesses who further verified the stories of atrocities by the Red Guards. Each had seen many persons murdered and each was thoroughly familiar with conditions over a wide area of Russia. They agreed that strenuous efforts were being made by Lenine and Trotzky to spread the Bolshevist idea to the United States. In this they were borne out by Professor Russell Storey of the University of Illinois, who asserted that the Bolsheviki were frankly anti-Ally and were openly aiming at world domination.

BOLSHEVIK AGENTS ADMIT HORRORS

Open advocates of Bolshevism heard by the committee convicted the cause they advocated by their own testimony. Among these were John Reed, ''Bolshevist Consul General in New York,'' who told of meeting former New Yorkers, now Bolshevist officials who had changed their names, in Russia; of how he hoped to open a propaganda bureau here financed ''by wealthy women who had more money than they knew what to do with,'' and how 2,000,000 rubles had been appropriated for international propaganda work. He also said he helped edit five Bolshevist papers with an aggregate circulation of almost two million daily.

Williams was on the stand for two days. At first the committee permitted him to tell his story in his own way, asking few questions. When he was re-called, however, he was pinned down to facts and it was then that his admissions convicted the Bolsheviks of horrors. At first Williams told the committee that the number killed in Russia totalled fewer than 50,000. In revising his testimony, he admitted that up to last May, when he left, this number must be at least 150,000.

He admitted that the atrocities of the Red Guard were frightful and told the committee that the stories of other witnesses doubtless were true. Williams left Russia months before the others who testified. Moreover, from his testimony it was made clear that Williams' firsthand observations in Russia were exceedingly limited.

From Readers of The National Civic Federation Review

From the beginning of the re-issue of the REVIEW, on December 5, 1918, stacks of congratulatory letters from all parts of the country and from all classes of the community have been received by the editor, the publication of which would require a volume. These letters, while referring to many topics treated by the REVIEW, speak specifically of the wonderful series of articles by T. Everett Harré on "Shadow Huns and Others," of the informing papers by Gustavus Myers and William English Walling on the Bolsheviki, and of the general anti-socialist trend of the discussions on industrial affairs.

Some of these letters were addressed to Mr. Harré personally and many of them seem such good propaganda matter that we are publishing a few in this number of the REVIEW, omitting signature where permission to use them has not been asked.

Los Angeles, Calif., February 6, 1919.

Mr. T. Everett Harré,
The National Civic Federation Review,
1 Madison Avenue, New York, N. Y.

Dear Sir:

I am reading with great interest and appreciation your series of articles on "Shadow Huns and Others" in THE NATIONAL CIVIC FEDERATION REVIEW. I am a socialist, and doubtless I differ with you profoundly on all sorts of questions. But I recognize the immense importance and value of what you are doing in combating national and social defeatism, Bolshevism and all-round diabolism, as voiced in the *New Republic*, the *Nation*, the *Dial* and the *Survey*. I hope that your articles will be assembled and printed in convenient form as a low-priced pamphlet, and that they may gain the widest possible circulation.

When I say that I am a socialist I must explain the statement by the notation that I have no connection with the Socialist Party of America. From the beginning of the great European conflict I recognized the prevalent pro-Germanism of the party leaders and strove against it. Considerations, however, of loyalty to a movement to which I had given so much of my life, as well as the futile hope that the party would right itself, prevailed upon me to retain my membership until the evidence became overwhelming that the party was irrevocably committed to national defeatism. Then I quit.

Your article in the issue of January 25th is an especially strong presentation of the defeatism and diabolism of the *New Republic* and its editor, and ought to prove convincing even to that friend of the editor's who protested against your previous articles. Probably, however, it will not convince such a mind; for one who can swallow with gusto the mass of untruths, distortions and pretensions with which that periodical constantly feeds its followers, and strain at a statement of fact, is not to be helped by any cogency of reasoning or marshalling of evidence.

I hope you will go on with this work. I wonder that more writers and more journals in the East do not set themselves to the task of taking up and answering, one by one, the outrageous statements, arguments and insinuations that regularly appear in the four periodicals I have named. The neglect to do so has given a certain vogue to this kind of stuff; and increasing numbers of persons are brought under its influence. It wins its way among both softheads and rough-necks; and since, apart from your series of articles there is little that serves for a correction, the plague becomes menacing. You are meeting it in a forceful and telling way, and I congratulate you.

Sincerely yours,
W. J. GHENT.

The following letter is from one of the most distinguished scholars and historians in America:

I have I confess a contempt for a goodly fraction of our so-called "Parlor-Socialists" which takes me to the very limits of Christian charity. They understand only one very minor fraction of America—*i. e.*, the Yiddish "Near-Soviet" of the East Side, and they are perfectly willing to play with fire, no matter how close they come to the powder magazine, so long as the sparks are bright, and the whole thing is amusing. I have much more respect personally for your real radical, who is struggling against undoubted physical wrongs (however unfortunate his remedies for those wrongs) than for well groomed ladies and gentlemen who love to dabble in social deviltry and stir up discontent, well assured that so doing will not probably cut into *their* particular incomes, and that a certain reputation for being very "advanced" brings them much highly desired advertising.

The *New Republic* is today engaged to use another simile in the alluring but not altogether safe amusement of trying to see how far it can paddle down the Niagara rapids and not get caught in the current and hurried over the falls of unabashed "red revolution"—an accident which would of course destroy all its prestige, circulation and influence and leave it the organ merely of a crude narrow propaganda, carrying no weight except among its own particular "comrades", and too "high brow" to be really useful to them. The *Nation* I think has got well into the rapids already. The *Dial* will also have great difficulty in getting back up stream, in fact its case is practically hopeless.

Inasmuch as the editors of these organs seem determined on a policy that makes them better reading in Great Russia than in America, I think a public service is being rendered in hoisting the proper colors over them as soon as possible that all may know where they belong. I can forgive many things, but I cannot forgive readily a scientifically trained American (often with a long academic record) who deliberately commits himself to the propagation of the most un-American thing in the world—*a gospel of class hatred.*

The following letter, dated Cambridge, Mass., was received by Mr. Harré:

I desire to express to you my great appreciation of the excellent articles you have contributed to THE NATIONAL CIVIC FEDERATION REVIEW on the work of German agents and near-agents.

There is a matter which I hope you may have an opportunity to touch upon in the course of your investigations—if, indeed, you have not already done so. The radical-socialistic journals are at present smoothing the way in this country for inculcation of the virtues of Bolshevism. It is characteristic of this sort of propaganda that it relies almost wholly upon rhetoric rather than definite facts and information. I was recently told by the editor of such a journal (one which is very well known to you) that he was guided in his editorial policy by information brought over by certain Red Cross workers; but he significantly added that he was unable to quote them because they had been asked to keep their knowledge secret 'for the present.' I wonder what authorities have imposed this censorship; It looks very much as if the Bolshevik-mongers were imposing this conspiracy of silence themselves in order to prevent people from realizing just how incomplete, biassed, and untrustworthy the information they claim to possess really is. The sooner the American public is given a complete and authenticated account of the Russian situation the better will be our protection against this irresponsible propaganda.

An interesting analysis of the appeal of destructive radicalism is given in the following communication from Connecticut:

Is it asking too much to request you to send marked copies of the latest issue of THE NATIONAL CIVIC FEDERATION REVIEW to some few citizens of this burg? I think they *need* it.

This instalment of the "Shadow Huns" article is *magnificent, tremendous, splendid.*

I am carried away with admiration and approval. Mr. Harré has done a wonderful piece of work, which ought to be in the hands of everybody.

The *New Republic* has a wide number of pious, sentimental adherents hereabouts, and I presume everywhere, who excuse what "Pro-Germanism" they can "detect" by its evident air of "intellectualism" and emotional morality.

I hope to see all these vicious publications analyzed and laid bare as this has been done. It is the most sinister work that has ever been perpetrated in any country—this defiling the minds of innocent people. And it is astounding to see how guileless people fall for it.

I think the secret of its success with the "educated" and Puritanical classes of the country lies in its essential *conservative* and *reactionary* mental bias, in total contradiction to its pretended radicalism. That is, it flatters its readers' self-love by pretending to present a progressive viewpoint, while at heart it is retrogressive and backward. It plays upon the old passion for mythical, mystical religious conceptions—the love of crusade for a remote sublimated *Ideal*, as opposed to the vigorous, virile, practical religion of the day founded upon *facts*, and marching hand in hand with *science*.

The pious women and the well-meaning fanatics whom you find voicing these high-flown vagaries are invariably of that dreamer type. They don't wan a red-blooded religion of everyday life and *truth*- but a vague something that lures them on to fanatical crusade which is not abated or modifie by the discovery of facts and recognition of alread accomplished social changes. Their "brain patterns are formed and cannot be changed.

That is why I say these are essentially the co *servatives*—the dyed-in-the-wool "stand-patters", wh cannot take in a new idea or recognize a new co ception of morality founded on *fact* and *knowledg* of mankind and what he will do under certain co ditions. Their minds are unadaptable—truly co servative.

This may be far-fetched as a psychological analysi but I thought it might be a suggestion of some us to you if you contemplate a show-up of the *victim* of this propaganda. And to make Mr. Harré's stor complete, that should be an epilogue.

Why, even the school-children here are bringin home this bunk about "sweetness and light" fro Germany! Miss Addams is perfectly right in sa ing that ministers are taking texts from the *Ne Republic* (I hear 'em, myself!) and I even saw soldier (Young Men's Christian Association room! devouring one the other day!

The following is a letter from a Presbyterian clergyman:

I have just received and read with interest cop of THE NATIONAL CIVIC FEDERATION REVIEW. I wan to thank you for sending it to me. Your editoria and articles and article by T. Everett Harré arouse deal of apprehension, and I am glad your paper presenting the perils that are to be met.

It has occurred to me that we need not only such printed page, but even more—speakers with abilit to bring to the people the same message of warning I have thought of it in connection with a group o men in my church to whom I would like to hav such an informing address made. We meet ever Monday evening for supper, and a conference follow ing, for discussion of the problems of the Reconstruc tion Period. We have about 150 men present. Ca you tell me of a man who could be secured for som Monday evening in January or February, and wh could bring such a strong message as is contained i your articles, or the paper of Mr. Harré? Perhap you or Mr. Harré might come. I am anxious tha the men in this typical American community, an one of the greatest industrial centers, should know the facts outlined.

Will you please let me know what chance there is of securing a speaker for this purpose, and upo what terms? I thought it might be possible that th Civic Federation has a bureau of speakers. Such plan would certainly not be of less value than t publish the REVIEW.

The following letter, addressed to Mr. Harré came from a distinguished church historian:

Though a stranger to you, I must write to tel you that I have had much pleasure and satisfactio in reading your articles on Shadow Huns. You are doing a valuable service in exposing this crew Specially am I delighted with your attention to the *New Republic*. That nefarious sheet has long needed sharp following up, such as you are giving it. I think it has been clear for some time that it is a pro-German organ; but your treatment of Croly's book and of the parallelism with German propaganda makes this unanswerably certain. Please continue, and treat 'em rough.

You have not yet spoken of another connection between Germany and The *New Republic* of which doubtless you are aware. In your article in THE NATIONAL CIVIC FEDERATION REVIEW of Jan. 25 you mention Prof. M. J. Bonn as having been one of the propagandists sent to these shores in 1914. This German agent wrote more than one article in The *New Republic*, as the index will show.

I feel that I must write you and commend the December 20 number of THE NATIONAL CIVIC FEDERATION REVIEW, especially the articles on Russia, Dr. Shaw, Walter Weyl, and *The New Republic*.

As I have pointed out in the Boston papers, the conservative and intelligent elements here are doing very little to combat the social revolutionary movement, while the radicals are at it all the time. At the last meeting of the Economic Club of Boston, three out of four speakers, including Rhys Williams, Olgin and Thomas Proctor, of New York, (Red Cross), all endorsed the Bolshevik point of view. The radicals here are working to make the League of Nations an instrument of social revolution; and claim that any other use of it means that it will be an instrument of capitalism.

EUROPE'S WAR LABOR EXPERIENCE

THE NATIONAL CIVIC FEDERATION'S COMMISSION ON INDUSTRIAL INQUIRY STUDYING IT TO APPLY TO CONDITIONS HERE—FAREWELL LUNCHEON TO A. F. BEMIS AND A. PARKER NEVIN

"BRING to us Europe's experience in industrial and labor problems," was the keynote sounded at the luncheon given early in the month at the City Midday Club to A. F. Bemis and A. Parker Nevin, last of the delegates to start abroad to join The National Civic Federation's Commission on Industrial Inquiry. Already Charles Mayer, Charles S. Barrett, Grant Forbes, James W. Sullivan and E. A. Quarles have begun the work. At the farewell luncheon given Messrs. Bemis and Nevin, the speakers expressed forcefully the need of fullest information on industrial conditions and of the steps taken abroad, particularly in Britain, to meet reconstruction problems.

When in England, the Federation's Commission will be aided by the National Alliance of Employers and Employed of which the Rt. Hon. Frederick Huth Jackson is chairman and W. A. Appleton is secretary. The British organization will aid The National Civic Federation's Commission in mapping its itinerary and in other ways. Simultaneously, the American branch of the Commission will conduct an inquiry here. This branch is composed of: V. Everit Macy, D. L. Cease, George Emmons, Mrs. Sara A. Conboy, Albert Russel Erskine, Hugh Frayne, R. J. Gilmore, H. H. S. Handy, H. E. Miles, Miss Anna K. Bowen and Matthew Woll.

Dr. Talcott Williams presided at the luncheon and first called upon Ralph M. Easley, Chairman, executive council, of The National Civic Federation, to outline the purpose of sending the Commission abroad.

"The outstanding feature resulting from the war," said Mr. Easley, "industrially speaking, is the broader and juster attitude taken by the large employing classes toward their employees. Within the last two months there has been a general acclaim demanding that in future so-called 'capital and labor' shall strive to maintain better relations, each recognizing the rights of the other.

"Concrete evidence of this sentiment has been shown by the program submitted to the United States Chamber of Commerce by its industrial committee at the meeting in Atlantic City; by resolutions adopted by the New York Chamber of Commerce; by public statements made by Charles M. Schwab, F. A. Vanderlip, John D. Rockefeller, Jr., and other captains of industry throughout the country. It matters not that in these resolutions, proposals and speeches there are all kinds of ideas, some practical, some impractical, about how to produce this better state of feeling. The essential thing is that they are all committed to an attempt to work out a bettering of our industrial conditions.

"It is the program of The National Civic Federation to try to translate these high ideals into a practical program by making a study, both in this country and in Europe, of the results of the experience in dealing with the 'capital and labor program during the war.'

"For instance: What has England learned during the war in respect to methods dealing with capital and labor problems that can be of benefit to us in the United States? What is the truth about the 'Whitley system' which is held up to us as 'the last word' on the subject? What does 'shop stewardism' stand for? And does it make for peace or chaos? What of the proposed schemes whereby employees are to be given a voice in the management of the business? What is meant by 'democratization of industry?'

"While the 'Whitley system' is much discussed as a new discovery, is it in fact anything more than what already exists in this country in such industries as coal mining, the printing and building trades, the boot and shoe, the textile and other industries where collective bargaining with its various committees has long obtained, the general principles of which have formed the basis for the program of the War Labor Board?

"Is not 'shop stewardism' another name for I. W. W.'ism? And if permitted to function,

HUGH FRAYNE

CHARLES S. BARRETT

ALBERT F. BEMIS

will it not destroy in this country not only the American Federation of Labor and the Railway Brotherhoods, but private ownership of industry as well? How far have profit-sharing, bonus systems or stock participation schemes proven a satisfactory antidote for industrial unrest? How far is State control of industry—that is, regulation of the functions of both employers and employees—made necessary by war emergency, desirable as a permanent policy?

"These are some of the questions that the foreign section of The National Civic Federation's Industrial Commission is expected to inquire into and it goes to England at a moment when England itself is inquiring into the same questions. While the Labor Congress in Paris is considering only questions of international application, the Joint Industrial Conference in London, now in session, is dealing with the specific questions that concern England and which concern the United States as well.

"It is important to note that both in Paris and London all the programs provided for joint considerations by employers and employees, while at the recent conference in Berne only the interests of socialists and workers were considered. This is the reason why the American Federation of Labor Commission, headed by Samuel Gompers, refused to attend that conference. All employers, whether or not they approve of all the methods of the American trade union movement, will agree that today they are faced with the alternative of joining hands with that movement to put down the anarchy of Bolshevism or of both being forced to succumb to Bolshevism."

STARTS WITH OPEN MIND

Mr. Bemis, answering the toastmaster's question: "What do you expect to do?" said:

"I feel very much in starting off on this mission that I should have the spirit of the open mind. It seems to me we should go without convictions, without opinions—that is, as to what those various things that have occurred over there during the war, those industrial matters really signify and really mean, particularly as applied to conditions in this country. It is perfectly clear, however, that no matter how isolated we may have been in the past, hereafter in this country we must be more cosmopolitan, so to speak. We cannot ignore the conditions of industry in the other principal nations of the world and shut ourselves up in a box in this country and paddle our own canoe without reference to them.

"So that, if there is a specific object that I have as an individual in accepting the kindness

JAMES W. SULLIVAN

of The National Civic Federation or the honor I should say—it is simply to study those particular things to which your chairman has just called attention with a view to determining in what respect any of those things may be adopted in this country which will make of us a greater world power industrially, and which will bring into greater harmony those great forces in industry and society as a whole. These we must recognize—whether or not the Bolshevists do—namely, that we are all workers and that those who act simply as life trustees for capital and are called perhaps capitalists or managers, do, nevertheless, represent a fundamental and essential part of industry.

"We must cooperate, and we must recognize the different elements which constitute our social and industrial life and bring them into as great harmony as possible for the good of society as a whole."

"I have not in many months, or even in years," said Dr. Williams, when Mr. Bemis had ended, "heard a happier phrase than that Mr. Bemis just has given us, that of 'life trustees for the good of society.' If we can succeed in getting on the other side the view that labor are the trustees for the benefit of society, we will be able to reach a solution. Directly opposite me sits one who has been through his career a trustee of society—Major Belmont who succeeded in adjusting a dispute which seemed impossible to adjust in regard to compensation for the injuries to labor, and who will be one of the leaders in the adjustment of this question."

"I have had no warning of this," said Major Belmont. "I would feel much more confidence in what I might have to say had I prepared myself on a subject of this kind, because it is so broad and carries with it so much. I do not feel that even in a lengthy talk I could cover it properly.

USING BORROWED CAPITAL

"I will touch upon but one feature of the situation. It was suggested to my mind by one of the most striking things that has been said on the subject abroad. Mr. J. H. Thomas, M.P., General Secretary of the British Railway Men's Union said,—'for four years the industrial life of the country has been conducted on borrowed capital, which has created an atmosphere fatal to sound economic progress. You will have to do what the nation must do;—retrench and build up your losses as soon as possible.'

"That is the most comprehensive thing that has been uttered on British industrial conditions since the war ceased. In this country we are suffering from much the same thing, but in a greater degree than in England because the English Government took the matter of regulating her industries in hand at an early stage of the war and there was developed a direct understanding with both the employer and the employed. Labor promised it would forego many of its rules and regulations throughout the duration of the war. Employers likewise promised to resume pre-war understandings with labor as soon as the war would be over.

DEPARTED FROM ECONOMIC BASIS

"Here, it has been done in a different way. But the fact remains that as Mr. Thomas correctly said of England, our entire industrial life too has departed from an economic basis because the borrowed money of the government has been running and patronizing industry with but one idea in view,—production without regard to cost. We cannot have any restoration of proper conditions of industry and permanent return for labor and for capital without going back to a sound economic footing; one which will permit of a continuous life for both. If labor demands too much, it must necessarily in the end exhaust capital, and capital exhausted cannot respond to the demands of labor. This is fundamental.

"Here in America, when we entered the war,

Radicals Mislead Churches About Labor

CIAL RECONSTRUCTION PROGRAMS PUT FORTH BY CATHOLICS AND PROTESTENTS ALIKE, BASED ON VIEWS OF NEAR-BOLSHEVIKI, NOT ON IDEAS OF RESPONSIBLE ORGANIZED LABOR

By RALPH M. EASLEY

HE Committee on Special War Activities of the National Catholic War Council has issued a pamphlet on Social Recon-ıction. The Chairman of the Administrative nmittee of the Council is the Rt. Rev. Peter Muldoon, Bishop of Rockford, and the Rt. . Joseph Schrembs, Bishop of Toledo, the Rt. . Patrick J. Hayes, Bishop of Tagaste (re-tly appointed to succeed the late Cardinal ley as head of the Archdiocese of New York) the Rt. Rev. William T. Russell, Bishop of rleston, are members. This pamphlet has at-ted considerable attention outside of Catho-circles not only because of the distinguished lates whose names are attached to its fore-d, but because of its method of treatment of ny of our social problems of the day.

he pamphlet is also exciting comment from fact that it comes from a committee of Catho-. For this reason it has been seized upon *The New York Call* as evidence that the holic Church, the always great bulwark inst Socialism, is shifting its base. *The Call* March 8 comments as follows:

> This body of conservatives has reached a point where pious moralizing is less conspicuous and material measures of a "socialistic" character are recommended. It is an advance from which further advances can be made, if the coming years show that capitalism is doomed. From the more advanced positions a complete reconciliation with a socialist society can be made without troubling the conscience too much.

his same interpretation is being placed upon pamphlet by the radical press in general. A ding of it shows that, while it contains many ements squinting, as the *Call* says, towards a eral socialization of industry, there are other agraphs that squint very much in the op-ite direction.

n view of the prodigious amount of propa-da that has been put out in this country and England in the interest of the British Labour ty's program, it is not at all surprising that distinguished committee responsible for this ument should have been affected by it. But nust be remembered that this is not the view he Catholic Church. It is only the expression he opinion of the gentlemen signing the docu-nt and has no official sanction. But it is not Catholic Committee alone that is giving th socialistic utterances. Many of the clergy the Protestant Church, also, are lining up h the radical forces. The Rt. Rev. Charles e, Bishop of Oxford, when in this country fall, had much to say in favor of the British our Party's program and stated that the hbishop of Canterbury's Committee on In-trial Problems was about to publish a report taining a program almost identical with that the British Labour Party.

n this country the campaign among the in-ectuals has been led by *The New Republic*, *Survey, The Dial, The Nation* and *The blic*, whose combined clientele includes many gymen, political economists and social kers.

n the "Bibliography and Digest of Recon-ıction Programs" put out by the Joint Com-sion on Social Service of the Protestant iscopal Church, practically all the authorities d are connected with the aforesaid radical blications, whose industrial campaign is de-ed entirely to the exploitation of the socialist or programs of Europe, as against the trade on labor programs of America. An elaborate n entitled "The Study Outline in the Prob-s of the Reconstruction Period" has been prepared and published by a committee made up from members of the Social Service Commissions of the Methodist Episcopal, Baptist, Presbyterian, Protestant Episcopal and Congregational Churches. Among the three members of the committee who, it is announced, made the final revision, is Harry F. Ward, of the Union Theological Seminary. Mr. Ward is also secretary of the Methodist Federation for Social Service and has recently issued a bulletin to the Methodist papers, analyzing, apologizing for and, seemingly, defending Bolshevism.* The New York *Nation* speaks of him as "a worthy successor to Walter Rauschenbusch." Other members of the main committee included socialists like John Spargo; Walter Rauschenbusch (since deceased), a pro-German, who for ten years preached German socialism in this country under the guise of Christian Socialism; and Owen R. Lovejoy, who is out with a two-column letter in *The New York Daily Call*, in criticism of the Supreme Court's action in dealing with Eugene Debs.

A glance through this "Study Outline" reveals that all that the members of the Study classes are recommended to read on such subjects as "National Control of Employment," "Employment Guaranteed for All," "Social Insurance Against Unemployment," etc., are the works of Arthur Henderson, the English Socialist, and John Spargo, the American Socialist; The New Republic's Supplement, containing the Report on Reconstruction by the Sub-Committee of the British Labour Party, (which the Committee says is "the most constructive program yet issued,") and the Defense of the I. W. W. by Carlton H. Parker (now deceased), referring to which the Committee boils down his views of this murderous Bolshevist crowd by saying:

"The I. W. W. can be profitably viewed only as a psychological by-product of the neglected childhood of industrial America."

On the question of "Democracy in Industry" —How the Control of Industry may be Shared by the Workers, Representation in Management and on Boards of Directors, etc., the students are referred to such distinguished and practical employers and labor leaders as the Rev. Percy Stickney Grant, Rector of the Church of the Ascension, New York City; our old socialist friend, H. H. Lusk, of New Zealand; radicals and pacifists of the Survey Publishing Company;** and Sidney Webb, the Fabian Socialist author of the British Labour Party's program.

Another scheme that is furnishing great sport for certain of our intellectuals is Guild Socialism, which, while based on an old, exploded idea, has been resurrected and dressed up in a lot of new, fantastic furbelows. It proposes to abolish the wage system and establish self-government in industry, working in conjunction with the State. It will, of course, wipe out the trade unions and equally of course, will "wipe in" the Bolshevists. Father Paul Bull, C. R., an English churchman, in an article published in *The Churchman*, the chief organ of the Protestant Episcopal Church in this country, says of national guilds:

> Various schemes of reconstruction in England fail to satisfy us because they aim only at the improvement of the old capitalist system, while we feel that God is calling us to a new venture which will eradicate the root of our social disease. The National Guilds find that root in wage slavery.

He then makes an elaborate attack on the wage system, which might well have been quoted from any socialist pamphlet.

So much for the Industrial Reconstruction programs of the Protestant churches.

Now, it meant nothing to any of these committees, Protestant or Catholic, that the British Labour Party's Program is not, as stated by the Catholic Committee, "the most comprehensive and coherent program that has yet appeared on the industrial phase of reconstruction," and is not, as stated by Bishop Brent, "the one great religious utterance of the war," but, so far as its constructive proposals are concerned, is largely a rehash of resolutions adopted at International Socialist Congresses, the various socialist platforms and the pronouncements of socialist leaders of all countries during the last twenty years.

By a barrage of glittering generalities, its authors sought to disguise the fact that its program is State Socialism, pure and simple. But a little scrutiny soon discloses scattered through the document such tell-tale phrases as these:

> The individualistic system of capitalist production, based on the private ownership and competitive administration of land and capital . . . will receive its death blow. And the Labour Party refuses absolutely to believe that the British people will permanently tolerate any reconstruction . . . involved in the abandonment of British industry to . . . separate private employers. . . . What the Labour Party looks to is a genuinely scientific reorganization of the nation's industry . . . on the basis of the common ownership of the means of production; the equitable sharing of the proceeds among all who participate in any capacity and only among these, and the adoption, in particular services and occupations, of those systems and methods of administration and control that may be found, in practice, best to promote the public interest. . . .

Then it goes on:

> The Labour Party stands not merely for the principle of the common ownership of the nation's land, to be applied as suitable opportunities occur, but also, specifically, for the immediate nationalization of railways, mines and the production of electrical power.

In other words, the State is to take over and operate all the farms, factories, mines, stores, banks, street railways, steam railways, mercantile marine, gas and electric light utilities,—in fact, all the productive industries and means of distribution, which is Marxian socialism without any disguises.

And this British Labour Party's program, which was, as previously stated, drafted not by workingmen but by a Fabian socialist, Sidney Webb, had so little support from the workingmen of England that practically every man having anything to do with it, who ran for Parliament at the last election, was defeated by an overwhelming vote.

Referring specifically to the "Social Reconstruction" pamphlet of the National Catholic War Council, without entering into any critical analysis, one is struck on reading it by many omissions and inconsistencies. Under the head-

---

* Dr. Ward's Bolshevist pamphlet has been vigorously attacked by *The Christian Advocate*, the leading publication of the Methodist Episcopal Church. In addition to criticizing the Bolshevist tendencies of Dr. Ward, it criticizes the socialistic flavor of his whole social program. The editorial referred to will be found in full on page 7. Dr. Ward is professor of Christian ethics in Union Theological Seminary.

** In one of the pamphlets they advertise *The Survey* at so much per year and urge all their readers to take it.

ing, "Program of American Labor," it is amazing to note that this distinguished committee makes no allusion to the well known policies of the American Federation of Labor and the Railway Brotherhoods, representing over four millions of wage earners, but refers only to the action of two State Federations of Labor and to the Chicago Labor Party, recently organized for a mayoralty campaign. The American Federation of Labor at its next annual convention will cast over 15,000 votes, based upon its dues-paying membership of three and a quarter millions; and of those 15,000 votes, the California State Federation of Labor and the Ohio State Federation of Labor—the two bodies referred to in "Social Reconstruction"—have one vote each; while the Chicago Labor Party, being a political party, will not even be present. In the complete and exhaustive reports of the Executive Council of the American Federation of Labor to the annual conventions of that body, the discussions and action thereon are available to all these church committees, and they should not only have known but have stated that in those conventions the American Federation of Labor has generally opposed by large majorities the propositions put forth by what are called in "Social Reconstruction" these "three prominent labor bodies."

It is also worthy of note that in the programs put out by the Social Service Commissions of the Protestant Churches, as well as by the Catholic Church, especially one by the Joint Commission on Social Service of the Protestant Episcopal Church, there is not a single reference to the American Federation of Labor or the Railway Brotherhoods or any of their leaders. If this omission had been intentional, it would be misleading and dishonest, not to say contemptible, for it is an insult to the organized labor movement of America to assume that it is represented by socialists, socialistic economists and I. W. W.'ists. Its views are not represented by such publications as *The New Republic, The Survey, The Dial, The Nation,* or by the organ of the Single Taxers—*The Public.* It would have been just as fair to quote *The Call, The Masses* (now *The Liberator,*) or *Solidarity,* the I. W. W. official organ, as any of these "higher-brow" publications referred to. Now, I do not mean to imply for one moment that representative men in the Catholic and Protestant Churches have intentionally done this thing but the work has been intentionally done just the same by the socialists or near-socialists in their ranks. It can be generally stated that the officials of all social welfare commissions are either straight-out socialists or so near to them in thought that the difference is not discernible with the naked eye.

The reconstruction program of the American Federation of Labor, put out officially and signed by the eleven members of the Executive Council, contained practically none of the recommendations found in the programs of the three local bodies referred to in the Social Reconstruction pamphlet. For instance, take the legal minimum wage, which is so stressed by the Catholic Committee: the American Federation of Labor has opposed it for all men and has accepted it for women only under protest. And yet the Catholic Committee says: "There is no longer any serious objection urged by impartial persons against the legal minimum wage." Certainly, the wage earners may be regarded as not "impartial persons", but can they not be regarded as the most intelligent witnesses that can be examined on this question?

Take the question of compulsory sickness insurance, also advocated by the Catholic Committee. The American Federation of Labor is on record as opposed to it by a striking majority. It does not obtain in any state. In California last fall, by a referendum vote, it was defeated by an overwhelming majority. At the recent Massachusetts Constitutional Convention, it was defeated by a large majority, while the Wisconsin legislature has just defeated a bill on that subject. In the various states where commissions have been looking into it, only one has reported in favor of it, but it has yet to run the gauntlet of the legislature. President Gompers, of the American Federation of Labor, in the *American Federationist,* the official organ of that organization, January, 1919, referring to that subject, said in part:

> There are many of our people, including workmen, who look to the government of our country to do the things which seem so easy f r the government to do and which they imagine should be done by the government. They do not recognize the pitfalls and the dangers which are entailed by conferring upon the government the function of doing these things. To my mind, it is a grave danger to place in the hands of the government the powers which would necessarily result from governmental compulsory health insurance with all the powers vested in the government incidental to and in the enforcement of health insurance.

The Brotherhood of Locomotive Engineers, at its last convention in May, 1918, unanimously adopted the report of its committee on compulsory health insurance, stating:

> First—We do not approve of any legislation that would compel our members to take out health insurance.
>
> Second—We recommend that the Grand Body go on record as opposing any State legislation compelling our members to take out any such insurance, and that our State Representatives be notified to this effect.

Speaking before a Committee that was inquiring into compulsory sickness insurance, as well as compulsory unemployment insurance, which is also advocated by the various Church committees, Mr. Gompers made the following declaration against all compulsory propositions relating to the wage-earner:

> But this particular feature I want to present to your minds, you gentlemen of the Committee on Social Insurance, that even the insurance feature of the soldiers, sailors and dependents' compensation bill is voluntary. It is not forced upon the soldier or the sailor; he has the right to decline to be insured, but he has the privilege and the opportunity to be insured.
>
> There is one thing that I want to say to the Committee on Social Insurance. Place in the hands of the government the right to determine who is or who is not entitled to government insurance; to determine regulations and conduct of every man insured, then it means that the government has the power with all the force at the command of the government to enforce the decrees of regulation.
>
> And that applies, too, to unemployment compulsory insurance. The government will determine then what will constitute justifiable reasons for unemployment. It might decide that when men and women are unemployed they are entitled to this insurance. Well, what is the cause of unemployment? Suppose it is a disagreement with employers. The government will decide as to whether the cause of unemployment is justifiable or is attributable to the workmen or to the employers. It is not necessary, then, for me to mention the fact of what that would mean to the work, the policy and the constructive movement of organized labor. The labor movement would lose its voluntary character and its effectiveness, and there would be brought about a condition of affairs in our country whereby the toilers would be rendered ineffective in their work for the protecton and promotion of their rights and interests.

Great emphasis is laid in the Catholic Social Reconstruction pamphlet, under the head "Labor Participation in Industrial Management," on the recommendations of an "English group of Quaker employers," who have proposed a scheme for giving the employees a voice in the management of the industry. The committee adds: "There can be no doubt that a frank adoption of these means and ends by employers would not only promote the welfare of the workers, but vastly improve the relations between them and their employers, and increase the efficiency and productiveness of each establishment."

Irrespective of what a handful of English Quakers think or propose to do on this ques of labor participation in industrial managem which appears to be the fad of the hour an "deep thinkers" and shallow magazine wri there is much to be learned right here in country by both our Catholic and Protes friends. In all the collective contracts mad the big copper and coal mining industries the building and printing trades, and in twenty-five or thirty manufacturing industri boots and shoes, hats and caps, stoves, toba etc., this very question was threshed out y ago. There are innumerable provisions w enter into the contracts, relating to matter mutual interest, but none of them have to with the management of the business. T refer to wages, hours and conditions of work.

If all of the Church social service commiss would read the verbatim reports of the dis sions in the national conference between the operators and the United Mine Workers America they would get a thousand times n real education on the subject than they can reading the stuff published by *The New Re lic, The Survey,* and the rest of the "Me-t backers of near-Bolshevism. The idea of a v in the management of industry is the "s steward" idea, which, in turn, is the I. W. or Bolshevist proposition, pure and simple, has had its "smash-up" in England during recent strikes.

The American labor movement has not as for it and it does not want it, if the statem of the trade union leaders are any criterio what organized labor wants—and certainly one else has any right to speak for organ labor. The American trade unionists want employers to take all the responsibility of management and run all the risks, and they very insistent upon this point. It is only socialists, the I. W. W.'s and the purely acad ic individuals who are advocating the o proposition. Also, it can be positively st that the American labor movement does not w the wage earners to become partners in the dustry through profit sharing or bonus or s participation schemes, which seems to be the put forth by the Catholic Committee in chapter on "Co-operation and Co-partnersh There are many questions on which there differences of opinion among members of trade unions but profit sharing is not one them. They are solidly opposed to it.

It is difficult to understand just why t Catholic gentlemen in referring to the emp ers' attitude on these industrial questions, in chapter on "American Employers", sho ignore the great organizations of employers this country—one of which alone, the Natic Industrial Conference Board, represents n teen national organizations, employing se millions of men—and tell us what a little gr of English Quaker employers is proposing do. The utterances of this same group of Qua employers, dominated by the so-called "Co Trust,"—the Cadburys, Rowntrees and Fry has been made to do duty also in some of Protestant Church reconstruction literature. is true that reference is made to the convent of the Chamber of Commerce of the Uni States and to a report of its Industrial C mittee; but the Chamber of Commerce of United States is not a body representative manufacturers or producers. It is largely re sentative of what may be called the commerc or "middleman" class.

Under the head of "No Profound Changes the United States," the Catholic Commit undertakes to explain why in this country th will not be as great social changes as in Euro One of the reasons it gives is that "our super natural advantages and resources, the better dustrial and social conditions of the work classes still constitute an obstacle to anyth like revolutionary changes." know the situation."

ol. Raymond Robins, testifying before the Senate Committee investigating Bolshevism.

THE complacent, mild, cow-faced young man leaned across the table, and with pleading earnestness, declared:

"Do you not know that under Bolk rule the arts and sciences are flourishing ussia? Do you not know that skilled labor 's better wages and is encouraged more than before? Do you not know that they have a am of education superior to education any e else in the world?"

ose of us who had been discussing Bolsm, who had gained our impression of and terrorism under Bolshevik rule from estimony of numerous persons who had back from Russia, looked up at this startpronouncement. We were a group of ediand writers come together for a monthly er, and the mild young guest who spoke the air of such quiet authority, such conn, was unknown to me.

HE SHADOW BOLSHEVIK PROPAGANDA

What you say is interesting," I ventured. y I ask—have you come from Russia?"

No, I have not been in Russia," said the achful-eyed young man, "but I know the t. And I know the American people have een told the truth. I know that news fale to the Bolsheviki has been suppressed ie British censorship, and I know the Asso-d Press refused to let its correspondent in ia cable the truth about the Bolsheviki."

earned the speaker was an associate editor of ekly magazine of wide circulation. Despite charge made against Bolshevism, every rity quoted in the course of conversation, ersisted obdurately in the assertion that the ieviki were not as black as they were paintn fact, that they were human benefactors were doing wonders for the proletariat of ia. He maintained that, against our igno, he knew the mysterious "truth about Russ and that he had gotten that truth from sacrosanct, exalted and unimpeachable e. As to that source, he hedged and evadir questions, but finally, however, he yieldnd, with an air of challenge and triumph, led that final and infallible authority. His shone.

What I know," he said slowly, solemnly, a pause between each word, "was told me . . . by . . . Colonel . . . Raymond . . . Robins."

Perhaps you may have encountered Shadow Bolshevik propaganda—whispered hints that the United States government was responsible for the signing of the Brest Litovsk treaty because, when Russia appealed for help, America had not responded; that the truth about Russia, about Messrs. Lenine and Trotzky, has been suppressed by the wicked Allied governments and that the reported atrocities are the fabrications of agents of conspiring capitalists. You may have had it, upon certain unknown authorities, that the documents published by the Committee on Public Information, which purported to prove that Lenine and Trotzky were paid German agents, are forgeries. You may have read all the plausible arguments against intervention in such standard-bearers of loyalty, intelligence and patriotism, as the *New Republic,* the *Dial,* the *Nation* and the *Survey.* You may have read the article, "Aunt Emmy Wants to Know," in Mr. Hearst's *Good Housekeeping,* and have come to the conclusion that God was in his heaven and that all was right in Russia—even if it wasn't in our own benighted country. And despite all your previous doubts, you may have been impetuously swept off your feet with conviction concerning the superior virtues and social achievements of Bolshevism, when you learned that one of the chief sources of *Good Housekeeping's* information was no less a person than Colonel Raymond Robins, unfailingly advertised as head of the American Red Cross in Russia.

During the investigation into Bolshevism by the Sub-Committee of Committee on Judiciary of the United States Senate, men appeared who had been in Russia. They told of mass murders, of executions without trial, of a bloody autocracy preserved by the terrorism of the Red Guards, of an oppression infinitely more terrible than the oppression of the Czar. Each time a new witness appeared, each time the Red Reign of Trotzky and Lenine was arraigned, —as each witness drew fire—there screamed out from the quarters of the Bolshevists, pro-Bolshevists, internationalists, conscientious objectors and pacifists, the defiant cry: "Why—don't —they — call — Raymond — Robins?"

Somehow there was built up by implication the impression that a gigantic conspiracy was afoot to keep the real truth, the comprehensive, absolute truth, about Russia from being known; that in this conspiracy the Government was involved and the Senate Committee was involved; that the Allied governments, all the forces of the capitalistic dynasties, were moving heaven and earth to keep Colonel Raymond Robin's mouth shut. All of this had the inevitable effect of imparting to Colonel Raymond Robins something of actual importance.

ROBINS HAILED AS AMERICAN REPRESENTATIVE

We read in the testimony of Miss Louise Bryant of Colonel Robin's intimate and cordial relationship with Lenine and Trotzky. We were told that by the Bolsheviki he was regarded as "the mouthpiece of America." Just as the former Rev. William Bayard Hale had been received in Germany as a super-ambassador from the American people to the German people, likewise, so were we informed, had Colonel Raymond Robins attained a similarly unique position in Bolshevik Russia. "In their propaganda papers," declared the Rev. Mr. Simons, "the Bolsheviki described Robins as a man of the people, a former workman, and in contrast pictured Governor Francis, as a typical representative of the capitalistic class. Time and again the suggestion was made that Robins should be made Ambassador."

Miss Louise Bryant—whose husband, John Reed, had hired himself as a propagandist to the Bolsheviki—said:

"They (the Bolsheviki) did not feel that Mr. Francis represented America. They felt that Mr. Robins was the real representative of this country."

"Mr. Robins," declared Miss Bryant, "was anxious to be called before this committee." Why was he not called? Miss Bryant demanded that Colonel Raymond Robins be called.

Albert Rhys Williams, one of the most notorious champions of Bolshevism and self-admitted paid agent of the Bolsheviki in Russia, averred that Colonel Raymond Robins shared his own views about the Bolsheviki. Mr. Williams, too, demanded that Colonel Raymond Robins be called to testify.

Subscribing presumably to the view that everything derogatory to the Bolsheviki was all invention and that the American public was being bamboozled and hoodwinked by capitalistic agents, that everyone who came out of Russia and failed to say sweet things about Lenine and Trotzky were false witnesses, deceivers and liars, a group of choice folk in New York sometime ago formed what was called "The Truth About Russia Committee." They announced they wanted to get "the truth about Russia." A group, composed largely of members of this initial "Truth About Russia Committee," on February 22 presented to Chairman Overman of the Senate Committee a demand that the committee alter its policy in choosing witnesses and call the men who were best informed about Russia.

PRO-BOLSHEVISTS CALL FOR ROBINS

"A certain group of witnesses have been given every opportunity to state their views," the demand read. "The growing impression throughout the country, however, is that an accurate and impartial picture of the Russian revolution is not being drawn. It is felt that the net result of the investigation, if it is to be continued along the lines so far laid down, will be greatly to intensify the misconception of the Russian revolutionary situation which the general public in America now holds."

Among the signers of this appeal were Paul U. Kellogg, editor of the *Survey,* who just prior to the war tried his puny best to stir up pacifism and avert our taking sides with the Allies against Germany; James Harvey Robinson, co-author of a text book which was ignominiously thrown out of the Seattle Public Schools because it embodied subtle pro-German propaganda; Albert J. Nock, associate editor of the pro-Bolshevist, pacifist, be-kind-to-the-Germans *Nation;* Harold Stearns, associate editor of the pro-Bolshevik *Dial;* Lincoln Colcord, pro-Bolshevist and secretary to the New Republic's League of Free Nations Association; and Dr. Harry S. Ward, who was recently summoned to answer to the Methodist clergy for attempting to exploit and justify Bolshevism through the Methodist Church.

And all of these sterling American folk, in their appeal to Chairman Overman, demanded vociferously that Colonel Raymond Robins be heard.

There may, or may not, be significance to the fact that it has been chiefly pacifists, con-

scientious objectors, pro-Germans, pro-Bolshevists and Bolshevist agents who cried aloud to heaven that Colonel Raymond Robins be permitted to speak. Whether this clamor became so irresistible that they were bullied and cornered into acquiescence and had no other escape, or whether they were just mildly curious, modestly desirous of being fair and impartial, at all events the Senate Committee finally did call Colonel Raymond Robins. And on a certain historic morning—it was March 6—Colonel Robins emerged from the innocuous desuetude of private life to tell, as he proclaimed, "the truth about Russia."

MR. ROBINS ESTIMATES HIMSELF

Mr. Robins, it is true, proved eloquent in self-assertions. Mr. Raymond Robins at least succeeded in convincing people of his own conviction of his own self-importance. Mr. Robins declared in so many words that he knew more about Russia than any of the Allied representatives who had been in Russia. Mr. Robins presented himself, in so many words, as "front page news." With sublime unconsciousness, he talked down to the investigating senators from the height of one who had gained and bottled-up a monopoly of special knowledge. The Allied representatives in Russia had only "indoor knowledge"—the opinions of "the seven percent." representing the old Czar regime. Mr. Raymond Robins had reserved for himself the "outdoor" point of view. Mr. Robins had "windows" all over Russia. He saw in, he saw out. He saw over plains, plateaus, mountains, valleys, rivers. He saw the panorama of the revolution. He beheld "company after company crumble" after Kerensky's fall. He beheld the division of land under the Bolsheviki, and saw the peasants "cultivate the soil for a year, for one season" and eat "the fruit of their labors from land that they now call their own." His vision encompassed the hitherto unreported atrocities of the Czecho-Slovak troops. But concerning the Bolsheviki, he "saw no organized terror. . . . . happened to see nobody stood up and shot." He never saw, only heard of, Bolshevik atrocities. Investigations proved these reports false. Mr. Robins implied the possession of a bird-eye view of what happened in Russia, something surpassing clairvoyance. He avowed that he "knew the situation." There could be no doubt, taking him as a man of his word, that Mr. Robins' exploring vision—his insight and outsight—was unique, peculiar. For he saw much that others did not see. Likewise he did not see, to an infinitely greater degree, what others saw.

Boiled down from the congested mass of circumlocution, digression, profuse verbiage and involved rhetoric, certain facts in Mr. Robins' testimony stand out. Mr. Robins, according to his own statement under oath, arrived in Russia in July, 1917, and "had six months of Bolshevik rule." He left Vladvostock June 1st, 1918, ten months ago. Mr. Robins told the Senate Committee that he had "percolated pretty well all over" Russia. Cross-examined specifically as to his movements, he admitted that he had not been in Kiev, or at Samara, or at Perm, that he had not gone down the Volga, or the Dneiper, or the Dneister. He had not been in Little Russia. Asked by Senator Nelson as to whether he had not confined most of his work and operations to the big cities, Petrograd and Moscow, Mr. Robins answered:

"Yes."

"And you get your impressions from that?" asked Senator Nelson.

"To a very considerable degree," acquiesced Mr. Robins, "but I went twice all over Russia."

"Did you go to the country and interview the peasants in their mirs?" asked Senator Nelson.

"I went into the country and interviewed them in their groups," answered the ubiquitous Mr. Robins.

SERVING THE BOSHEVIST GOVERNMENT

In the light of Mr. Robins' geographical and encyclopaediacal pretensions, there was something almost miraculous in the rapidity and universality of his movements. During six months of Bolshevik rule he worked in the cities, performed monumental labors for the relief of the suffering masses, distributed 400,000 cans of milk to babies; he walked or motored up to Smolney to interview Lenine or Trotzky at least every twenty-four hours; he was acting faithfully as the unofficial representative of the American Government, was endeavoring to hold the Russian armies along the Eastern front; he was simultaneously establishing "windows" all over Russia and getting an "outdoor" point of view as against the point of view entertained by Allied representatives who listened to the indoor Czarist seven percent. During this active period, in his own words: "I was trying to keep my feet on the ground and see facts, and not to be stampeded by rumor or the unfounded opinions of others."

"I tried to serve the Allied governments and the Russian government, from day to day," said Mr. Robins, apparently placing the Allied governments and the Bolshevik government on a par, "and I am ready to meet the day of judgment on what I did."

While he was performing feats in the cities, Mr. Robins was also out in the rural districts talking to the rustics, probing their class consciousness, and inquiring generally about the conditions of crops. From this he "developed a conviction" that he communicated to his superiors "that there was ample food in Russia to feed the people, and that the whole question was one of assembling and distribution." Doubtless in the course of these peregrinations and the holding of intimate conversazioni with "the eighty-four percent of Russian peasantry" it was that Mr. Robins ascertained that the mass of peasantry desired above any other thing in Russia a distribution of land and that the aspirations and social class consciousness of this peasantry found a perfect incarnation in Lenine and Trotzky.

"Do you speak Russian?" asked Major Humes, in the course of the examination.

"No, sir, only very poorly," confessed this champion of truth, this gatherer of facts, this depository of omniscience.

"Then," asked Major Humes, "the information you got, and the conversations which you had at various times with Russians and those who could not speak English was through an interpreter?"

"Yes," softly conceded the oracle of the Bolshevik "All-Russian" Soviet.

ROBIN'S INVESTIGATOR SECRETARY TO LENINE

From the point of view that the prime qualification for ascertaining an impartial and thorough knowledge of any subject is not to know anything about that subject, from the standpoint of the Robins' "outdoor" psychology, his ignorance of the Russian language was manifestly an advantage. It is plain the use of an interpreter afforded Mr. Robins a lead over other witnesses who had appeared before the Senate Committee, who had lived in Russia many years, who left after Mr. Robins, and who were thoroughly acquainted with the Russian language. It was brought out that Mr. Robins' choice of secretary and interpreter fell upon Alexander Gumberg, a selection in which Mr. Robins was singularly fortunate. For Gumberg's brother, who had adopted the Russianized name of "Sergius Zorin," was a member of the Lenine-Trotzky Bolshevik crew and occupied the position in the Bolshevist government of Minister of Pos Telegraphs. This Gumberg, a Russian Je lived in America, as had his brother "Z according to the impression of Miss Louis ant. Hundreds of unsavory "East Siders' various witnesses, went back to Russia wh terror was in prospect. Another perso worked for Mr. Robins in Russia—one "windows" presumably—according to t timony of Louise Bryant, was Boris Rei a Russian Jew, who had lived in Buffalo, cialist writer, who later became secret Lenine. Among Mr. Robins' choice and s staff of "investigators"—according to Bryant—in addition to Gumberg and Rei were Reed and Williams, both in th of the Bolsheviki, and Miss Bryant h Rhys Williams, John Reed and Boris Rei were all members of the Bolshevist Propa Bureau in Petrograd. It was thus made that Mr. Robins enjoyed extraordinarily connections with headquarters.

Mr. Robins, it was brought out, was d fully *persona grata* with Lenine and Trot he visited Smolny almost every day. In h words: "I never had any misunderst with Leon Trotzky." Which would impl there was perfect understanding, full co indescribable—exquisite!—rapport. Mr. R was so deeply trusted, so highly, if not tionately, regarded by the Red chiefs th was accorded facilities not even enjoyed American Ambassador. According to Am dor Francis—who testified after Mr. Rob Robins had every facility placed at his dis When he travelled, the Bolshevists telegr ahead to help him in every way. He eve authorization to have what telegrams h put ahead of all other messages—"that hi sages sent by wire should have the rig way." The Bolsheviki, according to Mr. cis, "looked upon him as their friend." was getting more privileges than you w asked Senator Nelson. To which Mr. F replied: "Well, I was not getting any." of which reveals the unique opportuniti joyed by Mr. Robins for obtaining the su knowledge which he frankly claimed, and afforded, it goes without saying, an unb unprejudiced, impartial point of view.

NO TERROR IN RUSSIA!

Unsympathetic, unsentimental, pra hardheaded Americans who comprehend Lenine and Trotzky have been able to a plish, who size up the two leaders as consc less, unscrupulous but astute and able men recognize them as men willing (as Trotzky ly admitted when charged with using Ge money) to use any means to their desired may ask why they were so unprecedented commodating to Mr. Raymond Robins, why so freely accorded Mr. Raymond Robins leges not enjoyed by the American Ambass It could not have been out of love of Am whose government—as Lenine had said to mond Robins—they were set upon to de Was it possible that the Bolshevik chiefs had thing to gain? Was it possible that they s upon the naive Mr. Robins as a possible in ment toward achieving some desired and o tune end, that they gauged the little man possible, if innocent and unsuspecting, but venient, tool. Planning as they did a vast p ganda in America, was there any ulterior tive back of their most gracious handling o Robins? Lenine and Trotzky are shrewd Is it possible that by their favors, their co sies, their condescensions, they deliberately dertook to "capture" Mr. Robins?

Mr. Robins informed the Senate Comm right off that he would not libel Bolshe He had not been "buncoed" by "lies, sla and stuff." He "had sought the truth." H

America no Place for Bolshevism

(*From The Christian Advocate of February* 20, 1919)

s one thing to oppose the use of American ayonets against the Bolshevists in Russia id quite another to come out in defense of at party. In view of all our history it is lt to justify the use of American armed in Russia, a state with which we are ally at peace, though circumstances are vable which would warrant intervention name of humanity, just as Christendom have saved the Armenian from the Turk. must come to equilibrium in her own time her own way. The Western world sat by enough and let the Romanoffs go on shoot- sending into exile those who resisted their ity, and now that the shoe is on the other he reasons for the former policy hold good. Socialist state is what Russia wants, it is to see why the American republic should r nay, unless the brutality of the process onstruction should pass the limits of hu- orbearance.

this willingness to let Russia settle her nternal affairs should delude no American defense of the monstrous work of Bolshe- Whatever its aim, there is no lack of first- uncensored, and presumably unprejudiced ice that its methods have been cruel and beyond all other revolutions in history. ession, robbery, starvation, violence, and er have been commonly used by the Bolshe-viki to gain their ends. Professing the loftiest aims, and setting up a goal of absolute justice and equality, it is clear that these radical and rabid communists are practicing upon the propertied classes the extreme of injustice, with the apparent purpose of exterminating them. Preaching the common good of all, they practice suspicion and hatred. Some of their American defenders plead that they are putting into effect the social principles of Jesus Christ. But their own spokesmen make no such claim. The government has expressly repudiated the religion of Jesus, and established atheism as the cult to be taught to the young in the place of any other doctrine, it being made unlawful to teach religion in any school, public or private, where instruction is given in any other subject.

The danger of such conclusions as Dr. Harry F. Ward makes public in the name of the Methodist Federation for Social Service is that many people who read them, and are desirous of forming a fair judgment, are liable to be misled into believing that Bolshevism is something very different from what it has shown itself to be. For this reason we have supplemented the Ward statement with a rather full report of the testimony given by Dr. George A. Simns, of Petrograd (Methodist missionary), before the committee of the United States Senate in Washington last week. His knowledge was gained at first hand. No prejudice can be alleged in his case. No public policy had to be supported by his remarks. Certainly his own interests as a resident of Russia would not be served by discrediting the powers that be. We must assume that he told the truth. If this is so, then it is a fact that Bolshevism as revealed in action is contrary to every principle on which American civilization is based. Self-preservation demands that it shall win no foothold here. Dr. Ward's statement is, unfortunately, so framed as to recommend it to favorable consideration. It asks indulgence for the detestable crew which has overthrown the Russian democracy and set up a class tyranny of terror worse than that of the Czars. To accept these conclusions without challenge would be to help on the subtle propaganda which is being diligently spread throughout all lands, partly by the authorized representatives of Bolshevism and partly, as perhaps in this case, by those whose sympathies in the class-struggle disqualify them from giving impartial counsel to others.

VACATION ASSOCIATION CONCERT

HE Vacation Association, Miss Robinson Smith, president of the Board of Directors, has returned to its objective activities after devoting its time, force and of its financial resources to war relief and bond sales. Its most notable sched- event of the season will be the gala con- at the Metropolitan Opera House, Tuesday ng, April 8, when Geraldine Farrar, the ican prima donna, will make her first con- appearance of the season. Still more inter- is the first appearance at an evening con- in this city for the present season of the delphia Orchestra, Leopold Stokowski, con- r. The Vacation Association has the dis- on of giving the only post season concert e organization and offering them at their evening performance. Sergei Rachman- the Russian pianist and composer, com- the programme.

aders of THE REVIEW will be especially in- ed in the concert because the Vacation As- ion is a branch of the Woman's Depart- of The National Civic Federation, or as Smith expressed it: "The Federation's lchild."

e return to its former activities of the Va- n Association means much to the 8,000 self- orting women of the department stores, ess offices and other places where women in numbers are engaged. It has done such ive work in its war service as to win high oval from the committees having charge of Liberty Loan and War Savings Stamp s. The list of purchasers among members e association itself has been unusually large, a feature has been the fact that purchases on the instalment plan have been main- d with fidelity, a tribute to the spirit of inculcated by the association.

ats for the concert are on sale at the Vaca- Association, 38 West 39th Street, the box of the Metropolitan Opera House and the ng theatre ticket agencies. They are ex- from war tax.

Radicals Mislead Churches

(*Continued from page* 4)

taken by itself, could not be objected to but in its setting in that paragraph it sounds as if the committee were somewhat regretful that we are not more ready for revolutionary changes.

While much of the discussion on industrial matters contained in this pamphlet is of the radical or academic type, the following paragraph from "Ultimate and Fundamental Reforms" indicates clearly that socialism was not in the minds of the distinguished signatories and that *The Daily Call* is reckoning without its host when it thinks the Catholic Church is coming its way:

> It seems clear that the present industrial system is destined to last for a long time in its main outlines. That is to say, private ownership of capital is not likely to be supplanted by a collectivist organization of industry at a date sufficiently near to justify any present action based on the hypothesis of its arrival. This forecast we recognize as not only extremely probable, but as highly desirable; for, other objections apart, Socialism would mean bureaucracy, political tyranny, the helplessness of the individual as a factor in the ordering of his own life, and in general social inefficiency and decadence.

Also, in the following paragraph our friends are on solid ground:

> Nevertheless, the present system stands in grievous need of considerable modifications and improvement. Its main defects are three: Enormous inefficiency and waste in the production and distribution of commodities; insufficient incomes for the great majority of wage-earners and unnecessarily large incomes for a small minority of privileged capitalists.

In other words, it might be said that the diagnosis of our social ills contained in the preceding paragraph is correct, but the cure suggested I believe to be utterly inadequate, if not unsound. But the Catholic Committee is only advocating measures which the Protestant Churches also are advocating. This raises the question, Why are the churches, whether those of wealthy and aristocratic congregations, those of the middle class or those made up largely from the working class, all alike advocating the same radical measures to aid the working classes, which these same working classes themselves do not want?

This is indeed a very grave question. The churches of our country, as a whole, include a large majority of the people of all classes, the bankers, merchants, lawyers, farmers, laborers, college presidents, etc. These churches all are controlled by boards of trustees, made up largely of business men and yet we see that the whole influence today of these millions of people, who believe thoroughly in the rights of private property and the orderly development of society, are represented in the industrial field at this crucial moment in our history by the radical element and in many cases by those who, if their programs were carried out to a logical conclusion, would overthrow our present institutions and inaugurate a reign of chaos. In using this language I am not, of course, referring in any way to the very able and distinguished Bishops whose names are signed to the Foreword of the Social Reconstruction pamphlet. Not one of them would come under such a head. I am speaking of the Church as it is presented to us as a whole today. There must be some answer to this question. We hope in succeeding numbers to present some views of clergy and laity on this subject.

CHESTERTON'S SUMMARY

Gilbert K. Chesterton, the brilliant English essayist, summarizing the Bolshevik movement in his weekly letter to *The Illustrated London News* on January 25, aptly puts the situation thus:

"It is mere robbery. The robbers may call themselves expropriators, though I shall have much more sympathy with them if they call themselves robbers. But, since modern sectarianism has allowed men to be conscientious traitors and conscientious cowards, I am not altogether surprised that it has occurred to other men to be conscientious burglars and conscientious pick-pockets. But it is quite obvious that no society, Socialist or Distributist or anything else, can allow its subjects to expropriate on their own account in this style. And the society will find it simpler not to call it anarchism, and not even to call it anarchy—but merely to call it crime.

"Thus we find that the word Bolshevism really covers three distinct and contrary things—in the country a quite human hunger for land; in the towns a rather inhuman theory of collectivism, and a still more inhuman practice of crime. It looks as if these contraries had come into collision. And the moral is that we must support the one revolutionary element, which will also be conservative, against the other revolutionary elements which can only be destructive. If we do not disappoint the peasants, we can defy both the theorists and the thieves."

Heating and Ventilating Problems

REQUIREMENTS AND STANDARDS FOR INDUSTRIAL ESTABLISHMENTS AND DWELLINGS—GOVERNMET RESEARCH BUREAU ADVOCATED—UNHYGIENIC ATMOSPHERE HEALTH MENACE

By WERNER NYGREN

(Among the divisional committees, appointed by Samuel Gompers, Chairman of the Committee on Labor—including Conservation and Welfare of Workers—to recommend means of protection under war conditions, was one to deal with the subject of Requirements and Standards upon Heating and Ventilation. It was made a part of the National Committee on Welfare Work, the Chairman being Louis A. Coolidge, who is also chairman of the Welfare Department of The National Civic Federation of which Mr. Gompers is Vice-President. The Sanitation Section, with Dr. William A. Evans as Chairman, gave attention to precautionary measures involving lighting codes, standards for washrooms in munition making or poisonous trades, how to prevent industrial fatigue, rural and camp sanitation and other physical comfort and health matters. Werner Nygren, consulting engineer and Chairman of the Divisional Committee upon Heating and Ventilation, had associated with him Dr. Rudolph Hering in the preparation of recommendations upon that subject. Essential arguments and proposed standards, contained in the report of that committee, are set forth in Mr. Nygren's article in this issue of the Review.—Editor.)

ASIDE from the aspect of humanity and justice, the securing of healthful conditions for the country's man-power will add to the national strength and production which must be greater than ever to maintain our lead in the world's work. Because a well and satisfied population is foremost among our national resources, it is important to correct all working and living conditions which undermine health. To do this effectively, it is as necessary to guard against concealed menaces as those which are obvious. Many unsuspected tributaries flow into that river which leads to an early grave. Living and working in an unhygienic atmosphere is one and will so remain until it is more universally recognized that a prolonged confinement in vitiated air is injurious.

Broadly speaking, ventilation means cleanliness of the air we inhale and come in contact with, just as cleanliness of the body, more readily apparent, is provided by bathing. Positive standards as to clean atmospheric conditions would considerably simplify the problem of good ventilation, but since our senses do not reliably inform us of air contaminations it is necessary to resort to analysis to determine the degree of uncleanliness.

The complexity of the problem makes ventilation somewhat difficult to understand and introduce universally. When the mere physical function of providing comfort is accomplished by maintaining proper temperature and humidity, ventilation is readily appreciated though the amount of fresh air supplied may be insufficient for the biological and chemical functions necessary to health. Yet, when quite sufficient in all of these respects, it may still be considered insufficient because of "closeness" or "stuffiness" which, although disagreeable, is not necessarily unhealthful. In other words, good indoor air may still be "stuffy" or even ill-smelling and offensive to the senses.

To the layman, this confusion is increased by the diverse theories and controversies of scientists as to whether the physical or chemical functions to be performed by ventilation are the more important; whether the air naturally introduced through the windows or artificially by mechanical means is the healthier, etcetera.

PRODUCTION INCREASED

There is a general lack of understanding of the purely commercial advantages to be gained by effective ventilation of working spaces. No apprehension need be felt that inordinate expenses will be involved, since proper provisions of this kind usually pay for themselves.

A persistent educational campaign should be inaugurated. Articles on ventilation in simple language should be issued explaining the benefits derived from proper ventilation to be followed by statistics upon health standards obtained from striking instances of well-ventilated and poorly ventilated establishments.

In *maintaining and improving the working and living conditions of the industrial and public employees,* the definition of Welfare Work formulated by Samuel Gompers for the Committee on Labor's war work, so far as the surrounding air is concerned, all set notions or problematic theories must be discarded.

Good ventilation means a sufficiently active dilution of the indoor atmosphere to maintain comfort and health. It is necessary when considering the requirements to determine the minimum limits of ventilation to avoid needless expense of installation and operation, and unreasonable structural demands to accommodate the ventilating apparatus. The problem, in every individual case, resolves itself into satisfying the requirements of those physical and other functions which make the greater demand. Usually the greatest amount of air is required to carry away heat and moisture. A human being, laboring or resting, can not possibly be surrounded by air that is too fresh, provided there are no objectionable drafts.

Laws, with established standards for ventilation and heating, have been enacted in various States. Predetermined standards are valuable for ordinary and simple conditions. For exceptional conditions, which usually are the most difficult, set standards are not possible. The laws are therefore mostly inefficient. They are further deficient in that they sometimes establish standards on the basis of *quantity* without stipulating the minimum *quality* results, the latter fixing a better test and capable of a broader application to varying problems.

CHEMICAL ANALYSES

By measuring the properties of the atmosphere, the same as is done for heating, cooling, humidifying, and dehumidifying, it should be possible to determine whether or not quarters for working men are healthy, and this should be the deciding test for all doubtful cases. The formerly much used carbon-dioxide test gives only an indication of the dilution of the room atmosphere and is of no value for ascertaining the presence of bacteria, injurious gases, and other unhealthful ingredients. There is no reason why the quality of atmospheric conditions in working quarters and elsewhere should not be a matter worthy of Government control. Consideration should be given to the establishment of such a bureau to supervise and control all matters pertaining to ventilation, to gather ... tabulate statistics of the respective health co... tions, and to include a laboratory for rese... and testing work, in charge of a competent ... wellpaid personnel, to inspire confidence; ... creation would be appreciated by every he... board and health association in the country.

In heating and ventilating we are confron... with the two problems of meeting the requ... ments in new and in old buildings oftenti... utilized for purposes for which they were ... originally constructed.

For new buildings, except that they can ... be equally definite, laws can be enacted to co... heating and ventilating along lines similar ... those controlling building construction ... plumbing. Existing building laws, with few ... ceptions, can be enforced almost litera... Ninety per cent. of the work can be carried ... in strict accordance with predetermined sta... ards, leaving 10 per cent. to the judgment ... officials, whereas in heating and ventilating ... greater percentage of work has to be done ... accordance with judgment of special conditi...

WINDOW VENTILATION

The limitation of ventilating by opening w... dows is mainly responsible for the developm... of mechanical methods. In crowded establi... ments the windows can not, under unfavora... weather conditions, be kept open sufficiently ... accomplish the necessary air dilution with... harmful and disagreeable drafts and chill... effects, and there are not always winds to fo... in the required amount when open windows ... be tolerated. In other words, window ventilat... can not be depended upon nor effectively c... trolled. It usually, though not always, requi... reenforcement with positive and reliable devi... which will work when natural agencies fail ... are insufficient. The old theory that the open... of windows destroys the effect of mechani... ventilation is not supported. Opening of w... dows is often sufficient for small offices and p... vate rooms where the occupants are at liberty ... manipulate them to suit their own comfo... Proper allowance should be made for unavo... able air leakage which secures some ventilati... even when windows are closed and for the ster... izing effect obtained by sunlight. Rooms havi... no windows or skylights, particularly if th... happen to be underground and interior a... without any wall exposure, require special... good ventilation by mechanical means.

POINTS OF SPECIAL IMPORTANCE

First—All air supplied for ventilating pu... poses should be free from dust, pathogenet... bacteria, and other contamination.

Second—A sufficient amount of air, proper... tempered and distributed, requires to be su... plied per person to satisfy both the biologic... and physical functions of the human organis... and the governing factor determining t... amount required must be that function whi... makes the greater demands.

Third—Ample allowance must be made f... the combustion of gas and oil burnt for illum... nation and other purposes, as this vitiates t... air and adds undesirable heat, and addition... ventilation must be provided fully to offset the... effects.

Fourth—The room temperature should ... kept as constant and agreeable for the occu... pants as possible, overheating being as objectio... able as underheating.

Fifth—Proper attention should be given to subject of the humidity and the necessity of plying additional moisture under extremely conditions and removing excessive moisture der reverse conditions. The latter is espelly important when a high temperature is ociated with a high relative humidity which nbination is injurious to health beside caus- discomfort.

Sixth—Rapid air currents causing drafts st be avoided. While such currents increase heat dissipation from the body and produce certain comfort in hot weather, they are inious to those who by necessity must remain their path when air at a comparatively low nperature is introduced.

Seventh—Excessive heat, vapor, and injurious bstances arising from manufacturing processes other causes require to be locally removed d thus prevented from being communicated to room atmosphere, and all toilet, locker, and ier rooms of similar character require positive haust ventilation for the combined purpose ventilating them and preventing odors from reading to adjoining rooms.

Eighth—Radiators and coils representing ating surfaces require individual controlling vices either for hand operation or automatic, d such heating surfaces must be so located and ranged that they will not cause discomfort.

Ninth—Hot surfaces, which by nature of their e do not require to be exposed, should be inlated by non-conducting material. This inides steam and other hot piping and metal rfaces of machinery, as well as walls and floors ich have high temperatures and cause discomrt both by direct heating up of the room air d by the effects from radiation or contact.

Tenth—The matter of design is as important d vital as the air quantities supplied. Many ntilating and heating installations which are ple in capacity are, nevertheless, inadequate account of faulty arrangements. The heatg and ventilating science is often considered simple that the design of the apparatus is trusted either to those having little or no evious experience, or to manufacturers mainly terested in finding a market for their special pliances and who consider their duty fulfilled hen the apparatus delivers the quantities of r and heat required by the contract. If the paratus is to be successful in maintaining roper atmospheric conditions, too much attenon can not be given to detail of arrangement d distribution of the heat and air introduced.

NTILATING, HEATING AND AIR-MOISTENING

The quantities of fresh air, heat, and moisture quired depend upon conditions. The standds hereinafter given are ample in their prosions to secure atmospheric conditions which ill promote health and comfort with a reasonle and yet not undue margin of safety. These andards cover the requirements of indoor contions generally encountered, with recommenations for special provisions against contaminaon developed with manufacturing processes of particular nature. They take into account at the occupants are confined for hours and at but brief periods of the working-day are ailable for airing and cooling the rooms.

Less air dilution than that given by the standds may answer for rooms and quarters occued for only short periods and for rooms having peral window areas of such exposures as to rmit of penetration of direct rays of the sun all parts. Working quarters, however, seldom me under this head. The stated requirements ould, therefore, be considered the minimum, d while they can with advantage be increased, ey should not at any time be decreased.

For rooms and workshops in which undue at, dust, fumes, vapors, odors, or other imrities are created and released, special means ould be provided for exhausting and collecting ose harmful substances immediately after and where they are generated. If this is not done and such heat and substances are permitted to mingle with the air, unhealthful conditions will be produced which can not be entirely eliminated by air dilution, even if the same is increased far beyond that given in the standards.

STANDARDS

Minimum requirements to maintain acceptable conditions in all classes of factories, rooms, and spaces devoted to industries follow: Included are offices, stock, sorting, shipping, wash, dressing, locker, and toilet rooms.

Two hundred and fifty cubic feet of space is the minimum for each occupant, the workroom being 12½ feet or less in height. If the height exceeds 12½ feet there should be at least 20 square feet of floor space per occupant.

Rooms having windows whose area is equal to or in excess of 21 square feet per occupant and which open directly outdoors, do not require mechanical means for ventilation except when injurious substances are released or undue heat is generated.

Interior rooms and those having less window area than 21 square feet per occupant require apparatus for mechanical ventilation, to be operated whenever occupied except when external temperature permits keeping windows wide open, provided the total window area is not less than 5 square feet per occupant. A positive supply of outdoor air from an uncontaminated source should be supplied to each room in this class, the amount being stipulated later, and distributed so as to maintain the stipulated temperature without harmful drafts. Sufficient means should also be provided for each room for exit of air corresponding in volume to the amount of fresh air supplied. The exit openings should be so arranged that the movement of the air will be given a direction whereby it will come into maximum contact with occupants, and should, when necessary, be provided with mechanical or other positive means for exhausting it. Rooms having a total area of windows opening directly outdoors amounting to less than 21 square feet per occupant require fresh air in the quantity of not less than 100 cubic feet per occupant per hour for each square foot of window area lacking, excepting that when mechanical ventilation becomes necessary the minimum amount supplied should be not less than 600 cubic feet of air per person per hour.

Rooms above the ground level having wall or ceiling exposure but no windows require 2,100 cubic feet per occupant per hour.

Interior rooms having neither exposure nor windows opening directly outdoors require a quantity of air per hour equal to five times their cubic contents, plus 1,200 cubic feet per hour for each and every occupant.

Underground rooms having neither exposure nor windows opening directly outdoors require a quantity of air per hour equal to six times their cubic contents plus 900 cubic feet per hour for each and every occupant.

Toilet, coat, and locker rooms require mechanical ventilation capable of exhausting air from such rooms in the following amounts:

Toilets, at least 10 complete air changes per hour, plus 1,500 cubic feet per hour for each water-closet and urinal fixture.

Locker and coat rooms, at least six complete air changes per hour, plus 600 cubic feet per hour for each locker or each person's wearing apparel.

Sufficient air inlets for inflow of air to replace the air exhausted should also be provided.

Areas of doors and skylights which can be freely opened may be considered equivalent to window area.

REMOVAL OF INJURIOUS SUBSTANCES

Where dust, fumes, gases, vapors, odors, fibers, or other impurities are created or released in the course of manufacturing, tending to discomfort and injury of health, there should be provided special mechanical or other positive means for removing such substances as fast as created or released.

In case of inability completely to collect and remove injurious substances such additional ventilation is required for dilution of the atmosphere beyond the standards given above as is required to maintain its purity. The percentage of injurious substances permissible should be determined by chemical analyses by medical authorities. This provision should cover all gas burned for illuminating or other purposes from which the products of combustion are released to the indoor atmosphere, and the allowance for such contamination by gas, etc., must be not less than 1,800 cubic feet of fresh air per hour for each cubic foot of gas burned within the room.

When, in the opinion of the proper authorities, the fresh air supplied for ventilating purposes is dust-laden to the extent of being unhealthful and unsuitable, it should be filtered or washed by suitable appliances capable of removing dust and other mechanical impurities.

EXCESSIVE TEMPERATURE AND HUMIDITY

Excessive heat generated by manufacturing processes should either be confined by application of non-conducting material or be collected and carried off in the same manner as described for injurious substances.

Excessive heat or humidity or a combination of the two when sufficiently high to be injurious must be counteracted or reduced so that the relative humidity will not exceed 65 per cent. when the temperature exceeds 75° F., except when outdoor weather conditions prevent or when the working quarters are used for special purposes which, in the opinion of the proper authorities, require or make advisable other degrees of humidity.

The minimum relative humidity for the stipulated temperatures should be not less than 20 per cent. and suitable air moistening appliances, controllable either by hand or automatically, should be provided in the rooms or in connection with the ventilating apparatus.

HEATING REQUIREMENTS

The temperatures in all factories, mercantile establishments, mills, and workshops should be maintained at a uniform degree consistent with reasonable requirements of the manufacturing processes, ranging from 62° F., the minimum for rooms in which manual labor is performed, to 72° F., the maximum for rooms in which clerical or mental work is performed.

Heating apparatus must be of a type to cause no contamination. All direct heating surfaces should be so arranged that the heat radiation will not cause discomfort or injury.

When warm air is used as a heating medium it must be so introduced and distributed as not to cause discomfort and must not be supplied at a temperature higher than 130° F.

Open salamanders must not be used under any circumstances.

Gas or oil heating appliances, discharging their products of combustion into rooms, must not be used unless a sufficient amount of fresh air is supplied to compensate for the vitiation. Gas heating appliances can be used without additional air supply if the products of the combustion are completely collected at the points where generated and carried off.

SUGGESTIONS FOR DWELLINGS

While it is as important to maintain pure atmospheric conditions in the homes as in the working quarters, it is neither reasonable to advocate nor practicable to install mechanical appliances for ventilation. Living and sleeping rooms, even of the dormitory kind, can be effectively ventilated by opening windows liberally if

The Editor alone is Responsible for any unsigned article or unquoted statement published in THE NATIONAL CIVIC FEDERATION REVIEW.

DEBATE OVER THE LEAGUE OF NATIONS

As this issue of the Review goes to press, the country from Maine to California is engaged in a stirring debate over the questions: "Shall we have a League of Nations, and, if so, does the Paris protocol furnish the best possible program?" The debate began in the Senate of the last Congress and it will continue until the Senate of the next Congress is convened, and after.

Speaking by and large, it can be said that the enlightened public sentiment of the country is gradually becoming unified on certain important features of the so-called "Wilson League." First, it is now known that it is not a "Wilson League"—that the covenant presented by the President is not at all his own draft but a compromise which he had to accept. Therefore, the arguments of those who oppose it because it is the President's creation lose much of their force. Second, the covenant, being only the first draft of a sub-committee's report, is subject to revision, at least so for as its phraseology is concerned. Its most conspicuous opponents and advocates alike agree that changes should be made to clarify many of its passages. So far as fundamental principles are concerned, however, conditions may be such that few, if any, changes can be made. It is in the light of this contingency that those who want to see the possibility of all wars reduced to a minimum must consider this issue now before the American people.

Certain points made clear by the debate so far are:

In regard to most of the provisions, such as limitations of armament and the right to declare war, so fiercely attacked by those who would not listen to any proposal curtailing the sovereignty of the United States through the formation of an international committee in which our Government would have only one voice out of nine, an important discovery was made. These assailants found, upon a closer reading, that none of those things could happen. In other words, it became clear that such an international committee, in which the United States Government had but one voice out of nine, would have only the right to make recommendations to the several governments. In our case, this would mean that Congress would have to pass upon a recommendation before it amounted to anything—a perfectly innocuous proceeding, rendering it immaterial, so far as this feature of the covenant is concerned, whether we had one voice out of nine, or eight or none.

Another serious question raised in the Senate debate is still doing service, although, so far as any committal of our Government by the covenant is concerned, it is answered completely by the discovery referred to above. It revolves around the words of Washington in his farewell address, in which he declared against America's becoming involved in "the entangling alliances and politics of Europe." "Why," it is asked, "should our great and independent country, three thousand miles from Europe, become embroiled in inter-nation conflicts among the Rumanians, Turks, Poles, Czecho-Slavs, Jugo-Slavs and so forth?" That would have been a perfectly good question for George Washington to ask, but it is too late for Woodrow Wilson to ask it and he does not ask it. We are already involved and committed clear up to our necks in all those controversies. And, to be perfectly frank, Woodrow Wilson is not to be blamed for having led us into that "mess"; most of us complained because he did not lead us in earlier. It was not that we, as a nation, felt at that time anything more than an academic concern about the troubles of those countries—and in this we can, in a broad sense, include also the larger troubles of France, England and Italy; but we did have a very vital concern as to whether we could get over there in time to help England, France and Italy beat down the "Beast of Berlin." Our consuming fear was that if we did not get there in time, and that horde of bestial barbarians should vanquish those powers, they would then make a bee-line for the United States of America, knowing full well that in these United States of America they had waiting to assist them anywhere from five hundred thousand to a million well-trained and armed reservists. That is why we went three thousand miles to mix into the European turmoil—and if George Washington had been alive, he would have led our army. Also, when by every possible intrigue that we could devise, we helped to stir up trouble between the Czecho-Slavs, Poles and Jugo-Slavs and Austro-Hungary, it was not because, academically speaking, we cared particularly for those peoples at that time, but it was because we wanted to weaken Austria and then Germany—all with the same great, vital purpose of keeping the Hun from the shores of our beloved America. So now we are there! And it would be dishonorable, immoral and contemptible if we tried to run away.

This situation recalls a tense moment in a debate at Saratoga, August 19, 1898, at a conference called by The National Civic Federation to discuss the future foreign policy of the United States. It was just at the close of the Spanish-American War, but before the peace treaty had been signed in Paris. The issue on which the American people were stirred up then was expansion and anti-expansion. Carl Schurz, who led the anti-expansionist forces in the conference, had just finished an impassioned speech, based largely upon the Washington farewell address and practically all the other arguments which are being used today against our entering into "entangling alliances" and so forth, and which the anti-expansionists had been using for a year past. William Dudley Foulke, who led the expansionist side, arose and leveling his finger at Mr. Schurz, his voice shaking with dramatic fervor, exclaimed: "Mr. Schurz, you are too late! What you have just said would have been pertinent six months ago! Since then, however, we have taken Hawaii and Porto Rico, our battleships have destroyed the Spanish fleet off Cavité and the Peace Conference has been called in Paris to determine whether we should return the Philippines to Spain, leave them alone without any government having destroyed the one they had, turn them over to some other power, or undertake their government ourselves. Mr. Schurz again I say, you are too late! We have already expanded! The question now is not whether we shall expand, but what are we to do with the problems now confronting us, for the solution of which we have become responsible and which we cannot shirk if we are to hold up our heads in the society of nations!"

Likewise, it is now too late to talk about withdrawing from "the embroilments of Europe."

Another inconsistency that looms up in most of the discussions is seen in the criticism of the covenant by certain men on the ground that it does not have "teeth"; that if it does only what some of its friends say, it amounts to nothing and will not prevent war. Now, most of these very critics would be the first to object if it had the "teeth" that the League to Enforce Peace advocated. To mention two points:

First, the League to Enforce Peace and all the organizations in Europe formed to promote peace provided for an international army to be used to enforce the acceptance of all arbitrati awards. This idea is entirely absent from t proposed covenant.

Second, many of the peace advocates ins that all questions, whatever their nature, sh be submitted to arbitration. This idea is lik wise not to be found in the League of Natio plan. On the contrary, Articles 13 and 14 cle ly stipulate that only those questions shall be su mitted to arbitration which, to quote Article "they (the nations concerned) *recognize to suitable for submission to arbitration"*; wh in Article 14 is this phrase: "This court permanent court of international justice) sha when established, be competent to hear and d termine any matter *which the parties recogn as suitable for submission to it for arbitration*

In other words, when it comes to the matt of arbitration among nations, each one will d termine for itself whether the question is of su vital nature that it does not care to hazard t chances of arbitration. This provision ought reassure all such critics, because, from the standpoint, it is entirely innocuous. But fro the point of view of those who want to see t best possible thing done it is the only way to a complish anything. The criticisms of its opp nents and the admissions of its advocates lea no room for doubt that the covenant will con back from Paris in a much better form and o which all patriots can approve. It does n mean that there will be no more wars. But does mean that, through its machinery, wa will be reduced to a minimum, because the cov nant, in its final form, will have back of it th great moral force of the enlightened world.

GERMANY'S THREATENED ALLIANCE WITH BOLSHEVISM

The way the wind was blowin in regard to Germany's prol able propaganda when the tim came for the peace terms to b imposed by America and th Allies might have been gauge from the drift of expressions in those organs i this country which have been secretly sympa thetic to Germany and sympathetically attune to the processes of Hun psychology. Before th signing of the armistice these journals urged peace of compromise and scolded against a con tinuance of the war "out of revenge." Afte the signing of the armistice they championed policy of "mercy and magnanimity" to th beaten foe lest Germany, in desperation, b plunged into the chaos of social revolution.

What was expressed in certain American organs is now clearly enunciated in Germany it self and there are all indications that a definit policy of intimidation is under way. "Unti now," declares the Berlin *Vorwaerts,* "Germany deliberately has opposed the Russian method o instigating a world revolution through paid agents, but if Germany is forced to refuse t sign the peace treaty it could not fail to effec a great change in her policy. She would center her hope on achieving similar far-reaching changes to the Western countries and concen trate her revolutionary energy and resources t the task." Various officials of the "reformed" German government have openly threatened the Allies against driving the people of Germany into Bolshevism. The *Vorwaert's* editorial is one of the first frank expressions of Germany's intention to promote revolution throughout the world if the Allied terms are not sufficiently mild.

"Germany would not willingly embark on such a policy, which must mean a sanguinary conflict and terrible sacrifice for herself as well as other nations," continues the *Vorwaerts,* "but the better way of a peaceful settlement may already be blocked by the Entente's mad and criminal decisions. Thus Germany may be forced to choose the harder fate of resisting the Entente's coercion, not with arms in hand, but by new weapons which recent developments furnished the German people."

What are the "new weapons" furnished the German people? Opportunity of an alliance, a close working pact, with Lenine and Trotzky? Have we forgotten the orders issued by the Imperial Government early in the war, instructing Hun ambassadors in neutral and Allied countries to foment "social separation movements and civil war?" Certain American journals, themselves devoted to the fomenting of class hatred and social discontent, have clearly implied that Germany will be forced to this very thing if she is not accorded an easy peace. Is it to be taken for granted that this is an idle threat?

The German armies have been beaten. In the field Germany has been utterly vanquished. But is she incapable of still working any effective harm to the world? Have her fangs been utterly drawn? From South America comes news of the activities of German propagandists. German and Bolshevist agents have inspired strikes in Argentine. From Mexico comes word of the reappearance of German agents and spies. From Spain is cabled the news that German propaganda is again under way. With her armies beaten and her commerce destroyed, Germany's quickest chance of recuperation would be in the economic paralysis of the nations that have vanquished her. Wherever a country could be torn with civil strife, with industry stopped by widespread strikes, it would react to German advantage. Is it impossible for Germany still to utilize the hordes of agents and spies who are still at large?

Is there no significance to the fact that throughout this country scores of pro-Germans are now allied, secretly or openly, with revolutionary radical movements? Whereas they contributed to German war loans before we entered the war, they now contribute to the Socialist Party. Whereas they previously aided Hun intrigues, their support is now given to organizations and propaganda teaching internationalism and Bolshevism.

The New Republic last December advanced "the conception which alone can convert the present association among the victors over Germany from an alliance for the purpose of imposing retribution. . . . It requires," said this sheet, "first of all renunciation on the part of the victorious nations of all ambitious claims. . . . . There are an increasing number of people in Europe who understand the critical need of abandoning these particularist national ambitions. . . . If they (the Allies) do not, they themselves will eventually be engulfed in the anarchy and ruin which is now threatening Europe.

"Ninety millions of international peons in Central Europe would represent a charge of high explosives quite sufficient to rock the planet and shake to pieces whatever civilization adheres to it. Allied statecraft is surely not so shortsighted as to lay such a mine as this. . . . No indemnities is not a counsel of mercy to Germany. It is a counsel of safety to the world."

Walter Lippman, returning without conspicuous honors from Paris, in an article issued as supplement to *The New Republic* of March 22, says the Versailles Congress "cannot damn the German people for all time, desirable as that might be, because German mothers bear German children. They cannot consign them to the hell they deserve, because the location of that hell will be the center of Europe.

"Bolshevism," says the former "diplomat of the new school," "in both Russia and Germany would soon eat the heart out of Poland, Rumania and Hungary where social conditions are already desperate. Now, anyone who supposes that the populations of France and Great Britain will endure the human and economic cost of such an occupation is suffering from a severe case of reading nothing but censored news."

All of which is strikingly along the line of expression of the Berlin *Vorwaerts*. The significant thing is that what the German press is now openly threatening was expressed by *The New Republic* long before they dared articulate it in Germany.

THE HARVESTER INDUSTRIAL COUNCIL In another part of the REVIEW will be found the text of the Harvester Industrial Council, a plan of cooperation between the International Harvester Company and its 30,000 employees on questions of policy relating to working conditions, now in operation.

We publish it in full because it is the most recent one put into operation by a large corporation and can well be said to represent the honest endeavor of broad-minded employers to provide a practical method whereby matters relating to working conditions can be jointly considered in a frank and just manner. Within the last year many large corporations have been moved to give greater consideration to the wishes and welfare of their workers. Such plans have been adopted chiefly in plants not having collective contracts with trade unions. It is largely in those establishments that such machinery is needed because in union plants it is already provided for in the terms of the trade agreements.

The plan removes one of the greatest obstacles to industrial peace by providing an opportunity for the employees to be heard and by omitting from the machinery foremen and sub-foremen who most frequently are the cause of grievances. A real point of contact is secured between the management and the workers, thus ensuring closer relations between the company and its employees. The execution by the company of all accepted recommendations is a proper arrangement.

The International Harvester plan, it will be noted, clearly defines the questions that are to be dealt with by the Council. The second paragraph in Article I states that the representation is to be equal and the questions to be dealt with relate to "working conditions, health, safety, hours of labor, wages, recreation, education, and other similar matters of mutual interest." This does not include matters concerning the management of the corporation.

Much is being said today by newspaper and magazine writers about "democracy in industry"; that "the day of autocracy has gone out and the day of democracy has come in;" that "the worker is now to have a voice not only as to the condition in which he works, but in the management of the business as well." Some of these writers picture the representatives of the wage earners sitting at the board of directors' table, passing with them upon the great questions of markets, prices, finance, and all others related to the business end of the concern. None of these things is to be found in the Harvester program nor in the program of any other corporation so far as we have been able to discover. It is magnanimous and perfectly praiseworthy for a large employer to feel that he would like to have one or two of his employees represented on the board of directors of the corporation, so that the real conditions could be observed. In case, for instance, demands were made for an increase in wages or a shortening of hours, and the financial situation were such that the concern could not afford to grant the concessions, it is the theory of such employers that the men's representatives would understand and could explain the reason to the men. As stated, such an idea is entirely commendable but experience has shown it to be impracticable. The standing of those two employees who would have to go back to the other 5,000 employees and tell them that they could not have the raise they had demanded, would not be a "wholesome" one, to say the least. In fact, they might have to dodge brickbats. At any rate, they would have to meet charges of having been bribed by the employers. There is nothing of this kind in the International Harvester plan.

A criticism of the provisions for arbitration in the Harvester project doubtless will be made by those who contend that all questions should be arbitrated. The principle involved in this proposal is identical with that underlying the discussion over arbitrable and non-arbitrable questions now going on in the League of Nations controversy. In the Harvester scheme, it requires mutual agreement to submit a question to arbitration: either side may block it. Were it otherwise, a critical situation might well arise. Suppose, for instance, the men should become sufficiently Bolshevized to propose that they should have a majority on the company's board of directors. Would the International Harvester Company or any other corporation submit such a question to arbitration? Suppose a corporation, on the other hand, should propose to men who wanted to join a union that they should arbitrate that question. The men would justly claim that that was a legal and natural right and would refuse to submit it to arbitration because whenever anything is submitted to arbitration, a risk is taken; each side must be prepared to lose.

The large employers of the country will watch closely the result of this new venture, as they are also watching those already put into operation by the Colorado Fuel and Iron Company, the Standard Oil Company of New Jersey, the General Electric Company and others.

Problems in Heating and Ventilating

(*Continued from Page* 9)

ample room is allotted per person. Interior and underground rooms, without windows opening directly outdoors, should not be permitted to be used for living and sleeping quarters under any conditions.

Ample provision should be made so that each and every room used for living and sleeping purposes can be heated to a comfortable temperature in the most severe weather. Sleeping rooms, which may usually be kept at somewhat lower temperatures, still require ample provisions for warming in cases of illness. The recognized average standard for living quarters is 70° F., and it would be well to adhere to this standard, so as to have a certain surplus that will permit windows to be kept partly open.

Hot water, steam, furnace, and open fireplace heating, and even stoves, can be considered satisfactory when ample in capacity and properly installed. Individual control of the heating for each room is very important, so that the heat can be distributed in accordance with requirements. Gas radiators and oil stoves, which release products of combustion should be prohibited for permanent heating of living and sleeping rooms, as they produce disagreeable and injurious gases.

Overheating is a prevalent evil. For ordinary rooms, an average temperature of 68° F. is, from the standpoint of health, preferable, except where there are aged people who require a slightly higher temperature. For sleeping rooms, a much lower temperature will suffice, except in cases of illness.

These standards will answer until the suggested bureau of research is created when additional and more definite ones can be made and measuring methods be devised for the establishing of *quality* standards to supersede the present *quantity* standards.

Special provisions for ventilating public halls, schoolrooms, etcetera, are not contested with the antagonism formerly manifested. The war has furnished a striking illustration of what can be accomplished by proper sanitation. Employers and owners of industrial establishments should cooperate with proper authorities to develop the best means of heating and ventilating.

New York State Probe of Bolshevism Asked

UNION LEAGUE CLUB COMMITTEE DECLARES FACTS WARRANT FULL INQUIRY, ESPECIALLY AS TO THOSE WHO SEEK TO STIR NEGROES—ULTRA RADICALS BACK NEW UNION

Valuable work is being done by the Union League Club of New York City in fighting Bolshevism. Its special committee on the subject has gathered many important facts regarding the propaganda in this country, the way in which it is received and who is putting it forth. Archibald E. Stevenson and Robert C. Morris constitute the committee and recently presented their second report, with a recommendation that the club urge a legislative investigation.

Messrs. Stevenson and Morris lay special stress on the efforts being made to spread Bolshevik ideas among negro workers. Elsewhere in this issue of The Review *will be found* The Messenger *article to which they refer in full. As will be seen, the so-called leaders of the negro and white I. W. W., include such persons as Morris Hillquit who talks socialism when not too busy clipping coupons or acting as corporation attorney; Abraham Shiplacoff, one time Assemblyman, now of the Jewish* Forward; *Rose Schneiderman who wants (as do the I. W. W.) a worldwide union of every worker and who has gone to Paris as President Wilson's appointee to represent women in post-war plans devised by the Peace Conference, and Charles W. Ervin, editor of* The Call.

Following is Messrs. Stevenson's and Morris's second and latest report to the Union League Club:

IN its preliminary report the committee on the study of Bolshevism endeavored to indicate the forces now at play on public opinion in the United States, to define the purposes and objects of the three main currents of radical thought, namely: Anarchism, Syndicalism, and Socialism, and to show that the advocates of these three theories of social order have united upon the common platform of internationalism and the solidarity of the working classes. The propaganda spread by these radicals is calculated to develop sympathy with the movement to establish in this country a socialistic state patterned after the model set up by the Bolsheviki in Russia.

The Rebel Worker, an organ of the Industrial Workers of the World, in the issue for February 15, 1919, says:

> The war has pretty nearly made the world safe for Bolshevism—something not at all in the original program. Russia, Germany, Austria, Holland—even Japan, though to a lesser degree—give evidence of a revolution that has already outrun both capitalist imperialism and Bourgeois liberalism.

The idea presented here challenges attention. While the Conference at Paris is discussing peace, civil war rages throughout Eastern and Central Europe. The struggle between the radical Spartacus group in Germany and the more conservative Socialists represented by the Ebert government continues to increase. It is impossible at the present time to determine which of these parties will be successful. The Spartacus group, like the Bolsheviki of Russia, is committed to internationalism and the dictatorship of the proletariat. It also spreads throughout the world its appeals for the cooperation of the workers in other lands, as illustrated by the manifesto signed by the late Karl Liebknecht, Rosa Luxemburg, and others, a copy of which appears in the issue of March 8, 1919, of *The Nation.* The manifesto is addressed:

> To the men and women workers of all countries—Comrades, the revolution has reached Germany . . . . . Workers of all countries! If we summon you now to make common cause with us, it is not in the interests of the German capitalists, who, under the banner of the "German Nation" are trying to escape the consequences of their own crime. No! We summon you to make common cause with us in your own interest. Face the facts. Your victorious capitalists are ready to repress in a bloody manner the revolution in Germany because they fear it will reach them. You, yourselves, are not enjoying greater liberty because of the "victory". The "victory" has reenforced your slavery . . . . . That is why we cry aloud: Arise and face the struggle! Arise and act!

The remarkable progress of revolutionary Socialism in Europe may occasion surprise. Prior to the outbreak of the war in 1914, the majority of the Socialists had been converted from the earlier militant form of Marxian doctrines and won to the principles of parliamentarian action, no cooperation existed between them and the Anarchists and only such Syndicalists as were agreeable to parliamentarian action were admitted to the International.

With the coming of the war in 1914, the International collapsed and for a time Socialism seemed to have received its death-blow. Had the war been brief and decisive this might have been the case. However, the length of the war, the unlimited demands made upon the resources of the nations engaged in it, the unparalleled sacrifices imposed upon the peoples of Europe, the shortage of food and the consequent economic and social distress combined to create in the minds of the masses of European peoples a disposition favorable to the development of Socialist doctrines. The progress of the war has been marked by a revival of revolutionary Socialism, which is today stronger, more militant and more dangerous to democratic governments than at any other period in history.

Reference is made to the conditions existing in Europe because the Committee feels that those conditions must inevitably have a reflex action upon the people of the United States. So long as the Bolsheviki are in control of the masses in Russia and remain a force to be reckoned with in the territories which were the Central Powers, so long will they continue to be a menace to the institutions of the United States. To emphasize this, reference is made to the influence which the Jacobin clubs of the French revolution had upon malcontents in the United States in the latter part of the 18th Century. The Whiskey Rebellion of western Pennsylvania was the outgrowth of agitation carried on by Democratic societies going under the garb of protectors of civil liberties and which received their inspiration from the French revolutionary societies. The power of these American agitators continued to grow until Robespierre was guillotined and the political power of the revolutionary clubs of France was destroyed. John Marshall, in his "Life of Washington", published at Philadelphia in 1832, page 353, says:

> Not more than certain is it that the boldest streams must disappear, if the fountains which fed them be emptied than was the dissolution of the democratic societies of America, when the Jacobin clubs were denounced by France.

This interesting reference to past experience carries with it a lesson for today. Repressive methods and even education in this country cannot overcome the pernicious influence of the Bolsheviki propaganda so long as it exercises a dominating influence upon the aspirations, cupidity and avarice of the millions of disorganized Europe. Before the government and people of the United States can safely ignore the agitation of radicals in our midst, order and the rule of law must be established in Russia and in Central Europe.

The purposes of the radical agitators in the United States are similar to those of their European comrades. The object sought to be attained is the establishment of democracy in industry and what is generally termed the Industrial Republic. It is pointed out in radical literature that in the evolution of human society, political democracy was but an initial step; that the demand of the people to select the persons to rule over them was as revolutionary when made as the claim that the workmen today shall have the right to select and control the management of industry. In other words, the claim is made that the first step in social evolution was the establishment of government of the people, for the people and by the people, and that the second step must necessarily be a government in industry of the workers, for the workers and by the workers.

This is the Industrial Republic which the radicals of the United States seek to establish, and this is the government which has already been established in Russia. It is recognized that in order to establish such a republic, a dictatorship of the proletariat is necessary. In a pamphlet entitled "Soviets at Work", Lenine says: "It would be the greatest stupidity and the most absurd opportunism to suppose that the transition from capitalism to socialism is possible without compulsion and dictatorship."

Referring to the Russian revolution, in the same pamphlet, Lenine says:

> We are now in the third stage. Our gains, our decrees, our laws, our plans must be secured by the solid forms of *every-day labor discipline.* This is the most difficult, but also the most promising problem, for only its solution will give us Socialism. We must learn to combine the stormy, energetic breaking of all restraint on the part of the toiling masses, with *iron discipline during work,* with *absolute submission* to the will of one person, the Soviet director, *during work.*

This is the liberty to which the workers seem to aspire.

The propaganda of these radicals in the United States is increasing. Every cause of complaint in any part of American society is used to increase the numbers of the radical forces.

An attempt is being made to arouse the latent discontent in the Negro population in this country by circulating among them Bolsheviki doctrines. An excellent illustration of the character of this propaganda is *The Messenger,* a Negro paper which has been widely distributed among Negroes of New York City and elsewhere. Two quotations from the February number of this magazine will be sufficient to indicate its nature. On page 6 there appears an article entitled "The Soviet", which closes with the following:

> As for the Negro, neither property, life, liberty nor the pursuit of happiness, which, by the way, is only possible by the possession of the former, is secure in the Southern section of these United States.
>
> The *Messenger* denies the right to every capitalist hypocrite in Christendom to speak to the motion of order on the Soviet of Russia. Long live the Soviet.

In another article entitled "We Want More Bolshevik Patriotism", we find the following:

> We want a patriotism represented by a flag so

> red that it symbolizes truly the oneness of blood running through each one of our veins.
>
> We want more patriotism which surges with turbulent unrest while men, black or white, are lynched in this land. . . . We want no black or white patriotism which demands separate camps, separate ships and separate oceans to travel on. What we want is a patriotism of liberty, justice and joy. That is Bolshevik patriotism, and we want more of that brand in the United States.

In order to stimulate an interest in Socialist activities, an association has been formed which is known as "The National Association for the Promotion of Labor Unionism among Negroes", with headquarters at 2305 Seventh Avenue, New York City. The significance of this movement may be gathered from an examination of the names upon its advisory board.

Among these appear Charles W. Ervin, editor of *The New York Call*, a Socialist organ; Julius Gerber, secretary of The New York Socialist Local and a member of the Metal Workers' Union; Morris Hillquit, the well-known Socialist; Harold C. Keys, of The Brotherhood of Railway Trainmen, recently identified with a radical organization known as Young Democracy; Jacob Panken, Socialist Judge in the Municipal Court; James H. Maurer, president of the Pennsylvania State Federation of Labor; Max Pine, organizer of the United Hebrew Trades; Joseph Schlossberg, secretary of the Amalgamated Clothing Workers of America; Abraham Shiplacoff of the Jewish Forward, and Rose Schneiderman.

The president of the association is Chandler Owen, a Negro and one of the editors of the radical paper from which we have been quoting.

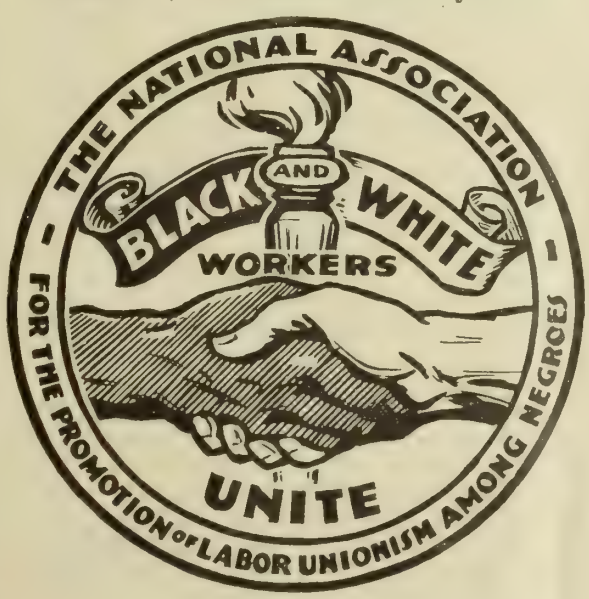
The propaganda carried on by the radical groups reaches all parts of the nation, but finds a particularly receptive mind in industrial centers, where large groups of aliens are present. Agitators have been particularly active among the Jewish, Italian, Hungarian, Finnish, and Slavic elements of our population.

In America the fundamental danger comes from social unrest rather than from the special form of socialism instituted by the Russian Communist Party, and known as Bolshevism. The success of propagandists and agitators in enlisting the interest, support or sympathy of a vast number of our population is an indication of how widespread has become the social unrest of our country. Any one familiar with the working conditions in many of our factories and industrial centers, and in the crowded and congested districts of our great cities must recognize the reasons for this unrest. There is a lack of understanding between the employing and working class as a whole.

The educated and employing class has in general been so engrossed in their own affairs as to ignore the thoughts, aspirations and conditions of people of less favored circumstances. The very people whom nature has endowed with the privilege of leadership, and upon whom our form of society has imposed the duty of constructive statesmanship, have in the main exerted their energies and talents in private life toward amassing wealth and power, and in public affairs have played to strengthen their position.

The leaders of radical opinion have in most instances been close to the mass of the people; have seen and sometimes shared the burdens they carry, and have advanced solutions for existing conditions which the workers are taught to believe intolerable. Nevertheless, the solutions offered by these radicals are impractical, unjust, and if put into effect are destined to increase the misery they are designed to cure.

It is, therefore, clear that the duty of the people of means, culture and education is to familiarize themselves with facts as they are; to become acquainted with the forces at play upon the working class, and to recognize that some constructive program must be substituted for the schemes of social reform which are now catching the ear of the masses. As was pointed out in the preliminary report of this Committee, the present radical agitation is as much a revolt against organized labor as it is against capital and the State. This is emphasized by an interesting manifesto which has recently been issued by "The Communist League of New Jersey". It is directed principally against the American Federation of Labor. We quote in part as follows:



> We must reverse the historic attitude of the Socialist Party towards the American Federation of Labor. Since its formation in 1898, the Socialist Party has pursued a policy of friendship and alliance with the A. F. of L. Our members have gone into the craft unions and have struggled to "bore from within". After twenty years we may read the result. Our efforts have collapsed in a heartbreaking failure.
>
> The A. F. of L. has ceased to be a labor union. It has allied itself with the master-class. . . . It has invoked the aid of the capitalist government to exterminate the revolutionary minorities within its unions.

This attack upon the American Federation of Labor, and the numerous other illustrations of the same kind which might be given, suggest lines of reflection. To continue the conflict between capital and labor, and to forget that the interests of employer and employee are identical, is to encourage a state of affairs which cannot but lead to an undermining of the institutions of our country. It should be emphasized that the radical elements are fast weakening organized labor and that if the process continues the power of the American Federation of Labor will be diverted to radical ends.

The obvious conclusion is that a greater cooperation should exist between employers and organized labor and interest should be taken in the experiments now being conducted in England looking towards that end. However, the Committee feels that before any recommendations for dealing with the radical movement in America are made, a more thorough knowledge of the nature, extent and purposes of the movement should be had.

The Overman Committee of the Senate at Washington, investigating Bolshevism, has devoted itself largely to ascertaining conditions existing in Russia and has brought out much valuable information for the enlightenment of the people in this country as to the theories and practices of the Bolshevist regimé. This is important as an object lesson as what the Bolsheviki would do if their ambitions were achieved here, but little accurate information has been obtained as to the exact extent of radical activities in this country.

We believe, therefore, that Bolshevism as it may exist in the United States, and particularly in New York, should be subject to an immediate investigation of a most thorough and painstaking character, and that the testimony heard at such an investigation should be supported by legal evidence only.

The State of New York during the war, through its then Attorney-General, Merton E. Lewis, vigorously applied a statute of which he was the author, known as the "Peace and Safety Law", and demonstrated its ability to curb activities against our government. This was practical war work. The State should now demonstrate its ability to handle in a practical manner the after-war menace of the Bolshevik and other revolutionary agents. Local action in matters of this character is always the most effective, as witness the splendid work of Ole Hanson, Mayor of Seattle.

RECOMMENDATION

We recommend, therefore, that The Union League Club at once request the Legislature of the State of New York, now in session, to appoint a joint legislative committee to investigate the Bolshevik and revolutionary movement. Such a committee could summon before it the real leaders of Bolshevik and revolutionary activities and other persons possessed of actual knowledge concerning these movements within the confines of the State. The actual leaders of this movement should be brought before such an investigating body and compelled to testify.

The full knowledge of conditions in this State which would be gained from such an investigation would enable the preparation of suitable legislation and the taking of such steps as may be necessary to cope with the situation. We do not make this recommendation because we believe that alarm should be felt at the present time, but solely because the Committee is convinced that revolutionary activities exist, and it feels that it is the duty of the people of New York to ascertain, immediately, the extent thereof. We, therefore, offer the following resolution for adoption by the club:

> RESOLVED, That the Committee on the Study of Bolshevism be and it hereby is directed to present to the Senate and Assembly of the State of New York, the recommendation of The Union League Club that a joint legislative committee should be appointed, with all necessary powers to investigate the tendencies, ramifications and activities of the Bolshevik or revolutionary movement in this State with a view to the enactment of such legislation as may be necessary to protect the government of the State and to insure the maintenance of the constitutional rights of its citizens.

(Sgd.) Archibald E. Stevenson, *Chairman.*
Robert C. Morris.

March 13th, 1919.

FOMENTING DISCORD AMONG NEGROES

The insidious propaganda carried on by those who seek to promote widespread class and race antagonism and discontent is indicated in the following article from the negro magazine The Messenger *of February,* 1919, *which was quoted in Messrs. Stevenson's and Morris's report to the Union League Club:*

FIRST, as workers, black and white, we all have one common interest, viz., the getting of more wages, shorter hours, and better working conditions. Black and white workers should combine for no other reason than that for which individual workers should combine, viz., to increase their bargaining power, which will enable them to get their demands.

Second, the history of the labor movement in America proves that the employing class recognizes no race lines. They will exploit a white man as readily as a black man. They will exploit women as readily as men. They will even go to the extent of coining the labor, blood and suffering of children into dollars. The introduction of women and children into the factories proves that capitalists are only concerned with

Europe's War Labor Experience

(*Continued from Page 2*)

we developed two features abnormally influencing the relations of capital and labor; the one in which the government went into the market as an insistent consumer on borrowed capital and with the unusual right of fixing prices, the other where it went into direct manufacturing with its borrowed capital with no concern regarding profit or the future.

"The vital demands of the war compelled absolute neglect of the economic law of supply and demand, with the result that capital in most directions, and labor in all directions, were placed above the economic level on which they both must finally rest to live fairly in their respective spheres. Capital's position is easily ascertained. Its books and its returns are kept and recorded. It can, if necessary, be regulated by law as to a fair compensation.

LABORER MUST LIVE

"Capital can die for want of a fair economic life. The laborer cannot. He has to continue. He lives anyway. After all, he is really the fundamental element in the situation. Labor as a wage earner or as an individual producer will continue to exist well or badly supplied, but exist he will. Capital cannot if labor unreasonably deprives it of sustenance; that is, a living profit. I mean by that, a margin over and above the cost of labor and material sufficient to reasonably compensate it.

"To be an employer capable of paying high wages and maintaining its labor in a happy, healthy and efficient way it must make money. It cannot attain its best condition in this respect without efficient and contented labor. This reduces the whole question to a mutuality of interests compelling co-operation between the two. Both must reach an understanding on the basis of complete interdependence.

"The economic side of these questions is not understood as it should be. I was speaking to a manufacturer the other day. He found a very curious state of mind among legislators in Washington when appearing before a committee of inquiry. He told me, for instance, of their incorrect conception of the industrial meaning of raw material; treating it with a sweeping definition for price fixing. It is a term if properly applied, given to the basic articles required for transforming the same in various industries into widely diversified products. These products even may again, in certain cases, constitute raw material for some other industry. Consequently, raw material is something starting from nature with capital applied to it in a greater or lesser degree and must be treated from a sound economic standpoint in each case based upon a proper understanding of what it is made up of.

MANY COSTS ADDED

"For example; if I have a factory in the East and I require ingot copper for my finished product, that copper is really not a primary raw material in itself. There enters into it not only the cost of producing it from the ore through the mining of it to the finished ingot, but the cost of transportation must be added with again all its elements of labor and capital involved in the construction and operation of the railroad carrying it to its destination.

"Labor has pyramided itself one wage on top of another until the cost of all articles to labor—itself being the chief consumer—finally lands it in high cost of living. This high cost is capable of reduction largely through concessions from its own present high standard of pay. Coincident with this, capital can and must make its concession.

"Quite naturally on the one side, capital wishes to put as much of the burden on the reduction of wages as it can. Labor wants to put as much of the burden on capital as it can, too often forgetting how far the workmen are consumers themselves. Therefore, I hope this commission will bring back something which will materially contribute to this important question, reporting how far in England they have succeeded in composing their differences so as to go down to a lower level and thus cheapen the cost of living.

"When reconstruction is considered, that fundamental idea will have to be the basis for an intelligent discussion of the subject. There are so many other features, to avoid touching upon them is difficult. One peculiar thing has struck me from the very beginning in the general comment on reconstruction. It is this; that people are thinking of reconstruction as requiring some sort of intricate formula, a formula that is going to bring about a solution, whereas a great part of the solution will be reached by the simple one of real and everyday work.

"The tendency today is shorter hours, more pay, less to do, and with it all to expect a better condition of life. That cannot be done without work. We now must set about to rebuild greatly impaired values. The preachment should be,—everybody work as much as possible, instead of everybody shortening hours and doing as little as they can for as much money as they can get."

Hugh Frayne, one of the members of the American section and the representative of the American Federation of Labor on the War Industries Board, said:

"This question of reconstruction and the after-the-war preparations to meet it is one that is going to take the best effort of every person who believes the country not only ought to be restored to a safe and sound basis, but that it ought to be restored upon a better and higher basis. Things that were not right in pre-war times should be made right in reconstruction times.

WAGES NOT GOING DOWN

"The time is too short to go into detail. It is sufficient to say that wages are not going down where they were in pre-war times. Wages were too low, generally speaking, before the war. Profits in some directions are not going to be—at least many things that were obtainable at a price before the war will not be so obtainable again. There is going to be a new level established, but I hope that in establishing the new condition, the work of economy and curtailment won't begin by reducing wages of the workers.

"If there is going to be cooperation between capital and labor it must be a real, sincere cooperation. Labor must not be asked to do all the cooperating and then he parcelled out anything that the employer may feel that they ought to get and no more.

"I believe that real, sincere cooperation between capital and labor is more necessary now than ever before because of the spirit of unrest that we have among us and that has shown itself in the other countries. That spirit of unrest would show itself more here were it not for the restraining influence of the people. Capital must begin to recognize the distinction between the real, bona fide, labor movement as typified by the American Federation of Labor and deal with it honestly and fairly in the way of cooperation.

"If they are not ready to do that, then they will have to select the other—the I. W. W. element, the Bolsheviki, that sort of labor which will not recognize and does not desire to have any relations with employers, and does not believe, in cooperation or in anything else.

"Whether it agrees with you or not, I know that it is a fact, and I make this statement that had it not been for the active work and the position of the American Federation of Labor, even prior to the entrance of this country into the war, and the influence of labor together with employers and many civic organizations—including The National Civic Federation—had it not been for that influence not only in the industrial field so far as it applied to war industries, but in every field where there was danger of interference with the government in winning the war, I dare say we would have had a much harder time in winning the war. And I doubt whether we could have terminated it at the period at which it ceased to go on.

"That influence proved what is possible to do by honest cooperation. Personally I want to see it. I don't want to see the old order of things under the new reconstruction. I hope that more value will be placed on labor; that sort of labor that is willing not only to work to give service to help build up the institutions of our country, but that labor that is willing to give its all in defense of the country.

TELLS OF WAGE CUT

"Mr. Belmont mentioned a moment ago about copper. The copper producers promised us they would not reduce wages, and the first thing they did, notwithstanding only two per cent production of copper has been going on since the armistice was signed, they reduced the pay of miners one dollar a day. That only amounts to something like ten per cent of the actual cost of the production of copper. But it was the only cost they could control and there was the same old idea of reducing wages in order to economize.

"Coal, coke, oil, machinery and transportation all are excessively high and can stand a reduction much better than can the wages of the working men and working women of this country. Every time there is a wage reduction it means reduction in efficiency as well as in the determination of the working man to give the best that is in him for his industry and the development of the country.

"You cannot develop a high standard of efficiency with a low standard of living among any class of people. So I am for full co-operation between capital and labor. We must not forget that we are standing on a volcano that may show itself in eruption through the influences of those who have come here and who would tear down the very foundations of our government. They do not care whether there is a free institution in this country; whether we have the Stars and Stripes; whether we have a Congress or Senate—it makes no difference to them.

"They want to have the right to go out and take, kill if necessary to take things they never had any part in producing. They have no respect for law and order. I say that unless the employers want to deal with that element, the standards of the American working man should be brought up. That will mean that industry will be brought up proportionately. The wage of the wage earner ought to be such that will properly provide for him and his family. There is no danger that a well returned profit will not go to the manufacturer.

"I do fear that the breach between the employers and the labor movement as we know it will widen so that the other fellow will come between and then substitute that insane idea of government they have in other countries today. That sort of government we don't want. We must unite to prevent it coming in. As a representative of labor I feel safe in saying we stand ready to cooperate with any movement that will stop its growth, even to the extent of driving it from our country entirely."

MR. BELMONT REPLIES

"I have an engagement and should have gone," said Major Belmont when Mr. Frayne finished, "but I remained because I see clearly I must have conveyed a wrong impression in what I said. I would like to correct it. It will take just a moment. I did not intend to convey the idea in speaking of labor as being a fundamental question, that I advocated the reduction of wages; but rather the study of the question,

because I think that capital not only will, but ought to do its share of concession.

"I believe in every word that has been said by the last speaker. I believe that I have always been considered to have stood for the principle of cooperation, but labor is really the fundamental question to be dealt with, admittedly, with fairness, for it is properly entitled to everything it can get.

"With that in view, however, the whole economic subject must be studied, because you cannot put labor upon an improved basis such as you hope for unless you have secured industry on a sound footing; that is to say, that capital shall have reasonable prosperity so as to be able to continue to be an employer.

"When I used the illustration of copper, it was to show that raw material is not to be interpreted in the sense of a product whose cost is nothing as far as labor is concerned. It was to illustrate that. You understand. I thought that I had conveyed a wrong impression, because I cannot and do not wish to be considered as advocating the reduction of wages as a preliminary to reconstruction."

MAINTAINED AFTER WAR

Dr. Williams here pointed out that after all great wars wages never had gone to the pre-war levels. "In the period after the Treaty of Berlin," he said, "England facilitated the organization of labor and I will ask Mr. Burton, (Pomeroy Burton, Director of the 'London Daily Mail',) in which direction England is facing today in the solution of this labor question."

"Make no mistake about the extent and seriousness of this worldwide industrial movement," said Mr. Burton. "It is not merely a show of strength on the part of labor against capital; not merely a matter of hours and wages. There underlies this great movement a determination to better the human conditions of labor throughout the world.

"That determination grows directly out of the war, for the war has made men think—men in all grades and conditions of life. The great nations are just now moved by a single impulse—they are uniting their strongest efforts to make war extremely difficult and unprofitable, if not impossible, and that means that their aim is a safe and better state of things for all the world's peoples.

"The work people of the world are the heart and soul and body of that movement. If they did not feel the call and have the vision and share in full measure the aspirations toward a better state of things, then that movement never would have been born, much less have gone so far toward realization. The people are content to leave to the higher statesmen the task of framing the international machinery to make war impossible, but they are by no means content to any longer leave to these statesmen the handling of those problems which rule the details of their work, their homes, their daily lives. In short, labor is out for a complete readjustment of its position.

DETERMINED IDEAS EXIST

"There is a determined feeling among the extremist leaders of many of the workmen's movements that the whole force of tradesunionism should be exerted now to gain for the workers shorter hours, more leisure, higher pay, greater freedom of opportunity, a larger share in the profits of capital and a larger life generally than they have enjoyed in the past, completely ignoring the vital fact that only upon an economically sound basis of production can the workers hope to prosper and progress toward the ends they have in view.

"On an economically sound basis of wages and production, there is work enough and more than enough for everybody. Until this shortage is made up, high prices are bound to continue. It is important to understand the relation of money in circulation and the supply of available goods. If the output of goods diminishes and the volume of money in circulation increases, then the buying power of money declines. That is the great secret of the high cost of living.

"During the war the supply of money has been greatly increased through vast issues of currency and securities based on government credit while the quantity of goods produced has been far below normal. There is today too much money and too few of the essential things people require; the balance is all wrong and this must be righted before the proper buying power of money can be restored.

"Higher wages and shorter hours can only be secured on the sound basis of cost reduction and increased volume of output. Otherwise, though wages, as we have seen during the war, may be doubled, the purchasing power of wages is bound to be still further reduced.

"Wages cannot be permanently raised without a corresponding rise in the standard of production; any wage that is not economically earned is unsound and reactive. Thorough public enlightenment, so that all men may understand these things, is clearly the most urgent need of the hour. All should be brought to a quick and full realization that *industrial warfare on any large scale now would paralyze trade and abruptly stop the process of restoration on which the welfare of all alike depends.*

NEED FOR PUBLICITY

"There is a great need in both England and the United States for a strongly directed governmental publicity bureau to make the people understand every phase of this whole industrial situation. Its work should be supplemented by intensive educational activity by all non-political public spirited bodies throughout the land. The public is in a receptive frame of mind. At heart the average man is reasonable and fair. He would welcome the facts, but up to now he has heard little other than false and misleading arguments so far as industrial conditions are concerned.

"The thing most needed today is the intelligent application of widespread, commonsense publicity, for after all sensible publicity is the one and only antidote to Bolshevism."

Emerson McMillin said:

"For twenty-five years I have had the idea in my head that it was possible for employer and employees to work together so that you could not draw the line between the two. I had hoped to live to see this done. I begin to have some grave doubts about living that long. It is absolutely possible to so organize industries that you could not draw the line between the employer and the workmen, but I am not going to tell you how I would go about it. There is not time.

"We have a case now in one of my own companies where the contract with labor expires in the coming April. The contract was made a year ago and is one that was perfectly satisfactory to the men, but in the end was not fair to them. The cost of living went up during the year. They lived up to their part of the contract, but we voluntarily increased pay in some instances. The contract expires April 1 and when our manager said to the men:

"'You know we are not making any money' (this is a public utility and that is enough to show you there is no money in it for the company) 'you know we are not making fixed charges to-day, so how can we increase wages April 1?'

"The men put up an argument we had not heard before, saying:

"'Within the last year you have been told by the oil men that you had to pay 50 per cent more and by the railways that you had to pay 25 per cent more for freight, and you paid the increase in each case. But when we ask you to increase wages 25 per cent, you say you can't do it. You can do it for everybody but the workman.'

"That is practically true of all industries. We expect the workman always to save us when adjusting profits and losses. They cannot always do it. I think we will have to increase the fares on our street railway and that question is now in the United States court.

"For about twenty-five or thirty years, with nearly all the companies I have controlled in a managerial way, we have made it the custom to pay our men the same rate of dividends and at the same time that we pay dividends to our stockholders. In the case of the stockholder we figure on the amount of stock he has, and with the workman on the money he earns. We have had one strike, I believe, in 35 years and this, too, with ten to fifteen companies in operation.

"It is therefore plain that to have that mode of dividing is an improvement over the ordinary way of compensating labor. But it is only a step; it is not near what ought to be done. It would take a long time of course, to bring ideal conditions about, but it must come. The workmen must share more of the responsibilities and the employers must share more of the profits with the workmen. It would not help workmen much to share profits with public utilities today, but they will not always be as bad as they are now."

H. E. Miles, of the commission, spoke of the need of bringing labor to the highest standards of efficiency through cooperation of the government and employers.

OTHER HONOR GUEST SPEAKS

A. Parker Nevin, the other guest of honor, was the final speaker. He said:

"As you listened to Mr. Easley recite the things the Commission should do in England, France and Italy, it must have occurred to you as to how we are going to spend our spare time. The problems he has outlined are men's jobs. As Mr. Bemis said, we will go over with open minds. It is a great honor to go in this capacity and a great privilege. My whole thought is that we must bring back something to this Association and to the workers and employers of America, some helpful and valuable contribution, not perhaps to any particular specific issue because there is no formula, but some contribution to what I might call the statesmanship of industry.

"If we can do that and shed some helpful light on the problems in this country, our mission will have been justified. I know from the personnel of your delegates that we will do the best we can and my conviction is that what we will bring back to you may be helpful to the great issues affecting industry. I have thought for a good many years that there is only one real burning issue in this country and that is the question of labor. And I use that synonymously almost, with industry—I mean the industrial problem.

"Certainly our country and its institutions and history justify us in believing that the American type of industry, its relation of employee to capital, has a helpful and hopeful future. And if, in this great complicated social, political, economic, industrial, financial problem, those of us you have selected to serve you abroad can in any way help you in your deliberations, we should be most honored and grateful for the opportunity. I thank you."

Those attending the luncheon, in addition to the honor guests and speakers were: James Bertram, Nicholas F. Brady, Timothy E. Byrnes, Mrs. Ralph M. Easley, Haley Fiske, H. H. S. Handy, T. Everett Harré, J. W. Jenks, Capt. Francis Mayer, William Fellowes Morgan, William Jay Schieffelin, Louis B. Schram, Mrs. Coffin Van Rensselaer, Miss Maude Wetmore, Louis A. Coolidge and Matthew Woll.

Shadow Bolsheviki and Others

(*Continued from page* 6)

cleared, moreover, that he told the truth. Asked concerning the reported killing of men without trial, Mr. Robins replied:

"I heard that, Senator Sterling, and in every instance where I investigated it, it proved to be false."

Mr. Robins said that in his judgment the Germans had absolutely nothing to do with the Red Guard, that the Bolsheviki were not officered by German officers, as many witnesses had stated. In fact, the Red Guard, said Mr. Robins, "was composed of men who knew how to die, and the one thing that I found in Russia the only ones who knew how to die were the Red Guards."

"I knew they killed some people," he admitted, casually.

"But you think they were rather moderate in this—is that your view?" asked Senator Nelson.

"At the risk of great misjudgment, may I say this," replied Mr. Robins, "that up to the time I left Russia the thing that was constantly in my mind, again and again, was the lack of vindictiveness, was the lack of actual destruction of life, under the circumstances. If it had been in America, if it had been in any other land I know of, where a mob had taken power like that and had the rifles back of them, I should have expected vastly more of destruction."

HOW DID MR. ROBINS "SHARE" IN THE "TREMENDOUS HOUR?"

Mr. Robins, by describing firing that was going on, admitted, however, that everything was not as blissfully tranquil as he previously implied. This background of peril may have been romantically necessary, however, for the staging of the melodramatic piece in which Mr. Robins played the heroic role. Mr. Robins had asked members of his Red Cross mission if they would voluntarily stay with him "to play this hand through."

"They stayed," said he, in drawing a descriptive word picture which reminds one of the thrilling episodes of Edmund Dantes' career in the "The Count of Monte Cristo."

"The hour came when it was very perilous in the opinion of many," orated Mr. Robins. "I remember one time when it looked as if we were through with the play quickly. I said to them, coming into the room where they were, when the machine gun fire was going on in the streets: 'I hope we will all get killed.' And they looked at me as if I was crazy. I said: "I mean it. Fellows, we have had the greatest privilege ever given, almost, to men, to see this tremendous hour, to share in it, and not only to share in it but to deal with it; not to believe the lies and slanders and stuff, and not to be buncoed by it, either, but to do our level best day by day. If we ever get out of Russia alive and go to living an ordinary humdrum life in America, it will be so infernal dull we will wish we had been killed.' "

In an eloquent tribute to his precious interpreter, Alexander Gumberg, brother of Bolshevik Minister of Posts and Telegraphs "Zorin", Mr. Robins thrillingly recounted that on a certain occasion "machine gun shots went into the wall above us and all around us."

Despite their almost peaceful revolution—a revolution less destructive than if it had occurred in America!—despite all the felicities enjoyed by the peasants, Mr. Robins undertook emphatically to deny that he favored the unpopular Bolshevik cause.

Of course, having once established an alibi, having impressed folk with a stand of absolute non-partisanship, of a lofty intellectual detachment from the prejudices and passions of the crowd, of an exalted desire only to be fair and to expound the truth, any special pleading becomes therefore all the stronger. The defense of any accused cause has the greater weight.

It could not be said that Mr. Robins is not a tactician. He admitted he knows something of politics. Moreover, since his return to America Mr. Robins, fully appreciating the publicity value of a certain line of conduct, probably also as fully realized that Bolshevism here isn't popular, that it isn't altogether fashionable. So, for one if not another reason, if, for instance, Mr. Robins had political ambitions, if he was looking forward to a high place in the councils of one of the great political parties, what could have been more opportune than a public repudiation of the principles of Bolshevism? Mr. Robins' condemnation of the Bolsheviki, with whom he was so friendly, and whom he absolved, so far as he knew, of crime and murder, is worth reproducing as it shows that in one respect at least he was not in total disagreement with the previous witnesses before the Overman Committee.

"Is there a menace in Russian Bolshevism?" said Mr. Robins. "A fundamental menace, gentlemen, in my judgment—a menace so much more far-reaching, going so much deeper than has sometimes been suggested by its bitterest opponents, that I think it well that we should take high ground and really know the thing we deal with. For the first time in the history of the human race there has been a definite economic revolution, a Socialist class, materialistic, social control by force.

"I regard the Soviet program as economically impossible and morally wrong. I regard it as carrying formulas beyond the range that formulas will produce.

"If you get the menace of the Russian revolution on the basis of German agents, theft and murder, and all that sort of thing, you get a wholly unsound view of the actual scope and power and menace that there is in it. I believe that its decree of workmen's control will destroy production in Russia. I believe that its class theory makes in the end for the class terror and the destruction of life and people without regard to right. I believe that its materialist program challenges the Christian conscience of the world.

"They believe in the use of force, and one of the reasons why a people who believe in settling questions by the ballot are opposed to the Bolsheviki is because the Bolsheviki believe in force."

"They would be willing to send troops into England or France or into our country for the purpose of aiding—" asked Senator King.

"For the purpose of aiding a revolutionary group in any of those countries," supplemented Mr. Robins.

BOLSHEVISM WANTED BY MAJORITY!

To an analytical reader of Mr. Robins' testimony it is difficult to reconcile his viewpoint as to the dangers of Bolshevism and the advantages to be gained by giving economic aid to a movement that aimed to destroy its very benefactor. In one breath Mr. Robins implied that in Bolshevism the Russian people got what they wanted, and in another that they would be cured of Bolshevism by giving them food—which, by the way, in another breath, Mr. Robins said they did not need.

"Do you not believe that if that system of government should prevail in Russia, with their gospel and their creed and mode of operation, that they would attempt to spread it over the world—to internationalize it?" asked Senator Nelson.

"Largely, I think they would," agreed Mr. Robins.

"Would you not regard that as a menace to other civilizations, to our country and to England and to other civilized countries? Would you not regard it as a menace?"

"I tried to make plain yesterday that I regard the formulas, the challenge, of the Bolshevik program as the first challenge and menace to all political democratic governments of the world."

"Now then," said Senator Nelson, "why do you want to nurse it in Russia?"

"I am not wanting to nurse it in Russia," replied the daily visitor to Lenine and Trotzky. "I would like to tell the truth about it."

Mr. Robins continued:

"I am perfectly willing that the Russian people should have the kind of government that the majority of the Russian people want, whether it suits me or whether it is in accord with my principles."

"I thought so," said Senator Nelson, "and your idea is that the Russian people, if they want a Bolshevik government full-fledged—"

"Yes—"

"As it is today, ought to have it?"

Said "the mouthpiece of America" to the Bolsheviki, the man who "knew more about Russia than any of the Allied representatives":

"Absolutely."

"So that, boiled down, your mission here is, your first intention is, that the Russian people, if they want a Bolshevik government ought to have it. . . And your next point is, you believe that the Russian people want that kind of a government?"

"At the time I left Russia I believed that the majority of the people were for that government."

"And you consider it one of the greatest menaces to government and law and order and civilization?"

"Absolutely, Senator."

SENATORS SCORE ROBINS

"And yet you want to see it work its way out in Russia," commented Senator Sterling. "Just let me add this—instead of excusing the acts of the government as your testimony seems to do, would it not be better, and would it not be more in accord with patriotism and with good government and real love of order and humanity, to discourage it rather than to say: 'Here, this is a government which has its foundation in certain great abuses; let it go on, just let it go on,' knowing it would be a menace to the rest of the world by its establishment in Russia. It seems to me there is an inconsistency in the position you take—first condemning it and treating it as a menace and so regarding it, and then trying to find excuses for its existence."

"You leave the impression upon my mind," said Senator Nelson, "from your whole statement, that your mission here is to have our government keep its hands off from the Bolsheviki over there and let them have their own sweet will about everything. Is not that what you are here for, and what your mission is?"

"I have not any definite mission of that sort," protested Mr. Robins.

"Is not that the drift of your evidence and of your conduct?" asked Senator Nelson.

"You can judge the drift of it," retorted Mr. Robins. "I am against the use of American arms and American men in Russia against the Russian revolutionary government on a false judgment of the facts in the case."

"It seems to me," dryly remarked Senator Sterling, "that you either do not know the facts in regard to some atrocities of the Bolshevist government, or else you are diligent, a little, in trying to excuse it."

"I understood you to think that Bolshevism is not only a menace to this country, but a menace to the world?" said Senator Overman a little later.

"I do, sir. I think it is the first challenge of the age to our order."

Asked whether he would "be in favor of this country recognizing a government that is such a menace to the world," Mr. Robins evaded a direct answer by saying the thing he would be opposed to "was to blind ourselves to the actual

acts in Russia, not to deal with the actual facts, not to inquire into them, but to prejudge the case and deal with it on a basis that does not exist."

Did Mr. Raymond Robins mean to imply that we had blinded ourselves to the actual facts in Russia? That we had prejudiced the case of the Bolsheviki? That we had dealt with it on a basis that did not exist?

ROBINS SAYS "OLD GRANDMOTHER" WAS MOVED BY "PERSONAL PIQUE!"

Mr. Robins, queried about statements made to the committee, avoided a direct answer by asserting that he had not read this testimony.

"I submit that there is more behind Soviet rule and the revolutionary government," the witness contested, "than has been suggested in a great deal of the testimony before the committee."

How was Mr. Robins in a position to know this if he had not read the "testimony before the committee"?

Mr. Robins was asked if he thought the committee could have had a better witness than Catherine Breshkovskaya.

"I would say that one of the most pathetic things in the world to my mind at this moment," declared Mr. Robins, "is that this splendid old woman, with her great record of revolutionary service, by reason of personal pique, by reason of a very terrible situation and discouragement, had turned so that she can unconsciously be used against the revolutionary movement in her own land that she helped to create, which seems to me to be the fact of the hour."

If Madam Breshkovskaya's repudiation of a revolution which aimed—as he admitted—at the destruction of every civilized government in the world, was due to "personal pique," to what was Mr. Robins' own repudiation of that very thing due? Did Mr. Robins reproach the venerable grandmother for a stand which, certainly for reasons known to himself, he himself personally assumed to take? Why, if he could deplore Bolshevism, was it "pathetic" for "Babushka" to do so?

At this point Senator Overman referred to the testimony of Dr. Huntington, Rev. Dr. Simons, American officials, officers of the National City Bank, officers of the Harvester Company, all of whom, asserted Senator Overman, having come from Russia, had corroborated Madam Breshkovsky as to the "starvation and red-handed murder" that prevailed under the Bolsheviki in Russia

"Are they to be believed?" asked Senator Overman.

"I have not read the testimony, Senator," hedged Mr. Robins.

Mr. Robins was under oath. Only a few moments before he had asserted: "I submit there is more behind Soviet rule and the revolutionary government than has been suggested in a great deal of the testimony before the committee." If Mr. Robins had not read the testimony, how was he in a position to assume that that testimony was inadequate?

URGED U. S. SUPPORT OF GANG OUT TO DESTROY OUR OWN GOVERNMENT

"As I understand," asked Major Humes, "the avowed purpose of the Bolsheviki is not only to rule Russia, but to overthrow by revolutionary means this government as well as all other governments?"

"Every government in the world."

"And do I not understand you to favor the formal recognition of the Bolshevik government?"

"Correct," admitted the extraordinary Mr. Robins.

"You favor economic support?"

"I do."

"In other words," continued Major Humes, "through economic support you would sanction and encourage and support a further development and strengthening of a government whose avowed purpose is the overthrow of our government. Is that correct?"

Major Humes went on:

"Is it not a fact that the economic strengthening of the Bolshevik government, the building up of that government, the furnishing it with more raw materials, with more material things, would make it possible for them, financially and otherwise, to carry on a stronger propaganda and a stronger agitation and a stronger warfare against our government than they could carry on if they did not have the economic support that you favor?"

Mr. Robins said politely that he did not agree with the question at all and that he did not think it a statement of sound fact. Then it was he gave utterance to what the world so long awaited. Said he: *"The best answer to Bolshevism is food."*

Mr. Robins had analyzed the Soviet program as doing away altogether with property, a program under which no peasant could call a foot of land his own, yet which, he staunchly asserted, satisfied 93 per cent. of Russia. He declared that Lenine and Trotzky ruled by reason of the support of the overwhelming majority of Russians; that the Russians wanted their system and were satisfied with it. He gave this as his own opinion, based on first-hand—or as he liked to call it "outdoor"—knowledge, of Russia and the revolution. Despite the glowing satisfaction of the Russians with their lot, Mr. Robins, who is said to be currying favor with Republican party leaders, in reply to Major Humes came forward with this excuse for his having championed an economic alliance on part of the American government with the murderous Bolsheviki:

PROPERTY INTEREST WOULD BREAK BOLSHEVISM!

"I believe that the reorganization of Russian life economically, the beginning to give substantial hope here and there, *beginning to recreate the property interest, and the stake in life, would begin at once to disorganize Bolshevik* power and the adherence to the formulas. Wherever there was a little situation, an oasis as it were, separated from the general situation, where they were getting along fairly well, and people BEGAN TO HAVE A PROPERTY INTEREST IN LIFE, a hope in life, the formulas had less power."

It was at this juncture that Major Humes happily recalled Mr. Robins' previous testimony describing enthusiastically the land distribution and the popularity and success of the measure. Mr. Robins had said:

"Senators, they have cultivated the soil for a year, for one season, and they have eaten the fruit of their own labors, from land that they now call their own; that is, from land which they had the right to cultivate without paying any landlord rent."

Mr. Robins, from the advantage of his "outdoor" experience, thus testified to the success of the land distribution, to the success of the crops, to the enjoyment by the peasants of "the fruit of their own labors." Previously, telling of his earlier observations in Russia, he had said: "There was ample food in Russia to feed the people; . . the whole question was one of assembling and distribution, from surface to centre, from centre to circumference; that task was greatly interfered with by the failure of the general economic and transportation system in Russia to function under revolutionary control."

CONSISTENCY IN CONTRADICTION

"You have kept track of Russia since you left?" asked Senator Nelson, sometime later. "Do you not think that if they had the means of distribution by boat, water and rail, that there would be enough bread, enough wheat, in the whole country to supply themselves with, if they could distribute it and divide it up?"

"Surely, Senator," responded Mr. Robins.

"There is no need of importing anything there?" continued Senator Nelson. "What they need is transportation?"

"Transportation and manufactured products," acquiesced Mr. Robins. Mr. Robins averred that the Allied troops sent into Siberia had prevented the Russians from getting anything from that section.

However, before Allied intervention and while Mr. Robins was himself in Russia, at the very time that, according to his own testimony, ample food was available, he was urging that the United States give material aid to the Russians.

And when he was forced to face the issue, to explain his activities, to explain his opposition to intervention, he came back weakly with the plea and excuse:

"The best answer to Bolshevism is food."

"On the assumption that there is this need for food, that conclusion might necessarily follow," pertinently commented Major Humes upon this assertion. "But you a few moments ago made the statement that the peasants, who represent some 84 per cent of the people of Russia, by reason of the productiveness of the soil and their having acquired ownership of the land, had enjoyed the fruits of a new era during the last year, and that therefore this want and this starvation that you refer to did not exist. . . . Your statement today has been that 84 per cent of the people are living in a new era; that they are satisfied with the fruits of their first year of possession of the land. If that is true, and that degree of contentment and joy exists among 84 per cent of the people, I do not see that the same necessity for the economic answer to Bolshevism presents itself."

"Well, I am sorry that I have made myself so unintelligible to you," lamely replied the gentleman who knew more about Russia than any other Allied representative!

From Mr. Robins' statements, it was clearly to be implied that the signing of the Brest-Litovsk treaty and the surrender of Russia to Germany was due to the failure of the American and Allied governments to respond to the Lenine-Trotzky overtures.

Of course, the word of Lenine and Trotzky was to be taken at its face value. Despite the fact—as Lenine himself admitted in a statement quoted by Mr. Robins—that the Bolsheviki intended ultimately to destroy the Government of the United States, it was to be taken for granted that in return for material help the Bolshevik would have co-operated with the Allies in fighting Germany.

To some people there may seem something refreshingly naive about Mr. Raymond Robins' mind. But then, unlike the majority of folk who witnessed Bolshevik rule in Russia, Mr. Robins apparently had absolute faith in the high character and integrity of Messrs. Lenine and Trotzky. For one thing Mr. Robins refused to believe that Lenine and Trotzky were conscious German agents. "Lenine," said Mr. Robins, "is patient, steady, proven." Trotzky, in Mr. Robins' words, is "a thoroughly educated man."

"90 PER CENT OF RUSSIA REVOLUTIONARY"

Prodded by Senator Overman as to whether he would be in favor of America recognizing a government which he had admitted was a menace to the world, Mr. Robins answered:

"As I understand that the question of recognition of a government does not rest upon the character of the government. If the government is really the government of a people, that is all that any foreign government has a right to inquire into."

In other words, despite his monotonous urging that we ascertain the facts and learn the

truth, he was of the opinion that the American government had no right to question the Bolshevik government and that as it represented the people of Russia the American government should have recognized this autocracy of bloody-handed murderers and plunderers.

Mr. Robins stoutly maintained that the great majority of the Russian people were back of Bolshevism. He said:

"Ninety per cent of the Russian people, the proletariat, are educated in the formulas of revolutionary ideas. They are in the cities. Forty per cent of that ninety per cent goes back twice a year to the villages, at planting time and harvest time. They are the persons who have been away, who have had experience. They go back to the village, . . . and their talk is of the revolution, of the good time that is coming. Their talk is in the terms of the formula, and for that reason there was this widespread agreement in the formula through Russian life; the revolutionary formula and it has a real power and a tremendous significance at this hour, at this time, as it has in our country and the world."

LENINE AND TROTZKY RULE BY WILL OF MAJORITY!

"There is this Soviet form which the Russian mass, the peasants and workmen, have adopted as a framework," Mr. Robins continued. "'All power to the Soviet,' was the cry on which Lenine and Trotzky took possession of the government in Russia. . . They really, discreetly —or rather cunningly—with real political judgment saw that the people liked their self-governing Soviets. . . I think we found, in course of time, in Russia that there was this definite framework that had grown up out of their historic past, that the clever political minds of the Bolshevik leaders fell upon as the way to get into power; so I think there is really something there in structure as well as the actual Bolshevik domination."

"Is there any way possible for the people of Russia to get rid of Lenine and Trotzky without a revolution?" asked Senator Overman.

"I should say so, absolutely, sir. I should say that the moment any considerable mass in Russia wants to get rid of Lenine and Trotzky they can do it," replied Mr. Robins.

In other words, according to Mr. Robins, Lenine and Trotzky rule by will of the majority and not by Red Guard terrorism, and in the Soviet system, controlled by the Bolshevik autocrats, the majority of Russians have what they want.

"The reason that their power has held," pursued Mr. Robins, speaking of Lenine and Trotzky, "has been that for the time they expressed as between the old experience of the past and the new experience, a larger expectation of hope and opportunity for the mass of the peasants and workers of Russia than they had before, and as long as that expectation holds they will support Lenine."

"I gather from your whole statement," said Senator Nelson, "that you are rather of the opinion that Lenine and Trotzky are the men of the hour for the Russian people at this time?"

"The question you asked, Senator," replied Mr. Robins, "might involve the assumption that I thought that they were right in their program. I do not think so. If what you inquired was—did I think that they represented the revolutionary mind in Russia and were the best interpreters of that revolutionary class conscience, socialistic revolutionary, I can say yes, absolutely, that they are the incarnation of it."

Major Humes asked Colonel Robins if the slogan of the Bolshevik government, the appeal to class, was not the appeal of 5 to 10 per cent. only, whether "the rest of the people that acquiesce in the Bolshevik rule are acquiescing simply because of the terrorism, and because of fear?"

To which Mr. Robins firmly replied:

"I do not think that any of the supposititious statements of fact in that series of questions are true."

According to Mr. Robins' assertions Lenine and Trotzky represented 93 per cent. of the population of Russia. However, during the cross examination, the following was brought out:

5 OR 6 OF 84 PERCENT ONLY CONSCIOUSLY REVOLUTIONARIES

"You have, on repeated occasions, referred to the 7 per cent. and the 93 per cent," asked Major Humes. "Are we to understand by that that it is your impression that the Bolsheviki are 93 per cent. of the people of Russia, or is the line between the 7 per cent. and the 93 per cent. simply a line between the great mass of the people and those who were connected with the former government of the Czar's regime?

"Rather the later, Mr. Humes, but with this effort to clarify. Men have said to me: 'Robins, you do not pretend to say for a moment that the mass of the peasants care about those formulas or are for them—that they have any real articulation in mind about them?' I said: 'No, I would not say that. I would say that of the peasant amount of 84 per cent. there was not more than 5 or 6 per cent. that were conscious at all of the formulas. Those are the leaders of the masses. What I would mean is this—that in Russia there was practically 93 per cent. who would either work with the Bolsheviki and their program or would not work against it; that they were inert when they were not actively with it, and that the leaders believed in the formula and carried the mass of the people with them. . . . About 5 or 6 per cent. of the 84 per cent. who are peasants were conscious, with the formula in their minds, and that 5 per cent. were the leaders of the groups in the Soviets who carried the masses with them. Of the 9 per cent. of the workers, there are perhaps 90 per cent. of that 9 per cent. who are formula men, that are conscious."

Elsewhere in his testimony, Mr. Robins, as before quoted, declared:

"Ninety per cent. of the Russian people, the proletariat, are educated in the formulas of revolutionary ideas."

If only 5 or 6 per cent. of the 84 per cent. of the peasants, and 90 per cent. of the 9 per cent. of workers, consciously stood for the Soviet formula, as Mr. Robins declared, how was it possible, as he elsewhere stated under oath, for Lenine and Trotzky to be "the incarnation" and "best interpreters" of the Russian revolutionary class conscience?

If only 5 or 6 per cent. of the 84 per cent. of the peasants were conscious of the formula of land distribution, of the whole Soviet scheme, how was it possible for Mr. Robins honestly to declare that Lenine and Trotzky held power by the will of the majority and that they "expressed" the expectation of "the mass of peasants"?

If only 5 or 6 per cent. were conscious, and if these were the leaders "who carried the mass with them," how could Mr. Robins decently assume to present the two archleaders, the two brutish and bloody despots at the head of that reign of crime and chaos as representative of the majority of the Russian people?

Ambassador Francis, in his testimony before the Senate Committee, told a good deal about Mr. Robins' activities. Mr. Francis stated that the Bolshevik looked upon Robins as their friend, and told of Mr. Robins' efforts to secure the recognition of the Bolshevik government. On May 15, 1917, at the railroad station at Vologda, on his way out of Russia, Mr. Robins, said Ambassador Francis, "told an Associated Press man there, and a man named Groves, one of my employees, that if he could get one hour with the President he could persuade the President to recognize the Soviet government." According to Ambassador Francis, Mr. Robins was said to have acted as a courier from the Bolshevik government and to have carried communications addressed to the American government over the head of the Ambassador. Whether these were ever presented or not, Mr. Francis did not know.

Mr. Robins, in the course of his testimony, had considerable to say about the appalling atrocities committed by the Czecho-Slovak troops in Russia. Mr. Robins complained: "I find that the atrocities of the Bolsheviki, terrible and wrong and to be opposed by all intelligent and honest men, create more excitement and interest than the atrocities of the Czecho-Slovaks, when they take Bolshevik villages and stand up and shoot the Bolsheviki without trial."

Did Colonel Raymond Robins, out of his telescopic vision, actually witness Bolsheviki villages being taken and Bolsheviki shot without trial? He has testified that he found most of the charges against the Bolsheviki to be false. In fact, if the Bolsheviki had committed atrocities Mr. Raymond Robins, according to his own words, failed to see them.

THE LIE GIVEN TO ROBINS

Mr. Raymond Robins had testified that the movement of Czecho-Slovak troops on their way through Russia had not been interfered with by the Trotzky and Lenine government at the instigation of Germany. In this Ambassador Francis said he thought Mr. Robins was mistaken. Colonel Hurban, who testified before the Committee, was present at the signing of the treaty between the Czecho-Slovak troops and the Bolsheviki. The Bolsheviki, according to both Ambassador Francis and Colonel Hurban, broke the treaty, took the arms from the Czecho-Slovaks and attacked them.

Colonel Raymond Robins' charges against the Czecho-Slovak troops are utterly refuted by Captain Selby James Day and Captain Clifford S. Wheeler, two Americans who have recently returned to this country from service with the Czecho-Slovak army in Siberia. In the *New York Times*, of March 16, Captain Day said of the alleged Czecho-Slovak atrocities:

"It is absolutely untrue and, in my mind, the work of propagandists. Let us lay these atrocities at the hands of the Bolsheviki, for I myself have seen recaptured Czecho-Slovak prisoners of the Bolsheviki who have returned to us in indescribable condition."

Madam Breshkovskaya—who, said Raymond Robins, had turned against the Revolution because of pique—was in Tumen, occupied by the Bolsheviki, when the Czecho-Slovaks were approaching that trading center. "In Tumen," said the "old Grandmother," "there was a Bolshevist inspector of the prison, a ferocious monster, who tortured the prisoners arrested by the Bolsheviki so incessantly that some went absolutely mad, some died from their tortures, and some were buried under the stones and rocks before they were dead."

Finally the Czecho-Slovaks arrived. "It was a thanksgiving day," declared Babushka. "While Colonel Robins tells his stories about the Czecho-Slovak 'atrocities,' I have never heard any complaint against them, never a derogatory remark, even by those who envied their valor. . . It is natural that such excellent people, such examples of bravery and honor, are hated by the Bolsheviki and their supporters.

"I will say that if a man, called as a witness, can slander a whole people and a whole army, known well to all the Russian people as the model of honor and humanity, what credit can be given to all the assertions made by him at second hand, or even, as he says, from his personal knowledge?"

Harvester Industrial Council Plan

IANAGEMENT OFFERS EMPLOYEES EQUAL VOICE AND VOTE IN MATTERS OF MUTUAL INTEREST—TO PROMOTE CONTENTMENT AND WELL BEING OF ALL

THE plan of the International Harvester Company for an Industrial Council, given in full below, which was voted upon by its thirty thousand employes on Vednesday, March 12, 1919, was adopted by a iajority of the workers at seventeen plants in ie United States and Canada. While it was re-ected in three others, soon after bulletins were osted giving the results, employees circulated etitions for a re-submission which, under the ompany's announcement, could only occur pon request by them. In submitting the Coun-il proposition to the employees, the company's resident, Harold F. McCormick, wrote:

Chicago, Ill., March 10, 1919.

To the Employees:—The directors and officers of he company have for some time been working out a lan to establish closer relations between the em-loyees and the management. To this end they now ffer the following Harvester Industrial Council plan or the consideration of the employees, hoping that it ay meet with their approval.

The plan provides for a "Works Council" in which epresentatives elected by the employees shall have qual voice and vote with the management in the onsideration of matters of mutual interest.

It guarantees to every employee the right to pre-ent any suggestion, request, or complaint and to ave it promptly considered and fairly decided. Pro-ision is also made for impartial arbitration.

Should this plan be adopted by vote of the em-loyees, the officers pledge their best efforts to carry t out in letter and spirit.

It is my hope and belief that the plan, if adopted, ill materially strengthen our relations in the work ve have in common, and will make for the greater ontentment and well-being of us all.

Article I. Purpose: The Employees and the Man-gement of the International Harvester Company and ts subsidiary companies undertake by the adoption f this plan of an Industrial Council to establish hese relations upon a definite and durable basis of nutual understanding and confidence.

To this end the Employees and the Management hall have equal representation in the consideration f all questions of policy relating to working condi-ions, health, safety, hours of labor, wages, recreation, ducation, and other similar matters of mutual in terest.

Article II. Works Council: As the principal neans of carrying this plan into effect there shall be rganized, at each Works adopting this Plan, a Works Council composed of Representatives of the Employees, and Representatives of the Management. The Employee Representatives shall be elected by the Employees. The Management Representatives hall be appointed by the management, and shall not exceed the Employee Representatives in number. Both hall at all times have an equal voice and voting power in considering matters coming before the Council.

Through these Councils any employee or group of employees, or the management, may at any time present suggestions, requests or complaints with the certainty of a full and fair hearing. Matters which cannot be thus disposed of may, by mutual consent, be submitted to impartial arbitration as hereinafter provided.

Article III. Department of Industrial Relations: To aid in carrying out this plan the Company has established a Department of Industrial Relations which is charged with the duty of giving special attention to all matters pertaining to labor policies and the well-being of the employees.

Article IV. Voting Divisions: The basis of repre-sentation shall generally be one Employee Repre-sentative for each two hundred to three hundred em-ployees, but in no case shall there be less than five Employee Representatives in the Works Council.

In order that the different departments and crafts may be fairly represented, each Works shall be di-vided into Voting Divisions, and each Division shall be assigned its proper number of Representatives, based upon the average number of persons employed therein during the month of December preceding the election.

The Works Council may change the Voting Di-visions whenever necessary to secure complete and fair representation.

Article V. Qualifications of Employee Representa-tives: 1. To be eligible for nomination as Em-ployee Representative from any Voting Division, the Employee must be employed therein.

2. Foremen, assistant foremen, and other em-ployees having the power of employment or dis-charge, shall not be eligible for nomination.

3. Only employees who are citizens of the United States, twenty-one years old or over, and have been continuously in the Works' service for one year im-mediately prior to nomination, as shown on the records of the Employment Department, shall be eligible for nomination as Employee Representatives.

Article VI. Nomination and Election of Employee Representatives: 1. Nomination and election of Employee Representatives shall be by secret ballot. The first nomination and election shall be held as soon as practicable after the adoption of this plan, at which time the full number of Employee Repre-sentatives shall be elected.

2. At the first meeting of the Works Council the Employee Representatives shall be divided by lot into two classes, one-half with terms expiring on January 1, 1920, and the other half with terms ex-piring on July 1, 1920. Thereafter the election of Em-ployee Representatives of the first class shall be held in December and of the second class in June. Except as above provided, all Employee Representatives shall hold office for one year and until their successors are duly elected.

3. Notice of the time appointed for nominations and elections shall be given by bulletins posted pub-licly in the Works at least two days before the date set for the nominating ballot.

4. All employees, both men and women, shall be entitled to vote, except foremen, assistant foremen, and other employees having the power of employ-ment or discharge.

5. Nominations shall be made in the following manner: Not more than four days before the date fixed for the election a nominating vote shall be taken. A blank ballot stating the number of Repre-sentatives to be nominated from his Voting Division will be offered to each employee present at work on the date of the nomination. including all workers on the night turn, if any.

6. On this ballot the employee will write (or he may have a fellow employee write for him) the name of the person he desires to nominate. If his Voting Division is to elect one Representative then one name shall be written on the ballot, if his Voting Division is to elect two Representatives then two names, and so on.

7. Any ballot containing more names than the number of Representatives to be elected from that Voting Division shall not be counted.

8. Employees will deposit their ballots in a locked box carried by a teller representing the employees, who shall be accompanied by a timekeeper.

9. When all who desire have voted, the timekeeper and two employee watchers shall open the ballot box and count and record the votes, in the presence of the Works Auditor, or person designated by him.

10. In Voting Divisions from which *one* Represen-tative is to be elected, the *two* persons receiving the highest number of votes shall be declared nominated. If any Voting Division is to elect *two* Representatives. then the *four* persons receiving the highest number of votes shall be declared nominated, and so on.

11. If any person nominated is disqualified under the provisions of Article V, then the properly quali-fied candidate receiving the next highest number of votes shall be declared the nominee.

12. The results of the balloting and the names of the nominees shall be posted in the Works as soon as the votes have been counted and the nomina-tions declared.

13. Not more than four days after the nomina-tions are posted, the election by secret ballot shall be held in the same manner as for nominations, ex-cept that at the election only the names of the per-sons who have been duly nominated shall appear on the ballots, and these persons alone can be voted for.

14. The name of the nominee receiving the highest number of votes shall be placed first upon the election ballot; the name of the nominee receiving the next highest number shall be placed next on the election ballot, and so on.

15. At the election the candidate or candidates receiving the highest number of votes in his or their Voting Division shall be declared elected members of the Works Council.

Article VII. Appointment of Management Repre-sentatives: Upon the election of the Employee Representatives the management will announce the appointment of the Management Representatives in the Works Council, whose number shall in no case exceed the number of elected Employee Representa-tives.

Article VIII. Vacancies in the Works Council: 1. If any Employee Representative leaves the ser-vice of the Works, or becomes ineligible for any of the reasons stated in V, or is recalled, as pro-vided in Article IX, or is absent from more than four consecutive meetings of the Works Council without such absence being excused by the Council, his membership therein shall immediately cease.

2. All vacancies among the Employee Representa-tives shall be promptly filled by special nomination and election, conducted under the direction of the Works Council in the same manner as regular nomin-ations and elections. Vacancies among the Manage-ment Representatives shall be filled by appointment by the Management.

Article IX. Recall of Employee Representatives: 1. If the services of any Employee Representative become unsatisfactory to the Employees of the Voting Division from which he was elected, they may recall him in the manner herein provided.

2. Whenever a petition is filed with the Chairman of the Works Council, signed by not less than one-third of the Employees of a Voting Division, asking for the recall of their Representative, a special elec-tion by secret ballot shall be held in that Voting Division under the direction of the Works Council, to decide whether such Representative shall be re-called or continued in office.

3. If at such election a majority of the employees in the Voting Division vote in favor of recalling their Representative, then his term of office shall immedi-ately cease; otherwise he shall continue in office.

4. Any vacancy so created shall be immediately filled by a special election, as provided in Article VIII.

Article X. Organization and Meetings of the Works Council: 1. The Manager of the Department of Industrial Relations or someone designated by him, shall act as Chairman of the Works Council. A Secretary shall be appointed by the Superintendent of the Works. Neither the Chairman nor Secretary shall have a vote.

2. A majority of the Employee Representatives, together with a majority of the Management Repre-sentatives, shall constitute a quorum, and no busi-ness shall be transacted at any meeting where less than a quorum is present.

3. The Works Council may appoint such sub-com-mittees as it deems desirable for efficient conduct of its business. On all such sub-committees both the employees and the management shall be represented, and each group of Representatives shall have equal voting power.

4. The Works Council shall hold regular monthly meetings at times fixed by the Council. Special meetings may be called on three days' written notice by the Chairman, Secretary, or any three members of the Council. Sub-committees shall meet whenever necessary.

5. The Company shall provide at its expense suit-able places for meetings of the Works Council and its sub-committees and the Employee Representatives thereon.

6. Employees serving as members of the Works Council shall receive their regular pay from the Company during such absence from work as this service actually requires, except that if the Em-ployee Representatives so desire, they shall be at liberty to arrange for compensation to be paid by pro rata assessment among the employees.

7. Employees attending any meeting at the re-quest of the Works Council or any sub-committee, shall receive their regular pay from the Company for such time as they are actually and necessarily absent from work on this account.

8. The Works Council may prepare and distribute to the employees reports of its proceedings, and the expense thereof shall be borne by the Company.

Article XI. Duties and Powers of the Works Council: 1. The Works Council may consider and make recommendations on all questions relating to working conditions, protection of health, safety, wages, hours of labor, recreation, education, and other similar matters of mutual interest to the em-ployees and the management. It shall afford full opportunity for the presentation and discussion of these matters.

2. The Works Council may on its own motion investigate matters of mutual interest and make recommendations thereon to the Works Management, and the management also may refer matters to the Works Council for investigation and report.

3. The Works Council may confer with the Su-perintendent or other person designated by him in regard to all matters of mutual interest, and shall receive from the management regular reports in re-

gard to accident prevention, sanitation, restaurants, medical service, employment, educational programs and recreational activities, including information as to the cost, efficiency and results obtained.

4. The Works Council shall be concerned solely with shaping the policies of the Company relating to the matters heretofore mentioned. When the policy of the Company as to any of these matters has been settled, its execution shall remain with the management, but the manner of that execution may at any time be a subject for the consideration of the Works Council.

Article XII. Procedure of Works Councils: 1. Employees desiring to bring any matters before the Works Council may present these to the Secretary of the Council either in person or through their Representatives. It shall be the Secretary's duty first to ascertain whether the matter has been properly presented through the regular channels to the Superintendent, and if not he shall see that this is promptly done.

2. If the matter is not satisfactorily disposed of in this manner, the Secretary shall submit a written statement of the matter to each member of the Works Council at least three days before the next regular meeting.

3. Any employee or group of employees thus referring a matter to the Works Council shall have an opportunity to appear before it and present the case. Any such group of employees shall select not more than three spokesmen from their own number to appear before the Council.

4. The Works Council may call any employee before it to give information regarding any matter under consideration. The Works Council, or any sub-committees apponted by it for that purpose, may go in a body to any part of the plant to make investigations.

5. After complete investigation and full discussion of any matter under consideration by the Works Council, the Chairman shall call for a vote which shall be secret, unless otherwise ordered by the Council. The Employee Representatives and the Management Representatives shall vote separately. The vote of a majority of the Employee Representatives shall be taken as the vote of all and recorded as their unit vote. Similarly, the vote of a majority of the Management Representatives shall be taken as the vote of all and recorded as their unit vote.

6. Both the Employee Representatives and the Management Representatives shall have the right to withdraw temporarily from any meeting of the Works Council for private discussion of any matter under consideration.

7. When the Works Council reaches an agreement on any matter, its recommendation shall be referred to the Superintendent for execution, except that if the Superintendent considers it of such importance as to require the attention of the general officers, he shall immediately refer it to the President of the International Harvester Company, who may either approve the recommendation of the Works Council and order its immediate execution by the Superintendent, or proceed with further consideration of the matter in accordance with Article XIII.

8. In case of a tie vote in the Works Council, it shall be in order to reopen the discussion, to offer a substitute or compromise recommendation, on which the votes shall be taken in the same manner as above provided.

Article XIII. Reference to the President: 1. If after further consideration, the vote in the Works Council remains a tie, then the matter shall, at the request of either the Employee Representatives or the Management Representatives, be referred to the President of the International Harvester Company.

2. The President, or his specially appointed representative, may confer with the Works Council as a whole, or any sub-committee thereof, or any group of Employee Representatives, at such time and place and in such manner as in his opinion will best serve to bring out all the facts of the case.

3. Within ten days after the matter has been referred to him, the President shall either

(a) propose a settlement thereof; or

(b) refer the matter directly to a General Council to be formed as provided in Article XIV.

4. If the settlement proposed by the President is not satisfactory to a majority of the Employee Representatives, and if after a further period of five days no agreement has been reached, then the President may, if he deems it advisable, refer the matter to a General Council to be formed as provided in Article XIV.

5. If the President decides not to refer the matter to a General Council, or if the vote of the General Council is a tie, then the matter may, by mutual agreement of the President and a majority of the Employee Representatives, be submitted to arbitration, as provided in Article XV.

Article XIV. General Council: 1. Whenever in the opinion of the President any matter coming before any Works Council affects other Works of the Company, or whenever he desires to refer any matter as provided in Article XIII, he may call a General Council to consider such matter, and thereafter the Works Council shall take no further action thereon.

2. The General Council shall be formed in the following manner: The President shall issue a notice designating the several Works which he deems jointly interested. Thereupon the Employee Representatives in the Works Council at each of the Works designated shall select two or more of their own number to act as members of the General Council. There shall be one such member of the General Council for each 1000 employees or major fraction thereof, except that no Works shall have less than two Representatives in the General Council.

3. The Management Representatives in the General Council shall be appointed by the President and shall not exceed the number of Employee Representatives.

4. The President or some person designated by him shall act as Chairman of the General Council, without vote.

5. The first meeting of the General Council shall be held within ten days after the President's notice calling such Council.

6. The General Council shall, when necessary, take recesses in order to allow Employee Representatives therein to confer with other members of their Works Councils. For this purpose special meetings of the Works Councils as a whole, or of the Employee Representatives alone, shall (at the request of the Employee Representatives serving on the General Council) be convened at the respective Works, and full opportunity shall be given for conference and discussion with such Representatives regarding their attitude and action on the pending matter.

7. Reasonable traveling expenses, including hotel bills of Employee and Management Representatives serving on a General Council, shall be paid by the Company.

8. The procedure in the General Council with reference to the consideration of matters coming before it and the manner of voting shall be the same as that prescribed for the Works Council.

9. If the General Council is unable to reach an agreement as to any matter, it may, by mutual agreement of a majority of both the Employee Representatives and the Management Representatives, be submitted to arbitration.

Article XV. Arbitration: 1. Whenever the President and a majority of the Employee Representatives in the General Council, or the Works Council, as the case may be, have mutually agreed to submit a matter to arbitration, they shall proceed to select an impartial and disinterested arbitrator. If they cannot agree upon an arbitrator, then the Employee Representatives shall choose one such arbitrator and the President shall choose another, and if these two agree, their decision shall be final. If they do not agree, then they shall select and call in a third arbitrator, and a decision of a majority of these three shall be final.

2. The arbitrator or arbitrators shall be furnished all the information and testimony they deem necessary regarding the matter in arbitration.

Article XVI. Decisions of General Council or by Arbitration: All decisions of any General Council or of any arbitrator or arbitrators shall be binding upon all the Works originally designated by the President as being jointly interested. Any such decision may be made retroactive.

Article XVII. Guaranty of Independence of Action: Every Representative serving on any Works or General Council shall be wholly free in the performance of his duties as such, and shall not be discriminated against on account of any action taken by him in good faith in his representative capacity. To guarantee to each Representative his independence, he shall have the right to appeal directly to the President for relief from any alleged discrimination against him, and if the decision of the President is not satisfactory to him, then to have the question settled by an arbitrator selected by mutual agreement.

Article XVIII. No Discrimination: There shall be no discrimination under this plan against any employee because of race, sex, political or religious affiliation or membership in any labor or other organization.

Article XIX. Decisions Affecting Wages: Decisions affecting wages made by any Works Council or General Council or by arbitration shall be subject to revision whenever changed conditions justify, but not oftener than at intervals of six months.

Article XX. Amendment or Termination of Plan: 1. This plan may be amended by the Works Council of any Works by a majority vote of all the duly elected Employee Representatives together with a majority vote of all the Management Representatives. Amendments must be proposed in writing at a regular meeting, and no vote shall be taken thereon until the regular meeting following such presentation. No amendment shall be adopted that will destroy or limit the equal voting power of the Employee Representatives and Management Representatives in the Works Council and General Council.

2. If in the judgment of the President any proposed amendment affects other Works, than he shall call a General Council to consider such amendment. The adoption or rejection of an amendment shall not be the subject of arbitration.

3. This plan may be terminated, at any Works, after six months' notice, by a majority vote of the employees of that Works, or by action of the Board of Directors of the Company.

Fomenting Race Discord

(*Continued from Page* 13)

profits and that they will exploit any race or class in order to make profits, whether they be black or white men, black or white women, black or white children.

Third, it is apparent that every Negro worker or non-union man is a potential scab upon white union men and black union men.

Fourth, self-interest is the only principle upon which individuals or groups will act if they are sane. Thus it is idle and vain to hope or expect Negro workers out of work and who receive less wages when at work than white workers, to refuse to scab upon white workers when an opportunity presents itself.

Men will always seek to improve their conditions. When colored workers, as scabs, accept the wages against which white workers strike, they (the Negro workers) have definitely improved their conditions. That is the only reason why colored workers scab upon white workers, or why non-union white men scab upon white union men.

Fifth, if the employers can keep the white and black dogs, on account of race prejudice, fighting over a bone; the yellow capitalist dog will get away with the bone—the bone of profits. No union man's standard of living is safe so long as there is a group of men or women who may be used as scabs and whose standard of living is lower.

The combination of black and white workers will be a powerful lesson to the capitalists of the solidarity of labor. It will show that labor, black and white, is conscious of its interests and power. This will prove that unions are not based upon race lines, but upon class lines. This will serve to convert a class of workers, which has been used by the capitalist class to defeat organized labor, into an ardent, class conscious, intelligent militant group.

The Advisory Board is made up of well known, scholarly and able radical labor leaders:

Joseph D. Cannon—Organizer of the United Mine and Smelter Workers of America.
Joseph Baskin—Secretary, Workmen's Circle.
Charles W. Ervin—Editor of the New York Call.
Julius Gerber—Secretary of the New York Socialist Local and member of the Metal Workers Union.
Edward F. Cassidy—Formerly business manager of the Big Six Typographical Union.
M. Feinstone—Assistant organizer of the United Hebrew Trades.
Morris Hillquit—Well known labor and Socialist lawyer, scholar, author and speaker.
Harold C. Keyes—Of the Brotherhood of Railway Trainmen.
Jacob Panken—Socialist Judge of the Municipal Court of New York and labor leader and lawyer.
James H. Maurer—President of the Pennsylvania State Federation of Labor.
Max Pine—Organizer of the United Hebrew Trades, N. Y.
Joseph Schlossberg—Secretary of the Amalgamated Clothing Workers of America.
Abraham Shiplacoff—A labor leader of national proportions and for the last three terms leader of the Socialist delegation in the New York legislature.
Rose Schneiderman—President of the Woman's Trade Union League of America.

The above brief sketch of the Advisory Board of the National Association for the Promotion of Labor Unionism among Negroes is sufficient evidence that this organization is well directed by persons who have both principle and intelligence. They recognize the problem and they understand the methods for its solution.

Chandler Owen, the president, and A. Philip Randolph, the secretary-treasurer, are young colored men with modern training in political science, well-known as uncompromising radicals and students of the labor problem.

Every name in connection with this organization is an added justification of confidence.

BRITISH CAPITAL AND LABOR UNITE

ANALOGY BETWEEN LABOR PROBLEMS IN GREAT BRITAIN AND UNITED STATES—BRITISH WORKERS OPPOSED TO RADICAL, REVOLUTIONARY CHANGES IN INDUSTRY

THE commission of employers sent by the Department of Labor to study industrial conditions in England and France has just returned. It was headed by E. T. Gundlach, of Chicago, and the other members were William H. Ingersoll, of New York; George E. McElwain, of Boston; Dorr E. Felt, of Chicago; F. R. Otis, of Atlanta, and R. J. Caldwell, of New York. In an interview published in the press, Chairman Gundlach gives the following review of the situation as it appeared when the commission left England:

"The air in England is full of talk about revolution, but when we come to analyze this talk in conversation with the workmen we find what they mean by revolution is a great change in the methods of the Government. The British workman also talks a great deal about overthrowing the Government. We must remember that overthrowing the Government in England means a change of administration. Of course there is a radical wave that really wants something akin to a revolution, but I recall particular talks with groups of ultra-radical workmen who talked loud and long about the fact that they were tired of waiting and wanted a complete change in the social structure now. On two occasions I pinned these men down by asking what they meant by 'now,' and it turned out that they merely wanted to start now, and proceed gradually.

"Everywhere we found the working classes aroused and alert. They are seriously attempting to grasp fundamentals of the problems facing them. At Manchester we found that workmen are, in a large degree, spending their free time in school studying economics instead of at sports. The whole air is full of the new era, and every workman thinks he is going to have something to say in this new era, but even those who are theoretical Marxians, I found, are by temperament wholly opposed to any violent change. They have been too long controlled by a Parliamentarian system.

"Unquestionably they are strongly organized. The leaders of the so-called Triple Alliance, composed of the three big unions of coal miners, railway men, and transportation men, have got so much power that if they went on a strike it seems as if the whole of England would have to submit. However, it was pointed out that this would be dictation by a small minority, and, as a violation of the principle of democracy, harmful to their interests in the long run. The coal hearings began just before we left, and there appeared to be no difference of opinion on the point that the coal miners had made out an excellent case for better living conditions. Whether the final outcome will be the beginning of another social order forced through the nationalization of the coal mines or whether this present trouble will be settled by simply giving the miners higher wages and shorter hours remains as a problem."

"There is no great fear of anything resembling Bolshevism in England, provided the great majority of workmen can be kept employed. How far the workers will go in their demand for more and more of the national products, and more and more shares in the national industries remains to be seen. However, with a very small minority which is opposed to harmony and constitutional methods nothing more is needed than a large army of unemployed, or partly employed, labor to create very serious danger—something one might describe as a Bolshevist menace. Again and again, radical labor leaders with whom we talked emphasized the point that they were expressing, consciously or subconsciously, the desires of the multitude. They recognize that they have not the majority of the workingmen supporting them in their present radicalism, but they count upon some upheaval of the industries to bring out their desires.

"In order to avoid the danger of an army of unemployed rising to follow these radicals, employers and labor leaders who believe in orderly procedure are agreed that the greatest attention must be paid to the subject of employment. There is a movement on foot now among business men to keep up manufacturing, even to the extent of stocking up on goods, and every effort is being made to stimulate non-war production trade in order to keep men employed. In the office of Sir Stephen Kent, one of the very wealthy men in the Government service, who, as Director of Demobilization, has charge of employment, we saw tables of figures showing how men are being systematically demobilized by industries. In the engineering trade a great many men are already out of work, so men in that trade were not being demobilized at the time of our interview with Sir Stephen. Employment offices are being greatly enlarged.

"Why did the commission spend practically all its time in Great Britain? Because industrial history shows some analogy between Great Britain and the United States. American development in many instances has followed the British, not because they know better, but because they have had longer experience. This similarity was particularly emphasized recently, because during the war events moved very fast. Great Britain had four years of war, while we had a year and a half. They began to get their shop committees after six or eight months of war, while we began to get our shop committees after we had been in the war for the same time. They had certain types of labor troubles, and we had certain types of labor troubles. It is reasonable to suppose that the events now taking place in Great Britain will take place here also in a more or less degree.

"The question we shall have to meet is that we must get along with these labor people. We cannot get along by trying to smash the workmen's organizations. The employers in England realize that this battle has been fought, and that kind of opposition has been abandoned. They now believe in the conservative organization of labor as one protection against chaos, and they know that the whole organization of labor, as at present constituted, is at stake, and that business, as owned and conducted by individuals, that is, the employers, is at stake,

"One of the big things which we could not very well touch in our report, which will be made public next week, is the very marked feeling among the British that their foreign trade is at stake if this labor unrest cannot be settled, and labor men themselves feel that. And I was greatly surprised to find that the employers and even members of the Great Britain Federation of Industries are talking with considerable favor of international agreements between labor, hoping that labor organizations in various countries will get together—the very thing they looked upon a year ago as anarchy. Of course, this can be accomplished only by national organizations of labor, not by employers. Employers are done with making war upon labor organizations as we have known them in the past, because they fear a more formidable foe.

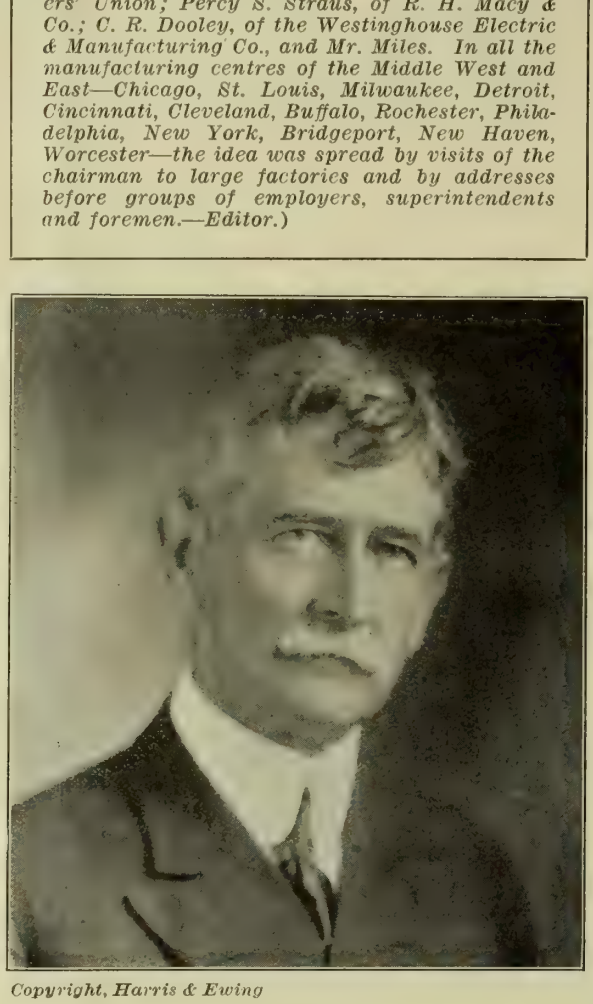
"We have Bolshevist elements in this country, and if we don't look out and cultivate harmony between employers and conservative employees, and, most of all, see to it that the unemployment problem does not spread to large proportions, we shall have troubles on our hands, with Bolshevist outbreaks aiming at labor's taking control of industry. We must have readjustments, better conditions for the average worker than formerly existed. I think the danger here is that employers are not waking up in outlining programs for closer cooperation with their employees, whereas in Great Britain nearly all employers have waked up. That, I think, is where our greatest danger of protracted labor disturbance lies."

Industrial Training A Way Out

LOW PRODUCTION COST, GOOD WAGES AND FAIR PROFITS—A TRIPARTITE ADJUSTMENT

By H. E. MILES

CHAIRMAN SECTION ON INDUSTRIAL TRAINING FOR THE WAR EMERGENCY, COMMITTEE ON LABOR, ADVISORY COMMISSION, COUNCIL OF NATIONAL DEFENSE—CHIEF OF TRAINING, U. S. DEPARTMENT OF LABOR



EARLY in the war, a machinist said to his foreman in a munition factory upon which both our country and the Allies were largely depending: "Come over and help me a little." Said the foreman: "Weren't you hired as an all-round toolmaker?" "Yes." "Then, —— you, bore that gun or get out!" The man quit, saying later: "I am an all-round toolmaker, but I never saw a 75 M/M gun before in my life, and I did not propose to spoil the first one." This factory had employed in the preceding six months 15,000 workers at an average cost of $50 each in order to maintain a force of only 4,500 men. About a fourth of its machines were broken or out of repair and the repair force was too small to put them in order. A factory making airplane motors, needing sensitive drill operators, brought a man to New Jersey from Vermont who declared he had run a drill successfully for eight years. It developed later that the drill he had operated was in a marble quarry. A barber in Connecticut with a machinist's kit of tools is said to have secured a machinist's job in a small arms factory and held it for several days before being found out.

The country was calling four million men to the colors, many of them skilled machinists for maintenance and repair work at the front. A million new workers were required in the factories, including tens of thousands of women who were either wholly inexperienced in factory work or had done only simple unskilled tasks.

It may have been in anticipation of conditions like these that Mr. Samuel Gompers, as chairman of the Committee on Labor of the Council of National Defense, appointed the Sectional Committee on Industrial Training for the War Emergency, its purpose being to devise and recommend to employers in essential war production, methods of intensively training their host of new workers each for perfection production as nearly as might be in the narrow field in which he was to operate.

The first meeting of the committee was on the 15th of June, 1917, in a tower room of the Metropolitan Building, New York, in the offices of The National Civic Federation, the Federation and the director of its Welfare Department, Mrs. R. M. Easley, being then and since a wellspring of inspiration and assistance, without which little might have been done. Labor men were there thoroughly versed in all the bearings of vocational education as applied to labor; vocational teachers from trade and apprentice schools; women qualified in the subjects; and representative manufacturers. The committee consisted of about equal numbers of representatives of wage earners, employers and experts in training. The harmonious and effective work of the committee illustrates the long-time insistance of the chairman that there are many fields of extreme and common concern to wage earners and their employers in which they should aggressively cooperate, and that such cooperation will bring returns so great as to lessen distrust and antagonisms in other fields where interests are obscure or apparently in conflict.

(Samuel Gompers, Chairman of the Committee on Labor, chose Mr. Miles as chairman of his Section on Industrial Training for the War Emergency because of his successful experience as a practical manufacturer and in industrial training as chairman of The National Manufacturers Association's Committee on that subject. Initial plans were based upon principles agreed upon by Hugh Frayne, chairman of the Industrial Training Committee of the American Federation of Labor. The section's executive committee was composed of John Golden, President of the United Textile Workers' Union; Percy S. Straus, of R. H. Macy & Co.; C. R. Dooley, of the Westinghouse Electric & Manufacturing Co., and Mr. Miles. In all the manufacturing centres of the Middle West and East—Chicago, St. Louis, Milwaukee, Detroit, Cincinnati, Cleveland, Buffalo, Rochester, Philadelphia, New York, Bridgeport, New Haven, Worcester—the idea was spread by visits of the chairman to large factories and by addresses before groups of employers, superintendents and foremen.—Editor.)

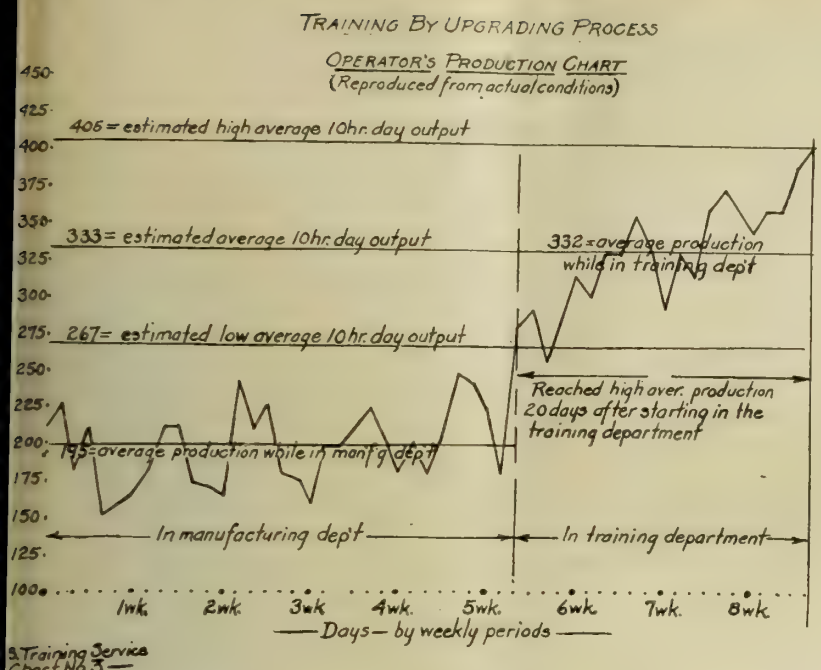
Copyright, Harris & Ewing

H. E. MILES

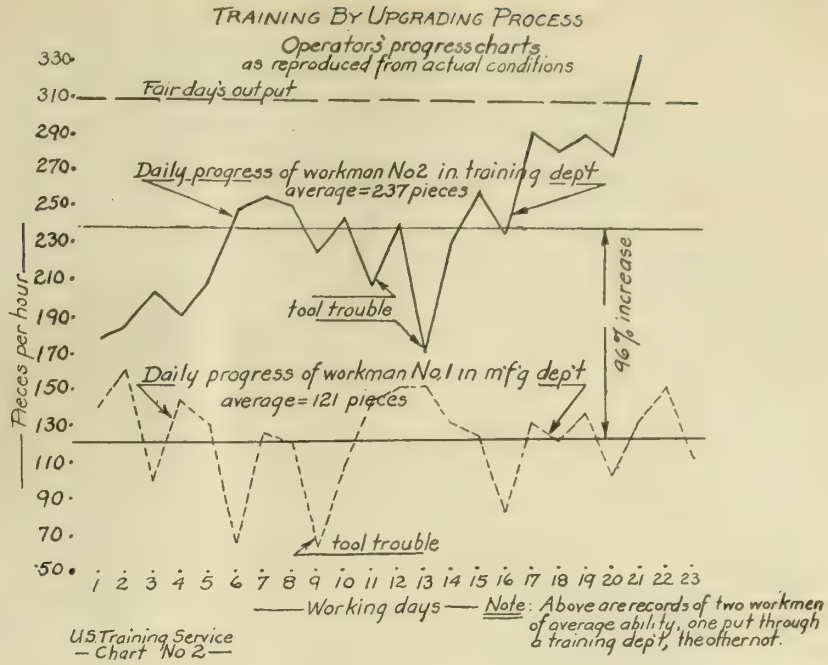
The purpose was not education for its general value but only for the making of munitions in the overwhelming quantity essential to victory. It was agreed that it is possible intensively to develop skill in workers in an incredibly short time by training. Some who worked successfully in factories on war contracts had three days' training, some three weeks, some eight weeks, according to their ability and the nature of their tasks. They were never all-round machinists after such training but each could do well the task assigned.

It was in the natural course that workers from idle trades were to be trained to their new tasks first, and later new comers outside of industry, and that operatives in the trade itself were to be up-graded to higher positions rather than outsiders. It was evident that millions could not be suddenly trained in school houses with little or no equipment. They must be trained in the factories directly upon the work they were to do.

"Vestibule school" such a factory training place was called and, in such vestibules or entrances, thousands of workers the country over were prepared for the particular part they were to play in the great war drama. And thanks to such training of more and yet more workers, the piles of war goods at the railway stations and harbor warehouses were many times higher than otherwise would have been. Machinery for the making of air motors, airplanes, micrometers, time fuses, gauges and fine instruments, gun carriages, guns and pneumatic tools for ship riveting—factories for all these things, swollen with war contracts and suffering for skilled workers and too much labor turnover—in them were developed these special training departments upon advice of the Section on Industrial Training and often by experts provided by the Section.



In some cases, blocks of machines upon the factory floor were set apart for this training but, wherever feasible, machines of each type were set apart in a separate room for training and the worker was there instructed by persons especially fit both in machine operations and in the imparting of information. Every factory has its toolroom in which the material instruments of production are kept sharp and fit. These training departments are Human Toolrooms in which the employees are especially fitted for their work. The success of the plan is illustrated by the following: A war factory with a labor turnover of 9,000 workers a year was spending at the rate of $40 per operative simply to get a new man on the payroll and then spending $50. or more "breaking him in" in the old way and



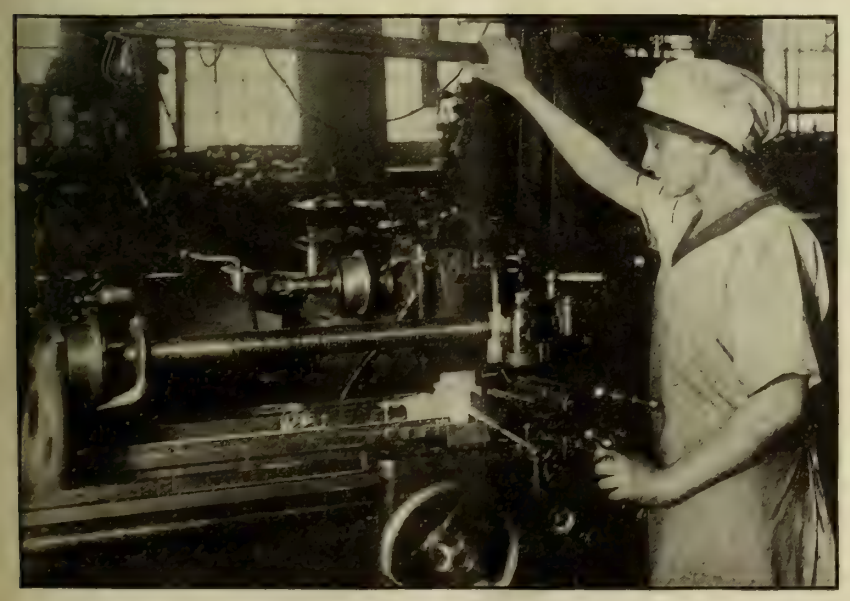
Machinists' Class, Norton Companies, Worcester, Mass., where eight weeks' intensive training is given.

Women inspecting pistons and valves for airplane motors, Lincoln Motor Co.

en probably losing him. By installing a lendid training room, having a capacity of 250 rsons, it trained new comers in from 4 to 8 ys to do special tasks better than they had er done anything before. It is an interesting ychological fact that what a man or woman n do well, he likes to do. So these newly ained workers, doing their tasks to the admira- on of all about them were themselves satisfied, id stuck! The turnover was one percent per onth among these workers as against 12% nong workers employed in the old way. It unnecessary to state that the general work- g conditions and welfare of the employees ere considered.

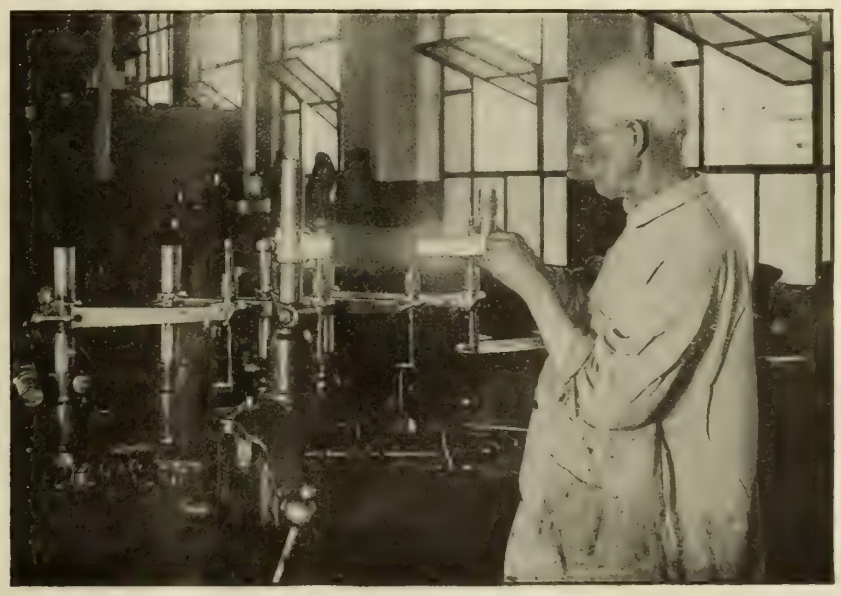
The important principle that wage earners om idle trades must be given preference in aining and employment is illustrated by the icture on the opposite page (at left). This ma- inists' class in training is made of some rocer's clerks, a painter, a musician, a man who arried boxes for a department store, a man who djusted glasses in an optician's office, a corset esigner, a laborer, a butcher, etc. The firm hich maintained this training class built, mong other things, machines used in other fac- ories for grinding crank shafts for airmotors. Every such machine built and delivered meant ne more airmotor every two hours. It is easy o see why this firm was greedy for machinists nd why when they could not find them ready ade, they trained their own.

The manufacture of rifles and revolvers is so erfected with jigs and stops that two or three ays' good training enabled workers to handle any one such machine without mistake. But firms building a few difficult machines of a kind and frequently shifting from one kind to another had to train their workers from two to eight weeks. They were, however, trained upon regular production and were, therefore, given good wages while in training without loss to the employer who profited equally with the trainee from the skill acquired.



The old man shown at the right hand, once a shoemaker, came to this tool works in June, 1918, and by late July was so far advanced that he was put on the difficult work of assembling. In the view here shown he is putting together a caliper device to be used for fine measurements on parts being surface ground.

Women proved particularly clever in tasks where accuracy was essential. In the making of time fuses, or the adjustment machinery of gun carriages, fine measuring instruments, or the lenses for gun sights, the allowable limits for divergence from absolutely true are .0005 in. or sometimes .0002 or .0001 in. The carefulness and patience of women, as well as a delicate sense of touch, made it possible for them, after training, to achieve this accuracy in metal handling, even when they had never worked before in any factory. In the picture on the page opposite at the right, a group of new trainees is shown in a factory where women work on fine instruments to limits of practically no tolerance.



A company in Detroit making airmotors advertised for 300 women, preferably with relatives at the front, and received 1,600 answers. The various types of women who were interested to do this form of war work while their men were overseas may be seen in the picture just mentioned.

But the best of this story is yet to come. It was demonstrated, by the time the Armistice was signed, in some 200 vestibule training departments in war factories of all types and sizes, that the skill, happiness, loyalty and accomplishment of the 10,000,000 workers in American factories is, and ever will be, what the employers are wise enough to make it, equally in their own interest and the interest of the workers and the country. Proverbially American mechanics have had to "steal" their trades and have been utterly neglected in respect to special training for their occupations. Foremen have been too busy to train and the men have had to bluff their way. Our factory workers are brothers and sisters of the men who went to the Front and like the latter, respond instantly to training, and with the same success as did our new-made soldiers. Women, after proving their perfect equality, are no longer entering the factories. More training departments are being installed now than in war times. Every great national association of employers is coming to participate in the up-grading of the millions of skilled and semi-skilled workers. The Section on Industrial Training worked without compensation and disclosed the national need. Congress recognized the need and, upon recommendation of the Secretary of Labor acting as War Labor Administrator, granted the Secretary $150,000. for the continuance of the work which he then organized

"Who's Who" in "The New School"

DID THE "NEW CLASS OF LEADERS" SPECIALIZING IN "THE REFORM OF SOCIAL EVILS" EVER ENGAG IN SHADOW HUN, SHADOW BOLSHEVIST OR OTHER UNAMERICAN PROPAGANDA?

"Our hypocrisy is too deep and impulsive for us to detect."—James Harvey Robinson, in the *Atlantic Monthly*, December, 1917.

By T. EVERETT HARRÉ

IN January there appeared in the *New York Evening Post*, and in such organs of outré intellectualism as the *New Republic* and the *Nation*, an advertisement announcing the opening of what was called "The New School for Social Research," which, according to the advertisement, "offers lectures on pressing problems of modern life with opportunity for their practical investigation. Its object is to prepare students who show promise of becoming high-class journalists, original teachers, public administrators, or capacity for dealing with problems of labor, industry and government."

Preliminary to the opening of the New School "with an enlarged staff and a full program in October," were announced courses of lectures extending from February until May. In view of the publicity given the enterprise, including generous space in the columns of the *New York Tribune*, it was only natural that people should ask what purposes lay behind the inauguration of "the New School," what it proposed to teach, who constituted the faculty and who were its backers.

At a time when many people are alive to the workings of insidious forces aiming at social distintegration, the undermining of American ideals and of our national integrity, it is inevitable that any new educational enterprise should escape vigilant precautionary scrutiny. Is a school, thus launched, in the hands of men of proven loyalty and patriotism? Is the school's program designed for "promising students" according to the highest constructive ideals of Christian civilization and the principles of the soundest Americanism?

After the amazing revelations of the extent to which Germanism had invaded American universities and schools during a quarter of a century, the extent to which the minds of American professors had been tainted by the Teutonic virus, it is only natural that Americans should be more than ever alert against baleful influences still being exerted upon the young of the land from the very seats of learning. Moreover, realizing as we do, that what was German propaganda has simply been converted into another yet no less definite and inimical form, the propaganda of social discontent, revolution and civil strife, which seeks to devitiate and destroy the nations through a cunning, deceptive and destructive "internationalism," it is urgently all-vital at this crucial and unsettled time that Americans be guardedly watchful lest a foe, no less defined, no less materially definite than the armed Huns, defeat the very victory won in the war by furtive and treacherous undermining of national integrity and social peace from within.

Any new school seeking students, especially if it advertises any unique line of teaching or investigation, will expect, of course, a discerning and thoroughly impartial examination of its personnel, and analysis of its purposes.

Who are the organizers of The New School for Social Research?

Who constitute the faculty?

Who are the lecturers?

Among those comprising the Organization Committee are Mr. Herbert Croly, Mr. Alvin Johnson, Mr. Charles A. Beard, and Mr. James Harvey Robinson.

MR. HERBERT CROLY is editor of the *New Republic*, and the author of "The Promise of American Life," published in 1909, a volume in which the now pacifist Mr. Croly exalted imperial Germany, attempted to justify Germany's wars of aggression, and advocated that war should be carried on to decisive results in military victory. Mr. Croly's *New Republic* advocated a peace of compromise with Germany, preached flagrant "defeatism," assailed the motives of the Allies, defended the Bolshevik and has promulgated "internationalism." This sheet is constantly and approvingly quoted by the *New York Call* and Viereck's erstwhile *Fatherland*.

MR. ALVIN JOHNSON is an associate editor of the *New Republic* and the author of articles fervently defending various school teachers put on trial for disloyalty and seditious teaching.

"It is our purpose and intention to secure control as far as we can of concerns publishing text books for use in public schools, and likewise to mobilize and influence all writers of school text books. We propose especially to control the preparation of school histories."

—Statement made to Mr. Harré in 1915 by Dr. Karl Mechlenburg, chief of the Translation Bureau of the Official German Propaganda Organization, at 1123 Broadway, New York.

"The Public School is the Ark of the Covenant of the Republic. It is little wonder, then, that for some years even before the German war, the common enemy sought and secured an entrance there. . . . To be forewarned is to be forearmed. We know now what the enemy has been up to in secret for many years. It is our duty to the children of the land to seek out this enemy's hiding places and drive him hence and to see to it that he never enters there again."

—Statement of Judge Thomas Burke, of the Text Book Committee of the Seattle, Wash, School Board, concerning "Outlines of European History, Part II.," by Professor Chas. A. Beard and James Harvey Robinson, which was thrown out of the Seattle Schools because the Board charged that it contained flagrant pro-Hun propaganda.

THEODORE ROOSEVELT, in a letter condemning Prof. James Harvey Robinson's school text-book, "Mediaeval and Modern Times," said:

"THE CHAPTER CALLED, 'THE ORIGIN OF THE WAR OF 1914' . . . IS AN OUTRAGEOUS PIECE OF GERMAN PROPAGANDA AND BECAUSE OF ITS OMISSIONS IT IS A SHAMEFUL PERVERSION OF HISTORIC TRUTH. THIS ONE CHAPTER MAKES THE BOOK UTTERLY UNFIT FOR USE IN AMERICAN SCHOOLS."

VISIONS OF THE GUILLOTINE?

PROF. CHARLES A. BEARD, one of the chief organizers and leaders of the New School, is co-author with Prof. James Harvey Robinson of "Outlines of European History, Part II," which was thrown out of the Seattle public schools because it was declared to contain pro-German propaganda. Beard was one of those named in the list of pacifists given the Overman Committee by Archibald Stevenson, of the Military Intelligence. He has been advertised as a lecturer of the Socialist Rand School. Beard found it convenient to resign from Columbia University after championing the "conscientious" objectors who were under fire, and has of late campaigned for the release of "political prisoners whose offense"—as he puts it—"was to retain Mr. Wilson's pacifist views after he abandoned them" and also for the release of "American citizens held in the interest of foreign governments for interpreting Mr. Wilson's 'liberty, self-government and undictated development' to mean a curtailment of British dominion in some parts of the earth." In his appeal for the release of "political prisoners," distributed free in leaflet form at lectures given in the Ne York public schools, Beard concluded signi cantly: "All this will be in the interest of the persons of commonsense and property *who wa to keep their money in their purses and th heads on their shoulders.*"* Was this somethi of a veiled threat?

Beard has defended the Russian Bolshevil and—despite the revelations that Lenine a Trotzky were financed by imperial Germany asserted in the *New Republic* of July 14, 191 "To say that the Russians, in declaring the unwillingness to spill more blood for the sake righting historic wrongs and in announcing the readiness for peace without annexations or i demnities, are tools of the Kaiser, paid pro-Ge man propagandists, advance agents of Germa ism, is utter folly." Prof. Beard is the auth of "An Economic Interpretation of the Co stitution of the United States," reviewed in previous article, "in which," says the *New Yo Times*, "he sought to show that the founders this Republic and the authors of its Constit tion, were a ring of land speculators who b stowed upon the country a body of organic la drawn up chiefly in the interest of their ow pockets. . . . It was a book that did Colun bia much harm," continued the *Times'* editoria "just as the two professors who were recentl dropped for seditious utterances did the un versity much harm. It was the fruit of th school of thought and teaching again borrowe from Germany, which denied to man in h larger actions the capacity of noble striving and self sacrifice for ideals, that seeks always the prompting motive either the animal desire t get more to eat or the hope of filling h pockets."

PROF. JAMES HARVEY ROBINSON, with Bear one of the chief moving spirits of the New Scho and also one of the lecturers, is a Ph. D. Freiburg, Germany. He is the author of "Th German Bundesrath," "Mediaeval and Moder Times," and co-author with Prof. Charles A Beard of the pro-German "Outlines of Euro pean History, Part II." Prof. Robinson was on of the signers of the appeal to raise $50,000 fo the defense of the I. W. W. leaders when the were on trial in Chicago for seditious conspiracy He was one of a committee, including Paul U Kellogg, which sent a demand to the Overma Committee investigating Bolshevism that Col Raymond Robins and certain Bolshevik sym pathizers be heard and in which the complain was made that the witnesses who had told o Bolshevik crime and misrule had not given "a accurate and impartial picture of the Russia Revolution."

"A NEW CLASS OF LEADERS"

In its prospectus, explaining "why" there should be a New School, it is asserted:

"An established university, on account of its diverse obligations, is necessarily hampered in investigating and teaching subjects of such contemporary interest as are involved in social relations. . . . Its form of government also tends to discourage independence, since the administration is responsible to trustees, who in turn represent the chief sources of income . . . The threatening cleavages in society throughout the world are causing men and women of all persuasions to feel uncertainty about the future. Opinions everywhere are crystalizing about certain dogmas and exclusive

* Italicization employed in quotations in this article are my own.—AUTHOR.

ıns of action, and the prospect of orderly ogress is correspondingly decreased."

"The school will not be so radical as the Soılists nor so conservative as the established iversities," Prof. Iobinson was quoted by e New York *Tribune* as saying. "It will be ıdogmatic in all its teachings. . . . A oup of instructors has been selected who cognize the pressing necessity of collecting acrate information about political, social and inıstrial conditions. . . . *The school will turn t a new class of leaders.*"

It is to be gathered, from Prof. Robinson's ıtement, that the New School will therefor not so radical, not quite so raw in its revolutiony preachments, as the Rand School, which is ɔerated by the American Socialist Society, the rporation which was recently sentenced to ıy a fine of $3,000 for publishing Scott Nearg's book, "The Great Madness." But was it be inferred, nevertheless, that the school will e at least mildly radical? No specific informaon was volunteered as to whether the program the New School aims at the dissemination of ıluted Socialism, camouflaged Bolshevism, or ıgar coated "internationalism." Prof. Robinn did not say whether young and unsophistiıted students would be taught along lines of ɔnomic determinism, after the doctrine that ıan is a beast spurred to endeavor only by reed and the urge of his belly, and that they ıould be trained to view all life, history, all ɔcial phenomena, from that basic standpoint f negation of all spiritual faith, moral princiles and national ideals which is Marxian maɛrialism.

In addition to Professors Robinson and Beard, he preliminary lecturers announced by the New ɨchool include:

Thorstein Veblen, Ph. D.
Horace M. Kallen
Harold J. Laski, B. A.
Ordway Tead
Robert Bruere

Robert Bruere, a student of the University of Berlin, with Prof. James Harvey Robinson and Dr. Walter E. Weyl, was involved in the effort o raise $50,000 in June, 1918, for the defense f the indicted I. W. W. leaders. Bruere is a rustee of the notorious Rand School of Social Science.

Thorstein Veblen, a Socialist professor of the University of Missouri, was one of the contributors to a remarkable pamphlet, "The Truth bout the I. W. W.," prepared as a whitewash f the I. W. W.'s on trial in Chicago, and issued y the National Civil Liberties Bureau, which is nade up of such intellectual "heavies" and notaıle patriots as Paul U. Kellogg, Rabbi Judah L. Magnes, Scott Nearing, Oswald Garrison Villard nd Roger N. Baldwin, who on October 30, 1918, was sentenced in the Federal Court in New York to serve one year in prison for violation f the Selective Service Law.

Horace Meyer Kallen, born at Berenstadt, Silesia, Germany, professor of philosophy at the University of Wisconsin, speaking at the Tenth Annual Convention of the Intercollegiate Soialist Society, presumably classified himself when he declared that the "difference" between him and Mr. Scott Nearing "was that the latter was essentially religious!" Aside from differences of "religion," Mr. Kallen, according to his own words, must therefore be in accord with Mr. Nearing, teacher of Bolshevism, internationalism nd class hatred, and author of "The Great Madness," which declared "the entrance of the United States into the World War on April 6, 1917, was the greatest victory that the Amerian plutocracy has won over the American Democracy." Dr. Horace Meyer Kallen is a fertile contributor to the pro-Bolshevist *Dial.* He is a lecturer at the New School on "The Evoution of the International Mind." Judging by his two volumes, "The Structure of Lasting Peace" and "The League of Nations," he is an exponent of that subtle, ambiguous yet esoterically definite stripe of "internationalism" which also runs in the blood of such Simon-pure examples of Americanism as Dr. Walter Lippmann and Dr. Walter Weyl, both associate editors of the *New Republic.*

Have these chief lecturers of the New School for Social Research qualified themselves by their past record, by their published works, or by their spoken utterances, as unimpeachably sound and safe teachers for American young men and women? Have they proven themselves, in the test of past experience, as loyal, one-hundred percent Americans, exponents of the highest American ideals and ethical principles?

When the war came, when Germany assaulted civilization, were all these "prominent and progressive teachers" aligned on the side of democracy? While certain of their colleagues engaged in shameless Hun propaganda, did the present instructors of the New School come forth to denounce the imperial Government for its perfidy? Did they condemn Germany for the invasion of Belgium, the sinking of the Lusitania, for her policy of frightfulness? Did they see, with clear vision, the Hun intentions which struck at the core of liberty throughout the world? Did they help expose the grisly threat to all free peoples in Hun "kultur?" Did they lend themselves to uncovering the sham back of Germany's advertised and vaunted social progress?

And after America had belatedly entered the conflict, did all these "advanced" teachers line up to back the Government in its intention to carry on the war until German militarism was crushed? Did they seek to expose and crush those insidious forces which opposed the war, which sought to stir up opposition to the war and to the enforcement of the draft, and which conspired to hinder the nation in its war activities? Did they all loyally and whole-heartedly bring their power and influence to bear against the teachers of sedition, the fomentors of strikes and discord, the opponents of the draft and advocates of pacifism and a peace of compromise with the foe? Presumably, it is by meeting such a test that the staff of the New School for Social Research, or the teachers of any school, would qualify as teachers of the sons and daughters of Americans who unreservedly gave of their blood and substance toward ultimate and absolute victory over Germany, who believe faithfully in American ideals, and who are unswervingly determined that American institutions and American national integrity shall be preserved.

Prof. James Harvey Robinson, one of the organizers, is delivering at the New School a series of twelve lectures on "The Relation of Education to Social Progress," the object of which course, according to the prospectus, "is to consider the present deficiencies of education as a means of promoting social readjustment." "An attempt will be made," it was announced, "to determine the ways in which education should be readjusted so as to forward the reform of existing evils."

What qualifications signally mark Prof. James Harvey Robinson as one uniquely fitted to "determine the ways in which education should be readjusted so as to forward the reform of existing evils?"

What is the underlying basic philosophy of Prof. James Harvey Robinson which would color his expounding of American ideals and his suggestions for the readjustment of education and reform of social evils?

NOT GERMANY, BUT "NATIONALITY," CAUSED WAR!

One cannot be more fair to anyone than to let him speak for himself. Mr. Robinson has expressed himself. Mr. Robinson contributed to the *Century Magazine,* of November, 1916, an illumining article entitled, "What is National Spirit?" To some people—perhaps old-fashioned people—love of country and love of home has been beautiful and wholesome, a source of strength rather than decadence, a praiseworthy rather than a discreditable and reprehensible thing. Patriotism to these people has not been merely a blind national fetish worship, a stupid apotheosis by the ignorant of their own insular virtues, a bigoted national or racial prejudice and intolerance of others. Patriotism has been the family spirit of love, trust and devotion, of cooperative pulling together for the best well being of one's self and one's immediate kin, broadened out to include a larger sphere. It is the spirit that enables men to pull together, constructively and productively, whether in small social groups such as in factories, or in the larger family group known as the state. That a man's home, where he was born and where he knew the tenderness of a mother, should be sweet to him, has from time immemorial been considered normally human and natural. That a man's native land should be loved, that its ideals should be cherished, has not been regarded as wicked or ugly. That man's belief in the purest ideals of religion, his faith in God, his love and loyalty for his country have wrought chiefly evil through the long evolutionary struggle toward higher civilization has probably never been contended even by the most bitter unchristian scoffers, envenomed cynics and bigoted atheists.

James Harvey Robinson—Ph. D. of Freiburg and champion of the I. W. W. leaders accused of seditious conspiracy to obstruct the country in its conduct of the war against Germany—writing in the *Century Magazine,* said that *"suddenly, in August,* 1914," *the word nationality "assumed a terrible significance."* "Previously the spirit of nationality had been accepted as on the whole a noble thing, although, like other noble things, it appeared to be a nuisance at times; but *when all the chief states of Europe rushed at one another's throats in the name of nationality,* all thoughtful outsiders began to wonder whether the current favorable estimate of the emotion could be right when it gave rise to such unprecedented woes."

According to this "thoughtful outsider," presumably Belgium rushed at Germany's throat "in the name of nationality;" France rushed at Germany's throat "in the name of nationality;" England rushed at Germany's throat "in the name of nationality;" Serbia rushed at Austria's throat "in the name of nationality." Therefore, when Belgium, France, England, Serbia and Russia combined "rushed at" the throats of Germany and Austria it was "nationality" that "gave rise to such unprecedented woes;" it was an ignoble and criminal thing known as "nationality," and not the imperialistic ambitions of perfidious Germany, that was responsible for the war.

PATRIOTISM, LIKE RELIGION, BREEDS MORE EVIL THAN GOOD!

Prof. James Harvey Robinson manifestly is still not clear as to Germany's guilt in precipitating the world catastrophe, for in a pamphlet issued recently by Ginn and Company, entitled "The Last Decade of European History and the Great War," it is stated: "The exact causes of the Great European War are still questions of dispute." Discussing "the policies which led to it"—the war—Prof. Robinson reviews France's "imperialistic policies in Africa," the "alliance of England and Japan," "the entente with Russia," and notes, as with significant emphasis, that "one great power had been rather noticeably left out of this circle of friends—Germany."

This pamphlet was "copyright, 1918, by James Harvey Robinson," so it must express comparatively recent views entertained by one

Smoking Out Hun Propaganda Nests

WONDERFUL WORK OF THE ALIEN PROPERTY CUSTODIAN IN COMBATTING THE SPY SYSTEM SEIZURE OF ALMOST A BILLION, AND IN TRACING COMMERCIAL RAMIFICATIONS

EVERY American should become familiar with the work of the Alien Property Custodian, A. Mitchell Palmer, and his successor, Francis P. Garvan, in tracing and seizing German property in the United States and in exposing the spy system maintained by Hun commercial houses here. In sixteen months this new department of the government took over almost $700,000,000 worth of enemy-owned property, converted essential industries into channels useful to us in war, and exposed the most gigantic commercial plot ever engineered by a nation. It did some of its most important work in linking individuals with plots against the United States and hundreds of dangerous aliens were interned as a result.

Up to February 15 last reports had been made on 35,400 pieces of enemy property at an administration cost of about $1,000,000, but this cost really was offset by $1,604,539 in unreported, concealed income and excess profit taxes collected as a result of the investigations. In addition, the Custodian seized vast quantities of enemy-owned commodities vital for war work, such as nickel, medicines, surgical instruments, lenses, coffee, rice, etc., etc. Innumerable fraudulent transfers of German-owned stocks to Americans or to neutrals also were exposed, full effect of which will be felt for many years after peace is declared.

To round out his work and make it of lasting value to the nation, the Custodian organized a company to take over hundreds of patents obtained by the Huns here to throttle American trade and the secrets of these processes are being made available for American business men at a nominal price. In handling enemy alien property, Messrs. Palmer and Garvan divide it into two classes—the small investments of individuals and the greater ones made by the great German trusts so interwoven with political and governmental affairs as to be almost officially imperial. The first-named class was treated purely as a trust, and administered as such. Of the second class, Mr. Palmer reported to the President:

> They constituted Germany's great industrial army on American soil. They were the far-flung lines of advance for her kultur and so great had they become with the opening of the world war that it has now become perfectly plain that Germany lived in high hopes of the assistance which would come to her from the organization built up on this side of the Atlantic. These investments were largely in industries which, while accepting the hospitality of American laws to become American corporations, were never in fact Americanized. In many cases the factories, warehouses and offices of these enemy-owned concerns were mere spy centers before America entered the world war and would have been nests of sedition if the Alien Property Custodian had not acted promptly in their seizure. The purpose of Germany in maintaining them here was such as to justify their complete eradication as German enterprises and their thorough naturalization into an American character.

In ferreting out these concerns, invaluable aid was furnished by the British secret service, as well as by our own, and an analysis of the famous British blacklists of 1916 that caused so much furore in this country, shows that in many cases they were fully justified. For instance, in one list of fifty-six concerns named by Great Britain, fifteen were seized and sold by the Alien Property Custodian within a few weeks after we entered the war. Full credit for this aid is given by Mr. Palmer in his report and unofficially it may be said that many blacklisted concerns that escaped seizure did so only because they were wholly owned by Americans, and as soon as we entered the war stopped their pro-German activities.

Copyright, S. V. Buck

A. MITCHELL PALMER

Americanization of the former enemy concerns is bound to result advantageously to the United States, for while foreign capital may be welcomed, foreign labor standards and anti-Americanism are not. "Their first love was for the fatherland," remarks Mr. Palmer, "and all their efforts were in its interest. They spread the German propaganda before America was awake. They hoped to make it powerful enough to be effective when 'the day' should come."

Smashing of the German commercial machine in America doubtless had a strong moral effect on the war, how great it is impossible to estimate. Elimination of the Huns' strangle hold on the dye industry; in textiles, metals, chemicals, electrical and other industries must have been a body-blow and cost them the "war after the war" before it even had begun. Mr. Palmer's industrial offensive was a fitting complement to the British blockade and Marshal Foch's military drive.

No such history of the chemical industry ever was compiled as is contained in the Custodian's report. Tracing the ramifications from the very beginning, he shows how the octopus had grown with government aid until its capital exceeded $400,000,000. He says:

> It cannot be doubted that this enormous engine of commercial warfare has been created expressly for the expected war after the war and that it is intended to undertake still more efficiently and on a larger scale the methods by which German attacks on all competition were carried on. . . . With the aid of patents, especially the product patents, they could, and did, exclude all importations of competing dyes. As if the legitimate advantages of the German industry, supplemented by the ruthless, if legal, tactics of dumping and destructive underselling were not enough, the methods of the great German houses in carrying on their business in this country were from the first honeycombed with corruption.
>
> Bribery of dyers was carried on almost universally and on a large scale. The head dyers of mills were subsidized in many direct and indirect ways. If any one of them wished to have his superiors cease using the dye of one manufacturer and buy the dye made by some other company, nothing was easier than to produce wretched results and by the exercise of a little care with the favored dye have satisfactory results. So extensive was this corruption that I came across only one American consumer who had escaped its ill effects.

Mr. Palmer's report fairly bristles with th names of Hun spies and propagandists as he goe on to analyze the chemical industry. One of th first nests his bureau of investigation smoke out was the by-product plant of the Lehigh Cok Co.

"Every ounce of toluol and nezol which wa produced," he says, "was sold under contract binding the purchaser not to use or permit th use of the product for the manufacture of ex plosives or for the benefit of the Allies. A examination of the correspondence betwee Hugo Schmidt, the agent of the Deutsche Ban in this country and the bank, shows that the en tire undertaking was a direct effort of the Ger man government to prevent the making of thes valuable materials for explosive manufacture i the United States." Mr. Palmer goes on:

> A still more striking instance uncovered b Mr. Garvan was that of the "Chemical Exchang Association." The effect of this enterprise wa to corner for a time the supply of phenol in th United States, and to prevent its use in makin T.N.T. This undertaking was apparently in itiated by Dr. Albert, the financial adviser of th German government in this country, in direc collaboration with von Bernstorff. Dr. Alber carried out the scheme through Dr. Hug Schweitzer, the chemist and leading spirit o Bayer & Co. (Inc.).

The Chemical Exchange Association even too over the surplus product of phenol from th Edison Selling Company, once the great in ventor began its manufacture for his phono graphic record business. Through another con cern, also German-owned, the phenol was con verted into salicylic acid and harmless flavorin extracts, at great profit. Schweitzer's share o those profits went direct to the German govern ment.

"The success of the venture was celebrated i the latter part of 1916," says Mr. Palmer, "b a dinner given by Schweitzer and Kny at th Hotel Astor in honor of Dr. Albert. Amon other guests were George Simon, F. A. Borge meister, Norvin R. Lindheim, and Captain Wol von Igel of the German Embassy. Striking ex amples of the same sort could be cited by th score.

"Dr. Isaac Strauss, organizer of the Chromo Chemical Co., arrived in September, 1914, ap parently with a direct mandate from the Ger man government for propaganda among th Jews, and established the *American Jewish Chronicle*. Funds to the amount of $85,00 were supplied for his activities by Dr. Albert and $15,000 by von Bernstorff, and his chemica company, profiting by the enormous war demand and prices, rapidly began to supply further sinews of war. Shortly after the United States entered the war his conduct attracted the atten tion of the military authorities and the ensuing investigation led to his internment, whereupon his Chromos Chemical Co. and the *American Jewish Chronicle* were taken over by me."

Almost as interesting as the chemical industry investigations and their many resultant seizures were the Custodian's inquiries into the metal situation.

It was in this phase of investigation that the British blacklist played a part, for among the very first firms barred in 1916 several were quickly seized as soon as the Alien Property Custodian began work. Among these were Beer, Sondheimer & Co., one of three firms seeking to control the metal markets of the world.

Another firm was the American Metal Co., dominated by German interests to a large extent. The Custodian seized 49 per cent. of the stock

f this concern and named five of the board of fteen directors to Americanize it. The Ameri-an Metal Co. was organized in 1887 with 200,000 capital. In 1917 this had increased to 3,500,000, and in that year was made $7,000,000.)f the 70,000 shares, 46,624 were held by Metallgesellschaft and Henry R. Merton & Co. f London, the German controlling influences. 'he Custodian is seeking to obtain control of the Merton shares through the British government.

Ten mining and smelting companies in the Jnited States and two in South America were wned or controlled by the American Metal Co. n addition to interests in other metal concerns. 'he 1917-18 edition of "The Directory of)irectors" shows these officers: Chairman of the)oard, Berthold Hochschild; president, C. M. .oeb; vice-presidents, Otto Sussman, Henry 3ruere, Julius Loeb, Harold K. Hochschild; ecretary, Julius Goldman; treasurer, Julian B. 3eaty. All these were directors, as were Henry V. Putzel, S. Roos and M. Schott.

The five directors named by Mr. Palmer to 'ully Americanize the American Metal Co. were Henry Morgenthau, Andrew W. Mellon, George McAneny, Lewis L. Clarke and F. C. Converse.

"These outposts of German aggression having gained a foothold in the United States, were gradually spreading into Mexico and South America," says the report. . . . With unlimited resources at their command they bought up mines, financed and built smelters and refineries, controlled their own transportation and even invaded the oil industry. With the controlling power of these great organizations centered in the hands of the Germans—knowing what we now know about Germany and Germans —who will deny that they have been a menace to the country?"

Summarizing his work in the metal business, Mr. Palmer says:

> Finding German interests and influences centered in three well defined corporations, American in name but all controlled by the German metal triumvirate, doing a business which ran anuually into hundreds of millions of dollars, we have succeeded in thoroughly Americanizing two of these concerns and in liquidating the third, thereby eliminating German influence in our metal markets and our metal industry.
> The German metal octopus has spread his tentacles across the ocean and over the United States into Mexico and South America, but for the present surely, and for all time it is hoped, he has been driven back and a wall of Americanism erected which, it is hoped, he will never be able to scale again.

Were any proof needed that Germany planned the great war long ago, Mr. Palmer's chapter on his seizure of the wireless companies would furnish it.

> The farsightedness of the German wireless policy was evident at the outbreak of the war. The vast expenditure on Sayville and Tuckerton and on the ship-to-shore stations was immediately justified. These instruments of warfare on the Allies functioned efficienctly. . . . Germany was able to begin at once the effort to influence American opinion.
>
> The German Ambassador was kept in touch with the war office at Berlin constantly and Dr. Albert and Hugo Schmidt and Richard Timmerscheidt were in receipt through Sayville of detailed orders governing their acts for the German government and German banks respectively. The file of radiograms kept by the Navy officials furnished a perfect mine of information to the government and to my office especially.
>
> Other departments of the government have learned that through the wireless propaganda and sabotage instructions were forwarded to German agents and spies; millions of German war loans were sold and the funds transmitted, and American opinion for a long time was influenced. It is asserted that the instructions to destroy the interned German ships were thus conveyed. As an instrument of politics and war the wireless stood out pre-eminent. . . .
>
> The effect of the work of my department is that Germany has been wholly excluded from the wireless field in America; has been substantially hampered in communication by wireless to the South; and can only after a long effort and at great expense and by the development of a new system recover (if she can recover at all) an independent position in the Western Hemisphere, our government, in turn, is free from the domination of any privately-owned system.

FRANCIS P. GARVAN

Mr. Palmer tells entertainingly of how he eliminated the German interests in the electrical industry, especially in the Bosch Magneto Co., which refused to sell its vital product for airplanes or automobiles that might be used against Germany. Also he tells of how control of the fur industry was taken from the Germans and centered in this country—to stay.

No fiction could be more sensational than the history of the Bridgeport Projectile Co. This is the story of a far-reaching and nefarious plot to prevent the manufacture of arms and ammunition for the Allies during the trying days of 1915 and so extensive were the German government's holdings that when the Alien Property Custodian acted, he seized 19,990 of the 20,000 shares of the concern. Propaganda and crime having failed to prevent shipments of munitions to the Allies, the Huns conceived the idea of using an apparently loyal American corporation to attain their ends.

The plan had the backing of von Bernstorff, Dr. Albert, Dr. Dernburg, Captain von Papen and others. It was planned that the Bridgeport Projectile Co. should buy up all available supplies of powder, antimony, hydraulic presses and other essentials for munitions and that the concern should take arms contracts from the Allies, but never fulfill them. In all, it was expected that $10,000,000 would be spent. The funds were furnished by the Deutsche Bank through Hugo Schmidt and Dr. Albert. In addition to those named, Mr. Palmer says in his report that Carl Heynen, once an American Consul in Mexico, and Hans Tauscher, husband of Mme. Gadski, the singer, and George W. Hoadley, an American, all were closely concerned in the enterprise.

Things went as planned until the exposure of Dr. Albert in August, 1915, when banks and manufacturers refused to deal with the company and then the business went from bad to worse. Finally, the German government withdrew its support and Hoadley organized the Liberty Ordnance Co., which took over the Bridgeport Projectile Co. When we went to war the Ordnance Department commandeered the plant and it soon was busy turning out munitions to beat the Hun.

Particular stress is laid by Mr. Palmer on the acquisition of the Hoboken docks from the North German Lloyd and Hamburg American Co., and the taking over of the latter company's plant after we bought the Danish West Indies, a strategic point close to the Panama Canal. The full effects of these seizures, he points out, will be felt for years after peace is declared.

One of the most dangerous Hun nests uncovered by the Custodian was the Transatlantic Trust Co., a prosperous concern under the presidency of Julius Pirnitzer of Buda-Pest. Not only were its advertisements in the foreign language press wholly anti-American, but it pushed the sale of war bonds for the Central Powers, carried accounts for von Bernstorff and Dumba, and harbored the notorious von Rintelen. Pirnitzer was interned for his activities and the trust company was liquidated as far as is possible until peace permits a balancing of accounts with the parent concern abroad. At the time Mr. Palmer seized the concern, it had a corps of 1,000 agents in Austro-Hungarian communities, many of them pastors of churches.

Another story from the Custodian's report that reads like a romance is the history of the German-American Lumber Co. Starting twenty-five years ago—another proof of the far-reaching plan of Germany to dominate the world—this company acquired St. Andrew's Bay on the west coast of Florida with 150,000 acres surrounding it. This harbor is one of the few really good ones close to the Panama Canal. Little development was done, however, though the several presidents drew large amounts for "expenses," and paid little attention to the lumber business.

"When H. G. Kulenkampf, president of the company, and E. Lutz, former president, were arrested," Mr. Palmer reports, "the government agents found great masses of evidence tending to show that they were more propagandists than commercial agents. In Kulenkampf's house evidence was found which resulted in the internment of two of his kinsmen of the same name, besides masses of pamphlets, thirty or forty kinds, of the sort sent broadcast over the world soon after Germany started the war."

The Emergency Fleet Corporation took over the property and began building ships there to offset the U-boat menace, and Mr. Palmer says: "I believe one of the most important and dangerous links of the German commercial and military propaganda in this country has been wiped out, never again to be in the hands of German agents."

On the first British blacklist appeared the firm K. & E. Neumond of New Orleans, a large grain house. This concern sent large quantities of foodstuffs into Scandinavia and toward the end of 1916 sought to camouflage its German connections. Karl Neumond, the American partner, eventually wound up in the internment camp at Fort Oglethorpe and the illegal shipments were stopped. Other blacklisted firms on the British list that the Alien Property Custodian took over included: Philip Bauer, Brasch & Rotherstein, Maclaren & Gentles, International Hide and Skin Co., Muller, Schall & Co., Schuchardt & Schutte, Orenstein & Keppel Co., Carlowitz & Co., and the Roessler & Hasslacher Chemical Co.

Thus is may be readily seen that much of the stir in this country that followed the issuance of the list was hardly justified.

One could go on indefinitely reciting how the German influence in all sorts of commercial houses was rooted out by the Custodian's keen hunt and how strikes and sabotage plans were foiled in vital industries. Shipbuilding firms, newspapers, food concerns, and even seed houses, all were affected by the insidious and dangerous plots of the Hun. Nest after nest of spies were broken up and the internment camps crowded by those arrested in connection therewith.

Democracy's battle against autocracy truly may be said to have had one of its most valuable aids in the Alien Property Custodian and his hardworking staff that ferreted out the nests of sedition that were a far greater menace from within than the general public ever could realize.

Secret Hyphenated Propaganda

UNDERGROUND EFFORTS IN FOREIGN LANGUAGE PRESS TO SPLIT ALLIES, SO THAT GERMANY MA GAIN IN THE LONG RUN

BY AN AMERICAN OF GERMAN BIRTH

DOES a "German-American" problem involving a certain danger to the unity of the American people still exist? Or is it a fact, as claimed by some, that two years of actual warfare against Germany, that the downfall of Kaiserism and autocracy, and the revelations as to the guilt of Germany made by Germans themselves as soon as they were able to discover the truth and dared to speak out, has brought a real and lasting change, blotting out every vestige of divided loyalty and hyphenism?

Looking merely at the surface, one may arrive at the conclusion that such a problem exists no longer. Americans of German descent, they say, have given the authorities comparatively little trouble during the war. The number of actually interned aliens amounted to only six thousand out of several millions; arrests of German-Americans who committed an overt act of disloyalty were few. They have liberally subscribed to the different war loans. Their sons were among the most faithful and valiant fighters. The fathers did not resist the draft; they complied with the food laws and every other war law, and made great sacrifices, perhaps with bleeding hearts, but with smiling lips.

It is certainly true that a good many of those of German blood who had thought up to the outbreak of the war that they owed a measure of loyalty to the land of their birth or their fathers have become true and 100 per cent. Americans. They are thoroughly ashamed that they allowed themselves to be fooled by German propagandists for many years. They honestly rejoiced over the downfall of Kaiserism, and are watching with anxious hearts the struggles of the German democracy, fearing that the machinations of the ex-Kaiser's faithful will eventually wreck the young Republic. These converts to democracy and to Americanism number many, especially among those who have never enjoyed the favor of kings and noblemen, and who today are comparing their happy lot with that of their brethren in Germany. They have come to appreciate America fully. From those we have nothing to fear for the future. They are welcoming every movement of Americanization.

But there is another class. Not large in numbers perhaps. But backed by a portion of the foreign language press, by wealth which has been linked to the "big interests" of Germany; by a certain kind of politicians who still chase the "German vote" (and get away with it as shown in the last national election in several Western states), this class is still in the position to do mischief and disrupt the unity of our people. They have changed somewhat their methods, for they have learned to fear public opinion. But have they experienced a change of heart?

If you hear them in public, they will loudly boast of the amount of Liberty Bonds they have bought, knowing as well as anybody else that a Liberty Bond is a splendid investment, and for a man of some means not a particularly great sacrifice. They will tell you at the slightest provocation of the number of "men of German blood" who fought in the American army. These same people used to count every one bearing a German-sounding name as one of "their own" whenever they wished to convince the Kaiser and his agents that America "with 16 or 25 million German-Americans" could be depended upon. They now coolly appropriate every soldier whose name sounds German as "their own" and from the valor of these fighting Americans they deduce their right to be adjudged loyal.

A certain portion of the German-language press is to blame for this condition. One who has studied the German-language press carefully during the last year must admit that a number of these papers are honestly striving to educate their readers to look upon things and events only from the standpoint of an American. This portion of the German-language press is careful to avoid the fostering of the old spirit of segregation and of German superiority that formerly pervaded every column of every German-American newspaper.

But there are others, who scrupulously refrain from condemning the old leaders and the old methods of Germany, who dare not denounce the guilt of a Ludendorff or a Tirpitz for fear of losing subscribers. Who, on the other hand, cry out in righteous indignation whenever a German-American is unjustly persecuted, but who are painfully silent when a crime against the American spirit is perpetrated. That is the portion of the German-language press which today is no more in favor of a real democracy than they were when everything German, especially imperial German, was holy to them, and when everybody who doubted the efficiency and superiority of everything German was put down as an enemy.

This group of German-language newspapers, some of them dailies, others weeklies, or religious, or farmers, papers, is in full accord with the old-time leaders of old-time German-Americanism, some of them men of wealth, who only recently have emerged from the cyclone cellar, and are boldly assuming again the role they had played for years. How eager they are for every scrap of news which can be construed as a "sure sign" of a coming conflict between the United States and Great Britain!

When Bernard Shaw, in one of his recent articles published by a New York newspaper of a decidedly anti-British tendency, divided the responsibility for the war equally between Germany and England, that portion of the German-language press responded eagerly and reproduced the Shaw articles, while the same papers had refrained from giving equal prominence to the revelations made by Kurt Eisner, who proved from the archives of the German chancellery clearly the guilt of imperial Germany.

One could hear in the favorite gathering places of this class of German-Americans the great Shaw quoted as the only true prophet, while to them Eisner was—the "contemptible Jew". They invariably prophecy some coming conflict between the United States and Great Britain, for they still "love" England dearly. One can find nearly every one of these old-time German leaders in the ranks of the opponents of the League of Nations, and their following is told that Great Britain dictated the covenant for her own benefit.

Next to Great Britain, Japan furnishes the *casus belli* of the future. When a few days ago it was reported that at Tientsin United States troops and Japanese had clashed, the mischief-makers smiled knowingly to each other and when among themselves drank to the toast "Der Tag". The conviction that because America entered the war against Germany and brought about the final defeat of the German armies we are destined to be involved in war with Great Britain or Japan sooner or later is carefully nursed among these simpletons, who, as of yore, follow blindly the old-time leaders.

All that would not in itself mean a great danger. The leaders, societies, certain churche and newspapers are only dangerous becaus they *foster a spirit of unrest, of sullenness an resentment against America, which seem to wel come distress, strife and chaos.* Nothing woul suit them better than to see our country and th countries of the Allies plunged into endles strife. Therein they resemble their old-tim friends, the Junkers in Germany, who are openly furthering the schemes of the Spartacides, tha chaos may give them the opportunity to com into power again.

Of course, it would be going too far to say that these old-time leaders of the German Americans willingly foster Bolshevism. But it is, nevertheless, true that from the ranks of those who are systematically embittered and are kept in that state of mind come some of the adherents of the dogma of chaos. Others do not consciously become Bolshevists, but they sympathize with them and for no other reason but that Bolshevism represents to them the most efficient means of tearing down Democracy which has just triumphed over German Autocracy. Even those who have property interests to protect and who a few years ago would have resented anything that smacked of the mildest socialism, have today words of sympathy and defense for Bolshevism.

How easily these good people can be lashed into a state of sullenness and resentment which reminds one of the times when German-language newspapers were full of protests of righteous indignation against the attitude of America relating to the war and the halls of the German-Americans resounded with fierce denunciation, was recently proved. The suppression of the German opera at the request of our war veterans has loosed again the voices which had to be stilled during the war and has set the pens in motion of those who used to send protesting letters to their newspapers.

It is scarcely believable, yet it is true, that from the minute the armistice was signed and the guns ceased firing, these leaders and their following, comparatively small as it may be, made ready to go back to the old order of things as if nothing had happened. One of the old-time leaders, a man who even as recently as last summer openly denounced the efforts of the American government and the American people to bring about a change in the German form of government and who had stated over his signature that we have no right to interfere in purely internal affairs of another nation, and who during the open season of the pro-German propaganda was one of those who had tried to get control of an English newspaper in New York, has again become a leading spirit.

It is true he, a very wealthy man, holds a prominent place on the Liberty Loan Committee, is chairman of one of the sub-committees and as such frequently issues statements to the German-Americans praising them for their deeds. It is only natural, that others seeing that this man (who was once put down as a pro-German and is implicated in one of the propaganda revelations which will soon be aired in court), still retains a place of honor, are willing to follow him.

The time for vicious, violent propaganda has passed forever. For one reason, because there is no money forthcoming to hire propagandists and their underlings, but the problem is still with us. In the case of German-Americans, Americanization means much more than it does in dealing with immigrants who are to be taught

The New Tragedy of the War

BOLSHEVIST CLASS WAR, HAVING SWEPT RUSSIA, THREATENS TO INVADE OTHER NATIONS AND MENACES SECURITY OF WORLD, SAYS J. G. PHELPS STOKES

Address made at a dinner of the Social Democratic League at which Catherine Breshkovskaya, Nicolas Avksentieff, Andre Argunoff, Vladimir Zenzinoff and Eugene Rogowsky were honor guests)

THE greatest tragedy of Bolshevism, as I see it, lies not in the demoralization and chaos nor even in the hideous suffering that it has brought to Russia or to the Russian people, appalling and heartrending though the tragedy within Russia is, but rather in the reaction that Bolshevism has produced in the Democratic movement throughout the world.

Prior to the Bolshevik revolution, I was one of those optimistic people who believed that the cause of Democracy was advancing everywhere. I knew that the hearts of men and women the world over were increasingly thrilled with the prospect that Democracy would emerge from the world war more virile, and more efficient in the cause of mankind, than ever before; and with the prospect that the spirit of Democracy would henceforth prevail so widely that armaments could soon be in the main dispensed with, and that the persuasions of right and fair dealing, backed by moderate police powers, would suffice to regulate the relations of men and governments in international as well as in national affairs.

Like so many others who, a year ago, saw Autocracy tottering and about to fall, I thought I saw Democracy arising and receiving in ever greater measure the acclaim and confidence and allegiance of all the peoples of the earth. And I thought, as did so many, that civilized peoples everywhere would soon cast aside outgrown and outworn Autocracies, and all other forms of arbitrary rule, and accept joyfully the methods of Democracy for their own self-government.

I had hoped, as had so many, that the new and the old democratic nations would soon gather around common council tables, and guided by the principles of reason and fairplay, build a world-wide structure of Democracy, and so perfect its machinery that disputes between nations as well as within nations would usually be adjusted by parliamentary and judicial methods without resort to arms.

An era of peace and good-will seemed near at hand in which large armies and navies might be dispensed with and the machineries of war be converted to serve the industries of peace. And then of a sudden arose Bolshevism, with all its hideous fury. Great masses of people, armed by Democracy's enemies, and inflamed by ugliest passions, debased the name of Liberty, using it as their shield for the maddest incursions upon the liberties of others and for grossest self-indulgence, in contemptuous disregard of all save what they conceived to be the needs of their immediate groups and their group desires to dominate and rule the world. A huge nation was soon immersed in chaos, murder became rampant; plunder universal; production ceased; starvation became the hideous portion of all but the plunderers, and even they enjoyed wealth only until their plunder was consumed.

The Class War, they said, was on. None might have a voice in government save those who had nothing else. The world and all it contained, they said, would henceforth be owned and controlled exclusively by those who had never before owned or controlled anything. Few else might eat or vote, or find protection from the mad excesses of those made drunk by the new-found "liberty". The propagandists of the new terror traveled rapidly throughout Europe and came even to America. They call now upon the propertyless workers everywhere to arise and overthrow Democracy as they overthrew the new democracy of Russia; and to establish in its place a Proletarian Dictatorship. The Bolshevik appeal for revolution against Democracy, must, and will of course, be met and resisted by all who believe that Democracy is essential to justice and to the highest welfare of mankind.

The greatest tragedy of the present situation lies in the fact that the ending of the war has not ended the need for the maintenance of armed forces everywhere. On the contrary, the democratic peoples everywhere must still look to their defenses, and in proportion as the foes of Democracy multiply, must postpone disarmament and prepare for whatever further sacrifices may be required to meet the new menace and overcome it. Those who love Democracy will not permit Democracy to be overthrown! They will not permit tyranny to supplant it. In Russia, the friends of Democracy were caught ununited and unprepared and have suffered a hideous, though temporary, defeat. The American people, on the other hand, are forewarned. Democracy will not be defeated here! Armaments are no longer required to thwart the lawless ambitions of kaisers and kings, but they appear to be still required to defend democratic governments from determined and dangerous foes within their borders.

It is tragic indeed that this new need for the defense of Democracy against foes within will give the reactionaries in every walk of life the opportunities they crave for demanding further curtailment of the liberties of the people. Herein lies the heart of the new tragedy that now confronts us. Reactionaries now have new and persuasive reasons not only with which to support excessive demands for continued armaments, but also—and this is still more to be deplored—for demanding the continuance of war-time restrictions upon the primary liberties of speech and assemblage and press. It is not going too far to say that the Bolsheviki have given the reactionaries the best arguments the latter ever had.

If the foes of Democracy within the United States or in any nation insist upon revolution for the overthrow of Democratic government; if they insist, as they do in their revolutionary journals that they are "unwilling to wait to be voted into power by parliamentary means;" if they continue to call, as they now do in this country, for "deeds of iron," and "revolutionary mass action of the proletariat" to establish the dictatorship they desire, there will be few friends of Democracy who will refuse their sanction to defensive measures that they would otherwise oppose with all the strength at their command.

It is unimaginable that those who believe in Democracy would idly tolerate its overthrow and the establishment of tyranny in its stead, whether that tyranny be one of wealth or of poverty, of czar, demagogue, mob, or proletariat. If challenged to a test of power, the friends of Democracy will accept the challenge, and, if required, meet force with force. If the unexpected happen, and the menace become so great that "dictatorship" of any kind is temporarily required, the temporary concentration of power must be in the hands of those who are determined to established equality of opportunity and of justice by lawful and democratic means, rather than in the hands of those who demand that propertyless proletarians, or any other class, be privileged to rule the world.

Bolshevism is a tragedy not merely because of the devastation it works among the people under its sway, but because in proportion to its strength in countries that have never known Democracy, it stimulates reaction and for a time lessens liberty, in countries where Democracy is most advanced.

Democracy must and will be preserved at all hazard, and at whatever cost. Here in America we shall endeavor to distinguish between those honest idealists who cry out that the millennium is not yet attained, but who aid their fellows to progress by all fair means towards it, and those fanatics, on the other hand, who because the institutions of men are not yet perfected, would wreck them all in the hope of being able to build in a day a millennium from the ruins of a world. If the attempt be made to create a Bolshevist revolution in this country, those who love Democracy will stand together, liberals and true Socialists alike. Personally, I shall be among those who will take up arms, if need be, in co-operation with all those believers in Democracy who are determined that no form of tyranny shall arise here.

Secret Hyphenated Propaganda

(*Continued from Page* 8)

merely the English language and American customs. Americanization in this case means the much more difficult task of eradicating a carefully fostered sentiment of sullenness and resentment against America.

It is very well to ridicule this fear by saying that these disgruntled persons are too closely watched to escape the eyes of the law. It is not a question of assaults upon the law. These people do not commit any overt act of disloyalty or treason, for the most part they do not even belong to the proletariat. In a good many instances they are men and women of moderate means, belonging to churches, considering themselves law-abiding citizens. The danger lies in the fact that they are led to breed unrest and dissatisfaction, and a desire to see Democracy which triumphed over their idol weakened and shattered.

Is there a remedy? I know of only one agency largely composed of Americans of German descent which has fully grasped the situation as far as this portion of our population is concerned and has kept an intelligent constant watch over it, fearlessly exposing every attempt, no matter how subtle, which has for its aim the return to the old order of things.

This organization, or some one similar should be maintained and supported by all who view the situation with alarm. Only those who are in constant touch with this element, who know how to read them and read their newspapers and who have worked with the great mass of loyal Americans of German descent, often against open or secret hostility on the part of the old-time leaders, can meet this danger successfully. It must be met—if for no other reason but to protect those who have been loyal Americans and intend to remain so, but who are constantly confronted by the vicious tactics of that small group which tries to kill their faith in America and in Democracy.

THE NATIONAL
Civic Federation Review

Office: Thirty-third Floor, Metropolitan Tower
1 Madison Avenue New York City

RALPH M. EASLEY, Editor

Published Twice a Month **Two Dollars a Year**

The Editor alone is Responsible for any unsigned article or unquoted statement published in THE NATIONAL CIVIC FEDERATION REVIEW.

THE GOSPEL ACCORDING TO HERR MARX

Those clergymen who have gone in for radicalism, both of the diluted and extreme varieties, and who have opened their churches to forums where Bolshevism is defended and expounded, and whose sermons ring more of the gospel of Karl Marx than of the New Testament, are doubtless in the majority well-meaning and sincere. They have been troubled, as all of us have been troubled, about the ills of the world, and they have been anxiously eager, as all normal and intelligent human beings must be eager, to help right the wrongs and end injustices that have prevailed. Throwing to the winds the eternal fact that man's progress is evolutionary and that the millenium cannot come in a day, these truly humanitarian and well-meaning men have cast in their lot with professional malcontents, Socialists and other radicals who pretend to have hit upon the panacea which will produce in its ultimate perfection and in a lightning-flash what all the teachings of Moses, Plato, the Hebrew prophets, moral philosophers and Christian apostles have only partially brought about during the course of several thousand years.

Can the doctrine of Karl Marx miraculously achieve in its perfect realization what the Sermon on the Mount has only to a degree effected in the relations among men during the running of twenty centuries? Those clergymen who have turned their churches over to Socialist teachings are probably appealed to by those cunning Socialist shibboleths about the "brotherhood of man." They are probably beguiled into the conviction that Socialism is merely concentrated Christianity and that the Marxian philosophy is merely the Christian philosophy taken out of the realm of theological speculation so that it can be put into living practice.

What these clergymen are totally in ignorance of, are the essential principles of Socialism. What they know as little about as a month's old babe, are the basic fundamentals of the Marxian scheme. What they believe in is their own idealization of Socialism, which is as opposite to real Socialism as are the two poles, and they confuse social reform, in which all of us believe, with Socialism.

Professional Socialists are not unaware of the sentimental susceptibility of many clergymen, nor are they blind to the value of churches as a vehicle for the dissemination of their doctrines. They have, therefore, deliberately sought to reach the Christian clergy through a very cunning and adroitly prepared propaganda, in the form of pamphlets and books, in which Socialism is sugar-coated with religious phraseology and the Marxian doctrines are camouflaged in theological terms. This, of course, to some degree may explain the phenomenon of clergymen turning over their pulpits for the promulgation of what is integrally the antithisis of all spiritual ideals, and all religious faith.

Clergymen reading the statement made by Prof. James Harvey Robinson, quoted in this issue of the REVIEW by Mr. Harré, to the effect that patriotism, religion and love have wrought more evil than good in the world, may be offended and shocked, and naturally so. Yet Prof. Robinson is only one of the group of mild or "diplomatic" radicals. What radically inclined clergymen perhaps do not realize is that the "advanced thinkers" to whom they turn over their pulpits entertain even a more extreme contempt for all religious belief than that indicated by Prof. Robinson. Can these clergymen see no significance in the prohibition in Russia by the Bolsheviki of religious practices, the sacking and defiling of churches and sacristies, the assassination of hundreds of Russian priests, the burying alive of Russian bishops, the violation of nuns and the turning of machine guns upon religious processions? Can they read no message in the letter recently addressed to the Archbishop of Canterbury by the Archbishop of Omsk, in which the Russian prelate declared:

"Wherever the Bolshevists are in power the Christian Church is persecuted with even greater ferocity than in the first three centuries of the Christian era."

"Bolshevism, the modern 'scourge of God,'" says David Goldstein, in *The Columbiad*, "is only another name for Socialism—Socialism applied.'"

The Bolsheviki are simply the Left or revolutionary wing, of the Socialists. They are merely putting into hideous practice the Communist Manifesto of Marx. They are anti-Christian because Marxian Socialism is anti-Christian. The Marxian philosophy is fundamentally a materialistic philosophy, which would make men's social and industrial life, their ethical beliefs and intellectual ideals conform to the doctrine of economic determinism—the doctrine that man is a beast actuated only by the desires of his body. The Socialist creed is an absolute denial of the belief that a divine force moves the universe and that man possesses a living soul. The gospel of Marx is the gospel of materialism and atheism.

Many clergymen have probably received the special propaganda pamphlets distributed by the Rand School designed for clerical consumption. How many, however, have undertaken to cover the entire line of propaganda distributed by this organization? In one pamphlet sold at the Rand School, for instance, appears the statement that "Compared with . . . the great martyrs of Russia, with the Chicago anarchists, Francesco Ferrer, and innumerable others, Christ cuts a poor figure indeed . . . Jesus is a veritable nonentity."

The Christian as all true religious philosophies is based upon the truth that the only reform, the only revolution which can effect good in the world, must take place in the human heart. How, therefore, can clergymen espouse any movement which, relegating man to the level of the beast, asserts it can miraculously redeem the world through wholesale murder and terrorism, by crime and violence, when in theory and practice it is a denial and violation of the eternal verity that human progress, human betterment, human good can be brought about only by that regeneration which takes place in the inner hearts of men?

ROBINS' SONG A SWAN SONG?

Colonel Raymond Robins, testifying before the Senate Committee investigating Bolshevism, expressed his amazement at the pacific character of the Bolshevik revolution, declaring that "in every instance" where he investigated the reported killing of men without trial "it proved to be false." Having paid his tribute to the heroic virtues of the Red Guard, the Colonel went on to say:

"Up to the time I left Russia the thing that was constantly in my mind, again and again, was the lack of vindictiveness, was the lack of actual destruction of life." The Colonel averred that if the revolution "had been in America, if it had been in any other land I know of, where a mob had taken power like that and had the rifles back of them, I should have expected vastly more of destruction."

Mr. Robins told of the arrival in Russia of Mr. Bruce Lockhart, the British High Commissioner, to whom Mr. Robins revealed what he knew about Russia, and to use his own words, he knew "more about it than any other Allied representative." "I took him (Mr. Lockhart) to my office and we opened up everything I had of a documentary nature." After giving him this fund of information, Mr. Robins suggested that Mr. Lockhart go out and get the opinions of the Czarist seven per cent.

"He (Mr. Lockhart) came back," testified Mr. Robins. "And he said: 'You told the truth. They sing a different song, just as opposite as it is possible to be; but I believe your song.'"

The Senate Committee and sundry aggregations of radical lunchers have recently heard Mr. Robins sing.

The Senate was told by Mr. Robins that "From that time in January, until I left Russia the British High Commissioner and myself were in absolute agreement on every move. We ate breakfast every morning."

Mr. Lockhart may have appreciated the rare opportunities of the breakfast hour for getting psychological if not political information. That Mr. Lockhart was of an enquiring turn of mind, and that he is not in agreement with Mr. Robins, is revealed in a report made by him and embodied in a White paper laid on the table of the House of Commons on April 5. In his despatch, sent on November 10, 1918, Mr. Lockhart stated that the Bolsheviki had established a rule of force and oppression unequaled in the history of any autocracy and classified some of the charges against them under the following heads:

> First, themselves the fiercest upholders of free speech, they suppressed every newspaper which does not approve their policy. In this respect the Socialist press suffered most of all.
>
> Second, the right of holding public meetings had been abolished, the vote had been taken away from every one except workmen in the factories and the poorer servants, and even among the workmen those who dared to vote against the Bolsheviki were marked down by Bolshevist secret police as counter-revolutionaries.
>
> Third, the worst crimes of the Bolsheviki have been against their Socialist opponents. Of countless executions which the Bolsheviki have carried out a large percentage has fallen on the heads of Socialists who had waged a lifelong struggle against the old regime, but who are now denounced as counter-revolutionaries merely because they disapprove of the manner in which the Bolsheviki have discredited Socialism.
>
> Fourth, the Bolsheviki have abolished even the most primitive forms of justice. Thousands of men and women have been shot without even the mockery of a trial, and thousands more are left to rot in prisons under conditions that to find a parallel to which one must turn to the darkest annals of Indian or Chinese history.
>
> Fifth, the Bolsheviki have restored the barbarous methods of torture.
>
> Sixth, the Bolsheviki have established the odious practice of taking hostages; still worse, they have struck at their political opponents through their women folk.

This prosaic declaration jars discordantly with the beguiling paean rendered by the star soloist of the so-called "Truth About Russia" chorus. Inasmuch as Mr. Lockhart's serious and convincing indictment comes long after Mr. Robins left Russia, Mr. Robins' pourings forth, as they apply to more recent developments and conditions, may be taken as being just as apropos as the chirruping "of the birds that sing in the spring, tra-la."

GERMANISM AND VILLARDRY

"Conspicuous among the novelties of present day doctrine is the threat to go Bolshevist," recently remarked the *New York Tribune*. "If Germany is asked to pay for a fraction of the damage she has done, she responds: 'Well, then, I'll go Bolshevist.'"

Among the high-pitched chorus of wailing that has of late come out of Germany, there now sobs the voice of Mr. Oswald Garrison Villard, editor of the *Nation*, who has been to Germany, who has seen the horrors due to the Allied blockade and who foresees what will happen if the wicked Allies force an unjust peace upon the beaten

foe. Says Mr. Villard in a cable letter published in the *Nation*:

"I believe to be correct the German estimate that in the Empire eight hundred die daily because of undernourishment and inability to resist disease. . . . If humanitarian America could realize the actual state of affairs it would compel the Red Cross to push in food, milk, oils, grease and soap. I have seen infants in Berlin and Dresden hospitals with the shrunken limbs and swollen stomachs characteristic of famine sufferers. . . . The continuance of the blockade simply means suffering and death for the most innocent.

"So deep is the feeling that all classes say that if a Brest-Litovsk peace is forced upon them, . . . they will open their doors wide to the Russians and if Bolshevism comes either because of the peace or the duration of the blockade since the armistice they will pull Europe down with them."

This is the same Mr. Villard who, in the enslavement of Belgian women, the massacre of Belgian women and children, the scientific devastation of Belgium and northern France, could see no reasons why Germany should be punished. This is the same Mr. Villard who boosted the Brest-Litovsk negotiations, the Bolshevist peace program, and who, so long as Germany was victorious urged a peace of compromise, and after German defeat, pleaded for mercy and magnanimity to the beaten Huns. This is the same Mr. Villard who published, in the New York *Evening Post,* of May 10, 1915, of which he was then editor and controlling owner, the following despatch regarding the sinking of the Lusitania:

"Had the submarine given thirty minutes' warning to the crew and passengers of the Cunarder, *the exploit would have gone down in history as one of the most brilliant in the annals of naval warfare.*"

Commenting upon that statement made then by the man who now whines about starving Germany, the *Outlook* said:

"Every man who did not spring to his feet in protest against the unwarned and cruel drowning of the women and children on the Lusitania is at heart pro-German and cannot complain if he is forever suspect."

A CAMPAIGN AGAINST INTERVENTION

"True information from Russia is needed," ran a headline in a recent number of *The Dial.* So it assuredly is, and nowhere more so than in the editorial office of that very publication.

The issue of *The Dial* of December 14 was conspicuously devoted to a panegyric on Bolshevism, and a demand (in large type) that the Allies withdraw from Russia. Hitherto *The Dial* has been more or less of an obscure affair of inane literary pretensions. Now it has not only assumed a solemn political character but suddenly has begun to advertise aggressively its mission in costly displays in the large newspapers. Wherefore? It is anxious that the public should know "the truth" about Russia which has been "so misrepresented", and therefore promulgates an invitation to all and sundry to read its pages. Surprise has been generally expressed at the simultaneous springing up in many places in this country of what seems to be concerted pro-Bolshevist propaganda.

Ever since the Allies disposed of Germany, the Bolsheviki have mortally feared an intervention that would put a stop to the anarchistic terrorism which they have inflicted upon the Russian people. Representative spokesmen for Russians, Letts and Esthonians have pleaded for intervention to save Russia.

How did the Bolsheviki manage to come into power? They themselves admit that it was because of their promises of bread and peace, neither of which has been fulfilled. But *The Dial* says it was because of the blunderings of the Allied nations and their "unwillingness to subscribe to the tenets of a real democratic peace." A Brest-Litovsk peace presumably might satisfy "The Editors." To them America is also a mere presumptuous upstart: "Russians regard us as well as many others in Western nations as political infants." This of Russia where about 68 percent of the people can neither read nor write, and where they have not had an iota of political experience except the tragic imposition of the Bolsheviki. What of the atrocities committed by the Bolsheviki? "Notoriously false" say "The Editors" of *The Dial,* and a contributor signing himself "S. M." It happens, however, that apart from the many other accounts from responsible sources, Professor George V. Lomonosoff, when pleading in New York City last June for recognition of the Bolsheviki Government, admitted that "crying atrocities" had been committed under it.

To intimidate civilized nations from rescuing Russia, *The Dial* holds out the threat that "before the foreign enemy domestic difficulties vanish," and that Trotzky stated "that he could afford to pay 100,000 rubles for every Japanese soldier landed on Russian soil."

The effect produced on all intelligent minds by such stuff is the very reverse of that intended. It is the thoughtless that may be deceived. All having good memories can never forget the cowardly submission of Lenine and Trotzky to the German invaders, and the shameful peace they signed. To "The Editors" of *The Dial* the German invasion of Russia was apparently acceptable; they reserve their indignation wholly for the intervention of the Allies. One of the things of which *The Dial* complains loudest is the suppression of news from Russia. Well, the Bolsheviki have very effectively suppressed news, as for instance, as told here recently by Colonel Vladimir I. Lebedev, a leading Russian Socialist Revolutionist, of the revolts of hundreds of thousands of workingmen against the Bolsheviki—revolts that failed only because the Bolsheviki possessed all the available arms and munitions, and a mercenary army composed largely of Germans, Hungarians, and Chinese to use against the real Russian workers.

While on the subject of "true information" we suggest that public policy demands a goodly supply of it as to the mainsprings of the present activities of *The Dial* and similar publications.

INTERNATIONAL AGRICULTURAL PROGRAM

The National Board of Farm Organizations, consisting of nineteen national farm organizations, delegated Mr. Charles S. Barrett, President of the Farmers' Educational and Co-Operative Union, to appear for it at the Peace Conference in Paris. Mr. Barrett has just returned to this country and had a most successful trip. He not only appeared before the American delegation to the Peace Conference, but conferred with M. Clemenceau, Mr. Lloyd George, Baron Sonnino, and other representatives of the various foreign governments. He found in each case a sympathetic and enthusiastic listener, because the representatives of the foreign governments were only too glad to do honor to a representative of those classes who had made sacrifices to furnish food for the soldiers and civilians among our allies.

It will interest our readers to know just what President Barrett presented as representing the desires of the great organizations of farmers in the United States. The international program proposed by Mr. Barrett was as follows:

a. Extension and improvement of the International Agricultural Institute at Rome.

b. Adoption, so far as practicable, of uniform systems of crop estimating and publishing reports on manufactures throughout the world.

c. Inclusion in the League of Nations of a special body having the international interests of agriculture directly in charge.

d. Adoption as a part of the constitution of the League of Nations of the principle of conservation of natural resources throughout the world and especially in all lands held under the jurisdiction of the League, whether such resources be found on the farm or elsewhere.

e. Provision for cooperative investigation of the relation of weather to crops in all parts of the world.

f. Endorsement of a set of International Agricultural principles, including:

1. Equality of pay, opportunity, and social reward for equal skill and equal work in agriculture as compared with other occupations.

2. Universal free education for farm children universally accessible.

3. Extension of the benefits of modern civilization to the open country, in spite of the added cost, part of which should be borne by general taxation.

4. Universal recognition of the right of farmers to bargain collectively through cooperative and other associations no less than other workers.

5. Adoption of the principle of gradual abolition of farm tenancy, on the theory that no land should be held permanently for renting.

6. Recognition of the right of each nation to withhold from export supplies essential to agriculture which are limited in quantity, subject to withholding such supplies only when so limited.

7. Recognition of the principle that the depression of agriculture constitutes the central danger to civilization, and that the demand for cheap food at the expense of a decent standard of living on the farm leads to agricultural disintegration and general decay.

8. Recognition of the principles that the compensation of agricultural producers on the basis of cost of production plus a reasonable profit is vital to the maintenance of a permanent agriculture, and therefore of a permanent civilization; and that provision should be made for maintaining this principle throughout the world by means of the regulation of international trade.

REMARKS OF MR. EMERSON McMILLIN AT DINNER GIVEN TO MR. CHARLES LATHROP PACK, UNION LEAGUE CLUB, MARCH 20TH, 1919

During the recent war, there were a few Americans—outside of the Army and Navy circles—who made themselves conspicuous by the magnitude and character of the work they performed. In a list of names of men of great deeds—men who have so distinguished themselves—President Wilson must be placed at the head. He has been the greatest and the most conspicuous, necessarily, because of his opportunities. Whether we Americans all believe in the efficiency of his work or not, it is evident to all that he has had the European world at his feet for the last two years.

Second on the list of men who accomplished great things, I would place Mr. Samuel Gompers. His work was great, but less conspicuous than some of the others. His influence in America was of infinite value. It enabled him to guide Labor and keep it in line; to combat the I. W. W.'s and Bolshevism. But his *greatest* work was done abroad. His thorough control of the situation in this country made it possible for him to deal comprehensively and effectively with like elements on the other side. While the press said but little regarding his wonderful achievements abroad, yet—to his influence, and to his intelligent and strikingly efficient work—was due the adherence of LABOR to the Allied Cause—both in England and in France. Without this loyalty on the part of Labor, success was not possible.

Sapping the Foundations of Society

HOW FAR HAVE REVOLUTIONARIES SUCCEEDED BY COVERT AND INSIDIOUS METHODS IN INVADING CHURCHES, THE PRESS, COLLEGES AND SCHOOLS

By RALPH M. EASLEY

What is the explanation for the invasion of churches, the press, colleges and schools by revolutionary Socialist propaganda?

Why is it that many clergymen, educators, writers, social workers and others have been "taken in" by propaganda whose ultimate purpose is the destruction of all religious belief, spiritual ideals, constructive social progress and beneficent institutions of modern civilization?

Do these sincere and well meaning men and women understand the basic crass essentials of the Marxian program? Or have they not been insidiously deceived into accepting Socialism as meaning social reform? Industrial and social progress must be achieved by constructive effort. No one would deny that evils exist and that much remains to be achieved. But to what extent have many people been led away from the consideration of actual evils and their sane remedy to exaggerated evils? To what extent has discontent been deliberately manufactured?

In The National Civic Federation Review *of March 25, in an article published under the title, "Radicals Mislead Churches About Labor," I raised the question:*

"Why are the churches, whether those of wealthy and aristocratic congregations, those of the middle class, or those made up largely from the working class, all advocating the same radical measures to aid the working classes, which these same working classes themselves do not want?"

The fact that the churches of our country, as a whole, include a large majority of the people of all classes—bankers, merchants, lawyers, farmers, laborers, college presidents, etc.—and that these churches are all controlled by boards of trustees made up largely of business men, makes that, I think, a very pertinent inquiry. This situation has not been developed over-night, so to speak, but is the result of a situation long in the making. That our churches, Protestant and Roman Catholic alike, should—as shown in the article referred to—have fallen under the spell of the revolutionary rather than the evolutionary and sane labor movement is not surprising in the light of the situation that has been developing in this country in the last fifteen years.

In 1914, I attempted to describe conditions then existing as they related to industry, in a statement prepared to be given as testimony before the Industrial Relations Commission, before which I had been subpoenaed to appear. I was, however, never called to the stand and this report has, therefore, not been used. As it seems to the writer to present one of the answers to the question above, it will now be published in full.

If the picture presented by that proposed testimony was true at that time—and I think no one will dispute its accuracy, since it was based almost entirely upon statements of the radicals themselves, rather than upon opinions of the writer—no one should be surprised at conditions today. The latter are the logical outcome of the former. In fact, the situation today is the same, only a little more so. What will it be tomorrow if not checked?

In this testimony will be found quotations from several socialists who at that time were extremely radical but who, during the war, repudiated the Socialist Party on account of its disloyalty to our nation. No offense to these sincere, high-minded and loyal men is therefore intended in using quotations which represented views entertained at that time but not today.

This testimony covered a variety of subjects, but the part that came under the head of "Present Day Unrest," one of the subjects appointed to be considered under the act creating the Industrial Relations Commission, is the only one that is used in this connection and only one-half of that will be published in this issue of the Review. *The remainder will appear in the succeeding issue. The topics treated in this number are:*

I. Legitimate Unrest.
II. Manufactured Unrest:
- *Socialist Propaganda in the Trade Unions;*
- *Socialism in the Press;*
- *Socialism in Social Reform Organizations;*
- *Socialism in Schools and Colleges.*

Those topics treated in the next number will be:
- *Socialism Among the East Side Immigrants;*
- *Socialism in the Churches;*
- *Socialism and Free Speech;*
- *Socialism and Patriotism.*

III. Is Wall Street or Socialism Gaining Control of Sources of Public Opinion?
IV. Socialism Versus Industrial and Social Progress.

The enquiry of the Industrial Relations Commission in 1914 sought to learn the causes of unrest. In my report, the publication of which begins herewith, I divided unrest into two classes—normal and manufactured.

NORMAL UNREST

A NORMAL unrest we have had since time began and it is wholesome and essential. Without it there would be no progress and society would die of dry rot. There never has been an age when unrest did not exist or when it was not exploited both for good and bad purposes. There is an industrial unrest today which comes from the education we had yesterday, and the broader education we have today will bring the unrest of tomorrow. Wage-earners of the present era know more about their rights and their needs than did those of an earlier period. They used to be content with the bare necessities of life. Now they, rightly, demand some of the luxuries. They have higher aspirations; and is this to be wondered at when the children of the wage-earners of today are receiving twelve times as much education as did their grandparents?

Unrest? Yes. But instead of charging it primarily to industrial conditions, we must credit most of it to education—the universal popular education of the schools and the even more far-reaching and stimulating education of daily contact and experience with the wonderful achievements of modern civilization.

There are, of course, other causes of normal unrest to which we cannot and should not shut our eyes. There are many black spots in our industrial conditions, as this Commission, in common with other students of the situation, well knows. There are still too many greedy and inhumane employers paying pitifully low wages to both men and women, and working them long hours under grievously bad conditions. There have been revelations in the domain of "high finance", instances of brutal defiance of public sentiment on the part of individual capitalists, arbitrary practices by various large corporations in the early days of their growth, discoveries of "business graft" in unsuspected places and of corrupt alliances between big business and political "bosses"—all of which have played their part in breeding in the public mind a certain amount of distrust of the soundness of our institutions and have thereby contributed to "social unrest".

But we must not forget that it is only an essentially sound body politic that relentlessly turns the light on its own faults and takes stern measures to correct them. The increasing determination of public opinion to know what is going on and to make the way of the transgressor hard is one of the surest signs that we are advancing towards higher civic standards. Our very success in locating and curbing, if not destroying, many of these evils which have existed in one form or another in all times and countries, demonstrates the integrity of the system under which it is possible to accomplish these reforms. We simply refuse to tolerate what earlier generations either ignored or accepted as unavoidable; and we do this because we have come up to a higher level of civilization. At the worst, such instances of industrial and financial misdoing are no more typical of the total situation than our jails and reformatories are typical of the general moral standards of the people. There is not one of the problems of bad working conditions chargeable to greedy or ignorant employers which has not been successfully met by other employers through just and humane treatment, and the proportion of employers of this latter type, to the credit of American industry, is rapidly growing.

The disaster which we constantly see overtaking corrupt practices and frauds, speculative "corners" and unfair business policies, means that the natural laws of business itself, for its own self-preservation and under the spur of a keener public conscience than the world has ever seen before under any state of civilization, work towards the elimination of dishonesty and will not permit anybody to succeed permanently except on the basis of square dealing. There is, therefore, no need for discouragement, but solid ground for confidence that we are working not against but with the tide in our efforts to solve our special industrial and social problems as they arise.

MANUFACTURED UNREST

But the wholesome discontent which attacks these problems with a view to the further bettering of the system under which we have advanced thus far is the very opposite of an artificial, manufactured discontent based upon a philosophy which of necessity denies all progress and the possibility of improvement along these tried and tested lines. Such a discontent or unrest can only be met after its instigated causes are clearly defined and their fallacies exposed.

This illegitimate or manufactured unrest has been deliberately stimulated, especially during the last fifteen years, by a persistent group of people holding to the Marxian economic philosophy and represented in this country by the Socialist Party and its off-shoot, the Industrial Workers of the World. I think this Commission could perform no greater service than to inquire into and report upon the proportion of present-day unrest chargeable to this factitious source.

As I understand it, the group of people who are promoting this artificial discontent asserts in brief that the competitive or "capitalistic"

system is producing a condition of increasing misery which is leading to an inevitable cataclysm; that the farms, the mills, the factories and all productive industries are rapidly being concentrated in the hands of the few, resulting in "wage slavery" with all its attendant horrors; that the wage-earner is being robbed of four-fifths of all he produces; that between him and the employer there can be nothing in common except a condition of perpetual class war; and that the only remedy for such a state of affairs is the overturning of the whole competitive regime and the substitution of "the co-operative commonwealth"—in other words, a revolution.

Accepting this program, these socialists consistently attempt to prove that under the present regime everything that is is bad. They admit no progress, because to do so would upset their theory. They, therefore, necessarily grossly misrepresent our social conditions. They are accustomed to distort figures and pervert or suppress facts as may suit the exigencies of their argument. Every working man or woman is a "wage-slave", "overworked", "underfed" and always "cowed down". Children of any age under twenty-five are always "little", "pinched", "pale", "emaciated" and "anaemic". The employer, always "a bloated capitalist", is "cold-blooded" and "a slave-driver" and generally "a scoundrel". The picture they paint of American industry is a nightmare and belongs in the "chamber of horrors". While boasting of their "scientific methods" the socialists are in reality notoriously unscientific in that they unceasingly try to make the facts fit their special theory. Their statements are no less partisan than those of the paid attorney of a corporation because they see only the things that help their side of the case. It means nothing to the great body of the Socialist Party that some of their most intellectual leaders have repudiated practically all of the Marxian theories because of their absurdity in the light of the known facts of today.

While numerically the Socialist Party has never had more than 125,000 members (now reduced to 75,000), their vote has run as high as 900,000 in 1912. In the 1914 elections the returns show that they lost from 25 to 40 per cent. in every state except Oklahoma, where their vote increased 25 per cent. But a compact organization of 75,000 persistent, active people in all parts of the United States, plus hundreds of papers, magazines and millions of pamphlets, all preaching the gospel of despair and class hatred, in season and out of season, with a fanaticism which would be magnificent were it employed in a better cause, cannot be regarded as a negligible factor.

Let me give some illustrations of the character of their propaganda in the trade unions, among immigrants, in the colleges, the press, the pulpit, and social organizations generally; and ask what we may expect the natural effect to be on the ten million foreigners who have come into this country during the last ten years, as well as on the ignorant and shallow of all classes of our cosmopolitan population; and then ask what part does all this play in manufacturing unrest.

SOCIALIST PROPAGANDA IN THE TRADE UNIONS

As the main proposal of the Socialist Party is to better conditions for the working classes, that party naturally makes its strongest appeal to the organized wage-earners. The activities of the socialists in this field are frankly and clearly described by Jack London, at one time president of the Intercollegiate Socialist Society, in the following paragraphs:

> *With the control of the police, the army, the navy, and the courts, they will confiscate, with or without remuneration, all the possessions of the capitalist class* which are used in the production and distribution of the luxuries and necessities of life. They mean to apply the law of eminent domain to the land and to extend the law of eminent domain until it embraces the mines, the factories, the railroads and the ocean carriers.
>
> The socialists turned their energies upon the trade-union movement. To win the trade unions was well-nigh to win the victory.
>
> Instead of antagonizing the unions, the socialists proceeded to conciliate the unions. "Let every good socialist join the union of his trade! Bore from within and capture the trade-union movement."
>
> Today the great labor unions are honeycombed with socialists. At work and at play, at business meeting and council, *their insidious propaganda goes on.* Night and day, tireless and unrelenting as a mortgage, they labor at their self-imposed task of undermining society.

So far the socialists have made little headway in capturing the trade unions as a whole. While they have, as stated, in round numbers 75,000 dues-paying members and the Industrial Workers of the World 14,000 dues-paying members, the American Federation of Labor, the railroad brotherhoods and other non-socialist labor organizations have something like 3,000,000 dues-paying members; so that, if the entire 89,000 membership of the Socialist Party and the Industrial Workers of the World combined were members of the trade unions, it would be but an unappreciable percentage, but probably not more than one-half of the members of the Socialist Party are trade unionists.

There are, however, individual crafts where the socialists have captured the machinery of the organization, the most important instance being that of The United Mine Workers of America. This they did at the twenty-third annual convention of that body, held at Indianapolis, Ind., January 17, 1912, when it resolved: "That this convention go on record favoring government ownership of all industries."

This did not mean that the five hundred thousand members of the organization had become conscious socialists, but that the political propagandists of the Socialist Party had been the more active in securing delegates to the convention. On a straight-cut issue socialism would probably now be defeated in that organization by ten to one, but until that resolution is rescinded the United Mine Workers of America stand committed to revolutionary socialism with all that that means.

Ninety per cent. of the leaders of the whole movement of organized labor are *non-socialist.* They have had to resist the socialist attempt to capture the American Federation of Labor by "boring from within" and that has made them thoroughly acquainted not only with the doctrines of the socialists but with their "insidious propaganda", as Jack London puts it. The measure of the full strength of the socialist contingent in any American Federation of Labor convention is shown by their annual unsuccessful attempt to defeat Samuel Gompers for re-election as president. At the last convention, held in Philadelphia, November, 1914, the socialists were so anxious to hide their weakness that they did not even put up a candidate. The antagonism to Mr. Gompers is because of his rooted opposition to the doctrines of socialism, his estimate of which is contained in the following extract from a speech in Faneuil Hall, Boston:

> I want to tell you, socialists, that I have studied your philosophy; read your works upon economics, and not the meanest of them; studied your standard works, both in English and German—have not only read but studied them. I have heard your orators and watched the work of your movement the world over. I have kept close watch upon your doctrines for thirty years; have been closely associated with many of you, and know how you think and what you propose. I know, too, what you have up your sleeve, and I want to say that I am entirely at variance with your philosophy. I declare it to you, I am not only at variance with your doctrines, but with your philosophy. Economically, you are unsound; socially, you are wrong; industrially, you are an impossibility.

That much bitterness is injected into strikes where the socialists have any appreciable hold should be no surprise when we consider the revolutionary character of the matter contained in the literature which they distribute so voluminously among the ranks of the men. This literature is well calculated to undermine the faith of its readers in American institutions and the hope of progress under them.

Just what effect such articles as the following from *The Appeal to Reason,* which has a circulation of 500,000, would have on men who were facing trouble with their employers or on employers who were asked to make collective bargains with men holding such views, it is not hard to imagine:

> We make no apology for advocating the confiscation of the nation's industries as soon as we have the power to confiscate them.
>
> The rebels of '76 confiscated the colonial possessions and drove out King George and his vassals who held the legal title to them.
>
> The Lincoln administration confiscated the slave property of the Southern slave holders and this constitutes its crowning glory.
>
> The railroads of this nation have plundered the people without mercy ever since the first of them was chartered. The people have paid for them over and over again and now when the people come to take possession of these railroads, which they built, and which in very truth belong to them, they would be nothing less than idiotic to turn over the public treasury to the private capitalists whose claim to them would not bear for one instant the searchlight of honest inquiry.
>
> So with the telegraph and the telephone. So with the steel mills and the coal mines; so with the oil refineries and the cotton mills. . . . . .
>
> We would have no one under any mistaken impression so far as our position on confiscation is concerned. We want the capitalists themselves to know that we are organizing to take from them the right and power they have had since the beginning of capitalism to take from us the proceeds of our toil.
>
> *The Appeal to Reason* unfurls the flag of confiscation and appeals to all the toilers of the nation, in the mills and mines, on the railroads and the farms, to rally beneath its folds and hasten the day of their deliverance.

SOCIALISM IN THE PRESS

While the socialists have their own press and literary bureaus, they boast of the great success with which they are making themselves felt not only in the reportorial, literary and art departments but in the editorial rooms of the great daily newspapers.

Mr. J. G. Phelps Stokes, in an interview published in *New York Times,* was so sure of his ground that he made the following frank statement:

> Only yesterday I was told by a prominent New York editor that he had among his personal friends as many as twenty socialistic editors of daily and weekly magazines, whose publications are not socialistic but whose personal opinions are unqualifiedly so. It is easy to observe the influence of their opinions on the matter which they publish. Many of our leading magazines, especially, are advocating socialism in a veiled way. Nearly all the literature of criticsm, of so-called "exposure", is really socialistic in degree.
>
> It is true of journalistic leaders elsewhere in the country. They are not all socialists, but more and more they are expressing socialistic sympathies to socialists and doing what they can to admit socialistic articles and arguments into their columns. And the most successful magazines are those which oftenest present analyses of modern conditions by men who are, in fact, true socialists. The most widely read medical journal in America is edited by socialists.

Mr. George Allan England, a magazine writer, makes the following interesting statement:

> Many a plutocratic magazine owner would be horrified if he knew the truth, that one or more of his apparently subservient editors were out-

and-out Marxian socialists, dues-paying members and enthusiastic workers in this field. The moral and intellectual influence exerted by these large numbers of directing spirits, scattered throughout the publication offices of this country, even though their work must, perforce, be carried on *sub rosa*, can hardly be overestimated.

Hutchins Hapgood, writing in *The New York Call*, explains in the following paragraphs just how he "put the thing over" on the plutocratic owners of papers:

> I have had a good deal of experience as a reporter, critic and editorial writer on the conservative daily newspapers of New York and Chicago, and I am writing, at the present time, editorials for one of New York's daily papers.
>
> Radicalism, when deeply and broadly assimilated and felt, applies to everything in life. A newspaper might be a great exponent of radicalism, a great revolutionary influence, merely by the way in which the news was treated in its columns. A man who wrote what he saw, without undue reference to tradition or countries, who told a news story as if it had never been told before, would be a radical and *his story would very subtly and also deeply disturb the viewpoint of his readers.*
>
> *If you visualize the news, if you deepen the meaning of every item that goes into your papers, you are making a* radical paper, even if the word "socialism" is very rare.

In *The New York Call* of February 7, 1915, the editor in describing with great enthusiasm his achievement in organizing a new socialist press bureau throughout the country, makes the following interesting statement:

> Perhaps one of the most surprising features of the entire situation is that in almost every large city where *The Call* now has a bureau or a correspondent, the representative is a trained newspaper man of ample experience. It is probable that but few have any adequate idea of the number of newspaper writers in active service on capitalist papers who are socialists in active connection with the party.

So successful have these propagandists been in impressing editors with the importance of their views that two magazines in New York have come out openly for socialism, although the support of one of these magazines is largely from advertisers who, if the Socialist Party should succeed in its efforts to overthrow the competitive system and take over their property, would be placed in a grotesque situation to say the least.

Another magazine has been founded during the last year, which is financially backed by a Wall Street business man. This magazine is edited by three gentlemen who together can be regarded as a hotch-potch of progressivism, populism, socialism and syndicalism. One of these editors is exploited by friends of this paper as a "great statesman" and "profound thinker", and he certainly has a right to those titles for he has been on earth for nearly a quarter of a century. This magazine, while containing much high grade matter on current events, nearly always has, sneaking away in some corner or between the lines on all its matter on industrial subjects, its particular syndicalist or socialist philosophy.

A little over a year ago a revolutionary change took place in one of the oldest weekly publications in New York, which in one leap went from ultra conservatism to ultra radicalism, its financial backers under the new management being wealthy manufacturers, two of them in high standing in national politics. In announcing its policy, one of the statements made by this paper was that it aspired to be the organ of "the Feminists"—that bunch of crazy, impossible women whom the backers of the paper would certainly not care to entertain in their own homes. It was also announced that in its art department it would follow closely the path blazed for it by those "brilliant, naughty rebels" who were publishing an anarchist sheet which just keeps itself within the line that permits it to go through the United States mails. That anarchist sheet is not backed by capitalists but by cartoonists, painters, sculptors and writers on the various capitalist newspapers and magazines, who boast of their rebellion against the present order.

An ingenious method which the socialists employ to manufacture sentiment is frankly announced by George Bernard Shaw, the English socialist and playwright, in Fabian Tract No. 41, as follows:

> It only cost us (the Fabian Society of London) twenty-eight post cards, written by twenty-eight members, to convince the newly-born *Star* newspaper that London was aflame with Fabian socialism.
>
> Before the year was out, we had the assistant editor . . . writing as extreme articles as Hyndman had ever written in *Justice*. Before the capitalist proprietors woke up to our game and cleared us out, the competition of the *Star*, which was immensely popular under what I may call the Fabian regime, had encouraged a morning daily, the *Chronicle*, to take up the running; and the *Star*, when it tried to go back, found that it could not do so further than to Gladstonize its party politics. On other questions it remained and remains far more advanced than the wildest socialist three years before ever hoped to see a capitalist paper.

It seems clear from these quotations that there is a well-defined, organized attempt to control the utterances and the policies of the press in the interest of the revolutionary propaganda. May it not be of the highest importance to ascertain to what extent this attempt is successful? The American people do not want editorials or news tainted by revolutionary socialists any more than they want their editorials or news tainted by the capitalists, who alone, so far as I have been able to see, have been charged with insidiously corrupting the sources of our public information.

SOCIAL SETTLEMENTS

Social settlements and the charity organizations form another great field for socialist exploitation. Settlement and charity workers are dealing constantly with poverty. The settlements themselves are located, designedly and properly in places where the greatest amount of squalor and misery are to be found. Necessarily the workers are brought into contact with all the human frailties at their worst, and, like the doctors who are constantly in attendance at clinics, they see only the abnormal. I do not mean to imply that all our social workers and charity experts who make radical utterances become conscious socialists. They see great misery and, to their credit, they resolve to do all that is within their power to remedy such evils. They may become practical social reformers, between whom and socialists there is an unbridgeable gulf. But the workers in these movements are constantly in danger of losing their perspective, imagining that what they see is typical, and concluding that, if the conditions which come to their notice are the product of present-day institutions, the more quickly these institutions are overturned the better, because nothing that could take their place could be worse.

Referring to one of the large charity organizations in New York City, I was told that the superintendent of a certain district spent the time when he was supposed to be instructing the workers in their daily duties in wild denunciations of the capitalist system. My informant said that, after listening to his speeches, she felt more disposed to go out and throw bombs than to dispense alms. Some of the charity workers who are more thoroughly steeped in the socialist philosophy have been heard to say, referring to the poor: "Let them starve. The sooner they starve, the sooner will come the revolution."*

The ingenious way in which the socialists distort and exaggerate is well understood by all students of the literature of rebellion and has already been referred to. A headline in a socialist paper a year ago read: "Women Making Knee Pants at 4 Cents a Dozen. They Earn Only a Pittance of 50 Cents a Day." This statement soon got into the "capitalist" papers and is still going the round. An inquiry into the matter revealed that these women did not make a whole pair of pants, as the headline would imply, but performed only a single operation on them in handsewing; that they worked on the knee pants in their homes between the performance of their household duties; and that, even so, they made from 90 cents to $1.25 a day. These facts were made public but received no attention.

The most fruitful field for this kind of exaggeration is that in which children are concerned, where "social investigators" have reported the finding of children of the ages of "four and five years" at work in cotton mills, canneries and various other industries. As a matter of fact, in such cases the mothers were doing work in the factory and the children playing around. In the campaign against the evils of child labor it is always a popular statement that there are from two to four million "little children wage-slaves" under fourteen years of age working in the factories, mills and mines of this country. It makes no difference that the inaccuracy of these figures has been exposed over and over again. They are still doing duty at the same old socialist stand. It is easy to puncture these statements, because they are admittedly based on the Census of 1900. The probability is that those who make them have never studied the Census reports but have taken the figures from some ranter who started the story. The Census of 1900, to which they refer, showed that two-thirds of these two million children were not employed in factories, mines or mills, but in agriculture, out on the farms where they ought to be, and that three-fourths of the remainder were over fourteen years of age. In other words, in the United States in 1900, instead of there being two or four million children under fourteen years of age working in factories, mines and mills, there were just 186,000, and, according to the Census of 1910, the number so employed in that year had been reduced to 95,000. By the present time that number has been very largely, if not entirely, taken out of industry.

An officer of the National Child Labor Committee, a society which, while devoted to the work of fighting the evils of child labor, has itself been guilty of using these exaggerated figures, became so much disturbed over the injurious effect of these ridiculous statements that, in an article in the *New York Independent*, he referred to it in the following language:

> We doubt the efficiency of pity to solve the problem of child labor. A certain value is derived from pictures of the bent shoulders, the contracted lungs, the tired limbs, the sallow faces, the vacant eyes and the dwarfed intellects of those we are banishing from home, playground and schoolroom to the weary tread of our sweat-shops, factories and mines. But not all child laborers are "slaves". Those who denounce the evils of child labor in such generalizations as that "two million little, wan and dwarfed child toilers march in the wage-slave ranks of America's industrial army" are a menace to this reform. Intelligent people, seeing many of these two million children who are not "wan" or "dwarfed", and who bear no other visible marks of slavery, discount the whole cry against child labor as sentiment. Many of the two million working children of America are between fifteen and sixteen years of age and are in occupations and laboring under conditions not injurious to themselves or to society. Not all glass houses employ little boys at night. Not all coal breakers are dense with clouds of dry dust. Not all telegraph offices employ little children to carry messages at midnight to houses of vice. Not all children in Southern cotton mills work through a twelve-hour night. Some one tells of seeing a little girl in a Southern cotton mill rudely awakened at night by a dash of cold water in her face. Homilies on child labor followed this incident, abounding in graphic descriptions of

* One of these same charity workers during the war, although holding a Government position, is charged with having boasted of being disloyal

numberless little girls cruelly awakened night after night by splashes of cold water.

Nothing is gained by exaggeration; much is lost. It is enough that some of the two million are toiling all night in glass houses; that some coal breakers compel little boys of ten years to work in clouds of dust so dense as to completely hide the light and fill the lungs; that some little girls of eight years toil through a twelve-hour night in Southern cotton mills; that some of the little children of New York are crushed in body and soul in the slavery of sweatshop labor. The truth is bad enough. Let the picture be drawn with simple accuracy, and we may hope to arouse, instead of sentiments of pity, the sense of social justice; an appreciation of the relation of this system to our social institutions. A demonstration of the loss to society, the injustice to the laborer, and the dwarfing of the progenitors of our coming generation, will be more effective than specific pictures of little children who suffer from the wrong.

OWEN R. LOVEJOY,
Assistant Secretary of the National Child Labor Committee.

SOCIALISM IN SCHOOLS AND COLLEGES

In the colleges revolutionary socialism is being endorsed by many professors and by more pupils. The sixth annual convention of the Intercollegiate Socialist Society, held in New York, December 29-31, 1914, was attended by delegates from local organizations in over fifty of our principal colleges. While this society pretends to be a non-partisan body to study socialism, it is simply an organization to promote socialist propaganda. It was founded by socialists and every officer in it is a member of the Socialist Party. The boys and girls, however, who join the Intercollegiate Socialist Society do not know this and many of them are led into radical socialism through it. A mother told me with tears in her eyes that her son, by imbibing this doctrine of despair through the socialists in this organization, had become so embittered towards society that she feared that his whole life would be wrecked.

In the report of the secretary of the Intercollegiate Socialist Society, Mr. Harry W. Laidler, which was presented at the convention referred to above, occur the following interesting paragraphs:

(The italics are mine.)

The year 1914-15 is chiefly noteworthy by virtue of the fact that the I. S. S. has, in a greater degree than heretofore, been able to present its message in scores of colleges, before whole college bodies, before economics and sociology classes and before many long-established organizations of undergraduates. In November and December of this year, for instance, the Organizing Secretary addressed twenty-seven economics, sociology and logic classes in twenty colleges of New York and New England, and spoke before college chapels, Y. M. C. A.'s and I. S. S. Chapters, reaching a total of 3,000 students and several hundred of the general public.

. . . . . .

Increasing sympathy toward Socialism is being shown by economics professors. In the sixteen New York and New England colleges in which the views of members of the economics department were obtained, *one professor was found to be a dues-paying member of the Socialist Party; four definitely stated that they believed Socialism to be the next system in economic development*, while a similar number tacitly admitted this fact. Two said that they *strongly suspected* that Socialism would be the next system in economic development, while nine or ten believed the tendency was in that direction, although they were not willing to commit themselves to the whole Socialist program. *One* called himself a "Societyist" and *prided himself on having made Socialists of a number of his students.*"

. . . . . .

Another indication of the increasing interest in Socialism is found in the topics for debates. Colgate, Western Reserve, Ohio Wesleyan, Rochester and other colleges are debating specifically on the subject of Socialism, while many more are arguing the question of collective ownership of railways, etc. Still another promising feature of the year's work is the organization of the New England Sectional Committee, Walter M. Hinkle, Williams, 1914, and a prominent debater, has been secured as organizer, and Ordway Tead, Amherst, 1914, as chairman. Both are doing excellent work in strengthening undergraduate Chapters in New England.

The Intercollegiate Socialist Society has *this year approximately sixty undergraduate and a dozen alumni Chapters*, the same number as at the last Convention.

. . . . . .

Among the most active and largest Chapters this year is *Union Theological Seminary, whose membership comprises about one-fourth of the college body.*

Two years ago the head of one of the most fashionable schools for girls in New York declared herself, at one of the meetings of the Intercollegiate Socialist Society, as a member of the Socialist Party. When asked how it came about that the rich people of New York were sending their daughters to a school conducted by such a prominent socialist, she replied: "Oh, they don't know anything about it, and if they did I doubt if they would care, because they don't know what socialism is. At any rate, these daughters of the rich turn to socialism as the flowers turn to the morning sun."

But the Intercollegiate Socialist Society has as good "running mates" the American Economic Association and the American Sociological Society, composed not of students but entirely of professors of economics and sociology in all the colleges of the United States. If the wealthy founders and patrons of those colleges had any sinister purpose in mind, as is so generally charged by the revolutionists, they certainly have fallen far short of the mark if the public utterances of the leaders of those organizations are any criterion. At the last annual meeting of those two societies held in Princeton, N. J., December 28-30, 1914, the annual address of the president of the American Economic Association was practically a declaration for socialism, while the annual address of the president of the American Sociological Society could be classed with the I. W. W. literature of the day.

I said to a member, whom I knew to be anti-socialist: "Why do you people stand for this kind of stuff? Why don't you hiss some of these declarations?" He replied: "The radicals have captured both of these organizations, and while there are a few of us who are opposed to such doctrines, there are not enough of us to stem the tide." I do not know how nearly correct was this professor's analysis, but if I were to judge alone from the friendly reception these addresses had I should say he was right.

Nor do the socialists confine themselves to the colleges. They are organizing locals among the teachers and pupils in the public schools, and throughout the country there are many important schools in which a socialist teacher or a boy or girl pupil is quietly spreading the socialist doctrines. For it must not be forgotten that the boys and girls of socialist parents are every one of them trained to be Marxian socialists from the age at which they are able to understand the outlines of that philosophy. In the circular issued to the socialists, urging them to organize the teachers, it is particularly pointed out that it is important, in every instance, to secure the teacher of history, as such teacher could interpret historical events discriminately, so as to fit the socialist doctrine of economic determinism.

The easy manner in which a teacher can make his pupils socialists is explained by Professor Enrico Ferri, of the University of Palermo. In addressing the International Congress of Socialist Students and Graduates on one occasion, he said:

> "We should introduce socialism into the student's mind as a part of science, as a logical and necessary culmination of the biological and sociological science. No need of making a direct propaganda which would frighten many of the listeners. Without pronouncing the word 'socialism' once a year. I make two-thirds of our students class-conscious socialists."

It would be interesting to know just how many Enrico Ferris, avowed or "surreptitious", there are in American universities and colleges today, working, as Jack London says, "at their self-imposed task of undermining society." I have been asked by parents to recommend colleges to which they could send their sons where they would not be made socialists or anarchists. I could not give advice on this subject because while there are in every university some avowed socialists and even syndicalists against whom a parent can protect himself, there are also in every university many more who come under the head of "surreptitious" socialists, and these, from the standpoint of such parents, are, obviously, much more dangerous.

I think this Commission would perform a useful service if it were to "dig them out" and "label" them. A college professor has, of course, a right to be a socialist, a syndicalist, an anarchist, or even a Mormon; but he should be made to declare himself openly as such, in order that the parents who abhor such a philosophy may know how to protect their boys and girls from what they believe to be insidious and dangerous teaching. It would be interesting to trace the influence, which is thought by many to be an evil influence, of the young men and women who have been made socialists in college and are today writing books, articles for magazines and editorials in the newspapers, preaching the "gospel of despair" in the pulpits, manipulating the social reform organizations and, in some instances, occupying important positions of trust in corporations or municipal, state and federal government offices.

Take, for instance, the history of the movement which resulted in the passage of the law creating this very Commission. It originated in the minds of a group of radical people, consisting of charity and social workers and ministers, all of them college graduates. They were overimpressed by the McNamara dynamiting incidents in California and thought that civilization was about to go to pieces. Some of them probably hoped that it would do so. They began a campaign to secure the enactment of a law creating a commission to study the underlying causes of the "great unrest" that was indicated not only by the McNamara incidents but by the Lawrence, Paterson and other eruptions caused by the Industrial Workers of the World. After securing the passage of the law, they tried to get the President to name as members of the Commission the persons whom they recommended, which included a number of themselves. None of the promoters, however, were placed on the Commission, but they had breathed their fears and their spirit into the law to such an extent as to handicap and circumscribe the work that it was to do. The law placed such an emphasis upon the study of unrest that the Commission felt obligated to do the same thing. It would, to my mind, have been much better if the Commission had been instructed, in addition to looking for unrest, normal and induced, to include in its investigation an inquiry into the progress which this country has made, industrially and socially, within the last few decades.

"Who's Who in "The New School"

(*Continued from Page* 5)

of the chief organizers of The New School for Social Research.

Less advanced thinkers than Prof. Robinson have for a very long time, indeed, had no vague uncertainties as to the "exact causes" of the war, as to where the guilt for this world agony lay, and to them it may seem exceedingly strange that any man of American birth—albeit a Ph.D. of Freiburg—can at this late hour regard those "exact causes" as "questions of dispute."

It was apparent from Prof. Robinson's *Century* article that in his opinion the "nationality" of the European states was responsible for the world catastrophe rather than German militarism—a view, of course, with which Dernburg's crew of propagandists were not unsympathetic. "*If nationality causes war,*" argued the "thoughtful outsiders" put forward by Prof. Robinson, "*then nationality must be a wicked thing, which should be got rid of altogether, or so far modified as to lose its ugly traits.*"

Prof. Robinson was painfully reticent, obstrusively shy, about making any direct allusion as to the guilt of German "nationality" in causing the war.

"The national spirit is only patriotism in its modern form," continued the co-author of the pro-German school text book so scathingly pilloried by the Seattle School Board, "and we have been taught from infancy that no sentiment can more safely be encouraged, since none is worthier of man or more pleasing to God than love of country. All national anthems," ironically remarked the cynic of Columbia University, "substantiate this."

"Nationality, in our meaning of the term, is a concomitant of another mystical entity, democracy."

"There is, however, nothing exceptional in this case of a cherished emotion which produces fearful disasters. PATRIOTISM RESEMBLES RELIGION AND LOVE IN THIS RESPECT. TO THE CANDID HISTORICAL STUDENT THE EVIL WORKINGS OF RELIGION ARE, TO SAY THE LEAST, FAR MORE CONSPICUOUS AND FAR MORE READILY DEMONSTRATED THAN ITS GOOD RESULTS."

"AN ALIEN ABSTRACTION CALLED THE STATE"

James Harvey Robinson, unable to place any special blame upon Germany for loosing the scourge of war upon the world, could apparently see in the "workings" of the teaching of the Man who was crucified on Calvary more evil than good results. This strutting sophist, insensible to all its spiritual mellowings, would apparently place upon Christianity the blame of all the persecutions, massacres and crimes actuated by human bigotry, just as, relieving the Huns of direct culpability, he would put the guilt of the war upon "nationality."

"As for love," said Robinson, "St. Paul's eulogy in 1 Corinthians, 13, might fairly and squarely be reversed." Is a man whose soul is utterly callous to the spiritual regeneration worked upon the world by the Christian teaching, a man who could divert the moral guilt for starting the war from Germany by ascribing it to "nationality," who, by perversion of reason or by hypocrisy, can assert that patriotism, religion and love work more evil than good, such a man as might be trusted to mould the thought of young men and women? One's mind goes back to the saying of a courageous Man—hated and ultimately slain by a breed similar to those who today counsel in secret and pack halls where class war is incited—concerning those who scandalize the young and lead young minds astray. And one marvels exceedingly, and is sorely amazed, when the New York School of Philanthropy Porter R. Lee, director should select as the Kennedy lecturer for 1919, one who ribaldly wags his head and scoffs at patriotism, religion and love.

"Patriotism," said this champion of the I. W. W., "is made up of two quite different things, love of one's country and dislike and depreciation of foreign peoples. Unhappily the latter is the more vivid and unreasoning sentiment when once aroused." Prof. Robinson aptly said: "The first records of emotions which may properly be called national are to be found in the Old Testament."

German patriotism may have combined with love of country "dislike and depreciation of foreign peoples." But it is a question whether truly Christian civilizations have been "more vivid and unreasoning" in their hate, and the fact that America and other nations accepted Germany as she professed herself to be, that we accepted her at her own valuation and gave generous credit to her flamboyant boasts of superior achievements, is proof of that. Germany alone—and Prof. Robinson ignores this—wallowed in hymns of hate in this war. Prof. Robinson, in making his points, quotes such a distinguished authority as Max Eastman, editor of the *Masses* and *Liberator*, with whose views he seems to be in accord. He quotes the editor of the *Masses* as saying: "The disposition of European people, grouped in nations, to wage war when their nation was threatened, and to believe it threatened upon a very light excuse, seems to be fixed in the nervous tissue, like self-preservation itself. Men who would not contribute a peaceable eight cents to the public weal, drop their cash, credit and commercial prospects and go toss in their lives like a song at the bidding of an alien abstraction called the state."

By this could it be implied that Belgium, France and England considered themselves "threatened upon a very light excuse"? Was that national sovereignty, integrity and liberty which Germany sought to destroy merely "an alien abstraction?"

PATRIOTISM "TOUCHY AND UGLY"

One may have wondered what would be the reaction in such a "progressive mind" as that of Robinson's at the spectacle of America going to war, of millions of boys going bravely forth to fight, of people giving their money unstintedly to war loans and war charities, of the whole nation uniting unselfishly and heroically toward the great task of winning the war.

Here in the face of that spectacle a puny Zoilus sneers and snivels.

"A man who exhibited no public spirit and consistently dodged his taxes in times of peace might find himself hurrying off to the trenches at the bugle's sound, urged on by an innate property of his nature of which he himself had not suspected the existence. The war-dance is in our blood."

That for "Star Spangled Banner stuff"!

"To most of our fellow men," he sourly sniggers, "patriotism is a word that still falls most sweetly on the ear. . . ."

He goes on:

"The chief quarrel with patriotism is its innate tendency to precipitate war with other groups upon the most trivial pretenses. It is, in short, touchy and ugly in its most constant and characteristic manifestation."

Did Belgium rush at Germany's throat upon a "trivial pretense?" Did France? Did England? Did America? Were the invasion of Belgium and the killing of helpless women and children by the submarines "trivial pretenses" upon which to quarrel with Germany?

Was the inspiring spirit of this country throughout the war "touchy and ugly?"

Says the pundit who has risen above the merely human quality of patriotism:

"I AM INCLINED, HOWEVER, TO THINK THAT ANYONE WHO REALLY ACKNOWLEDGED AND BELIEVED IN THE BOTTOM OF HIS HEART ALL THE THINGS WHICH I HAVE BEEN RECALLING WOULD SCARCELY BE SWEPT OFF HIS FEET BY A WAVE OF NATIONAL EMOTION. IF THAT BE TRUE, THEN MUCH CAN BE ACCOMPLISHED THROUGH EDUCATION."

Is it on the basis of this belief—the belief that those accepting as truth what he preached—that Prof. Robinson predicts the New School for Social Research "will turn out a new class of leaders?" Is this—this emasculation of all vital and heroic national virtues—what Prof. Robinson hopes to accomplish through his particular form of "new" education?

Do the people of America want "a new class of leaders" who "would scarcely be swept off their feet by a wave of national emotion?"

One is irresistably inclined to ask whether Prof. Robinson was incapable of "a wave of national emotion" when the Lusitania was torpedoed and helpless American women and children were sent to their death? Was he unmoved by "any wave of emotion" when imperial Germany, breaking her solemn word, announced the resumption of ruthless and indiscriminate killing upon the high seas? Was he unstirred when America went into the war, when American boys first braved that ordeal of steel and fire?

ROBINSON AND THE I. W. W.

Through the tense days of that war, when American blood was spilled that the world's heritage of freedom might be preserved, in the long dark hours of that Gethsemane, was this little professor impervious to the emotions that swayed the crowds? Was he, exalted in some lofty and detached angle of intellectual neutrality, alien to the rising and ebbing despairs, sorrows and enthusiasms of the herd? Scorning nationality, scoffing at patriotism, cold-bloodedly aloof in some superior philosophical dimension of "internationalism," did he fail to share in the warm-blooded hope of "the majority" that our boys rout the bestial Huns and that the Allies break and crush Hun militarism finally and forever?

Or, after America had entered the war, was it not true that this advanced thinker did succumb to a purely human heart glow when American boys in khaki marched down Fifth Avenue? And when he read, in his well-warmed and comfortable library, of their feats at Chateau Thierry, did his pulses not involuntarily thrill to a genuine emotion of patriotism? Was he not inspired to do his "bit" in combatting pacifists, opponents of the draft, the advocates of a peace of compromise, the disloyalists, internationalists and secret abettors of the foe? Despite his academic theories, teachings and speculations, when it came to practice, was Mr. Robinson not "right" after all?

Prof. Robinson, as before stated, lent himself to the effort to raise a $50,000 fund in June, 1918, for the defense of I. W. W. leaders on trial for seditious conspiracy to obstruct the country in its conduct of the war. The majority of those I. W. W.'s were later found guilty of the crimes charged against them and sentenced to long terms of imprisonment.

By those engaged in defending the criminal I. W. W. leaders at that time it was implied that the Government would not give the accused a fair trial. Just as, in more or less the same manner that Prof. Robinson endeavored in effect to deflect the blame for starting the world war from Germany to "nationality," so the defenders of this lawless organization at that time sought to shift the blame for their crimes to "social conditions." Conspicuously among the defenders of the I. W. W. was the *New Republic*, whose editor, Mr. Herbert Croly, is one of the organizers of Prof. Robinson's New School for Social Research. The *New Republic* alleged that the I. W. W. were not on trial for seditious conspiracy—of which they were actually found

guilty—but "for revolting against the intolerable by-products of timber mining and crass speculation in public lands." The committee signing the appeal for a defense fund, of which Prof. James Harvey Robinson was a member, complained that the indicted I. W. W. leaders "are at least entitled to a fair trial and an open-minded public hearing," implying, obviously, that the Department of Justice would not accord what it was "for American liberals" to make possible.

EMOTION FOR THE HYPHENATES?

When various radical, revolutionary and Socialist magazines were suppressed by the postal authorities for publishing unpatriotic and seditious articles, for opposing the draft and otherwise seeking to hinder the country in its war work, a wail at once went up about the suppression of the constitutional rights of free speech. Among those who sniffled and scolded about the violation of individual rights were the same revolutionary radicals, pacifists, pro-Germans, and others who had defended the I. W. W. and who later became apologists for the Russian Bolsheviki. The most vehement champions of "the constitutional rights of free speech" proved chiefly to be those who were opposed to our waging the war against Germany until a decisive victory was achieved, who urged a peace of compromise and who, since the signing of the armistice, have assailed the Allies and pleaded for mercy and magnanimity to the beaten foe. Of this kidney were the *Nation* and the *New Republic* crew.

Prof. James Harvey Robinson published in the *Atlantic Monthly* of December, 1917, an article entitled "The Threatened Eclipse of Free Speech."

"I cannot share the flushed indignation of those who denounce as traitors all who take a different view of our national policy and of the choice we have made," declared the intellect which has transcended so vulgar a thing as "a wave of national emotion."

"If we can honestly agree with the mass of our countrymen on the wisdom of joining the war, we should be devoutly thankful, for we are lucky in escaping the disgrace and danger of dissent and suspected loyalty."

Prof. Robinson confessedly managed to be one of those "thankful" ones, for he said: *"Some of us who* NOW *warmly support the war cannot find it in our hearts to contemn all so-called pacifists, or even those who are torn by conflicting allegiances."* Thankful that he at least had escaped "disgrace" and "suspected loyalty" by achieving a warm approval of the war, Prof. Robinson did not find it necessary to strain the quality of his mercy toward those dissenters who "appear to be quite as noble as we," whose "ideals are no less lofty than ours," who are "disloyal only in the sense of failing eagerly to co-operate with the majority in a crisis."

"When we see khaki uniforms all about us; . . . when coal runs low in the cellar and sugar in the kitchen; . . . when we . . . are suspected of being a scoundrel if we do not invest in government bonds, the mind is quickened as never before. We would seem to have a right to suspect that many things must have been fundamentally wrong in the old and revered notions of the State, of national honor, even of patriotism, since they seem at least partially responsible for bringing the world to the pass in which it now finds itself."

Some minds that were quickened by the sight of khaki uniforms did not fail clearly to see the responsibility of imperial Germany "for bringing the world to the pass" in which it found itself. Some persons, "saying good-bye to relatives and friends departing for French trenches," failed to see, as did this odd scribe at least a "partial responsibility" for the world agony in our "old and revered notions . . . of national honor, even of patriotism."

NATIONAL FLATTERY AND SELF DELUSION

"Just at this critical juncture," continued the befriender of the I. W. W., ". . come reports of government censorship, exclusions from the mails, the breaking up of public meetings, and expulsion of teachers from our schools and colleges for expressing opinions adjudged disloyal, seditious, or treasonable . . ."

"We have," complained the man who declared religion, love and patriotism to have worked more evil than good, "furthermore been taught from childhood to sing of our country as a land of liberty and to flatter ourselves that freedom of speech is an indubitable element of 'Americanism.' The Constitution of the United States precludes Congress from passing any law abridging freedom of speech, or of the press, or the right of the people peacefully to assemble and to petition the government for a redress of grievances."

However, the ideals of the Constitution are a snare and a pitfall, for, "according to those very laws which proclaim freedom of speech, 'every individual is to be held responsible for the abuse of the same.' This means that . . . if anyone says anything at a public meeting which is deemed immoral, indecent, inflammatory, or treasonable by the policeman or plain clothes men present, he may be arrested, and mayhap imprisoned or fined." "The courts," bewailed Prof. Robinson with characteristic irony, "have decided that the United States post-office has precisely the same right to refuse to carry the *Masses* that it has to exclude sulphuric acid and dynamite from the mails. So it comes about that the rights of public discussion are always really limited, and that they may readily be impaired by narrow, ignorant and prudish interference."

For the "new vigilance" exercised over meetings and public speeches by "plain clothes men and police officials, our district attorneys, juries and judges" during the war, Prof. Robinson implied that mere "excuses," and not valid, legitimate reasons, were given. *"The excuses for this," said he, "are the activities of German agents and sympathizers."* Did Prof. Robinson not know of these activities, of the plots and pacifist propaganda of Hun agents and sympathizers? Or were the exposures of these Hun conspiracies mere fabrications, subterfuges with which to gag the radical press and shut "advanced" pamphleteering from the mails?

America decided to enter the war, admitted Prof. Robinson, "with the general sanction of the nation." "The minority, who are still unreconciled with this decision or are not yet fully persuaded, must, it is urged, yield to the majority and keep their mouths shut. For them to continue their protests when the boys are in the trenches is giving aid and comfort to the enemy," sarcastically continued the man who abetted the effort to raise $50,000 to defend those I. W. W.'s who, as a jury decided, had given aid and comfort to the enemy. "It is essentially disloyal, if not downright treasonable. . . . When we start out to kill enemies abroad on a gigantic scale," cynically animadverted this superior thinker, "we are not likely to hesitate to gag those at home who seem directly or indirectly to sympathize with the foe. But just here we may well stop and make a couple of distinctions. In the first place difference of opinion is not necessarily disloyalty."

COMFORT TO SHADOW HUNS AND OTHERS

There is, one must admit, in Prof. Robinson's style a gleam now and then of something akin to the fine touch of machiavellian subtlety. Or maybe, it is just "plain clumsy."

"Some people in the United States wish Germany to be victorious. To express this wish *publicly* . . . would certainly be disloyal, not to say treasonable."

Would an expression of the wish privately, in camera, say in one's bedchamber or over a seidel of lager, not have been disloyal, not to say treasonable?

"Those, however, who continue to say that they wish we had not entered the war; that some other less horrible policy might have been selected; that war has never yet begotten lasting peace but only new war; that some men loathe shooting their fellow men under government auspices in the same sickening way that they would loathe private murder—such persons are in no way treasonable, and disloyal only in the sense of failing eagerly to co-operate with the majority in a crisis."

"It is this confusion between real traitors, on one hand," said Robinson, "and on the other hand *those persons whose human sympathy and idealism outrun the common bounds,* that fills many of us with dismay."

Were the I. W. W.'s, who opposed the war and preached resistance to the draft, were Victor Berger and Rose Pastor Stokes, persons "whose human sympathy and idealism outrun the common bounds" of "the majority" who were loyally willing to sacrifice their blood and the blood of their dearest in order to vanquish the brutish Huns?

Prof. Robinson, obviously appreciating with fine discernment, the unwisdom and embarrassment of too rash or too emotional public expressions, did not fail to hold out hope of freedom and relief to those likely "to attract the attention of the postal authorities and guardians of the public purity." In fact, he pointed a way of "safety."

"The censor is commonly slow-footed and heavy-eyed," remarked the sapient Mr. Robinson. *"It is not hard to elude him; one need only avoid a few phrases which he has learned to recognize as wicked or dangerous, and express one's self with a little freshness, or resort to irony, or a scientific phraseology, in order to be quite safe."*

This, presumably, was given as the wisdom that comes from experience. It came with the weight of authority. The suggestion had in itself a quality of freshness, a delightful touch of irony. And the suggestion was given generously to those who might run and read with a prodigality rare among those misers who hoard nothing but their own conceit.

And in this gentle hint, this outburst of kindly magnanimous feeling toward the suppressed, was there not perhaps a suggestion which may have filled the hearts of German well-wishers, sympathizers and agents with a due feeling of gratitude and elation?

DENIAL OF GOD A "PRIVILEGE"

Prof. Robinson, chafing against the rude efforts to restrict freedom of expression by the "slow-footed and heavy-eyed" censor, warmed genially as he discovered and pointed out a loophole for free, unrestricted and loose talk. He thawed and expanded thus:

"At present, all things may be said and printed if only time and circumstance be somewhat carefully considered. One may reject every vestige, not only of Christianity but of all religious belief, even the existence of God and the life to come—and there are many occasions on which this privilege can be exercised."

Having, therefore, given the cue to pacifists, conscientious objectors, the great "unreconciled"—and perhaps inadvertently to German agents and sympathizers—as to how they might all continue to give vent to their painfully repressed emotions without danger of suppression or arrest, Prof. Robinson remarked, as it were, facetiously: "Indeed, except for blasphemy, which is a sort of breach of good order, no arrests, or exclusions from the mails are likely to take place, unless one's negations are accompanied by seditious or otherwise shocking remarks." Those desiring to "exercise" the

"privilege" of denying God, of rejecting Christianity, of discrediting as archaic and evil loyalty to country and national ideals, therefore require only that felicitously scientific phraseology, that freshness of cynicism, that delightful spirit of ironic mockery, that velvet suavity and *savoir faire* which have distinguished the author of "Mediaeval and Modern Times" and co-author of "Outlines of European History, Part II."

To the advanced thinker who solicits students for his courses at the New School for Social Research, the Kennedy lecturer for 1919 at the New York School of Philanthropy, was the discovery of an opportune way of rejecting every vestige of Christianity and belief in God a cause for personal exultation? To the man who found in the workings of religion, patriotism and love more evil than good, was it a cause for gratification that, by considering time and circumstance, or by scientific phraseology, or by irony, there are many occasions on which the "privilege" of rejecting Christianity and belief in God can be exercised? Are the two hours in his lecture courses at the New School for Social Research such rare occasions?

Prof. Robinson, at last moved by a wave of emotion, of challenging exultant triumph, went on to boast in the *Atlantic Monthly*:

"ONE CAN ALWAYS CRITICISE AND ATTACK THE POLICY OF ALL GOVERNMENT OFFICIALS, FROM THE PRESIDENT OF THE UNITED STATES DOWN TO THE LOCAL CORONER; THEY CAN SAFELY BE DENOUNCED AS KNAVES, FOOLS, AND LATTERLY, EVEN AS TRAITORS. ONE CAN PICK FLAWS IN OUR CONSTITUTION AND THE COURTS WHICH INTERPRET IT; ONE CAN EVEN QUESTION THE EXPEDIENCY OF THE STATE ITSELF, AS NOW UNDERSTOOD; BUT ONE WOULD BETTER NOT BE ASSOCIATING WITH SUPPOSED ANARCHISTS WHEN SO DOING."

Was that why Prof. Robinson took pains to announce that the New School for Social Research "will not be so radical as the Socialists"?

Prof. Robinson's friend and collaborator, Charles Beard, did "pick flaws" in the framing of the Constitution and, now that it has been pointed out, it seems that he, while so doing, did seek out and assiduously cultivate respectable company.

"SAVAGE TERM SACRED"

Prof. Robinson's somewhat vainglorious admission betrays real acuteness and wordly wisdom, and to many of his colleagues at Columbia may answer their oft-repeated question to how "he gets away with it." To some, however—viewing it from Prof. Robinson's own standpoint—this oracular delivery, one of the truly wisest bits Robinson ever dropped, may seem a self-asserted triumph which carries with it its own defeat, for it "lets the cat out of the bag," gives away the trick, and ergo, when the secret of the charm is known the charm ceases to work.

Prof. Robinson and his New School colleagues would probably repudiate, with indignation, any suggestion that they intend to teach or encourage Bolshevism or social revolution. But supposing they so wished, according to Prof. Robinson they could do even that by avoiding phrases which people might "recognize as wicked or dangerous," by resorting to "irony" or "scientific phraseology." According to this "secret key," they could teach anything and be quite "safe," provided they did not associate with notorious "supposed anarchists while so doing."

It is declared in the prospectus of the New School for Social Research:

"Everyone who watches public affairs sees that we must now deal with social difficulties of the most complex and dangerous sort, and that we have neither sufficient applied knowledge nor sufficient trained personnel to cope with them." Therefore: "The New School will exist frankly and solely for social research. Its founders are aware of the necessity for disinterested study of the problems of modern society. . . ."

"ABOVE GOOD AND EVIL"

Is that "disinterested" point of view which shall govern the study of the New School indicated by Robinson's definition: "Such a stage of intellectual emancipation that he exempts nothing from scrutiny . . . when that ancient, savage term 'sacred' disappears from our thought and speech?" Which suggests a stage of "intellectual emancipation" so morally neuter that one cannot tell right from wrong.

For, never mentioning Germany so much as in a whispered hint, the emancipated intellect of Mr. Robinson out of much travail delivered this:

"It might be shown that the horrors of the present war are largely due to the perpetuation of outworn institutions, of discredited ambitions, and of illicit national aspirations."

Were the "outward institutions" German? Were the "discredited ambitions" those of his Majesty William II? Were those "illicit national aspirations" the aspirations of Germany for world dominion?

Of Mr. Robinson's writings, prior to the time that Boards of Education began to show a lively and painful interest in them, and he began the revision of text-books indignantly kicked out of public schools, it might be said that at least there was little in them to which the Kaiser could have taken exception.

Professor Robinson gives us his word that: "In the free expansion of friendly conversation, I, at least, can deal damnation round in a way fully to justify my claim to be a patriot." Being, therefore, a patriot, on the strength of dealing out damnation in words, Prof. Robinson could not, of course, have openly implied that the horrors of the war were largely due to the outworn institutions, discredited ambitions and illicit national aspirations of Russia, England and France. Prof. Robinson surely was not pro-German. Intellectually emancipated, possibly; academically neutral, perhaps; morally neuter, maybe. But certainly not pro-Hun.

The very fact that Professor Robinson, after his long, laborious, lonely pilgrimage over the stony road of academic learning, arrived at such a rarefied intellectual altitude where he could impassionately look down upon and contemplate the coarse mobs swayed by vulgar human passions, swept off their feet by "waves of national emotion," moved by such evil working forces as religious beliefs, faith in God, confidence in a life hereafter—whence with impartial because remote vision he could see "the chief states of Europe rushing at one another's throats in the name of nationality"—the very fact that he attained exalted heights where he was lifted above purely national emotions, national prejudices, would in itself preclude any possibility of Prof. Robinson's having any partiality, any biased sympathy, any predilection, any grovelling adoration for Germany. The man who had risen above national emotion so far as the land of his own birth was concerned certainly could not entertain a "soft spot" for the Huns.

PROPAGANDA PLANS OF HUNS

The official German propaganda was scientific. It was subtle. It was, to a surprising degree, able. To create hostile sentiment toward the Allies and favorable sentiment toward Germany, the Imperial representatives sought as their most effective agents men of American birth and of reputable standing. The history of Hun propaganda shows that they did not fail altogether in their enlisting of "distinguished" aides. As has been shown in a previous article in this series, that form of German propaganda which aimed at the creation of anti-British feeling was inaugurated shortly after the Spanish-American war, while the propaganda which aimed to poison the fonts of American learning began twenty-five years before the outbreak of the European war. Anticipating success in her war against the Allies, imperial Germany proposed to carry on her insidious efforts toward ultimate world dominion and commercial supremacy, and toward this end laid out a propaganda campaign which was to continue in the United States and other countries after the conclusion of peace. The imperial government planned an international wireless news service, to compete with the established agencies, which was to be launched as an American affair, and the directorship of which was promised to William Bayard Hale, secret director of Hun propaganda in the United States. News distribution agencies, news syndicates and newspapers were also to be secretly purchased or subsidized by the imperial government. The imperial government proposed thus to secure control of American public opinion. In this propaganda American colleges and schools were not to be neglected by the crafty Huns.

This information was accorded me by no less a person than one of the chief directors of Hun propaganda in the United States.

My informant was Dr. Karl A. Mechlenburg, chief of the Translation Bureau of the official German propaganda organization located at 1123 Broadway, New York.

"Our propaganda in America," said Dr. Mechlenburg, genially expanding one day in 1915 after the report of German victories, "will continue and even widen on a bigger scale after the war. It is our purpose and intention to secure control, as far as we can, of concerns publishing text-books for use in public schools, and likewise to mobilize and influence all writers of school text-books. We propose especially to control the preparation of school histories, so that American children will not be taught that Germany began this war, or was guilty of unwarranted atrocities in this war. . . . By controlling the preparation of school histories we can begin to make Americans from the time they are children see the German point of view."

In these school text-books, according to the German plan, Germany was to be glorified and the Allied nations disparaged; by creating admiration for her supremacy and achievements friendship and partiality toward Germany were to be fostered while hostility and antagonism toward the Allies, especially England, was to be stimulated; the causes of the war were either to be beclouded or laid at the doors of the Allies, and Germany was to be exculpated of all original blame for precipitating the world catastrophe.

[In my next article, I shall endeavor to give an adequate analysis of the amazing propaganda put into American public schools under the guise of a text book, and show how Dr. Robinson, in 1918 and after school boards throughout the country had suddenly evinced a lively and uncomfortable interest in his works, undertook a task of surgically drastic and heroic expurgation and revision such as finds no literary parallel even in the feat of rendering the "Arabian Nights" innocuous reading for children. The spectacle of this dignified historian qualifying impromptu as an intellectual "lightning-change artist" will probably cause a sensation, if not consternation, in the jealously competitive circles of vaudeville. Dr. Robinson's sleight-of-hand, turn-about conversion, under the exigencies of a changed and painfully exacting market, affords an illuminating commentary upon the intellectual integrity and philosophic sincerity of the eminent historian who now presents himself to the American audience as one of the "advanced leaders" of "The New School for Social Research."]

Industrial Training

(*Continued from page 3*)

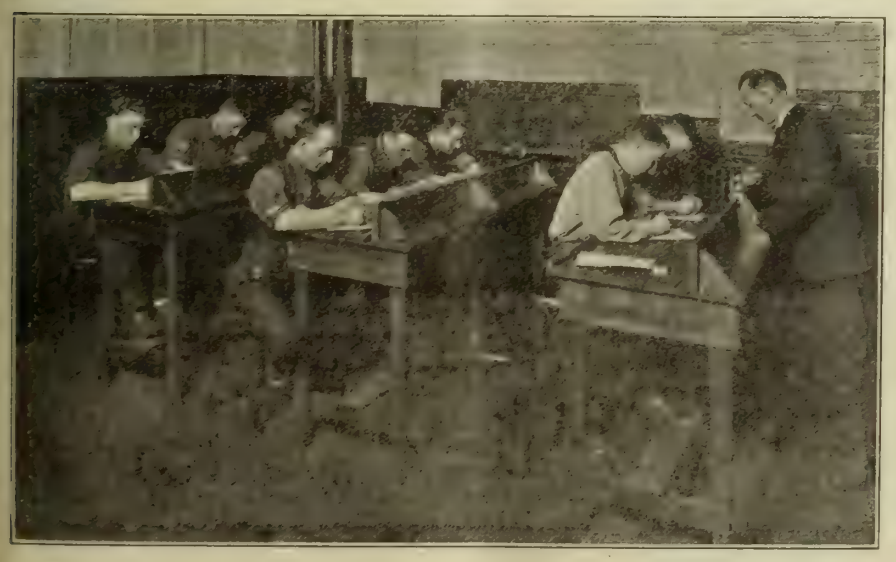
as the U. S. Training Service, a division of the Department of Labor, which took over and continued the work. The U. S. Training Service has an adequate field force and, with a part of this force, is cooperating with the national organizations in each major trade in developing the best possible method for present and future training. In its Bulletin No. 8, the Training Service declares that careful analysis seems to justify the judgment that more than half of the 10,000,000 factory workers are producing less than one-half of a fair day's output, mostly for reasons that can be corrected by training. It is also found that training is as much needed in the simpler trades as in the more difficult, though more quickly given in the former. In the latter, great numbers of workers have been admitted who lacked the peculiar aptitudes required for success therein. There is a place in which any worker may succeed. Society owes each assistance in finding that place, whether it is in making rubber shoes, cotton cloth, candy, boots and shoes, paper boxes, machinery, fine instruments, silverware, or clerking in a store. This is now being recognized and acted upon by employers in each of these trades.

The only altogether precious possession of any nation is the spirit, brain and muscle of its people. In the United States this is worth today in terms of mere money, about $350,000,000,000. This equals the entire tangible wealth of the nation and is five times more than all our other natural resources combined, and yet our little minds have been worrying about coal and iron and water powers, utterly negligent until now of the supreme possession.

It is known now that by a little training of the right kind almost any employer can get from 20 to 40 per cent. more from his present workers to their increased satisfaction and comfort, for wage earners, like others, hate to do what they do poorly and enjoy doing what they do well.

If training increases per capita output only 20 per cent. it will give $1,000,000,000. more labor return from the present payrolls, with an equal saving in overhead, being a total of $2,000,000,000. annually with which to make the tripartite adjustment for which the country waits in agony; a lowering of the cost of living by reduced prices to the consumer, the continuance of high wages and the safeguarding of profits. As consumers pay at least twice the shop cost, the $2,000,000,000 shop saving here contemplated would be at least $4,000,000,000 to consumers. Said Secretary Wilson, "the employer terest in securing the greatest amount of produc- and employee have a mutual—not identical—intion from a given amount of labor." With the new margins coming from increased per capita production, we may hear less of profit sharing and isms, for the wage will be high and a just capitalization (as it always has been theoretically) of the worker's share in profits.

As this is written, a representative of the U. S. Employment Service, says—"Last week there were 9,000 idle mechanics in a small New England district. The railroads wanted 800 locomotive repair men but we could recommend for their consideration only 210 out of the 9,000. The roads wanted hundreds of boiler makers, but only one in ten of the boiler makers who applied was good enough." Of all these men said he, "Thousands are *almost* good enough, they just miss it." A nation that leaves vast numbers of its employed or unemployed wage earners, "almost good enough" when they can easily be made plenty good enough, should pray for mercy on bended knees.



How poor workers can quickly be made excellent is shown by two charts elsewhere. In the first, a worker is shown at his accustomed place in the shop producing for five weeks 195 pieces per hour. He was transferred to the training room and in one week reached 300 pieces, and in three more weeks 405 pieces, thereby doubling his income. The company is as happy as the man as its saving in overhead equals the worker's increase in wage. In the second chart an experiment was made with two men who were thought to be alike in all respects. The one represented by the dotted line was left in the shop and averaged 121 pieces without improvement for 23 days. The other was taken into the training department and in one week reached 250 pieces, and by the end of the 23 days 330. Each had tool trouble. Little was made of this in the shop but the training room is a laboratory for all things and the study of the tool trouble there brought an improvement to the whole shop. All places of employment now promise to become also places of education. Workers will learn while they earn.

Lest it may seem that educators have been spoken of inconsiderately, the following quotation is given from *one of the most distinguished of them:

> "Is not the plan of vocational education here suggested the only one that will assist our workers in modern highly specialized productive enterprises.
>
> . . . Given opportunities of the kind here suggested, we are justified in assuming that the more ambitious and gifted boys will push on from level to level. As they reach twenty-two to thirty years of age some of them will become aware of their possession of natural powers of leadership. They will see possibilities of becoming foremen, inspectors, managers, inventors, technical specialists. They will attend special upgrading schools, correspondence schools, or else take a year or two off to go to a technical school or college in the field of their special interest."

The U. S. Training Service solicits correspondence from any who may be helped through its service. This Service will possibly be discontinued with other war activities of the Government at the end of the present fiscal year, June 30. It is thought by many to be of such great consequence in the following twelve months of reconstruction as to make its continuance for one more year by Congress highly desirable.

*Dr. David Snedden, Prof. of the Psychology of Education, Teacher's College, Columbia University and President of The Nat'l Society for Vocational Education,—SCHOOL & SOCIETY, Dec. 28, 1918.

Classroom in Training Department, General Electric Co., Fort Wayne, Ind.—Upgrading promising employees in shop arithmetic, blue print reading, safety, health, shop economics, etc. Also in the machine training room.

A Model Training Department—Several returned soldiers being trained as operators on engine lathes, milling machines, shapers, drill presses and hand automatic screw machines. Also upgrading old employees.

The Red Glow of Bolshevism

A NEW "SCOURGE OF GOD" MAKES MORALITY IMMORALITY; WOULD ABOLISH EVERY PHASE OF SOCIAL STRUCTURE; MARXISM APPLIED IN DICTATORSHIP OF PROLETARIAT

By DAVID GOLDSTEIN, in the Current Issue of "The Columbiad"

SO lurid is the red glow in the sky of Russia that the eyes of the whole world are centered on the land of the Czars. There is fear in every country that Bolshevism will overrun the world as the "Scourge of God" with his hordes over-ran the center of civilization some fifteen centuries ago.

The nickname, Bolshevism, given to the modern "Scourge of God," has somewhat obscured its identity. Yet, to those who know, Bolshevism is only another name for Socialism—Socialism applied. It is carrying out the doctrine of Marx and Engels as set forth in "The Communist Manifesto," "Das Kapital," "Anti-Duhring" and the other authoritative writings of these fathers of modern Socialism. It is the self-same Socialism that Pope Leo XIII condemned so long ago as 1878, when from his watchtower at the center of the moral world he warned civilized peoples, Catholic and non-Catholic alike, of the movement that was gathering its force for a vital assault upon religion, the family, private property, and the commonwealth.

A REVOLT AGAINST A REVOLT

It took a Leo to drive back the fifth century "Scourge of God," and it will take the teachings and the practices set forth by the Thirteenth Leo to overcome the Scourge of Bolshevism: "When they shall have recognized that the Church of Christ is possessed of a power to stave off the pest of Socialism, too mighty to be found in human enactments or in the strong hand of the civil power or in military force, let them reestablish that Church in the condition and liberty needed in order to be able to exercise her most salutary influence for the good of society in general" (Leo XIII "Concerning Modern Errors" December 28, 1878).

What then is this mighty power of which the nations may well be afraid? It is a well nigh universal reaction against political tyranny, economic extortion, social iniquity. It is a blind attempt to remedy these evils by a proletarian domination of society. It seeks by its programme the confiscation of private capital, the abolition of civil and religious authority in marriage; the absolute, compulsory secularization of education; and by a promise of more of this world's goods and greater leisure it seeks to unite the power of the working class under a dictatorship of its own.

In Russia Bolshevism found a most fertile field for manifesting itself upon a national scale. It was in Russia, where despotic rule had not been shorn of any of its power by a parliament, that the proletariat did not have to pass through the stage of parliamentarism on its journey from Capitalism to Socialism. The advantage was this, the Bolsheviki had not been tamed down, as were their comrades across the border in the Reichstag by their long fight within a parliamentary body where discussion, personal contact with representatives of other parties, passing upon specific measures, appointments, appropriations, and the other realities of legislative life lead to reform rather than to revolution. No, the red glow of Bolshevism had not lost what the Russian Premier calls its "almost exclusively agitation habits" as had their comrades, in some more favored political lands. Ah! but the Russians knew their Marx.

Just a glance at the speed with which "the dictatorship of the proletariat" sprung into power will show how well the Bolsheviki know their Marx. When the Czar was overthrown and the Constituent Assembly was organized the Marxians found themselves in the minority. They knew that to meet on equal terms with the representatives of other classes of their countrymen would inevitably lead to compromise on specific legislative statutes. "No Compromise, No Political Trading," was their made-in-Germany shibboleth. It had not been carried out by the majority of the German Socialists, but the Russians would carry it to its logical end—a real Socialist revolution. So with bayonets and machine guns the determined Bolsheviki—a minority—broke up the democratic Constituent Assembly, of which they were a part, declaring parliamentary government to be "a deception upon the working class." Then was their proletarian mission entered upon. They set up Soviets, councils made up of delegates representing shop workers, peasants, and soldiers. What then to do?

SEEK CLASS-LESS SOCIETY

To a proper understanding of the Bolsheviki, it is necessary to know, first of all, that the Socialist aim is a "class-less society." It is to classes that Socialists attribute all the evils of society; the very "evil" existence of the State itself; the subjugation and exploitation of the workers; the domination of the workers by capitalism. Socialists hold that but one class can justly claim the right to exist at all, namely, the working class, whose historic mission is to wrest control of government from the hands of the property owning class and thus to "expropriate the expropriators." To this end, says Nikolai Lenine, Premier of the Russian Soviet Republic, "we must adhere to the brief, sharp, exact and vivid formula of Marx, *the dictatorship of the proletariat.*"

So it was that Russia reacted immediately from the tyranny of one despotism to the tyranny of another.

Since "no other class has any right," upon gaining control of the government at Petrograd Lenine and his followers established, forthwith, a "Council of the People's Commissaries." One of its divisions, "The Supreme Council of National Economy," was given authority to execute the will of the proletariat—to "confiscate, requisition, sequestrate, and syndicate different branches of industry and commerce." Complete expropriation has not yet been carried out.

A stroke of genius was revealed in the make-up of the delegate body of Soviets. One delegate is elected to represent each thousand workmen, and one delegate to represent each one hundred and twenty-five Red Guards; thus the vote of a Red Guard equals the vote of eight workmen. The *provincial* Soviet representation is so arranged that the vote of less than half a million of the Red Guards equals that of a hundred millions or more of peasants living in the Russian "volosts"—groups of villages. Thus the dictatorship of the proletariat is amply safeguarded in what Eugene V. Debs is pleased to call "the first real attempt at actual democratic administration in the history of the world."

Some interesting experiences in *freedom* have been made by the Bolsheviki that led to the discovery "that behind the screen of liberty lurks, in fact, freedom—to poison and bring confusion into the minds of the masses." Therefore the utter abolition of free press became necessary to the liberty of the proletariat, by the proletariat. Great is confusion confounded!

Likewise morality has become immorality. Religious institutions are forbidden to own property, or to "enjoy any prerogative or subsidy whatsoever." The teaching of religion is forbidden in any private or public school.

Surely the attack upon every department of organic society is complete. What then shall we see in devastated Russia but the lurid glow of red ripe Socialism, running its blind course to chaos. To Catholics the call comes to advocate the principles and to promote the practices set forth by Pope Leo XIII. Only so shall our well beloved America be safe from the "Scourge of God."

ol. IV. NEW YORK, APRIL 25, 1919 No. 13

AMERICAN LABOR MISSION RETURNS

AMUEL GOMPERS DESCRIBES AT NATIONAL CIVIC FEDERATION LUNCHEON WHAT WAS ACCOMPLISHED ABROAD AND MENACE OF BOLSHEVISM—TAFT LAUDS WORK

LOVE and respect, keen interest and enusiasm, marked the eception and luncheon given on April 12 ıst, at the Holland ouse, New York ity, to Samuel Gomers and his fellow elegates of the Amrican Federation of abor's foreign mision, on their return rom the Paris Conerence. More than hree hundred men nd women, including Villiam Howard aft, former Presient of the United tates, assembled at he invitation of The ational Civic Fedration, to do honor o the veteran labor eader and his assoiates and to hear at irst hand of the wonlerful work done broad for internaional industrial eace.

LUNCHEON OF WELCOME TO SAMUEL GOMPERS AND THE FOREIGN COMMISSION OF THE AMERICAN FEDERATION OF LABOR, GIVEN IN THE HOLLAND HOUSE, NEW YORK, APRIL 12, 1919, BY THE NATIONAL CIVIC FEDERATION. THE HONOR GUESTS ARE IN THE BACKGROUND, STANDING.

Whole-hearted applause and cheers punctuated the speeches made y V. Everit Macy, presïdent of the Federation, vho presided at the luncheon; President Taft; ames Duncan, president of the Granite Cutters' nternational Association, one of the mission, nd the masterly address of Mr. Gompers. Untinted endorsement was given by those present o the expressed sentiments in favor of the eague of Nations, the recital of what had been ccomplished toward improving labor condiions throughout the world and the denunciation f Bolshevism. All three topics commanded the losest attention.

At the guest table, in addition to the speakrs, were: Mme. Catherine Breshkovskaya, "the ittle grandmother of the Russian revolution"; William Green, secretary-treasurer, United Mine Workers of America, (mission member); Frank Duffy, secretary Brotherhood of Carpenters and Joiners, (mission member); Major August Belmont; Miss Maude Wetmore; Mrs. F. Lothrop Ames, Boston; Otto H. Kahn. Also present was Major G. H. Berry, president, International Printing Pressmen, who had been associated with the labor mission, though not a member. John R. Alpine, general president, United Association of Plumbers and Steam Fitters, one of the labor mission, was not present at the luncheon, having returned before the other delegates and having gone on to his headquarters in Chicago.

"Whatever inconvenience you have suffered to-day," said Mr. Macy in introducing President Taft, the first speaker, "I hope you will excuse, for we have had less than twenty-four hours to prepare to welcome our returning delegates owing to the fact that the wireless on Mr. Gompers's steamer broke down. Some weeks ago the whole city turned out to welcome our returning soldiers. And I am sure, had we had the time, we would have had almost as large a celebration in welcoming Mr. Gompers and the other delegates, for their work has supplemented that of our military men in a most important way. Their endeavors in Europe as delegates to the International Conference on Labor have been an effort to make a permanent peace, and a peace that can be permanent only because it does justice to all nations. Therefore their work was as important, looking to the future as that of any of our military forces.

"There is no one in our country who is doing more at present to show us what relation and what burdens or what sacrifice and what spirit the American nation must have to maintain and help establish peace throughout the world, and there is no one who has done more to maintain a just peace in industry throughout the country as a whole than our well known and beloved citizen, President Taft."

MR. TAFT'S SPEECH

"Mr. Chairman, Mr. Gompers, gentlemen of the Commission, and members of the Civic Federation: It is the good nature of the Chairman and of Mr. Gompers, our chief guest, that enables me now to speak in an order that I am not entitled to have followed," said President Taft, "but, as you know, this was a hastily gotten up meeting and I am a bird of passage, a kind of a rotatory, gyratory animal, and Mr. Easley, with all that energy that he has frequently displayed, caught me on the wing. I could only come here with the condition that I should stay but a few minutes, but I was glad to come in order that I might bear witness to what I think is the debt of gratitude owing to Mr. Gompers and his associates in these labor commissions which have been to Europe during the war and who are now returning from their labors.

"It does not need any examination of history to know that Mr. Gompers and I have often been on opposite sides. My favorite form of addressing Mr. Gompers when we fall into correspondence is 'My dear Old Antagonist.' Nevertheless, I am sure we have mutual respect for each other and the arguments and the reasons and the bases of our positions on each side. And when I find myself with him, it is a gratification for me to say so.

"We have been through a great war, and it is a fact that with the resiliency of the American people, we are able to ignore or forget, and are able to minimize the lessons that we had to have from the war, and the experiences of other nations. There is nothing that this war has developed so much as the complete dependence of a nation in modern war upon labor. If labor deserts the cause, the country is gone. The war is fought not only in the trenches with the brave boys who are there, but in the fields of agriculture and especially in the manufactories and in the preparation of raw materials in the mine, which are so essential to carry on modern war, that we are all hoping may now disappear from the world. Therefore, it was of the utmost importance that in order to win this war for the benefit of world liberty and world independence, the laboring men should realize what the real issues were before them, and should stand up to those issues, and not be led away by the insidious propaganda which had been put out by a country that had been studying for half a century to make that propaganda effective.

"Few people realize how much we are indebted to Mr. Gompers and those associated with him in the American Federation of Labor for holding our own ranks of labor. And I fancy that there are few who understand what the commissions sent abroad, the labor commissions, have done and did do during the war in preserving the morale of the laboring men in France and Italy and England. Had that morale yielded to the influences that were wearing it out, nobody knows what the result of the war would have been. And it was through the encouragement that they received by the labor commissions that were sent over there and discussed with them and steered them properly and eliminated the vicious evil elements that were struggling for mastery among them, that we were able, with other factors of course—we were able to win the war as we did. I feel a debt of gratitude to those men who went over and maintained the patriotic and the conservative view that they advocated and put through, and feel a gratitude that I am delighted to come here and testify to.

"I have been the representative of the public appointed by a committee of national industrial manufacturers to sit on a National War Labor Board in which we attempted so far as we could, to maintain maximum production and avoid halts due to strikes and lockouts. So I have come again into association with both sides. I have had the privilege of hearing each side tell the truth to the other side, or, at least, what it conceived to be the truth, with a candor that left nothing to be desired certainly in openness of statement and eloquence of invective.

"But it shows the advantage of clearing away the bile in the body social and the body politic, and finally we got down to principles and induced twelve men to sign a statement of principles that when we began three weeks before, anybody but an optimist of the most ideal character would say was impossible. And we have attempted to do what we could in reaching the object of that National War Labor Board. The ranks of labor have by reason of this war become a much more important element in the community than they had been before. They have been convinced of their power, and it is of the highest importance that they should exercise such power as they believe to have with moderation and restraint, with a view to playing a part and playing their part right in the conduct of the government and the maintenance of society.

"I conceive it to be the duty of those who occupy a somewhat adverse position in that they are to divide the joint product of labor and capital, to realize the change from the old times, and that we must all, capitalists and laborites and the people between, welcome and encourage that part of labor which has a sense of responsibility for the entire government and for the country. And that is to be found in the ranks of organized labor and their present leaders.

"Now, this is not to say that I wish to express an agreement with my friend Gompers in respect to platforms and constructive views of very many kinds. As to those we doubtless differ. But there are certain things upon which I am sure we stand together, and one of them is that it is the duty of the employers to seek every means possible in adopting the rules, the terms, the wages and the environment in which working men are to work, to follow the rule that the workmen shall have the fullest opportunity for the freest consultation and expression of their opinions through men whom they select to represent them, because the great amount of industry is carried on with such great bodies of working men that it is impossible to have that personal contact that used to exist, and that personal confidence that used to exist where there were only ten or a dozen laborers and only one employer and perhaps the employer worked along with the laborers.

"That time has passed, and now the question is for the creation of a machinery by which the men engaged in the work shall have the full and freest opportunity to appoint their representatives and then to have those representatives consulted with respect to everything that is done. That is called industrial democracy.

"What does that mean? Does it mean that necessarily the laborers with their committees are to prevail simply by a vote of the laborer? No. That is not it. That has got to be reached by adjustment between the employer and the employee, and if it cannot, then there is a halt, then there is a waiting, then there is the exercise of what is called in our Board 'economic pressure.' But what we believe is—those of us who have had experience in this National War Labor Board—that in that industrial democracy so-called is meant that men who are to be affected by a change in conditions or by existing conditions in respect to which they ask a change, or in respect to which the employer contemplates a change, shall have an opportunity fully to bargain with him and fully to bring before him what those conditions are and what their views of those conditions are.

"And I verily believe that while that is not going to end controversies, because between people of adverse interests we must expect a controversy only to be settled by a sense of responsibility on both sides, what is referred to as collective bargaining makes greatly for advance in that direction. That I believe to be the position of Mr. Gompers and organized labor, or the American Federation of Labor. My experience in the National War Labor Board leads me fully to approve that principle, as we did approve it when the manufacturers and the working men signed that agreement through their representatives before this War Labor Board came on.

"I want to say personally for Mr. Gompers that I read his statements in respect to the war with profound admiration and gratitude, because there never came from him any doubtful word as to what must be done with reference to carrying through this war. No pro-German was ever able to gather from what he said any consolation in respect to the policy that this government was to pursue in fighting the war through to the end. And when you conside the currents that were strong in many direc tions, and when you consider what he had t meet and oppose in that regard, I think no on who understands it could possibly withhold fron him the meed of praise to which he is entitled

"And then the agency with respect to wha was done on the other side you know quite a well as I do. I have already dwelt upon it. am glad to be able to welcome these gentlemei back, to congratulate them on the work the have done, and to receive them here with th hope that now they are here, and now that th issue of the League of Nations in which th workmen of this country are so much interested is on, we can count upon them to help out.

"Now, why is that? Is it because they ar more interested in opposing war than other ele ments? Not really so except in this sense: Tha the burden of war is going to fall on them gen erally; that more of the working men will b in the army than from any other element. mean more in absolute number; perhaps no more proportionately, but more in absolute num ber.

"We who are active in the promotion of th League of Nations are counting—and I know counting with our host because Mr. Gompers has already expressed his opinion on the subject and generally I have found everywhere where we have been that we could count on the ex pression of the laboring men in favor of th League. If that movement be organized, if i give expression to it as it can, I believe it wil make greatly for the ratification of the peace treaty as it comes back, with the League in it We welcome Mr. Gompers as the advance courier of the return from the other side of those in authority who have been over there representing us in this Congress and who are about to bring back a treaty of peace with the machinery for a League of Nations that means, in my judgment, so much for mankind and so much for the benefit of those who suffer most and suffer innocently from the scourge of war.

"I value the opportunity to come here and welcome Mr. Gompers and his associates, with congratulations on the work they have done, and I hope Mr. Gompers will excuse me if I show an apparent lack of respect in not waiting to hear him, because I shall read what he says, therefore he must look out—if I now withdraw. I thank the president and Mr. Gompers for giving me this opportunity."

Mr. Taft departed immediately after his speech, the company rising as he left the room. The chairman, Mr. Macy, then said, in introducing James Duncan, one of the mission's members:

"Before any people can emerge from barbarism into civilization, they must learn to become associated so that those having common views and aims can express those views and aims in an orderly way. Until we have such orderly and associated expression, we have little but anarchy or barbarism. In this country we are fortunate in having the American Federation of Labor better able to express the views of labor and their sentiments than any other body. They have a membership of over 3,500,000 and can rightly claim to speak for the labor of this country. They are also fortunate in having a constructive leadership, for while the stability of democracy depends largely upon the intelligence of the individual, its progress can be slow or rapid according to whether it has wise or unwise leaders. The success of our conduct of the war might have been very different had we not had this constructive leadership."

Mr. Duncan told of the labor mission going to Europe with instructions from the conventions in regard to the League of Nations and peace terms, and added:

"The question has been asked why we did not

(*Continued on page* 10)

The National Civic Federation Commission in London

(*From the London Daily Telegraph, March* 26, 1919)

AT a period like the present, when Labour problems are giving rise to general unrest, the activities of the National Alliance of Employers and Employed will doubtless command the attention of all interested in the industries of the country. The organization came into existence three years ago with the threefold object of promoting cordial cooperation upon all questions affecting labour and employment, the welfare of the workers generally, and facilitating the reinstatement in civil occupations of men who have been demobilized. In furtherance of its purpose, the alliance has rendered excellent service. It embraces eleven employers' associations, representing between 8,000 and 9,000 firms, and fifteen trade unions, aggregating 1,250,000 workers. A commission from The National Civic Federation of America—an organization which has been engaged in similar work in the United States for many years—arrived in London a few days ago, and are to visit various parts of the country in order to inquire into industrial matters. A hearty welcome was extended to the delegates last evening at a dinner which was given in their honour by the alliance at the Holborn Restaurant, under the chairmanship of the Right Hon. F. Huth Jackson. The members of the commission who attended were:

Mr. C. S. Barrett (vice-president of The National Civic Federation and chairman of the Farmers' Union, U. S. A.), Mr. Albert Farwell Bemis, Mr. A. Parker Nevin, Mr. James W. Sullivan, M. E. A. Quarles, and Mr. Grant Forbes. Among the general company were: Mr. J. Butler Wright, Mr. F. L. Mayer, Mr. W. S. Howell, and Mr. C. C. Williams, members of the American Embassy, Colonel D. Carnegie, Sir Algernon Firth, Bt., Mr. J. T. Clatworthy, and Mr. H. F. Dawtry.

After the toasts of "The King" and "The President of the United States" had been honoured,

The CHAIRMAN, in proposing "The National Civic Federation of America," mentioned that that body had nearly completed twenty years of a form of social service which in its main features had remained without change. It aimed primarily at bringing "the best brains of America" to the task of maintaining industrial peace so far as possible by means of conferences between employers and wage earners. He thought the alliance might look forward to the future with much more confidence when they knew and realized the great work which had been done on similar lines in America by The National Civic Federation. (Hear, hear.) He regretted the absence of Mr. Samuel Gompers, who would have been present had he not been detained in Paris. The war had brought together all the nations which had fought for the cause of civilization and humanity, but none had been brought into closer brotherhood than England and America. (Hear, hear.) Now that peace was within sight it was for the citizens of both countries to see that this bond, created by the war, did not relax, and he could not conceive anything more calculated to perpetuate this spirit of comradeship than an affiliation on a definite and constitutional basis between such bodies as The National Civic Federation of America and the National Alliance of Employers and Employed. (Hear, hear.) The commission were to visit the great industrial centres of Swansea, Manchester, Liverpool, Glasgow, and Dundee. He trusted there would be in the future the spirit of real cooperation between Capital and Labour on an equitable basis for the general benefit of the whole community.

Mr. JAMES W. SULLIVAN, who replied, said the primary principle of The National Civic Federation was prevention of waste in the relations between wage-payers and wage-receivers. In seeking membership among employers and employed the Federation in effect had said: "Why waste time in long-distance sparring? Why keep up misunderstandings? Why fight through the Press or any third parties? Be sensible; be a little democratic; get together; get your legs under the same conference table—(laughter); look each other in the eye, and see how and where you can begin. You are urged to do this systematically, for good business of course, but what is more, for the immediate peace of society, and possibly for some ultimate assistance to a higher civilization." (Cheers.) An undoubted benefit through the Federation had been the promotion of acquaintanceship among people of various interests and social ideals, and especially among the more active men on the opposite sides of the wage question. The Federation had sent three commissions to Europe. The first came to study municipal as compared with private ownership, and the operation of public utilities. The second investigated social insurance, and the third was inquiring into British methods of reconstruction.

Mr. ANDREW PARKER NEVIN, who next replied, said he had always believed that public opinion was sovereign and the keystone of life in Great Britain. He had been profoundly impressed by the scholarly, constructive, and sincere utterances of the newspapers here regarding the Labour issues. The new spirit of industry was not constructed geographically. It was sympathetic and reciprocal. Industry in America and England could never again harbour narrowness and prejudice, but must be broad, liberal, and enlightened. (Hear, hear.) Men and women workers were human and divine, and must be treated as such. Personally, he had not the slightest doubt that the genius of Great Britain would work out her present problems of commerce, labour, and industry. They in America were watching with great interest and real sympathy. They would never forget what the men of Britain and her Fleet did from 1914, which made it possible for them to discuss the reconstruction of industry and gave the right to men and women to live peaceful lives and to work out their own destiny. (Cheers.)

Mr. A. FARWELL BEMIS also returned thanks.

In the absence of the Hon. C. Mayer, the toast of "The National Alliance of Employers and Employed" was submitted by Mr. E. A. QUARLES (secretary of the commission).

Mr. W. A. APPLETON, in responding, said their American friends had come to this country at at time when we were troubled by much confused thought and utterance. We were hearing much of rights, without men seeming to comprehend the fact that all rights were circumscribed by other rights, and that these could never be satisfied except the spirit of compromise entered into our arrangements. If ever compromise was to be effective it must be organised and lead to legal control. The alliance recognised this, and endeavoured to promote understanding. It had had opposition, due sometimes to misunderstanding, sometimes to animosity. It was overcoming this because the mass of men understood the need for production. Our troubles were to-day no worse than those which assailed Britain in the seventeenth century. We came out of that, and we shall come out of this. (Hear, hear.) The problem was a world-problem, and the Anglo-Saxon-speaking peoples were under an obligation to collaborate. If they did so the world would overcome the difficulties and dangers which faced it. (Hear, hear.)

The toast of "The Chairman" brought the proceedings to a close.

Sapping the Foundations of Society

By RALPH M. EASLEY

PART II

In the last number of THE NATIONAL CIVIC FEDERATION REVIEW *there was published the first half of a statement prepared for the Industrial Relations Commission of 1914 on conditions then existing as related to industry. "The situation today is the same, only a little more so," I said in introducing Part I.*

In the first instalment I discussed "Legitimate Unrest," and began the analysis of "Manufactured Unrest." In this Part II. I complete the second topic and give the additional chapters: "Is Wall Street or Socialism Gaining Control of the Sources of Public Opinion?" and "Socialism vs. Industrial and Social Progress."

SOCIALISM AMONG EAST SIDE IMMIGRANTS

WHAT may fairly be assumed to be the effect upon the immigrants arriving here from Russia, Poland, Hungary, Italy and other countries of Europe, when they are met at Ellis Island by socialists and the Industrial Workers of the World and told that they have gone from bad to worse in coming to America? These preachers of the gospel of despair inform the newcomers to our shores that conditions for working men and women in the United States are infinitely worse than in any of the monarchical countries which they have left; that these "wage-slaves" receive starvation wages and are worked night and day, under the lash; that there is no such thing as justice for the working man in the courts and no freedom of speech; and that capitalism controls everything.

A man who worked for years among the socialists on the East Side in New York wrote me that at one time he had thought there was no higher ideal for one to strive for than a socialist commonwealth and no more sacred work to devote one's life to than converting people to the socialist ideas. He said that after many years of work in the socialist movement on the East Side he became sceptical in regard to the idea of a socialist commonwealth and the propaganda in its behalf. He had become convinced that it was a disgrace for the East Side and a misfortune to the young immigrants from whose ranks "the cause" recruited the greatest part of its following. He pointed out that in Russia, the country supplying the greater part of the East Side population, to be a socialist means the jeopardizing of one's liberty and quite often of one's life. A socialist, therefore, in Russia is looked upon as a hero and a martyr. The immigrants, having that idea of a socialist, naturally accepted as gospel everything they heard in this country from the socialist speakers or that they read in the socialist newspapers. He added: "The socialist propaganda all over means discontent and class hatred. In order to make the workingman dissatisfied with his lot the socialist agitator draws a gloomy, disheartening picture of the life of the toiler, and in order to enrage

him against the employers the capitalist is pictured as a terrible monster, a vampire sucking the blood of thousands of working men and spending his long hours of leisure in wild bacchanalian revels."

SOCIALISM IN THE CHURCHES

In the church field, also, we find socialists and syndicalists, both open and "surreptitious". While the Socialist Party itself has little or no use for the "Christian Socialists," as they style themselves, the latter are just as loyal to the socialist program as is Eugene Debs, whom they supported for President, and their statements about industrial conditions are just as reckless as those which appear in the most radical socialist publications.

During the last few years several of the Protestant denominations have organized social service departments, some of them very largely dominated by the socialist contingent within these bodies. The secretary of one such department, at a convention of the religious denomination to which he belonged, made an address in which he paid the following tribute to Haywood and the other sabotage and violence preaching leaders of the Industrial Workers of the World:

> Syndicalism, as every investigation has shown, finds a field only in our industrial centres where immigrants are herded. Without a vote, strange, bewildered, 'put upon,' deserted by the Church, the labor union, and the socialists, it was syndicalism which went to them in their distress and gave them courage and hope. All honor to the I. W. W. leaders that they were found at the hottest point of the industrial conflict!

Another feature at this convention was a radical socialist speech by a western bishop who was then president of what is known as the Christian Socialist league. This bishop was killed in an automobile accident and his successor in office, before his consecration, proudly announced that he had been taken into membership by the socialist local in his home town.

An illustration of the recklessness of speech of practically all clergymen who espouse socialism is the following extract from a sermon by the Rt. Rev. Theodore I. Reese, Bishop of Southern Ohio, published in *The American Socialist* of January 23, 1915. In this sermon, which was preached in the Cathedral of Sts. Peter and Paul, Chicago, described by *The American Socialist* as being "in the heart of the slum district" of that city, Bishop Reese said:

> Conditions today are almost exactly similar to those immediately preceding the French Revolution. There is the same thoughtless gayety among the upper classes, the same widespread misery among the lower; and today as then, there is a great deal of superficial interest taken in the investigation of conditions by the upper classes.
>
> Marie Antoinette and her court at Versailles dressed themselves as shepherdesses, and thought that they were solving the problem of life. And today 'slumming' and dabbling in social economics are fashionable among the rich.
>
> I am not saying that another French Revolution is sure to follow; I am saying that the conditions are similar.

That a man of education in a post of large responsibility and influence could permit himself to declare from the pulpit that conditions in this country today are like those in France prior to the French Revolution is unaccountable except as testimony to the curious effect of the socialist mental attitude upon the power to see correctly or state dispassionately the facts either of history or of present conditions. The absurdity of this particular parallel has rarely been shown more effectively than in a review of Brooks Adams's "Theory of Social Revolution", in *The New York Times Review of Books*, December 7, 1913; and it is quite likely that the bishop had read this book by the brilliant but erratic Brooks Adams. That review, while it answers the allusions of Bishop Reese to the French Revolution, refutes so many other false views held by clergymen of socialistic tendencies that I quote it in full:

> Mr. Adams's narrative of the French Revolution is thrilling, and its interpretation is instructive. But only those with whom the wish is father of the thought can go with him in applying the French precedent to our case. The differences lie on the surface, and the parallel is obscure and forced. In the French Revolution the poor ate grass, and slept on mud floors. Their poverty was not their fault, for their substance was exhausted by taxes which went to feed the luxury of incompetent and corrupt rulers. The wealthy could purchase nobility and the nobles were exempt from taxation. The church owned a third of the lands and took most of what the tax collectors left. The landlord and the cultivator divided equally a mere third of the produce of the land. This was the regime which the courts upheld, and which the Royalists were too dull to see must be reformed. It was despair which drove the wretched peasants to revolt. How can it be held that there is any likeness to our conditions? In our happy land the taxes are just what the electorate makes them. Over six million individual farmers hold over 800,000,000 acres of land and levy their tribute upon consumers. Of privilege before the law there is no trace, and the free people have just destroyed the industrial privilege which they created. In France conditions were about the worst the world ever knew. Our conditions challenge the best to surpass them. Our poor enjoy comforts or even luxuries which Kings of old might envy them.
>
> If this picture is thought too glowing it should be remembered that while the Frenchmen of the time of Louis were oppressed, and helpless without violence, our affairs are entirely in the hands of those who are complaining. The Frenchmen could not use the ballot to remedy their conditions. Their wrongs were part of the system which the courts defended. Our wrongs are the creation of those who have voted for what exists, or who have not used the ballot to destroy it. The laws are made by elective lawmakers. It is the fault of the electorate if incapable legislators pass laws whose interpretation baffles ingenuity and brings the courts into disrepute. Mr. Adams ventures to say that the courts defend the capitalists, when it is notorious that capitalist organizations are prostrate before the law, and that if a shred of them survive it is because there is not ingenuity to destroy them without doing greater damage. On the other hand, while the railway trusts, and the industrial trusts, are forbidden and dissolved by the law the statutes make exceptions in favor of the working class. The President signs a law preventing their prosecution, and laws are proposed to make their offendings no crime, without even taking the verdict of a jury upon it. The industrial system which Mr. Adams arraigns as capitalistic is such because all are capitalists, or may be. Mr. Carnegie had forty millionaire partners. The billion dollar trust which succeeded him has twice forty thousand stockholders, including thousands of workers in the trust's shops. One eighth of the entire railway capitalization is held by insurance companies, of which there are 20,000,000 policy holders. Nine million depositors in savings banks own four billions' worth of securities unknown at the French Revolution. If the existing industrial system were abolished the world could not feed nor clothe its present population. There are multitudes alive who would not have come into being but for the system of organizing and financing industry which is represented as an outrage on the poor.

There are socialist Sunday schools, with no suggestion of religious training, entirely devoted to teaching the children of working people class hatred, through systematic "lessons", songs, pictures and violent attacks upon all owners of capital and the system which guarantees the right of private property. At the spring festival of socialist Sunday schools, held in Carnegie Hall, Sunday, May 4, 1913, there were over seven hundred children of all nationalities present in gala dress, affording no aspect of poverty or of being the underfed, anaemic or crippled products of capitalist greed. The psychology of the gathering is well shown by the following report in *The World* of May 5, 1913:

> "How many good rebels are there?" cried Prof. Kendrick Shedd of Rochester, turning to the seven hundred children of the socialist Sunday schools of New York, who yesterday afternoon filled the stage of Carnegie Hall, hung wi red banners, at the May Day festival of t local socialists. Seven hundred right arms sh upward.
>
> "Make a fist!" next cried Prof. Shedd.
>
> Seven hundred small fists were clenched air.
>
> "Now, show what you would do if you we knocking wrong and capitalism between t eyes."
>
> Bing! The seven hundred fists shot out a terrific punch at seven hundred imaginar plutocratic eyes. And the fifteen hundred s cialists in the body and galleries of the aud torium raised a whoop of glee.

The socialists have entered even the dramati field. No theatrical season is complete witho one or more socialist plays; the music halls an moving picture shows have their share of dra matic, pictorial and vocal presentations designe to inflame the popular mind against the presen order.

SOCIALISM AND FREE SPEECH

On no question have the socialists and Indus trial Workers of the World made a more vigor ous campaign than on that of free speech an the right of assembly. In various parts of th country disturbances were deliberately planne by the socialists and Industrial Workers of th World for the purpose of forcing action tha would give a seeming right to charge the authori ties with attempts to override their constitu tional rights. Many persons, whether in sym pathy with the views or the methods of th agitators or not, were much impressed by th claim that constitutional rights were being vio lated. In fact, very few people outside of th legal profession had any real conception as t what were the rights of any one who wanted t speak or organize a meeting or a parade. In the big disturbances at San Diego, Little Falls, N. Y., Paterson and Lawrence, the riots were led by the I. W. W. alone. In nearly all the cases where this issue was raised it was a part of the regular propaganda work of the Industrial Workers of the World, and they openly boasted in their journals of the great advertising value of such contests. However, they overdid the thing to such an extent that the socialists turned on them and were forced to expose them as frauds because they were getting money out of the socialists. Victor Berger, the socialist congressman, in *The Social-Democratic Herald*, referred to the San Diego situation in the following language:

> This paper, at a time when it was unpopular to take such a stand, and apt to be looked at as treason to the cause of the working class, made it pretty plain that it considered the San Diego free speech fight a shameful frameup for panhandling purposes, and it received a lot of indignant letters as a result of its stand. Its position has since been abundantly justified.

The official organ of the Western Federation of Miners asserted that the "scrap" was started in San Diego in order that funds might be secured under the pretext that free speech was in jeopardy, and said:

> Many members of organized labor, socialists and other sympathizers, swallowed the bait and parted with their money, believing that they were aiding in protecting legal rights and constitutional liberties.

Ralph Korngold, then circulation manager of *The American Socialist*, the official organ of the Socialist Party, referring to the San Diego fight in a letter to *The New York Call*, (April 12, 1913), said:

> Starting free speech fights seems to have become a regular order of business with the I. W. W. One such free speech fight has been recently nipped in the bud by the exposure of the Western Federation of Miners' Magazine.

Mr. Korngold then quoted a letter from Kasper Bauer and P. S. Ford, the treasurer

(*Continued on page* 12)

Menace of Recognizing the Russian Soviets

UNION LEAGUE CLUB'S COMMITTEE ON STUDY OF BOLSHEVISM WARNS AGAINST MOVE ABROAD AND WORK OF MISSION HERE

Ever alert and patriotic, the Union League Club of New York City sounds a warning to the nation and the authorities at Washington against the proposed recognition of the Russian Soviet form of government. Through its Committee on the Study of Bolshevism, the chairman of which is Archibald E. Stevenson, formerly of the Military Intelligence, the Club has forwarded a report on conditions to our diplomatic representatives at the Paris Peace Conference, the Attorney-General, and to every Senator and Representative.

This report, in addition to being signed by Mr. Stevenson, is signed by Robert C. Morris and Theodore F. Sanxay. Its text and the accompanying resolutions follow:

THE Committee on the Study of Bolshevism feels that it is necessary to report certain international phases of the subject committed to it, which should engage the thoughtful consideration of the members of this Club. Evidence is daily accumulating which indicates that the representatives of the American people at Paris are considering more and more favorably the question of giving recognition to the Russian Soviet Republic. This question is brought forcibly to our attention by a news item which appears in the issue of the *New York Times* for April 8th, 1919, from which we quote the following:

> Ludwig C. A. K. Martens, the Bolshevist envoy who hopes to be Ambassador to the United States, established permanent offices in the Tower Building, at 110 West Fortieth Street, yesterday. The offices are to be known officially as The Russian Soviet Bureau in the United States.

The article further states that one of the purposes of the Bureau is "to re-establish trade relations between the United States and Russia, and prepare the way for ultimate recognition." In answer to the question, "Have Mr. Martens's credentials been acknowledged by the State Department?" Mr. Nuorteva is quoted as saying, 'Not yet. I imagine that the State Department, before acting in the matter, must first communicate with Paris."

It appears, therefore, that an unofficial diplomatic mission has been established in New York City by the Russian Soviet Republic. It is apparently well supplied with funds, for the Bureau has taken an entire floor in the office-building referred to. Its commercial department is headed by Mr. A. A. Heller; the legal department is in charge of Morris Hillquit; the Chancellery is under the direction of Gregory Weinstein, who was formerly editor of the *Novy Mir;* the railway department is in charge of Professor J. W. Lomonosoff, and the diplomatic department is in charge of Santeri Nuorteva, who hitherto has conducted the Bolshevik propaganda in the United States.

We desire to call your attention to the Official Bolshevik communique received from Moscow on the same day, which is reprinted in the *Evening Sun* for April 8th, 1919, as follows:

> On the Archangel front fighting occurred near Tcheriserskoe, the statement said. In the region of Peliatsek we advanced twelve miles, capturing several fortified enemy positions. West of Obozerskoe, enemy attacks against Ozerki were frustrated.

Our troops are the enemy referred to in this communique.

These two items of news show that a condition exists in the foreign relations of this country which is unique in its history. Never before has a government with which the armed forces of the United States have been engaged in battle, openly established a mission within our borders for the purpose of carrying on propaganda looking towards its recognition.

The American representatives at Paris have chosen to send a diplomatic mission to Russia, the exact purpose of which has not been officially disclosed, consisting, according to report, of William C. Bullitt, Lincoln Steffens and Walter E. Weyl. This commission has recently returned to Paris and is reported to have expressed itself in favor of a recognition of the Russian Soviet Republic. Your Committee believes, therefore, that the question of the recognition of the present de facto government of Russia deserves the thoughtful consideration of every citizen who holds in esteem the institutions of the United States. We therefore direct your attention to the nature of the government which seeks recognition.

As has been pointed out in the previous reports submitted to the Club by this Committee, the present Russian Government is a class government. It is in no sense representative of the people of Russia. It was created and maintained by the armed forces of the Russian Communist Party, which dispersed at the point of the bayonet the constituent assembly elected through the suffrage of the whole Russian people. It is committed to the proposition of the expropriation of all capitalists and the permanent destruction of the Bourgeoisie. The government set up by Nikolai Lenine and his followers, is a Socialistic State founded upon the principles of the first Internatinale, and dedicated to the proposition that class rule shall maintain throughout the world.

The international policies of the Soviet Republic are written into its constitution. That document sets forth the rights and duties of the workers as follows:

> To keep in mind always and everywhere the sacred duty of liberating labor from the domination of capital, and to strive for the establishment of a world-embracing fraternal league of working people.
>
> In proclaiming these rights and duties the Russian Socialist Republic of the Soviets calls upon the working classes of the entire world to accomplish their task to the very end, and in the faith that the Socialist ideal will soon be achieved, to write upon their flags the old battle cry of the working people. PROLETARIANS OF ALL LANDS UNITE! LONG LIVE THE SOCIALIST WORLD REVOLUTION!

The document further states that it is the duty of the workers,

> To fight everywhere and without sparing their strength for the complete power of the working classes, and to stamp out all attempts to restore the dominion of the despoilers and oppressors.

The purpose of this government is made still clearer in the preamble of the same document, as follows:

> In order to put an end to every ill that oppresses humanity and in order to secure to labor all the rights belonging to it, we recognize that it is necessary to destroy the existing social structure, which rests upon private property in the soil and the means of production, in the spoliation and oppression of the laboring masses, and to substitute for it a Socialist structure. Then the whole earth, its surface and its depths, and all the means and instruments of production, created by the toil of the laboring classes, will belong by right of common property to the whole people, who are united in a fraternal association of laborers.

The international character of the Russian Soviet Republic is further emphasized by the following provision of its constitution:

> In its efforts to create a league—free and voluntary, and for that reason all the more complete and secure—of the working classes of all the peoples of Russia, the Soviet Republic declared itself a federal republic and offered to the laborers and peasants of every nation the opportunity to enter as members with equal rights into the fraternal family of the Republic of Soviets (through action taken) independently in the plenipotentiary sessions of their Soviets, to any extent and in whatever form they might wish.

It was for this reason that the Congress of Soviets of the United States held in New York City during the month of January of this year was called the Pan Colonial Congress of Soviets. This provision of the Russian constitution purports to give the right to American citizens to organize Soviets within our own boundaries and by their independent action to become citizens of the Russian Soviet Republic.

We are thus brought face to face with the proposition of admitting to the society of nations by recognition, a de facto government which has written into its constitution the duty of stimulating, encouraging and assisting revolutions in all countries of the world. The mere statement of such a proposition would of itself seem sufficient to render the recognition of the Russian Soviet Republic impossible. However, many forces have been set at work to accomplish this purpose. The fear of the spread of Bolshevism through Central Europe has clouded the judgment of many statesmen. It has been argued that should the present Russian Government be recognized, it would discontinue the world-wide propaganda of revolution which it has set in motion. But such a hope cannot be entertained because it would involve a violation of its fundamental law. Your Committee therefore suggests the necessity of considering what effect the recognition of the Russian Soviet Republic would have upon the people and the Government of the United States.

Agents of the Soviet Republic would of necessity be received officially in this country and be protected in their activities by diplomatic custom and international law. The use of the diplomatic service by the Imperial German Government in working against the interests of the United States at a time when it was supposedly a friendly power, is an indication of what may be expected from a representative of a Government which is committed to the policy of stimulating revolution in the country to which he is accredited.

The experience of the United States with one representative of a revolutionary government should be sufficient to teach her statesmen not to repeat the same error. We refer to the reception by the United States of Edmond C. Genet, Minister Plenipotentiary of the Revolutionaries of France. This Minister of the French Revolutionary Government, immediately upon his arrival in the United States on the 8th of April, 1793, began a campaign for the violation of the neutrality of the United States in the war then existing between France and Great Britain and her then allies, and to appeal to the people of the United States over the protest of President Washington, to justify his acts, which almost involved this country in a war with Great Britain.

It would require but little imagination to believe that the representatives of the Bolshevik Government of Russia, who in the past have advocated revolution in the United States, would continue such activity while representing officially a Government which is committed to that proposition. Diplomatic and Consular agents

could unquestionably form centers for agitation for proletarian revolution, and investigating bodies of this Government would be powerless under diplomatic usage to investigate the accounts and the disposition made of Russian funds for unlawful purposes here. The red flag of world revolution would become the flag of a friendly nation and might be used on all occasions by those elements of our population who show a desire to emulate the Russian Proletariat.

Your Committee feels that the consequences of recognition of the Russian Soviet Republic by this country would be to add fuel to the flame of internal disorder within our boundaries.

In the second report of this Committee it was pointed out that the influence of the Jacobin Clubs of the French Revolution upon the malcontents in the United States in the latter part of the 18th Century, was sufficient to stimulate and inspire the organization of Democratic societies which sought to disturb and overthrow the administration of justice by our constituted authorities. We attempted to point out that the experience of the French Revolution should teach us that so long as the Bolsheviki continue to exercise a dominating influence upon the millions of disorganized Europe, so long would they continue a menace to the institutions of the United States. The recognition of the Russian Soviet Republic would necessarily increase that menace.

The period through which we are now passing is analogous to that period of doubt and indecision which preceded the declaration of war upon Germany. The issues are confused in the public mind. Certain individuals in this country have publicly given their approval to the proposition of a recognition of the Lenine Government. It is obvious, however, that they have not understood the consequences of the position which they have assumed.

The presence in this country of the mission heretofore referred to, makes us inquire whether it is possible that the Russian Soviet Republic can have received encouragement with respect of recognition, which has warranted their establishing a bureau here. It is hardly conceivable that such a mission would have been sent unless such encouragement had been received.

When by reason of revolution a Government is overthrown, it has long been the custom for civilized nations to withhold recognition from the new authorities, in order that they may pass through a period of probation before being admitted to the society of nations. The object of this "is to enable other States to judge of the probable stability of the new 'Government' before entering into relations with it." (Pitt Cobbett. Cases and Opinions on International Law. Part I, p. 82.)

While the power to recognize a new government appears to be vested in the Executive branch of our government, a doubt has been present in the minds of our Presidents as to the safety of relying upon their own judgment in recognizing a new State when the consequences of such an act involve delicate international questions. In the case of the recognition by the United States of the Spanish-American Republics, of Texas, Hayti and Liberia, the then Presidents before recognizing the new States, invoked the judgment and cooperation of Congress.

In his special message of December 21, 1836, President Jackson observed that a resolution, which had been introduced in the House of Representatives, "distinctly intimated that the expediency of recognizing the independence of Texas should be left to the decision of Congress. In this view, on the ground of expediency, I am," said President Jackson, "disposed to concur, and do not, therefore, consider it necessary to express any opinion as to the strict constitutional right of the Executive, either apart from or in conjunction with the Senate, over the subject."

President Monroe, in his message to Congress on March 8th, 1822, presented the question of recognizing the Spanish Province in this hemisphere. The President stated that he did so in order that there might be "such cooperation between the two departments of the Government as their respective rights and duties may require."

In none of the instances cited were the questions of international policy so delicate, nor were they fraught with so great consequences to the people and the institutions of the United States, as the one presented by the threatened situation. We therefore feel that should the Executive of the United States be convinced that a recognition of the Soviet Republic is necessary, that before exercising his prerogative he should consult with and obtain the advice of Congress as the representatives of the people of the United States whose vital interests would be seriously affected by such an act.

Your Committee therefore offers the following resolution:

> WHEREAS, the Union League Club is pledged to the principle of unqualified loyalty to the Government of the United States; and
>
> WHEREAS, at the present moment the armed forces of the United States are engaged in conflict with the armed forces of the Russian Soviet Republic;
>
> NOW, THEREFORE, BE IT RESOLVED, that the Union League Club resents the act of the Russian Soviet Republic in establishing a mission in the United States, and calls upon the Government to take immediate action to prevent the activities of such mission and in every way to discountenance the present ambition of the Russian Soviet Republic to gain diplomatic recognition; and
>
> BE IT FURTHER RESOLVED, that the President and the Secretary of the Club be directed to send a copy of this report and this resolution to our diplomatic representatives at the Peace Conference in Paris, to the Attorney-General of the United States, and to every Senator and Representative in Congress, commending the questions presented to their immediate consideration.

W. J. Ghent Makes Critical Analysis of "The Nation"

We are glad to give space to the following letter from William J. Ghent to Henry R. Mussey. Mr. Ghent is well known as one of the ablest socialist writers in this country and in Europe, but, because of his true Americanism, he left the Socialist Party when it became the mouthpiece for the German propaganda in the United States.

Henry R. Mussey is the editor of "The Nation," which journal has already been described in these columns.

In 1908 the editor of the REVIEW *took occasion to protest to the Y. M. C. A. for permitting Professor Mussey, then of the University of Pennsylvania, to give before its organization in Philadelphia a series of lectures on socialism, which, while pretending to be an honest and dispassionate discussion of the subject, was in fact nothing more or less than veiled socialist propaganda. About that time Mussey had come to Barnard College, and a Columbia professor who was largely responsible for having brought him there, took up the cudgels in his behalf, stating among other things that Mussey had told him that "it would be impossible for him ever to be a socialist."*

The reply made to that was that whatever Mr. Mussey might think about it, he was in fact a socialist just the same, and that an analysis of his addresses, made by five different men who were competent to pass judgment in such matters, unanimously pronounced him such.

Mr. Ghent, ten years later, adds this closing chapter on the subject:

627 Belmont Ave.,
Los Angeles, California,
March 15, 1919.

My dear Mr. Mussey:

Your letter of February 27th was delayed in reaching me, owing to the fact that it was addressed to a non-existent "Vilmont" avenue instead of to Belmont avenue. It was not delivered to me till the 12th. I assure you that I was glad to receive it, since it gives me an opportunity to speak a few things that I have had in mind for some time.

Let me say first that I note well your reference to the upsetting of so many persons' judgments these recent years, and that on this point I join my testimony with yours. I, too, have met with abundant proof of the wide range and unexpected incidence of this malady. If the reference is intended as the mere statement of a striking fact, I willingly subscribe my agreement with you. If it is intended with some measure of reproach, I reply that I hold myself blameless in the matter, since I have done what lay in my power to check the malady, while I think *The Nation* has done very much to foster its spread. And if, as I greatly fear, the reference is intended to express a serene complacency as to the equilibrium of your own judgment and a doubt to the equilibrium of mine, then I reply: Read this letter; you may be right, but I have something to say to the contrary.

All the information I had about the organization of the Truth About Russia Committee was contained in the dispatch carried by the Associated Press. Of course I did not know that the announcement was unauthorized, and that upon the publication of this announcement the three representatives of *The Nation*, as well as Mr. Kellogg, at once withdrew. But these matters are immaterial. Your letter says that "the suggestion of the formation of this committee was made absolutely and solely with the purpose of giving publicity to any authentic information that could be got from Russia, no matter who or what it favored." This is exactly what I understood the declared purposes of the proposed committee to have been; and it was because, in my judgment, the four periodicals mentioned by me have constantly and flagrantly violated their professions that I criticized them in my letter to the *New York Times*.

DEALS ONLY WITH "THE NATION"

I shall deal here only with *The Nation*. I read your periodical regularly and keep my copies on file. I do not find in it the information believed by me to be authentic which I readily find elsewhere. You say: "We have also been utilizing absolutely every source of information concerning Russia that we can get." I emphatically dispute this statement; and I shall show that your belief in its correctness involves an almost incredible degree of self-deception. True enough, I find in *The Nation* much that is pertinent and valuable—the text of the Soviet constitution, of various Soviet decrees, etc.—and I willingly pay tribute to the enterprise of your periodical in gathering and publishing these documents. But the publication of them does not compensate for the omission of other and equally important matter.

The text of a constitution or a decree is not a description of the workings of a government. You, who are always censuring and ridiculing the delinquencies of our administrators, would greet with sardonic laughter the publication in Russia of the United States Constitution and pure-food law as evidences of the kind of government under which we live. If you know anything of what is going on in Mexico you would hardly regard the publication of the new constitution as a description of political conditions in that land. It is even conceivable that a convention

horse-thieves might draw up a constitution ontaining many altruistic and high-sounding eclarations. But the publication of such a con- itution would give only a very misleading otion of that organization or its workings. What the world is entitled to know is not only hat the horse-thieves have to say about them- lves, but what the people feloniously divested f their horse-flesh have to say about the thieves.

In all that you print about Russia I find only ne grossest partisanship: in the testimony, only hat which favors the Lenine-Trotzky regime, nd in the editorial comment the assumption hat no other testimony is of the slightest value. ou do, indeed, occasionally print a sentence isclaiming support of the Bolshevik regime; nd on two recent occasions (December 21 and larch 1) you generously permitted two corre- pondents, in letters to the editor, to enter mild lemurrers to the Bolshevik claims. But aside rom these, all that you print on the subject is otoriously pro-Bolshevik matter.

What you think of the adverse testimony is erhaps best summed up in an editorial declara- ion in the issue of February 1:

"The emigrant Russian princes and prin- esses, ex-ambassadors of the Czar and Kerensky, nd secret agents who, safely in exile in Europe r America and abundantly supplied with money rom mysterious sources, have been filling the ress of both continents with denunciations of he Soviet government or the Bolsheviki . . . nd who in the meantime have been carrying on n impudent and insidious propaganda."

You here link together revolutionist and re- ctionary, democrat and imperialist, the life- ong servant of the Russian people with the parasite who has lived upon them, in one com- mon mass of discredited adventurers; and you annot see, such is the blind violence with which you have written this sweeping sentence, that in the use of the little phrase *safely in exile* you have perpetrated a ghastly joke on your own assertions of the mildness and justness of Bolshevik rule.

What you think of this adverse testimony is further shown (issue of February 22) in an editorial on the Overman committee, in which you say: "The committee . . . went on to pick out a series of witnesses who would heap abuse on the present government of Russia. *We have no space to deal with individual witnesses or their specific testimony.* Suffice it to say that it is mostly the same sort of wild hearsay with which our press has been filled for months; little of it would stand for five minutes in any court of justice."

ATROCIOUS LIBEL ON THE COMMITTEE

The first sentence is an atrocious libel on the committee which took testimony from all sides. The second sentence is true enough, but not greatly to the credit of a periodical which professes to "utilize absolutely every source of information concerning Russia that it can get." The third sentence is more atrociously false than the first; for these witnesses included Catherine Breshkovsky (February 14), for whom you personally profess so reverent a love; Roger E. Simmons (February 15), William C. Huntington (February 12), the Rev. G. A. Simons (February 13) and Prof. Ralph Dennis (February 14), all of whom gave accounts of matters with which they were intimately acquainted.

You pretend to know more about what is happening in Russia than do these people. Do you? I say rather that in this rejection of this testimony and the insulting reference to these witnesses you are merely revealing a working formula of your office: "Pro-Bolshevist testimony is necessarily believable testimony; anti-Bolshevist testimony is necessarily the reverse."

To refresh my memory and to re-examine the basis of my criticism, I have read through a file of your periodical from November 16 to March 1, inclusive. I must say that the case, thus revealed, now appears to me a much clearer one than it did when I wrote my letter to the *Times*. I was prepared to find that I had overlooked something in your defense; that the cumulative impression made on me from reading these issues week by week might be in some measure an erroneous one. But I find my view confirmed by overwhelming evidence.

I say now that you cannot point to a single line in these fifteen issues that gives to an open-minded reader the slightest indication of a wish to treat the Russian situation fairly. You may have wished to treat it fairly; you may have thought you were treating it fairly; but the evidence that you have not so treated it is here in unmistakable black and white. There is one side, and one only, presented. The honored leaders in the long history of the Russian revolution are for the most part ignored, or they are mentioned only to be dismissed as of no consequence. To Babushka "the Drifter" (February 8) pays a personal tribute. But of the volumes of testimony given by her in interviews, in speeches, in her examination before the Overman committee and in her formal message to the American people, there is not here or elsewhere a syllable. There is, indeed, the statement that "her viewpoint of affairs Russian and international differs widely from the *Nation's*"; but this is presented as though it settled the matter by reducing the value of her testimony to zero. Tschaikowsky, well known and well loved in America, is mentioned twice (December 21 and February 8) and pushed aside. Of his frequent detailed statements regarding Bolshevist rule, you print not a line. I find no mention of Kropotkin, Bourtseff, Axelrod, Savinkoff, Avksentie or Plechanoff (now deceased), and yet the testimony of every one of these, some part of which appeared during these fifteen weeks, is still an enduring indictment of the Bolshevist regime.

MUCH MATTER IGNORED

A great deal of reputable anti-Bolshevist testimony from many other sources appeared during these fifteen weeks; and a great deal more, which appeared somewhat earlier, is available and still forms a part of the documentation of this case. But no part of it, not even a reference to it, except the admission (December 21) that "the partisans of the Kerensky regime, or of any regime at all save the present one, go on denouncing the Bolsheviki and clamoring for military action," is to be found in your journal. During those fifteen weeks appeared, among a great mass of contributions to the general subject, the following:

A remarkable series of papers (a part of which was published earlier) by Ariadna Tyrkova, in the *Christian Science Monitor*.

An article by George Kennan in the *New York Times*, January 23.

Several formal statements by Dr. David Soskice.

A protest against Bolshevism addressed to J. Ramsay MacDonald (December 7), by a delegation representing the Esthonian republic.

A formal statement (published in the *Christian Science Monitor*, January 22) by Mr. Titoff, moderate Socialist and member of an anti-Bolshevist delegation from Russia.

A statement (published in London in December and sent here by Associated Press correspondence dated January 1) signed by five representatives of Russian political organizations.

The official dispatches of O. Wardrop, British consul-general at Moscow.

An address to President Wilson, presented to him on his visit to London, signed by 100 prominent members of the Russian colony of that city.

Several statements by G. A. Martuchin, former secretary of finance in the government of Northern Russia.

Various translations from *Pravda* and *Izvestya*, Bolshevik organs, confirming the truth of anti-Bolshevist charges.

Against your preposterous statement that you have been "utilizing absolutely every source of information concerning Russia" that you could get, I set down the plain and indisputable fact that you utilized in print, during the period named, nothing of the slightest consequence from any anti-Bolshevist statement.

This sweeping indictment I must, on again examining my material, qualify to the extent of one instance. Under the heading, "The Siberian Duma," among the fine-print notes in the issue of November 16, you print a summary of a speech by M. Vologotsky, then president of the council of ministers of the Omsk government. The speech as a whole is a resume of what the Omsk government has done and is at least impliedly a criticism of the Bolshevist government, and it contains at least two sentences in which the Bolsheviki are plainly denounced.

In another instance my statement may be qualified or not, accordingly as one views the matter. In the introduction, headed "A Bolshevist Outbreak," to a letter by E. Odier, Swiss Ambassador to Russia, and a reply by G. W. Tschitscherin, people's commissary for foreign affairs, in the same issue, occurs the sentence: "It will be observed that the fact of the outrages against which the neutral diplomats complained is not denied." This curious sentence may have been inserted either to show the culpability of the Bolshevik government or to show your approval of its contemptuous resistance to the impudent demands of the Allies. Since you have taken the trouble to italicize all the most arrogant and calumnious assertions of Tschitscherin, thus giving them an editorial approval, I cannot think there is much doubt about your intention. But if the former interpretation is to be made, my statement is obviously to that extent qualified; if the latter, my statement is not affected.

The article, "Who Shall Inherit the Power in Russia?" by Vladimir Grossman, translated from the *Morganavisen*, a conservative journal of Bergen, Norway, does indubitably contain many hard words about the Bolsheviki. But the motive for printing it is easily enough revealed in the argument of the writer, which is, that if Bolshevism goes down, Czarism is apt to come up. To have excised the denunciations of the Bolsheviki would have completely destroyed the point which you sought to make; and so faced with the alternative, you could do no less than admit these passages to your columns.

WHY THE INDICTMENT STANDS

Otherwise my indictment stands. You had special articles by Albert Rhys Williams (November 16), Michael S. Farbman (November 30 and February 8), George V. Lomonosoff (March 1), "Christian" (December 21)—the last-named a woozy melange of mysticism and flapdoodle—and John Rickman (January 11). With the exception of Rickman's article, which is nebulous in the extreme, these are all, in greater or less degree, pro-Bolshevist contributions. The article by "Christian" is fanatically so. The first of Farbman's might seem to a considerable number of persons the adulatory tribute of a hired man to his employer. I do not, however, press this matter, though I am sure that had the same kind of stuff been written by Dr. David Soskice in praise of Kerensky you would have so treated it, with an outburst of scornful rhetoric. My point is that as a set-off against these articles you can point to nothing whatever for the other side.

Your failure to print anything explanatory of the Socialist and democratic opposition to Bolshevism might possibly be attributed to chance, though he would be a bold man who would so contend. But your distortion of particular episodes cannot, even by the widest stretch of charity, be so explained. You treated, with characteristic denunciation, as a lie out of the whole cloth, the press story of an intended

HOW CAN THE "PEOPLE" BE REPRESENTED

A correspondent has written the editor of the REVIEW, asking "What on earth is the meaning of all this talk about having the people rather than the governments represented in the League of Nations, just as though the representatives of our Government, for instance, were not representatives of the people?" Also he inquires: "What is the significance of the proportional representation idea that they talk about?"

These questions are quite natural, because of the various references to these subjects by so-called "liberals" of all countries, who, by the way, are today nothing but radicals and revolutionaries. There was a time when the word "liberal" meant something. Today it means principally that to be a "liberal" is to be more or less a Bolshevist, or at any rate a socialist. But to answer the questions of our correspondent:

When the socialists at Berne demanded that the League of Nations should not be constituted of representatives of the governments, they meant that they wanted them to be selected by the various parliaments or legislative bodies, instead of being named by the executive heads of the several governments. Their reason for wanting proportional representation was that in practically all the governments in Europe the revolutionaries had representation—and in some countries, both in Europe and South America, the minority representation is very large and may at any time become majority representation. This would let the socialists and even the anarchists secure membership in the League of Nations, enabling them to hold up every measure squinting in the direction of sanity. Also, this possibility of the revolutionaries capturing a majority of the governments of the world explains why originally some of their more radical groups so enthusiastically supported the League of Nations' idea. They hoped to work the thing around to the point where all the nations of the earth would be admitted on equal terms. Then they would capture the League of Nations, and, with the armies and navies of the world in their hands, the future, for them at least, was quite rosy, if not carmine-hued.

The left wing of the Berne conference, however, not satisfied with having the legislatures select the delegates for the League of Nations, insisted on having the people do it directly, and this absurd idea has been taken up by the revolutionaries and freaks of this country, the reason being that if Congress selected our League of Nations representatives, it would not enable them to have any voice in that body, because, thanks to the good sense of the American people, none of them are allowed to enter our national legislative body. Proportional representation would therefore do them no good. It would simply mean that the representation would be made up of democrats and republicans.

Just how these ghost-dancers of the League of Free Nations propose to have the American people get together and select representatives "proportionally" is, of course, not stated. Probably they propose to call the hundred million people of the country to meet in some nice, quiet spot and "thresh it out" at a town meeting. Or if that would seem a little bulky, they might decide to divide it up and have a few million people called together in each state. If, after the deep thinkers thought some more and found that such a crowd would also be a little unwieldy, they might consider that it would be well to reduce it to county mass meetings of a few hundred thousand people and finally get back to towns and wards and election districts, just as we do it now, in which case they would again find that the American people have too much sense to select any of the R's and F's to represent them anywhere except in institutions for the feeble-minded.

On the "representation by the people" proposition, President Wilson, in his explanation of the League of Nations program to the Peace Conference, greatly stressed the idea of having met this demand. But when the covenant was examined it was found that all it meant was that he would name three representatives instead of one, and of course if he wanted to appoint one of these revolutionaries or freaks he would have that pleasure; but, also, the Senate would express its views on the matter before they reached the peace table.

The proportional representation idea, generally speaking, is a dishonest proposition to emphasize artificially the importance of a minority, which frequently amounts to a handful of men holding the balance of power between the two great parties, enabling them to blackmail one side or the other into supporting measures to which they are opposed. A weekly journal of high standing, but with socialistic leanings, bemoaned the fact that in the 1916 Congressional elections, the ten or twelve socialist candidates running had not been elected so as to act as a "balancing force" in Congress. One can readily imagine what would have happened where there were only three votes between the republicans and democrats, to have the disloyal Berger and the pacifist, and worse, Hillquit leading the ten socialists. They would have practically dictated much of the legislation and policy of that body by playing the democrats against the republicans, and where they could not have dictated, they would have blocked.

Therefore, proportional representation not only permits a minority to prevent the majority from expressing the will of the people, but, as it frequently works out, is an immoral proposition.

It is well to note that it is only where the "liberals" are in the minority that they want proportional representation. Where they are in the majority, as in Petrograd and Moscow, Professors Lenine and Trotzky, those princes of "liberals", are not bothering about giving the *bourgeoisie* any minority voice except when they face the firing squads, and then they are allowed to scream.

JUSTICE DEMANDED FOR THE NEGRO

A call for a National Conference on Lynching, to be held in New York, May 5 and 6, 1919, has just been issued by a committee of citizens, of which Moorfield Story, of Boston, is chairman and John R. Shillady, of New York, secretary. It is certainly an anomaly, to say the least, that there should be need in the United States at this time for such a convention. Well may the enemies of our country point to this burning disgrace to our American civilization.

The call for delegates to this convention says:

> The prevalence in many states of the spirit which tolerates lynching, accompanied too often with inhuman cruelty, and the inability or unwillingness of the public authorities to punish the persons who are guilty of this crime, threaten very seriously the future peace of the nation. Not only is lynching a denial of the right secured by law to every man of a fair trial before an established court in case he is charged with crime, not only does it brutalize the communities which suffer it by breeding a spirit of lawlessness and cruelty in the young people who see barbarities unpunished and uncondemned, not only does it terrorize important bodies of our citizens, but it inevitably leads the people whose rights are thus trampled upon to leave the regions where their lives, their families and their property are in danger, and move to others where they can find peace and protection, thus disturbing the labor situation all over the country. It also blots our fair fame as a nation, for we cannot claim to be civilized until our laws are respected and enforced and our citizens secured against the hideous cruelties of which we are constantly furnishing fresh examples.
>
> It is time that we should wake to the need of action, and that public opinion, irresistible when aroused, should be enlisted against this barbarism in our midst.

At a Pan-African Congress recently held in Paris, Mr. Daigne, Deputy of Dakar, one of the most energetic of the colored members of the French Parliament, which was called to consider improvements in the general condition of the black race throughout the world, is quoted in *The Christian Science Monitor* as saying:

> "I have already said the French colored men have few if any demands to make. But it is generally hoped amongst all the leaders of the colored races that now that the United States have placed themselves in the vanguard of civilization, they will stand by the assertions they have made concerning the ideal of nationalities and the right of people to dispose of themselves.
>
> "Yet, in the opinion of the Pan-African Congress, this does not at present seem to be the case and in spite of their declarations concerning this ideal, the United States do not, as yet, seem more liberally disposed toward the black race than of yore."
>
> Nevertheless, Mr. Diagne is convinced that the problem of the black race is infinitely more serious in America than in any other country. In 1860 the United States, he said, numbered 4,000,000 colored men amongst its population whilst today it has more than 12,000,000. Mr. Diagne considers that the policy actually followed by the United States as regards the colored element of its population is far from a happy one, and that the constitution of so formidable a state within the state is a great danger to national security. Moreover, he does not believe that after the war, in which they have taken so great and splendid a part, the colored men will be content to possess only in theory a liberty which they wish to put into practice. Therefore the congress considers that the demands of the colored populations of the States are quite legitimate. Mr. Diagne also believes that those colored American troops who have witnessed the absolute liberty and equality which their French brothers enjoy, will constitute an element of discord and that they will return to the States with newly awakened aspirations toward obtaining, in what is popularly believed to be the freest country in the world, the prerogatives to which they have a right as citizens. During their stay in France they will have had time to realize that the motto of the French Republic, "Liberty, Equality, Fraternity," is not a vain formula, and they may possibly wish to see it applied as universally in the United States.

SOCIALISM AND SOCIAL REFORM ANTITHETICAL

As offering a partial explanation of the seeming capture of the social reform movement in our churches by the radical and revolutionary forces, the testimony on Unrest prepared by the editor for submission to the United States Commission on Industrial Relations in 1914 has been published in the REVIEW. In the issue of April 10 the topics discussed under this head were:

I. Normal Unrest.

II. Manufactured Unrest:
- Socialist Propaganda in the Trade Unions;
- Socialism in the Press;
- Socialism in Social Reform Organizations;
- Socialism in Schools and Colleges.

The topics discussed in this number are:
- Socialism among the East Side Immigrants;
- Socialism in the Churches;
- Socialism and Patriotism.

III. Is Wall Street or Socialism Gaining Control of Sources of Public Opinion?

IV. Socialism Versus Industrial and Social Progress.

The principal merit of this matter, if any ıere be, consists in the quotations from socialist ıd syndicalist authorities. If the description ven of conditions in 1914 was even approxiately correct, there should be little surprise at ıe conditions we face today. This burrowing ıs been going on insidiously and insistently ver since 1914, just as Jack London boasted ıat it would, and it will continue to go on unless ıe sane forces of our nation are aroused and roperly organized to combat it.

It will be a shock to social reformers to read ıe clear-cut statements contained in the quotaons from socialist writers, who frankly declare ıat they do not want to bring about better conitions in the present state of society but want) tear it up by the roots and begin all over again. n their pronouncements to that effect, it will be bserved that five years ago they used language s violent as that employed by Lenine and 'rotzky today.

The answer to the socialist stock claims that apitalists, through their great wealth, are conınually plotting to thwart and suppress liberalsm and radicalism is given in this issue of the ℃EVIEW. In a word, it shows that just the reerse is true. Apparently, the larger the capitalst, the more willing a victim is he to the blandshments of the smooth-tongued and hypocritical evolutionaries who are masquerading as "social eformers."

NOTE TO READERS

Owing to the temporary illness of T. Everett Harré, the second instalment of "Who's Who in he New School", scheduled for this issue, will ppear in the next number of the REVIEW.

DR. O'GRADY TAKES EXCEPTION TO CRITICISM OF THE CATHOLIC SOCIAL RECONSTRUCTION PAMPHLET

THE NATIONAL CATHOLIC WAR COUNCIL.
932 14th Street, N. W.,
Washington, D. C., April 9, 1919.

Mr. Ralph M. Easley,
NATIONAL CIVIC FEDERATION REVIEW,
New York City.

Dear Sir—An article in the issue of your REVIEW for March 25th, entitled "Radicals Mislead Churches About Labor," contains some sweeping criticisms of the National Catholic War Council's reconstruction program.

We have no desire to engage in a controversy over the merits of the program. It speaks for itself and justifies itself. We want, however, to correct a few misconceptions. You say that the program "is only the expression of the opinion of the gentlemen signing the document and has no official sanction.". That is not true. The Bishops signed it, not as individuals, but as the Administrative Committee of the National Catholic War Council. As such, they are the authorized representatives of the Catholic Hierarchy.

You find fault with the program for not mentioning the reconstruction proposals of the American Federation of Labor and of the Industrial Conference Board, but neither of these had appeared when the Bishops' program was written. You intimate that the general policies of the American Federation of Labor are well known and should have been noticed. But the Bishops were not discussing the general policies of any organization. They deal with the opinions of others only in so far as these had found expression in formal programs of reconstruction, and the only documents of this sort that had been issued by labor in the United States up to the time that they wrote were the declarations of the state and city federations which they cited. In the same way they noted the declaration of the National Chamber of Commerce because that was the only reconstruction statement then available from employers, and there are more employers in the National Chamber of Commerce than in any other organization in America.

You complain that the Bishops have made recommendations which are at variance with the policies of the American Federation of Labor. Well, the Bishops were stating their own views and program. While sympathizing with and endorsing the fundamental aims and views of labor, they were no more obliged to adopt all its opinions than those of organized capital.

The heading of your article is not exactly complimentary to the Bishops. They have sufficient intelligence and sufficient knowledge of social thought and conditions to protect themselves against being "misled by radicals."

Your statement that a certain sentence in the program "sounds as if the Committee were somewhat regretful that we were not more ready for revolutionary changes," is an entirely gratuitous bit of interpretation.

In your concluding paragraph you say that "the churches are all controlled by boards of trustees, made up largely of business men." In the Catholic church the control is in the hands of the Pope and the Bishops.

Very truly yours,
(Signed) JOHN O'GRADY,
Secretary, Committee on Reconstruction.

REPLY BY RALPH M. EASLEY

Dr. O'Grady takes exception first to the statement that the bishops, who as members of the Administrative Committee of the National Catholic War Council signed the foreword to the pamphlet on "Social Reconstruction", had no official sanction for so doing. It would be presumptuous for the writer to discuss that question with so eminent an authority. However, it is only fair to remark that the idea was not gathered from the clouds. The pamphlet came to the writer, in the first place, through a Catholic, who was shocked at what seemed to him the socialistic trend of its contents and it was a Catholic labor man who called attention to the editorial which appeared in *The New York Daily Call,* and said: "I never expected to see the time when the policy of my Church could be approved by that revolutionary sheet which is not only the organ of the socialists but is rapidly becoming the organ of the 'Left Wing', which means Bolshevism."

In regard to the authority of the National Catholic War Council's Administrative Committee to pass upon economic matters, certain Catholics were consulted who are regarded as being versed in Catholic procedure. Their composite opinion is contained in the following paragraphs:

"The hierarchy of the United States addresses its communications to the Catholics of this country ordinarily when assembled in Plenary Council. Not more than three such councils have been held, and never has the hierarchy, out of Council, addressed a joint official communication to clergy or laity.

"The National Catholic War Council consists of the Archbishops, represented by an Administrative Committee of four bishops. The bishops of the country take no active part in the War Council, nor, so far as is known, a consultative part.

"The War Council is authorized to act only in War Work proper and it is to cease its activities just as soon as it will have expended its present funds in War Work. Its Administrative Committee and Committee on Special Activities will then cease.

"The War Council is not considered by the bishops generally to act in other than war matters, such as Social Reconstruction is considered to be.

"If the bulletin on Social Reconstruction were an official hierarchial statement it would have been issued as such and signed by the members of the hierarchy or by representative bishops specially designated for this.

"Catholics generally do not recognize it as an official statement of the heirarchy, but only of the Administrative Committee of the War Council.

"There was a meeting of the bishops at Cardinal Gibbons's Jubilee in Washington. This meeting did not endorse or take action in the matter of this statement."

These views are not published for the purpose of disputing Dr. O'Grady's statement, but simply to give some justification for the assertion on the matter of authority contained in the REVIEW article.

The reason given by Dr. O'Grady for the ignoring of the well-known policies of the organized American labor movement by the Catholic War Council's committee is, in the writer's opinion, not at all adequate. He says:

"The bishops were not discussing the general policies of any organization." Well, they did more than merely discuss the British Labour Party's Program, for they pronounced judgment upon it, declaring that it was "unquestionably the most comprehensive and coherent program that has yet appeared on the industrial phase of reconstruction," although admitting that "This program may properly be described as one of immediate radical reforms, involving a rapid approach towards complete Socialism."

Concerning the report, the REVIEW article stated that "On reading it, one is struck by many omissions and inconsistencies." A Catholic critic adds that it is also "a superficial treatment of the capital and labor problem, and more or less a 'hotch-potch', something like the first draft of the League of Nations covenant, which was made up by throwing together parts of various drafts by many different individuals."

To discuss the labor question in the United States and omit any reference to the policies and work of the American Federation of Labor or the Railway Brotherhoods is almost inexcusable. In the opinion of the writer, those responsible for the pamphlet should either have gone into the matter thoroughly or they should not have touched upon it at all.

To make a positive declaration that "The State should make comprehensive provision for insurance against illness, invalidity, unemployment and old age," is to attempt to place the great Roman Catholic Church behind a group of socialistic ventures that neither the wage-earners nor the employers want. The reason is that they have learned that in foreign countries such schemes have not accomplished what is claimed for them by the socialists here. Take the genesis of the movement for compulsory social insurance in the United States. It will be something of a shock to those interested in constructive efforts to learn that the self-styled "first advocate", the socialist Dr. Isaac M. Rubinow, in an article entitled "A Socialist Remedy for Unemployment," published in *The New Review,* November 15, 1915, frankly states:

> "Twelve years ago, when I began to preach social insurance, I was a man with a new idea in this country. . . . After all, social ills, like bodily ills, have only one true remedy, though it is not always known in time, and if we socialists are at all right, these remedies must be in line with our philosophy."

This same socialist, Dr. Isaac M. Rubinow, in an article in *The New Republic,* July 27, 1918, lets in a little more light upon the peculiar origin

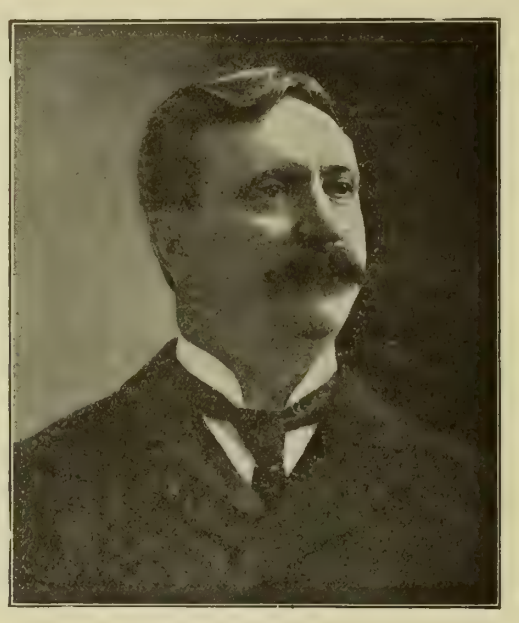
American Labor Mission Returns

(*Continued from page 2*)

go to Berne, Switzerland, to attend the so-called international meeting there. The principal reason we had for not going was that, as representatives of the organized labor movement of America, we had no need to go to a neutral country to debate the question. What we had to say and do, could, and should, be said and done in an allied country. We were not prepared, since peace was not signed, to go and meet delegates of organized labor from Germany, Austria and Bulgaria, thereby appearing to give them an advantage which their countries had lost through their own choice of the arbitrament of war."

Marked applause greeted Mr. Duncan's definition of organized labor's position in this matter and he roused further enthusiasm by telling of labor's stand on the League of Nations and on reconstruction.



"We have learned that democracy means self discipline," said Mr. Macy, "and it does not mean license. It does not mean a dictatorship of the proletariat, whatever that means, the dictatorship of religious sects, or the dictatorship of any part of the community. But it does mean the cooperation of all in the community to work toward a common end. Wherever there has been oppression in this country, wherever a body has signified a desire for better democracy, we have been long accustomed to seeing Mr. Gompers, our honored guest, in the front of that fight.

"While he has always been one of the strongest advocates of peace, he has been one of the most persistent fighters all his life for justice to the greatest number. He is now regarded as the champion throughout the world of these same rights of democracy and order and constructive progress. We have been most fortunate in having Mr. Gompers in Paris at this critical time in the world's history where he has been able to add his statesmanship to that of the other delegates to the Peace Conference.

"Notwithstanding our pleasure at having him there, and our pride, I am sure we are still more glad to have him back home with us. We feel more comfortable when he is here where we can advise with him constantly. Mr. Gompers."

As one man, the gathering rose to greet the venerable leader of the American Federation of Labor and it was some minutes before he was permitted to speak because of the prolonged applause. Then he said:

"Perhaps one of the greatest difficulties with which a man has to deal is to speak when a great tribute has been paid him. I want you, Mr. Chairman, my fellow countrymen and coun-

JAMES DUNCAN

try women, to accept my assurance of a deep, deep sense of gratitude that I owe to you and to all my fellow Americans for the kindly thoughts that they have had for my associates and myself, and the efforts which we have made to be helpful to our own country and to the common cause of justice and humanity.

"I do not care to add much to what has been said as to the efforts made by the men and women of the American Labor movement to stabilize the good opinion and loyalty and devotion to the cause which America represents.

"Let me relate one incident that may be of more than passing interest. In February, 1918, there was held in London a conference of the representatives of labor and of socialists, and after several days' meeting, a declaration was made by that body calling upon their respective governments to bring about peace with Germany and Austria by negotiation. In September, 1918, another conference was held representative of the same bodies which I have mentioned, but in addition there was a delegation representing the American Federation of Labor.

"At that conference, made up of the same peoples, aye, of the same personnel except that the American Labor movement was represented, that September conference declared the unflinching support to the governments of the United States and of our allied countries until victory has been won and the enemy driven from the invaded countries.

"There were only five delegates from America and there were about 88 representing the other countries. And we thought that that was rather a declaration that would help to stabilize the conscience and the conduct of men who have been trimming and trimming and trimming with the common enemy.

"We had no votes to ask. We had no support to appeal for other than having had our country assailed and invaded and our innocent men and women and children murdered in cold blood, and we had the right to say that we were going to fight until at least some reparation shall be made to common humanity for the most monumental crimes ever committed by any people or any nation. And it has come about. The war has practically come to an end and the greatest military power on the face of the globe has been humbled into the dust.

"And now, my friends, let me say this, that the propaganda now being conducted, and conducted since the armistice has been signed, is just as vigorous and just as—perhaps more—insidious than at any time before, during or since, the war.

"It is the same junker crowd there in control in Germany as it was under the Kaiser. The propaganda now going on and having been carried on is the propaganda to win by diplomacy and agitation what Germany has lost on the battlefield.

"It is during these trying times of peace that it is necessary for every man and every woman to be on the alert lest the whole victory shall be turned into defeat. With my associates we had the great privilege of meeting in conference with our great President, the spokesman and practical leader and humanitarian, who speaks for the world of justice and of right. It has been our privilege to meet with our other commissioners and to place before them our views of the situation and what should be done. We simply tried to make our contribution to the world in the remaking. Here during those times and while over in France, the President made another American and myself a commission to represent our country in an international commission for Labor Legislation. The commission did me the great honor of making me its presiding officer. It may sound humorous to you, for while great tributes were paid to me and to the years of long continued service that I had given to the cause of right and freedom, I found myself nine times out of ten in a lonesome minority.

"It was a hard fight. It was a great struggle, and the best that was in me was given toward trying to reach some conclusion of a beneficial character to the world. And I may say that after thirty-five sessions lasting each of them from three to seven hours, a conclusion was reached. A covenant was created. It was a great problem and in all likelihood the dual

aracter of our government was one of the eatest problems that we had to meet.

"But the problem was solved—it is too long story to try to tell it or explain it—and then ere were but two questions with which we had deal. One was relative to interstate commerce and the other, foreign commerce. We feguarded the instrument and our governental rights and integrity by a declaration ade a protocol of the covenant, that no state country shall be asked or required to enforce conditions which are lower or less than btain in the country or state. And so a great rganization has been perfected.

"The news published in this morning's papers shows that at the meeting of the peace ommissioners yesterday that covenant has been dopted by the unanimous vote of the commission. And the instrument has been referred to hat has come to be known as the 'Big Four', o decide whether this covenant creating an inernational labor conference each year to be eld, and a governing body to have administrative functions and powers during the interim—and the question was whether this instrument should be made a separate treaty or ecome a part of the treaty of peace.

"In addition to this convention or covenant, r what it may be called, the International Commission adopted recommendations and placed hem before the peace commissioners, asking that hey be made part of the treaty of peace, and shall read them to you.

"But lest it shall slip my memory, I want to make one observation now. That is, that in that rganization created by the representatives of our allied countries and of the United States, there is not one thing that, when Germany and Austria shall have signed the treaty of peace—there is not one of its conditions or terms that can react to the injury of the working people of Germany or Austria. It is to make for them a better life and a better standard, and we hope more independence and less regard for the dictatorship of a Kaiser.

"The clauses proposed for insertion in the Treaty of Peace are:

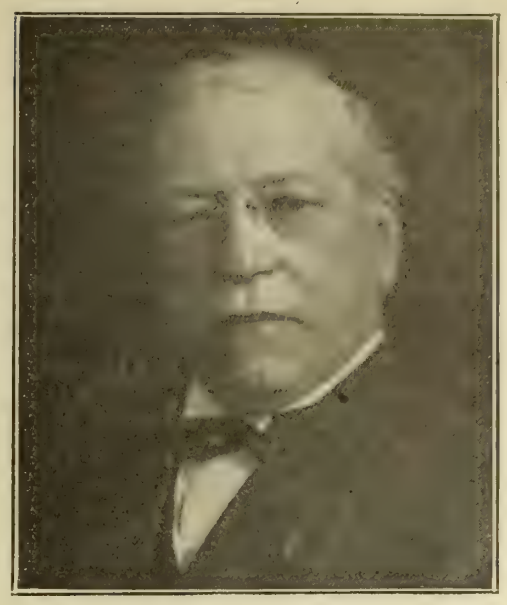
The high contracting parties declare their acceptance of the following principles and engage to take all necessary steps to secure their realization in accordance with the recommendations to be made by the International Labor Conference as to their practical application:

1. In right and in fact the labor of a human being should not be treated as merchandise or an article of commerce.

2. Employers and workers should be allowed the right of association for all lawful purposes.

3. No child should be permitted to be employed in industry or commerce before the age of fourteen years, in order that every child may be insured reasonable opportunities for mental and physical education. Between the years of fourteen and eighteen, young persons of either sex may only be employed on work which is not harmful to their physical development and on condition that the continuation of their technical or general education is insured.

4. Every worker has a right to a wage adequate to maintain a reasonable standard of life, having regard to the civilization of his age, time and country.



5. Equal pay should be given to women and to men for work of equal value in quantity and quality.

6. A weekly rest, including Sunday or its equivalent, for all workers.

7. Limitation of the hours of work in industry on the basis of an eight-hour day or forty-eight-hour week, subject to an exception for countries in which climatic conditions, imperfect industrial development or industrial organizations, or other special circumstances render the industrial efficiency of the workers substantially different. The International Labor Conference will recommend a basis approximately equivalent to the above for adoption in such countries.

8. In all matters concerning their status as workers and social insurance, foreign workmen, lawfully admitted to a country, and their families should be insured the same treatment as the nationals of that country.

9. All states should institute a system of inspection in which women should take part, in order to insure the enforcement of the laws and regulations for the protection of the workers.

SAMUEL GOMPERS

You who know me or who have heard of me, have heard me express myself, or have seen the expression of my absolute opposition to Bolshevism either in theory or in fact. In theory it is a mental impossibility. In fact, if it were put in operation, or could be, it would mean the decadence and perversion of the civilization of our time. To me, the story of the destruction of Samson when he pulled down the temple upon his head is an example of what is meant by Bolshevism. I am unwilling that the service that I have tried to give my fellows to bring a little light into their lives shall be destroyed because of maddening desperation—Samuel Gompers at The National Civic Federation's luncheon of welcome.

"I count it as one of the great privileges to have had the opportunity to help in the construction of this great scheme that shall make for the world's betterment.

"You who know me or have heard of me, have heard me express myself, or have seen the expression of my absolute opposition to Bolshevism either in theory or in fact. In theory it is a mental impossibility. In fact, if it were put into operation, or could be, it would mean the decadence and the perversion of the civilization of our time. To me, the story of the destruction of Samson when he pulled the temple down upon his head is an example of what is meant by Bolshevism.

"I am unwilling that the service that I have tried to give to my fellows to bring a little light into their lives shall be destroyed because of maddening desperation. I might say this to you also—that it is well for us to see that our own house is kept in order. There is another element in our life which needs scrutiny. Bolshevism is not the only danger confronting our institutions. The 'stand-patter' and the profiteer are equally a menace to our civilization.

"Since our coming ashore—not more than a day past—I find the situation right here where men entrusted with great industrial transit interests of our community have said to the working people in their employ, 'You cannot talk to us and you cannot labor for us, with the grievances or the complaints that you claim you have.' The industrial autocrat who thinks that he is master of all he surveys is the incentive and motive power for all the resentment that you can find in people.

"I was very much interested in what was said, not only by my associate, Brother Duncan, with which, of course, I am in entire agreement always, but particularly with the statement by the Honorable William Howard Taft, when he spoke of the collective bargaining, and of the right of the workers to sit in council with their employers and talk over the industry and commerce and production and cost, and to try and reach an adjustment.

"Of course it is not a solution. There is no such thing as a solution, because there is no such thing as an end. Not even death. There is no such thing as a solution, but it is the common sense way of trying to get along with the least possible friction to the attainment of the very best possible conditions. No man in this day and time can stand up and say that he is the master of all he surveys. He must be willing to yield some. If he does not, he has not learned anything of the lesson of this war. I am pleading for a clean life for our people. I want to see America, my America, not only the foremost democracy of the world; I want to see it true to history, true to its birth, true to its conception and ideals, and that we shall not only be the great industrial and agricultural and commercial country of the world, but also that we shall stand foremost like a beacon light to the whole world, and say justice and right and freedom must prevail in every relation of life.

"In these reconstruction times, it must cause us to pause, and be alert and active, and to give devoted service now. Now! Now, men and women, is the time that is trying our very souls and the institutions under which we are living.

"I want to say a word in regard to the covenant for the establishment of a League of Nations, and using in essence the words of our President when he laid the covenant before the High Commissioners, it is not only a League of Nations but a league of free peoples of the nations of the world. It may be true that the covenant, as it was tentatively adopted by the Commission and which the President of the United States brought with him to our country—it may be true that it is not a perfect instrument. It may be true, as it is true, that it will require some change and modification or strengthening. We must be safeguarded in America against those who might wish to menace this Republic of ours.

"It may need amendment, but, my friends, in principle it is right.

"Whoever heard of a written instrument that in its first conception and publication did not require time to make some changes? The Constitution of the United States—who would say that that Constitution is of no value to the people of our country and of the world? And you know how often we have amended it. I do not know—I may say that I don't know that we have always amended wisely. And perhaps the last amendment was the silliest of them all. But in the language of Kipling, that is another story.

"As Mr. Taft said, there are some people who will not learn, and because of it they may successfully oppose the ratification and adoption of this covenant for the free peoples of the world in a league to conduct a police force, if you please, in order to make some people behave themselves.

"War with all its untold miseries and sufferings, its pangs and its horrors, its nightmares—all, all, all—we must, if we can, endeavor to prevent such a holocaust coming upon the peoples of the world again. If that be in our power, we should do it. At least, it demands from every one of us to give the best that is in us,

(*Continued on page* 14)

Sapping the Foundations of Society

(*Continued from page 4*)

and secretary respectively of the Free Speech League, which had the fight in charge, in which these officials of the League stated:

> Most of the I. W. W. organizers who came to San Diego to speak used language upon the street corners such as would not be tolerated in any civilized community. They were foul mouthed and vile. . . . As a result, they inflamed the people and the police and the restricted district ordinance was passed. . . . The I. W. W. kept on sending men from the entire Pacific Coast to San Diego. Many of these men came simply in order to be supported.

Confirmatory of the above statement that money-raising was one of the prime objects of these various free speech propaganda, is the following extract from an appeal for money published in *Solidarity*, the official organ of the Industrial Workers of the World, during the controversy at Little Falls, N. Y.:

> In the meantime it is necessary that demands be made all the time on Governor Sulzer, Albany, N. Y., for an immediate grand jury investigation of the Little Falls authorities. BE SURE TO SEND ME A COPY, so I can get it into the local papers; that will help some here. *I might add that a public meeting for such resolutions consists of a chairman, secretary and audience. So, you see, three persons can be a meeting. A tip to the wise should be sufficient for a lot of action along these lines. Be sure and use all of the hack-worn expressions, etc., that you can think of. Paper is cheap and may do a little good in this instance.*
>
> But the most needed here are funds. DON'T FORGET THIS.

This was signed by J. S. Biscay, the organizer in charge of that particular campaign.

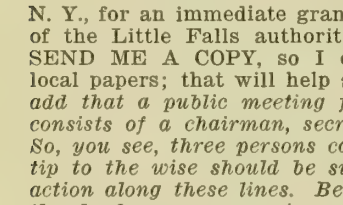
SOCIALISM AND PATRIOTISM

One of the persistent efforts of the socialists and Industrial Workers of the World is to stifle the patriotic impulse of the people. Love of country, or what they term "nationalism", is, they say, unethical. Books and pamphlets dealing with this question have been specially prepared for different classes of people, school teachers and children as well as for soldiers and policemen. In fact, the very word "patriotism" is anathema to the socialists. In *The Young Socialist Magazine* for April, 1912, is a good illustration of this feeling in the form of an acrostic, which also indicates the kind of teaching which the children of the socialists and of their sympathizers are receiving:

"WHAT IT SPELLS".

"P owder
A sininity
T rouble
R
I
O
T
I diocy
S uffering
M urder."

The socialists have a number of text books for children, by means of which they develop in the mind of the student a hatred for all employers and men of wealth. Below are sample pag from "The Socialist Primer."



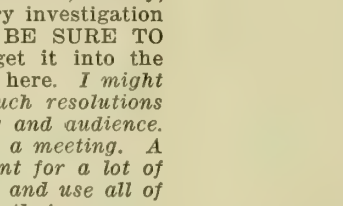
In their campaign against war, against battleships and forts and armies and navies, t socialists have curiously captivated many of t peace societies, the members of which, being favor of disarmament themselves for humar tarian reasons, jumped to the conclusion th the socialists had the same humanitarian motiv back of their position, and began to call the s cialists "brother pacificists". One of the b peace organizations, whose executive committ contained the names of some of the largest cap talists in the United States, was so much pleas with this accession, as it considered it, to t peace movement that it published a pamphl against war written by one of the leading s cialists. This pamphlet included a commend tion of *The Appeal to Reason* for its work in e couraging mutiny and desertion through t sending of bundles of that paper to the Unite States army posts and naval stations. Neve theless the socialists have never attempted t fool either the churches or the peace societi as to the real motives of their campaign again war. If any of these good people will take th trouble to look into their literature they wi discover why the socialists are against the arm and navy and forts and battleships. It is n for reasons of humanity nor because they ar opposed to the horrors of battle and the bloo shed of war, for they are not. In fact, they e pect to use all these measures with the sam ferocity with which they were so long used i Europe. What the socialists are working fo is a revolution of their own through which the shall destroy "capitalism", including of cours the capitalists, big and little, should they offe objection to being despoiled of their property The socialists are now against militarism becaus they do not want to have to meet the existin armies and navies when they undertake to con fiscate the property of the world and take ove the governments to themselves. There is n excuse for intelligent people not understandin this, because the leaders of the Socialist Party do not disguise it in any way. They want every body to know it.

I wrote an article on this subject which wa published in a new York paper, in which I quoted from the socialist authorities to sustain this view. Some of these quotations I repeat here to show not only their feeling on the peace propaganda but also the venom of their general attitude and their idea of how to overthrow the present regime.

The first two are from *The New York Call.*

> We have not started this thing (the war) and we hope that our correspondents will comprehend us when we say that, now that it is started, the most cold-blooded calculation on our part at the present moment is that they should all bleed each other to exhaustion so that the *coming social revolution may have an easier job of sweeping out the stinking fragments. We are through with protesting, mourning and deploring.* THAT TIME HAS PASSED AND NOW WE STAND FOR DESTRUCTION—THE DESTRUCTION OF CAPITALISM.
>
> * * * * *
>
> And it may be well to note also that we are by no means the peaceable people our opponents (the capitalist peace advocates) wish to pretend, in this situation. . . . We must not be confounded with the smooth prating knaves of The Hague Conference and the ordinary peace society. If it means literal war to put capitalism down and out, we are always ready to wage it for that object. . . . We have a deadly score to settle with the capitalist system, and despite what we may do now, or what we are forced to do, we never forget the ultimate enemy, and its supporters owe us nothing for the part any of us may take in the European War, in any country. And unless we are grievously mistaken they will find that out as an aftermath of the present struggle.

This certainly makes matters clear, but there

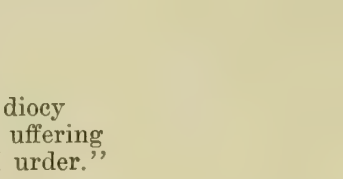


LESSON XI.

We See Ape — He Gets Nuts — Babe No Starve

What have we here? Where did you see an Ape? Does the Ape live in the woods? The Ape lives on Nuts. Does one Ape own the woods? No; all the Apes get nuts. The Apes must have nuts to live on. They would not let one big Ape own the woods and trees. If they did the small Apes could get no nuts that the big fat Apes did not want them to get. The small Apes would be the slaves of the big fat Apes. Did you ever see an Ape beg? No; not so long as there were nuts in the woods. Is one Ape the slave of the big, fat Ape? No, they are all free Apes. Does the Babe of the Ape work? Does the Babe of the Ape starve so long as there are nuts in the woods?

THE BABES OF THE APE DO NOT STARVE.



LESSON XII.

Lots Of Room — Too Much Food — Starve Homes Dies

O, see the Map! It is the Land they call the States. Do you live in the States? Does your chum live in the States? Yes, we all live in the States. A few years ago it held no folks too rich or too poor. All had some food to eat and a home in which to live. This was in the days when the west was new and men went west to be free. The States is big and all the men in the world could live in the States. There is land here for all. Do all the men have land? Do all men have homes? The soil is rich, and we can work so that all men will have food. Do all men have good food? Why is it that men have no land? The rich, Fat Man owns it! Why is it that men have no homes of their own? The Rich, Fat Man owns most homes. Why is it that men have no food? The rich, Fat Man owns the right to most of the food. Is this right? No, it is not.

ALL MEN MUST HAVE NICE HOMES. ALL MEN MUST HAVE GOOD FOOD.

LESSON XVI.

Toil Pick Digs — Must Have Chance — Thus Makes Wealth

What do we see here? It is a man at work with a pick. What is his name? We call him TOIL. Will he dig all day? No, he will work eight hours. He will work two hours to make his own wage, and six hours to make his BOSS rich. Is this fair? This poor man keeps his wife and babe poor, while his BOSS is rich and wears silk and drinks wine. This is not fair! This is what we call a wage slave. If you tell this man that he is a wage slave, he will get mad. He wants to think that he is free. Is he? He is not, for the job he has, and the tools that he must use are owned by the rich man. Thus the rich man takes the wealth made by the poor. The poor man must have a chance. He will get a chance when all the men will own all the tools and land that they must have to live. Man must also have rest as well as work. as work.

THAT WHICH GAVE US LIFE, GAVE US THE RIGHT TO BE FREE.

LESSON XVII.

Child Works Shop — Wheels Big Near — Love Hate Wrong

O, see the shop! The child is in the shop. See the big wheels! They are near the child. The child works hard. The child should be in the school, and not in the shop. You don't want to go to the shop to work all day? You like play; and you like a good time as well as you like the school. Can the child in the shop play? It must work. Why must such a small child work? Are there no men who want to work? A child works cheap. The Big, Fat Man owns the shop. This is a crime. The child is a slave. Men are out of work. Men beg. The child dies. The [illegible] will come when there will be no child in the shop. Men will not be out of work. They will not need to beg. "CHILD SLAVE" will be no words in use, for we will have no slave. All will be free. That will be nice for all. Joy and love will take the place of hate and wrong.

THE CHILD NEEDS PLAY. ALL MEN WILL WORK

LESSON XIX.

Strike Poor Slave — Law Said Work — Food Keep Sore

See the poor Slave! See the man with the whip! Will he strike the Slave? It would be bad to do so. Is he not a bad man to hit the poor slave? But he has this right. He owns the Slave and may do with him as he will. The law said a man may own a slave. No law like that now. It was a bad law for the Slave, was it not? Is it nice to be a slave? No, it is bad to be a slave. The Slave had to work. He got no wage. But he got his food and keep. He got this sure! Does the white slave now get his food and keep? Does he get it sure? I know lots of men who would be glad to work for their food and keep. Right in this town where we are told that we have no slave. Would you like to be a slave? Do you want a slave? Is your Pa a slave? Does he want to be free? The law will wipe out the wage slave.

LET US BE FREE. NO WHIP. NO WAGE SLAVE.

LESSON XXVI.

This, my dear child, is what is meant by the term "Class War." One class of men work and make our food, clothes and homes. While one class of men do no real work, but live on the hard work and the sweat of the first class. Who works? What do we call the class that does the real work? Is your Pa in this class? The Big, Fat man does no real work. Yet he eats. The big Fat Man is the Boss of the earth. He can give, or not give, your Pa and Ma work. The big, Fat Man owns the shops, mills, mines and the land. He can tell your Pa and Ma to "Get off the earth." You see he is the Boss. Did he make the earth? Did he make the shops? Did he make the mines? Did he make the mills? No, my dear child, these things are here for all, and not for the few big, Fat Men. Some day each man will be his own Boss. These things will be for all. Then the big, Fat Man will have to work just like the Thin man. We will all have lots of joy, time to play, and no Boss. Would you like to see this time? I would!

HE WHO WILL NOT WORK SHALL NOT EAT. WE WANT NO CLASS WAR.

FACSIMILE PAGES FROM "THE SOCIALIST PRIMER."

ld be produced a thousand quotations of the ne character.

n 1909 Victor Berger made the following pre-tion in *The Social-Democratic Herald*:

> In view of the plutocratic law-making of the present day, it is easy to predict that the safety and hope of this country will finally lie *in one direction only—that of a violent and bloody revolution.*
>
> Therefore, I say, each of the 500,000 socialist voters, and of the two million workingmen who instinctively incline our way, should, besides doing much reading and still more thinking, also have a good rifle and *the necessary rounds of ammunition in his home and be prepared to back up his ballot with his bullets if necessary.*

John Spargo said:

> . . . When the slaves answer the challenge of socialism with a united war-cry for justice and economic freedom, *all who resist them will be swept away as chaff, before the fury of the gale. And that, I believe will be the result.* The despoiled and disinherited, urged by the mighty passion of socialism, will rise and enter into full possession of their own, hurling into the dust of oblivion false and unjust religions, state crafts, and political economies.

In my article in a daily paper referred to ove I stated that there was no excuse for the ace societies not knowing just what the so-alist position was and I predicted that the cialists themselves would thank me for writing e article. My prediction was verified. The itor of *The Call* the day following its publica-on acknowledged the debt and said:

> *The Call* is much indebted to Mr. Easley for his assistance in putting us right before the capitalistic minded public. We will take the chance of his doing us any harm.
>
> There has always been some difficulty in getting our propaganda clearly understood, and though we always insist upon accentuating the revolutionary character of socialism, there are always great numbers who will persist in ranking us with reformers and futile mollycoddles of that species and its numerous variations.

5 WALL STREET OR SOCIALISM GAINING CONTROL OF THE SOURCES OF PUBLIC OPINIONS?

There is undoubtedly today a widespread feel-g that in some subterranean way the hand of apital is directing the principal agencies of pub-c opinion and education.

I have given a few typical instances, out of ie hundreds that could be cited, of the easy ccess these preachers of social hatred seem to ad to the editorial columns of the so-called plutocratic press," the pulpits of wealthy urches, the lecture halls and student clubs of ir colleges and universities, and the working affs of privately endowed philanthropic bodies id social settlements, and, astonishing as it ay seem, even in some of the great foundations ere is an active socialist contingent and influ-ce working in and through them. Instead of ese organizations being used to promote the lfish capitalistic interests of their founders, as charged, my observation is that just the re-rse is true. The foundations are more often ominated in some of their most important de-artments, if not in their entire attitude, by so-alists and radicals of various types than by designing emissaries of capitalism." Many of ie creators of great fortunes which are now de-oted to the furtherance of social reform move-ents would turn in their graves if they knew to hat an extent their money was being used today promote socialism and other revolutionary rograms.

The simple truth is that there is no mysteri-us underground way through which these great olochs of capitalism are continually plotting id conspiring against the people. Their every ove is not invested with a deadly and sinister tention to strike a blow at our democratic in-itutions.

It is an erroneous assumption that, because a man has been successful in business he has great ability and shrewdness in everything else to which he turns his hand. Dense ignorance of economic and social questions, not to say personal animosities, would alone prevent philanthropists from agreeing upon any plan of action which could have a sinister or baneful effect upon our institutions, even should they so desire. The danger, as I have stated, is entirely the other way. They are more likely to be used by promoters of revolutionary cults to the detriment of these very institutions. The capitalists knew how to organize trusts and combinations in the days when such things were tolerated by law and public sentiment, but today, when they strike the economic and industrial field, they are helpless and become "easy marks" for the "ghost dancers" and "dealers in gold bricks". One might almost say of them, as Haywood did of the judge who tried him in Paterson, that they "don't know the difference between anarchy and arnica," much less the difference between the trade unionists, the socialists and the Industrial Workers of the World.

When the movement to have Ettor and Giovannitti released from the prison in Lawrence, Massachusetts, was worked up, one of the prominent leaders was an important man in a big foundation and the Industrial Workers of the World made great capital out of the fact that this man was helping them, which showed, as they alleged, that the "infamous treatment" that Giovannitti and Ettor had received was such that even this capitalist felt it his duty to take up the cudgels for them. They suppressed the fact that this man was a socialist and a personal sympathizer with and admirer of Haywood and the whole industrial Workers of the World movement. For years one of the vice-presidents of a large insurance company has been a member of the Socialist Party and his bank account was always at the disposal of that party. This man's socialist utterances were used as coming from "a prominent Wall Street capitalist". The socialists themselves knew that he was one of the party members but the people whom they were trying to impress did not suspect that fact, which made great capital for the socialists.

In the offices of many industrial corporations there may be found revolutionary socialists. In one of the largest industrial corporations of the country, the highest priced expert, commonly called "the one hundred thousand dollar man", is a radical socialist and his writings and speeches are used throughout the country by the socialists, giving his full title in this big manufacturing establishment, without any objection, so far as I have heard, from the capitalist owners of that great plant.

In a large casualty insurance company the expert is an out-and-out socialist, who prefaces his books on social insurance problems with a statement frankly warning the reader of his possible bias. If socialism should be achieved, of course that insurance company would go out of business. The financial editor of a large daily paper is affectionately known in socialist circles as "the Wall Street Red". He makes no attempt to conceal his straight-out Karl Marxian views and he doubtless has the "Open Sesame" to "Broad and Wall" and the other big financial institutions, which fact alone ought either to acquit the Wall Street powers of any well-defined intention to "put anything over" on the people or else to convict them of dense stupidity.

One of the prolific sources of socialist propaganda has, strangely enough, come through commercial organizations which, ignorantly or indifferently, have permitted socialists to make social and industrial surveys for them in different cities. One in Chicago that dealt with conditions in the stockyards was made by a member of the Socialist Party who is now a socialist alderman in that District. It is easy to imagine what his report was; and yet this was paid for by good, hard-headed business men who probably swallowed the stuff that was turned in to them. Of course it was indigestible and therefore valueless.

A leading charity publication, which has among its directors and patrons some of the prominent capitalists of the country and whose president is a large New York corporation lawyer, is completely dominated by the revolutionary forces. Some time ago it boasted in its editorial columns of having been so magnanimous to the syndicalists as to have run four articles from the pens of those fomenters of disorder. It printed one article of six pages by a woman member of its regular staff, which was designed to explain sympathetically the sabotage, violence and murder proposals of the Industrial Workers of the World.

As I have already pointed out, there are churches in all the large cities with socialist preachers, although the trustees of these churches include leading bankers and other business men. The preachers are teaching socialism right under their noses and they do not seem to know it. In one conspicuous instance in New York City the church is noted not only for the almost anarchistic utterances of the preacher but for his activity in organizing movements for no other purpose than to promote the socialist propaganda. This church last winter took up the unemployment situation in New York City and, as the chairman of the committee which made the report was a radical socialist leader, his report naturally represented that practically everybody in the city was out of employment. And yet the trustees of this church include some of the most wealthy of the manufacturers and "predatory rich." Either they do not know or do not care, indicating at any rate that they are not searching for means to despoil the common people of their rights.

A financial writer who maintains a bureau for the dissemination of so-called "facts and statistics", which he sells to the bankers of the country, in one of the letters (for which the bankers are paying) after describing the labor situation and the destructive character of the Industrial Workers of the World, and stating that "the aim of the workers is the ultimate ownership of factories, banks, stores, and all other industries by the workers themselves", coolly announces his belief that the theory of the Industrial Workers of the World is right and advises the manufacturers and bankers to get into line with the idea that all that they have is soon to be confiscated by the workers. He says, "Capital will not much longer rest content with present conditions." In other words, capitalists are becoming so dissatisfied with the present conditions under which they own their own property that they are willing to have the socialists, anarchists and Industrial Workers of the World seize it and operate it for them! And yet this gentleman is selling letters containing this advice to supposedly hard-headed business men, who are accused by the radicals of eternally plotting and scheming to despoil the people. It might be remarked that a banker who has no more sense than to pay for such stuff ought to be relieved of his property, because he has already been relieved of his commonsense.

One of the richest men in the United States for some years assisted a campaign conducted by one of the most radical socialists in the country to prove that low wages were the cause of vice. This socialist announced publicly his views when he started in on this work, as follows:

> I believe that so-called "white slavery" is a disease of the social body; that it cannot be cured by treating the symptoms; that it can be cured only by eradicating the cause. I believe that the cause is economic—that the cause is poverty. I therefore believe that the only way to cure white slavery is to cure poverty. And

> I know of no cure for poverty save the erection of an industrial system whereunder a living wage shall be guaranteed to all workers, whereunder all persons capable of working shall be forced to work, whereunder private property shall be abolished, and the entire means of production and distribution, now owned by the few for the enrichment of the few, shall be owned and operated by the many for the benefit of all. In a word, I know of no cure but socialism.
>
> All suggested cures are and must be futile save the cure that socialism alone can supply.

The wealthy man referred to, who is attacked as one of the chief of malefactors, was pointed to by the socialists as having accepted their doctrine, when as a matter of fact practically every expert on the social evil would declare this theory of white slavery entirely groundless as well as a libel upon the working girls of this country, and this wealthy "malefactor" himself would not accept such a theory.

There is a journal of high-brow pretensions, recently started in this city by a combination of populists, socialists, syndicalists and all-round freaks. This publication is backed by a rich young man, who is making good its deficits. Its editors are generally twenty-five-year old statesmen, superficial and reckless. They boast of their ultra radicalism and at the present time are making a specialty of feminism and birth control. And yet rich men, with high business connections, are "putting up the money."

I give this picture of the socialist inroads into capitalism to show the utter absurdity and screaming farcicalness of the cry that capital is very alert and vigorous in its efforts to protect its own selfish interests. These illustrations could be continued indefinitely but I have given sufficient to show that whatever crimes may be charged against the capitalists they cannot be convicted of sitting up at night to devise ways and means for destroying American ideals and American institutions. Rather should they be charged with the gravest negligence in not interesting themselves in the intelligent and patriotic defence of these ideals and institutions from the onslaughts of those who would destroy them in the interests of a philosophy subversive of individual liberty and industrial progress.

While the cumulative effect of the enumeration of the activities of the socialists in all fields might seem alarming to some, I do not want to give the impression that I share that feeling. It is true that socialism is gnawing at the vitals of all that most people hold dear but I think it contains within itself the seeds of its own destruction. Education is showing that its philosophy is false, its indictments of society absurd and its methods utterly impossible.

SOCIALISM VS. INDUSTRIAL AND SOCIAL PROGRESS

The socialists, if we grant their philosophy, are of course perfectly consistent in ridiculing and opposing definite social reforms. If the evils incident to modern industry should be abolished—and many of them are being abolished—they would have nothing upon which to base the demand for revolution, and it is revolution they are working for, and not reform.

The lack of a clear perception of this important distinction has confused many good people. All right-minded persons are heartily in favor of practical social reform, but the real party socialists, who are the only socialists having a right to speak for the party, are not reformers at all but revolutionists. It is true that in the socialist platform there is a long list of what are termed "immediate demands," which include every conceivable change in social conditions that anyone has ever suggested, without any relation to socialism; but it is made perfectly apparent that this is only done for campaign purposes as the platform always closes with this clearly understandable paragraph:

> Such measures of relief as we may be able to force from capitalism are but a preparation of the workers to seize the whole powers of government in order that they may thereby lay hold of the whole system of socialized industry and thus come to their rightful inheritance.

That the Socialist Party has no use for social reform was well stated by Keir Hardie at an annual conference of the Independent Labour Party of England (the title of the Socialist Party in that country) when he declared:

> The Independent Labour Party is not a reform organization. It is revolutionary in the fullest sense of the word. The party does not exist to patch up the existing order of society and make it a little more tolerable, but to overthrow the existing order and build up a Socialist State.

The Progressive Party at its convention in 1912, held in Chicago, struck the double-dealing political policy of the socialists like a Kansas tornado, and the wreckage was to be found in the editorial pages of all their papers. They were in a veritable panic. With the Progressive Party declaring for many of the immediate reforms which the socialists had pretended that they stood for, the latter had to come out in the open and either ADMIT that they were not sincere in demanding these measures or else support Colonel Roosevelt in that campaign.

That they decided to throw off all pretence for reform and come out boldly for revolution was well shown by Charles Edward Russell, then socialist candidate for Governor of New York, in a political speech made on Saturday evening, September 7, 1912. Referring to the social reforms included in the platform of the Progressive Party, he said he wished it to be distinctly understood that the socialists had no interest in them. He added:

> Some gentlemen in this campaign believe that two or three fragments of the socialist program, with a few worn out remedial laws, will spike the socialist guns.
>
> They have jimmied the back door of the socialist house, have stolen half a dozen silver-plated spoons and think they have shut down the house, and they forget that the Socialist Party is not a party of reform but of revolution.

To a reporter on *The Evening Sun*, who asked Mr. Russell if there were not socialist ideas in the Progressive platform, he replied:

> Not a single one. Those who say that there are don't know what the word "socialistic" means. The Progressive Party is just as far from socialism as it is from democracy. Their planks are mere palliatives and nostrums, idle as the wind—not worth talking about.

Mr. Russell's criticisms of the Progressive platform would, of course, apply with equal force to the social reforms proposed in both the Republican and Democratic platforms.

A later and probably more official statement to the same effect is the following extract from *The New York Call* of March 17, 1915:

> No doubt there are many people attracted to the socialist party by impressions they have received—not from it—that it is a party of reform. Some of these stay, even when they discover that their first impressions were untrue, and that they have joined a party whose central object, purpose and idea is social revolution and the abolition of the present established system of capitalism. They gradually comprehend and accept its revolutionary object. Others again get out as soon as possible when they discover their mistake; and others again, unconsciously obsessed with the reform virus in every cell of their intellectual being, and at the same time complacently satisfied with their intellectual superiority, stay in and make trouble or at least strive to make it.

Mr. Chester M. Wright, the writer of th paragraph, is obviously "gunning" for the s cialist editors of *The New Republic*.

I do not mean to charge that the socialists, pushing their campaign of misrepresentation the churches, the colleges, the press and the lab unions, or permeating the citadel of capitalis are deliberately urging a philosophy which th think will lead to ultimate misery. Their ul mate goal—the well-being of every man—is th of all normal people. Ultimately to make thin better is the goal of the syndicalists, the ana chists and other fomenters of disorder. order to reach this ultimate goal they belie that they must tear down our present civiliz tion at whatever cost, the end justifying t means. To lie, to steal, even to murder, in t interest of this philosophy is considered a virt by some of them.

I do not claim that the socialists or any oth body of revolutionary thinkers have not a pe fect right to push their propaganda, or th from their own standpoint they are inconsiste in creating all the trouble they can in every wa they can. I am simply pointing out what seem to me to be a well-defined, persistent campaig to promote an unrest that is illegitimate becaus based entirely upon false premises in regard t our actual industrial conditions and tendencie I hope that this Commission, before it com pletes its work, will make a study of this aspe of the matter, and will also give the America people a report of the industrial and soci progress which this country has made in th last two decades. Such a showing would, I a sure, prove of tremendous value in its bearin upon the insistent claim that our present ec nomic system is growing so bad that only th overturning of present institutions and th ushering in of the cooperative commonwealt can prevent the country from going to destruc tion.

American Labor Mission Returns

'. J. Ghent Makes Critical Analysis of "The Nation"

(*Continued from page 7*)

assacre on November 11th. Yet it was not at kind of an untruth; it was a report that d a plausible basis. Even *The Liberator* nich usually shows an entire absence of fair-ss, forgot itself for the moment and explained, its January issue, the origin of the story. he threat of a general massacre, admits *The iberator,* was actually made, "in a heated eech," by Zinovieff, then president of the etrograd Soviet. It is unlikely that you are norant of what appears in *The Liberator.* Weeks have since passed, but you have made no ention of Zinovieff.

On December 14 you indulged in some rather ephantine humor over the charge that Bolshe-ik funds were being used to foment revolution n Germany. On January 18 you granted your-elf another indulgence in the same pleasantry. et nothing is more certain than that these unds were so used. The fact has been admitted y the Bolshevists Joffe and Radek, and by cer-ain of the Independent Socialists, particularly ohn and Haase. Joffe says that up to Decem-er 23d altogether 24,000,000 rubles had been laced at the disposal of the German revolu-ionaries. The matter has been widely discussed n the German press and has been further de-ated in the national assembly at Weimar. That ome part of the funds may have been intended or the relief of Russian prisoners may or may ot be true; but no reasonable person now denies he essential truth of the original story. Never-heless, though weeks have since passed, you have nade no admission of the unfair treatment you gave to this episode.

You have shown a like unfairness in the reatment of Kerensky's testimony. During the eriod I have named, the former head of the Russian republic, in a number of speeches and nterviews, gave voluminous accounts of condi-ions in Russia. You may say that they were partisan and therefore to be distrusted; but no such scrupulosity guided you when you pub-lished Tschitscherin's infamous paper and care-fully emphasized by italics the most impudent passages. This matter, however, is neither here nor there. What I wish to point out is that you published not one line of Kerensky's testimony.

Later, however, when Kerensky became em-bittered by his realization of the fact that he was not to be restored to power, and assailed the Allies, you suddenly shifted your attitude toward him and eagerly accepted him as a com-petent witness. You say (December 21st) that "a sinister interpretation is put upon the Russian policy of the Allies by Kerensky in his United Press interview of December 11th," and you quote some of his utterances. So long, therefore, as Kerensky was denouncing Lenine and Trotzky his testimony was negligible; the moment he turned to denouncing the Allies his testimony acquired a sterling worth.

But your treatment of the testimony of Col. Vladimir I. Lebedeff is perhaps the most striking illustration of the fraud which you persistently practice upon your readers. Lebedeff, in his formal statement, issued by the Russian In-formation Bureau, relates conditions in Russia as he knows them. No reasonable being who reads his statement can doubt this man's sincer-ity or his competency as a witness. Yet in spite of your professed determination to "utilize absolutely every source of information concern-ing Russia that you can get," you ignore every-thing he says about the Bolsheviki. No one would ever have known from your journal that such a person as Lebedeff existed had you not lighted upon a paragraph in his account in which you think you discover something to the discredit of the Allies. This you exultantly publish.

There are many other similar instances which I could mention; but for the present these will do. You suppress one kind of testimony, and you disseminate the opposite kind. But your distortion and suppression are not limited to the mere matter of the juggling of testimony. In your editorial comment you carry the work further. You constantly assume as facts what the most reputable witnesses assert to be untrue. You constantly declare or imply that all the opponents of the Bolsheviki are reactionaries, in spite of the fact that most of the noblest and the best of the Russian progressive elements have opposed these usurpers. You repeatedly pay out praise to yourself for your alleged practice of truth-telling, although no other journal so uni-formly distorts the truth; and you repeatedly harp upon the alleged "lying" of other jour-nals, although these journals have printed the most dependable testimony that has come out of Russia. And you never fail to pour out upon those persons, no matter how upright, who op-pose your position, a stream of objurgatory epithets.

Of course, this editorial manner is a tradi-tional one in your office, and perhaps there is no escape from it. It comes down from the days of E. L. Godkin. There is, however, a difference. Godkin scattered the largess of his odium in cynical disdain; you people do the thing in riot-ous frenzy. Your journal has long been the particular organ of the college professors and detached intellectuals, and this manner is after their hearts' desire. These cloistered savants are, in the main, a timid folk who do not ordi-narily venture far from their sheltered retreats. But what they lack in contact with actual life they make up in imaginative adventure. Just as shopgirls and serving maids find escape from the trammels of everyday life in the glowing pages of Bertha M. Clay and Laura Jean Libbey, identifying themselves with the heroines of these romances and listening to the ardent wooing of princelings, lordlings and rich manufacturers' sons, so these *faineant* intellectuals ride to glorious adventure on the wings of your de-nunciatory rhetoric. Your battles become their battles; and they see themselves the doughty victors on a thousand fields.

Now, strangely enough, you have taken on a new clientele—one of pro-Bolshevists, anar-chists and I. W. W.'s. I find them out here the eager purchasers and hungry readers of your journal. These folk are not necessarily timid folk like the intellectuals; indeed, some of them sometimes give examples of what is called "rough-house" that might make even Trotzky envious; but since their wonted activities are more and more restrained by the brutal hand of the police and the secret service, there rises in them also this upwelling of suppressed de-sires, and they, too, must find imaginative ad-venture along the torrent of your denunciation.

Now I find nothing in the character of your journal which gives warrant for this arrogant assumption of the right to pour out a constant stream of convictions and sentences against per-sons who disagree with you, and in addition to shower upon them, like a "hanging judge," a rain of vituperation. If your habit was impar-tially to give the facts of an episode or a situa-tion; if you revealed in your editorial policy a consistent fairness of treatment; and if, further-more, you held to a consistent social philosophy of any kind, no matter what, which gave to your expressed judgments a character of uniformity and dignity, then you might fairly claim some of this Rhadamanthine prerogative.

I have already shown that to the first two of these virtues you can lay no claim whatever; and I say further that you are equally lacking in the third. I say that anyone who reads your editorial comment and understands what he is reading, will inevitably find three wholly differ-ent strains of social theory. Sometimes they are separated by paragraphs or articles, and some-times they are inextricably wound together. The first is the *laizzez-faire* of the Godkinian tradition; the second is state collectivism, or, if you prefer, state capitalism; and the third is that amorphous thing, borrowed from the philos-ophers of the *New Republic,* unnamed as yet, but which I propose to call, after the terminol-ogy of that school, the "federationism of experi-mental allegiances." You thus give the spec-tacle of yourselves not knowing what you are after, of having no fixed social belief, and yet as of one pretending to know all things, dealing out Olympian judgments.

As for your journal's distortion of the truth, there is, of course, this to be said in mitigation of my criticism. All radical and so-called liberal journals habitually do this thing. The capitalist journal appeals to the general mass of readers, and no matter what its disposition may be, it must in some measure restrain the temptation to juggle and suppress. No such restraint is obli-gatory upon the radical or so-called "liberal" journal. Its business is to furnish a particular bias to a group of particularly biassed minds. For the "greater glory of the cause" it stretches and warps and makes over what it uses and ignores what it finds inconvenient.

If, then, the reader must scan with caution what he finds in a capitalist journal, he must scan with a far more careful scrutiny what he finds in the journals of professed enlightenment. My complaint against *The Nation* is that it carries this distortion to a greater extreme than do other journals of its class, that at the same time, more loudly and more persistently than they, it professes the highest virtue, and that with greater frequency and more passionate vehemence than they it shouts "liar" and "knave" at its opponents.

You tell me that I should not question motives. Perhaps I should not; but this is strange counsel from the office of your journal, which exceeds all other journals with which I am acquainted in the outrageousness with which it does this very thing. Of course, in the explanation of your policy there is an alternative interpreta-tion, and that is the fanaticism of self-deception.

Let me say, however, that I have been in the radical movement all my life and that I have met with fanaticisms of a wide range and degree, but never with one which could compass so wide a chasm as that between the professions and the practices of your journal.

At any rate I have given the facts; they are notorious, indisputable, and of a nature that calls for some remedial action. I marvel at the stupidity of the capitalist press in New York that it lets your journal go on, week after week, virtually unrebuked. It seems to me that a three months' campaign by any daily newspaper could force your journal to a shriving of past sins, to the making of new resolutions and the adoption of a new policy.

Maybe the opinion prevails that it is best to let *The Nation* shout itself out in vain and im-potent diatribes. If that is the case, I fear that not much is to be done, for I see no evidence of an inclination toward reform from the inside.

Very truly yours,

W. J. GHENT.

(*Quotation from Letter from W. J. Ghent, dated April 17, 1919.*)

"I had a reply from Mussey. It was very tame. The only thing he could find to say in confutation was that he had not himself italic-ized the most offensive passages in the Tschits-cherin letter, but had used them as he found them. I can't think that much of a point. Whether he did the italicizing himself or adopted another's work, the effect was to show editorial approval, as I had said. The fact is that Mussey knew I had the goods on him, and there was nothing to say."

Dr. O'Grady Takes Exception to Criticism of Pamphlet

(*Continued from page* 9)

of the social insurance movement in this country, when he says: "Within less than five years, originating with a small committee in New York, it has gained so much headway that nine states have appointed government commissions for its investigation, with a total appropriation of considerably over $100,000." He might have added that this "small committee in New York" was made up entirely of doctrinaires, not one employer nor one representative wage-earner being admitted into that incubating conference. He might also have stated that all this money spent on commissions has availed little, because there is not today a compulsory health insurance law on the statute book of any of the forty-eight states; that in California, although the commission which employed Dr. Rubinow as actuary favored the proposition, the people turned it down by more than two to one majority, on a referendum vote; that in Massachusetts, the constitutional convention voted it down by a large majority; that in New York the Legislature refused to enact such a law; and that the commissions in Wisconsin and Connecticut have reported against it.

It may be true, as Dr. O'Grady asserts, that there are more employers in the Chamber of Commerce of the United States than in any other organization in America; the figures are not available to the writer. But the statement criticised was: "The Chamber of Commerce of the United States is not a body representative of manufacturers or producers. It is largely representative of what may be called the commercial or 'middleman' class." True, merchants are employers; so are bankers, stockbrokers and professional men who have stenographers and clerks; and so are farmers who have hired help. But they are not the employers, such as manufacturers and mine owners, who deal directly with large labor problems. When the National War Labor Board was formed by President Wilson, he did not call upon the Chamber of Commerce of the United States to furnish the employer group, but upon the National Industrial Conference Board.

It is not desirable to resume a detailed discussion of the reconstruction program. However, as one of the many expressions of opinion received by the writer from Catholics since the publication of the article referred to has gone rather fully into certain phases of the report, it is given in part below:

"The pamphlet entitled "Social Reconstruction", being No. 1 of the "Reconstruction Pamphlets" of the Committee on Special War Activities of the National Catholic War Council and dated January, 1919, contains a "Foreword," subscribed by four eminent Catholic Bishops, which exhorts American Catholics to be zealous in the solution of the great social problems which now face us and in a general way approves the program for social reform advocated in what follows. That is to be construed as an endorsement of the general ends and purposes of the measures advocated in the pamphlet and of the strictly moral features of such measures; but it does not carry with it an authentication of all allegations of fact to be found in the pamphlet and much less enjoin upon Catholics the support of the particular political measures advocated. However, that Foreword is liable popularly to be given a broader construction. Consequently, this pamphlet looks like a case of inadvertent ecclesiastical approval of propaganda of social discontent.

"For, the opening matter in this pamphlet, which purports to present the reconstruction program of labor and capital in Great Britain and America, is partial, misinforming and misleading. And the program of social reform that follows is replete with doubtful assertions of fact, calculated to convey a false and exaggeratedly pessimistic impression of social conditions in this country, and presents as certain means for the economic betterment of the masses a series of political measures of doubtful practical expediency and involving grave social risks. For examples:

> It is stated (p. 14) that the average rate of pay of American wage-earners has not increased faster than the cost of living. To say the least, that is an assertion to be doubted.
>
> It is stated (p. 14), on the authority of Lauck and Sydenstricker, that in 1915 four-fifths of heads of American families obtained less than $800. Certainly much that is implied in that statement is both disputable and vigorously disputed.
>
> It is stated (p. 22) that the incomes for the great majority of American wage-earners are "insufficient"—this statement, in conjunction with the context, conveying the impression that such incomes are insufficient for a decent livelihood. Without denying that on the average the wage-earners deserve a greater share in the products of industry, this assertion may rightly be characterized as a gross and rash exaggeration.
>
> It is stated (p. 22) that in the present industrial system there is enormous inefficiency and waste in the production and distribution of commodities. Inevitably in all human operations there is some inefficiency and waste. But that enormous inefficiency characterizes production and distribution in America is a bald assertion that merits indignant denial. And the allegation of waste, because general and undiscriminating, deserves like condemnation.

"Such is the character of the premises upon which is based the program of reform advocated in the pamphlet. Certainly they grossly and inexcusably exaggerate the grounds for social discontent.

"Turning now to the particular measures advocated:

> It is stated (p. 15) that the great cities "ought to" take up and continue the National Government's work of housing. But surely, as a practical question, it is doubtful whether a city, like New York, which cannot build a court house in ten years and without wasting some millions of dollars in the preliminary operations, ought to embark upon any such project as here urged.
>
> It is stated (p. 16) that the means of avoiding the toll taken from industry by various classes of middlemen is "the operation of retail and wholesale mercantile concerns under the ownership and management of consumers." But those who have studied actual experiments in this line certainly have ground for a reasonable belief that the remedy here advocated is not only far from being a generally applicable panacea, but, on the contrary, that it is a dangerous one for ordinary consumers to experiment with.
>
> It is stated (p. 22) that the full possibilities of increased production will only be reached when the majority of the workers become owners, at least in part, of the instruments of production, which stage can be reached through cooperative productive societies or copartnership arrangements. But certainly the average person of experience cannot be expected to believe that cooperative ownership and management of "grand industries" by the workers would be otherwise than destructive. Practical experience indicates that the Bolsheviki are wrong not only morally but also practically.
>
> It is stated (p. 23) that excessive gains by privileged capitalists may be prevented by heavy taxation of incomes and inheritances. That may be true; and yet it is admissible to believe that the waste and extravagance incident to taxation concentrated upon only one class of the people will make the remedy worse than the disease.
>
> It is stated (p. 18) that "the State should make comprehensive provision for insurance against illness, invalidity, unemployment and old age." But closely following it is further stated that "any insurance scheme" "that tends to separate the workers into distinct or dependent classes, that offends against their domestic privacy and independence or that threatens individual self-reliance and self-respect, should not be tolerated." Although these propositions are really very indefinite, they are undoubtedly intended to convey the impression that the State ought to provide a system of compulsory social insurance for wage-workers generally and that it will be practicable to do so without violating the conditions "not to be tolerated." But it is almost certai that State social insurance was designed as means whereby the State could control, regimen and drill the working people; and there ar strong grounds for believing that it is so hand a means for the State, or political parties withi the State, to exercise coercion upon the worker or minorities among the workers, to the detri ment of their independence, self-reliance and pri vate and family rights, that, if adopted, it woul inevitably be used for that purpose. This is wh so many of the representative wage-earners ar violently opposed to it.
>
> Years ago, in the glamour of German propa ganda, State social insurance appeared quite at tractive. But in recent years investigator afte investigator has penetrated behind the false hoods of that propaganda, and their reports ar replete with warnings. We are warned that th overhead expense, though hidden, is enormous that the principal beneficiaries are an over manned bureaucracy, that the services rendered medical and otherwise, are grossly inefficient and disappointing, that in every line frauds and im positions are rampant, that the parasite and malingerer is favored at the expense of the in dustrious and thrifty, that economically the in sured are levelled down, that the insurance is peculiarly ineffective in helping those who most need State help, that, so far from reducing social unrest, it is itself an additional cause of dissensions and discontent, that State unemployment insurance is practically a delusion, that State health insurance does not tend to improve the public health, etc., etc.
>
> Under the circumstances—confirmed by our own experience with political administration—it is only reasonable to doubt and to emphasize the need of caution, lest, having inconsiderately adopted this exotic political system, our last case should be worse than the first. Whatsoever truth there may be in the indictment in this pamphlet of the economic status of American workers, we know that there are far lower levels to which it is possible to fall, and that such levels have prevailed where this alleged panacea has long been in use. Consequently there is reason to fear that resort to the same medicine would reduce us to the same levels.
>
> The choice is not between State social insurance or nothing. We are far ahead of all Europe in the material welfare of our workers; and it is reasonable to believe that the self-reliance of our people, which has brought about that superior condition, can gradually develop other methods more efficient, more economical and less demoralizing than State insurance, to cure the evils complained of.

"To conclude: The harmfulness of the reconstruction program advocated in this pamphlet lies not in presenting the measures criticized for study and consideration, but in misrepresenting them to be certain cures for evils specified, whereas practically they cannot be otherwise than uncertain experiments, involving serious social risks."

The following quotation from an article in *The Buffalo Echo*, a Catholic paper sent to the writer, is published because it indicates how different minds construe the reconstruction report. The editor of the *Echo* seems so sure that the National Catholic War Council's report is syndicalistic that he feels called upon to defend syndicalism.

> While the pronouncement of the Bishops is designedly of a practical character dealing with immediate needs and purposes and making no attempt to formulate a comprehensive scheme of reconstruction, nevertheless, as one of the ultimate and fundamental reforms, a measure is espoused *which is far-reaching and involves to a great extent the abolition of the present wage system.* (Italics are ours.—Ed. Review.)
>
> "The full possibility of increased production," we are assured, "will not be realized so long as the majority of the workers remain mere wage-earners. The majority must somehow become owners, or at least in part of the instruments of production."
>
> The aim here set forth will, in the minds of some, conjure up the grim spectre of Syndicalism, usually regarded as the extreme left of socialism and associated with the I. W. W. and "direct action." However "Syndicalism" spells terror only when interpreted in the light of the writings of M. Georges Sorel, its French exponent, or when accepted in the terms of revolutionary propaganda. Of itself, Syndicalism is *growing in favor with many soberminded trades union leaders* and *even with Catholic economists.* (Again the italics are ours.)

The National
Civic Federation Review

Vol. IV. NEW YORK, MAY 15, 1919 No. 14

MR. TAFT ENDORSES THE COVENANT

HE SAYS VALID OBJECTIONS ARE MET BY CHANGES IN PHRASEOLOGY ADOPTED BY THE PARIS CONFERENCE AND THAT AMENDMENTS STRENGTHEN IT

By WILLIAM HOWARD TAFT

(*Copyright*, 1919, *by Public Ledger Company*)

THE amendments to the covenant of the league of nations adopted in Paris on Monday (April 28) will bear careful study, and perhaps it is unwise hastily to express a confident opinion. But several readings suggest the following comment:

In the first place, the language and arrangement of the articles have been greatly improved. The use of different terms to mean the same thing, which tended to prevent an easy reading of the document, has been largely avoided. Provisions having immediate relation to one another have been assembled where they belong, avoiding application of them to subjects or countries which they were not intended to affect. Then names, misleading or clumsy, have been changed. The executive council, which was and is not executive but advisory, has become the council. The body of delegates has become the assembly, a much more suitable term.

Second, rules of construction that ought to have obtained in interpreting the original covenant are now made express and relieve the real doubts of friends and supporters of the league. The most important of these, perhaps, is the privilege specifically reserved to any member of the league to withdraw from it after two years' notice and after a compliance with its obligation under international law and the league covenant incurred before withdrawal. This gives any nation an opportunity to test the operation of the league and its usefulness and to avoid undue and unreasonable danger or burden in the future which actual trial may develop. Moreover, taken with the power of amendment which can be effected by a unanimous vote of the nine countries whose representatives compose the council and by a majority of the members of the league, there is ample opportunity for such a country as the United States to secure a revision of the covenant and a re-examination of the status of the states composing the league after peace has stabilized conditions and has shown where changes should be made. We are so important a member of an effective world league, and so indispensable to its successful working, because of our impartial position and world power, that an announcement of our purpose to withdraw unless amendments were made would be most persuasive. In this view Mr. Root's suggestion that it would be well to re-examine treaty provisions made just after the war in the light of the test of five years or more of peace can be carried out.

Copyright, Underwood & Underwood

WILLIAM HOWARD TAFT

The second change of the same character is the provision that, except where otherwise specifically provided, the action of the council or the assembly shall be by unanimous vote. The original covenant, properly interpreted, meant this, but it is of great importance to remove objections of those who did not think so. There are some who believe that such required unanimity will make the league ineffective and that a majority would have sufficed. But progress toward complete international cooperation in a new field like this must be gradual, and must, for the present, leave safeguards to nations against abuse of joint power which, experience may show, can be dispensed with. The required unanimity in the action of the council is very important in the answer it gives to the claim that under Article X and Article XVI the United States may be required to send expeditionary forces into distant parts of the world to defend the integrity and independence of a country with which we have no relation of interest or to suppress remote wars not affecting us. Such expeditions are to be planned and recommended by the council, and the plan is to be accepted in the discretion of the countries to whom the recommendation is addressed. The plan would certainly mark the limit of the obligation of the nations to whom it is presented. The United States will have a representative on the council, whose vote must approve the plan before its presentation. Is it likely, then, that the plan will be unreasonable in proposing an undue share of the league's work to the United States? May we not be sure that what is to be done will be apportioned according to the convenience and natural interest of the members of the league, because it must in effect be by mutual agreement?

It is now made clear that under Article VIII the limit of armament for each country, under

a general plan of reduction proposed by the council, is only to be adopted and made binding as a covenant for each member of the league after its full examination and agreement. Moreover, there is to be a re-examination of the plan and the limits every ten years, and meantime a specific limit may be increased by consent of the council. Thus we are to stop forever the race of armaments, the truculence and bullying they engender, their temptation to war and their cruel and enormous destructiveness when war ensues. Unless we have this league of nations, this race of armament must go on with the dreary round of events—first, burdensome taxation and consumption and waste of producing capacity, then war, then world suicide. These are the only alternatives to a league.

It is now made an express provision that only nations who choose to accept the duty may be made mandatories of the league. This removes another objection that was strongly pressed. We don't have to take charge of Constantinople or Armenia unless we choose to do so.

ARBITRATION MADE DEFINITE

One important change made by addition is the result of Mr. Root's constructive criticism. Mr. Root thought, and all who supported the plan of the League to Enforce Peace agreed with him, that the provision for arbitration ought to have required arbitration in justiciable issues, and he defined what he thought was clearly within the meaning of that term. By the present Article XIII the members agree to submit to arbitration any dispute which they recognize as suitable for arbitration. The covenant then declares disputes of the character described by Mr. Root, and, as the writer recollects, in Mr. Root's language, to be suitable for arbitration. Disputes as to interpretations of treaties, as to international law, as to facts upon which its application turns and damages for its breach are all declared to be arbitrable, or, in other words, justiciable. This imposes on members of the league having a dispute the duty of recognizing such disputes to be arbitrable and to submit them to arbitration. Can this duty be enforced under the league? Practically yes. If a nation declines to arbitrate such an issue, it goes to the council or assembly, with interested members excluded. Such body will at once recommend arbitration or will refer the issue to an international court of the league, as it may, to determine whether the issue is arbitrable under the obligations of the league and will doubtless follow the judicial advice thus given. As this machinery thus works out indirectly the result sought for in the plan of the League to Enforce Peace, an amendment to substitute a court of the league to take up and decide such questions directly will doubtless approve itself to the nations.

Mr. Root was anxious that, in addition to the declaration in the preamble, there should be practical recognition of international law as a guiding star of the league, its tribunals and its action. In the addition to Article XIII, which we have been discussing, we find such a recognition in the present Article XIV providing for a permanent *international court of justice* which is competent to hear and determine any dispute of international character submitted to it and to give an advisory opinion upon any dispute or question referred to it by the council or assembly.

The provision for mediation and recommendation of settlement in the first report of the covenant, which met Mr. Root's unqualified approval, has not been changed, except that the unanimity required for an effective recommendation by the body of delegates is now made unanimity by countries represented in the council and a majority of the assembly, a change which makes for effectiveness. Another important change is the addition of Article XXI, as follows:

> Nothing in this covenant shall be deemed to affect the validity of international engagements, such as treaties of arbitration or regional understandings like the Monroe Doctrine, for securing the maintenance of peace.

This meets two of Mr. Root's criticisms in full. First, it removes all doubt that all present arbitration treaties are to stand and bind the parties to them whether members of the league or not, and relieves those who were concerned lest progress toward peace by arbitration already made might be lost.

Second, it not only enables the United States to maintain the Monroe Doctrine, which was all that friends of that doctrine asked, but it recognizes it as a regional understanding for the securing of international peace. Never before in our history has the world set its approval upon the doctrine as in this covenant. It is really a great triumph for the supporters of the doctrine. It is not only a reservation in favor of the United States asserting it, but it is an affirmative declaration of its conventional character and of its value in securing international peace.

DOMESTIC QUESTIONS EXCLUDED

The exclusion of immigration and tariff and other internal and domestic questions is secured by the following:

> If the dispute between the parties is claimed by one of them and is found by the council to arise out of a matter which by international law is solely within the jurisdiction of that party, the council shall so report and shall make no recommendation as to its settlement.

If anything is clearly settled in international law, it is that except where a nation limits its rights by treaty, it may impose whatever condition it chooses upon the admission of persons or things into its territory. Those who express alarm lest the council should reach a different conclusion, in spite of international law, can hardly be aware how jealous all countries must and will be as to their method of raising taxes and protecting their industries, and how acutely many of the nations will insist on the right to exclude persons not desirable as permanent residents. Indeed, Japan has not urged the view that immigration was anything but a domestic question in this conference, but only pressed for an express recognition of racial equality of treatment of foreign persons resident in each country, and even this the conference did not deem it wise to grant.

Finally, we come to Article X, by which the members of the league undertake to respect and preserve against external aggression the territorial integrity and political independence of every member of the league. Mr. Root, as the writer understands, strongly favors this article; but he thinks there should be a re-examination of the arrangements made under the influence of the recent war, after conditions have become stabilized by peace, to remedy the possible mistakes made and to avoid too great rigidity. How this can be brought about indirectly through powers of amendment and withdrawal has already been pointed out.

The arguments against Article X which have been most pressed are those directed to showing that under its obligations the United States can be forced into many wars and to burdensome expeditionary forces to protect countries in which it has no legitimate interest. This objection will not bear examination. If Germany were to organize another conspiracy of militarism against the world, or if she and her old allies, together with Russia, were to organize a militant campaign for Bolshevism against the world, we should wish to do our share in fighting her, and in doing so quickly. If a stronger nation were to attack a weaker nation, a member of the league, our immediate and selfish interest in the matter would be determined by the question whether it would develop into a world war, inevitably dragging us in. But we are interested as a member of the family of nations in maintaining international justice in the interest of international peace everywhere, and we should do our share in maintaining it. It was a mixture of all these motives which carried us into this war and we accepted as a slogan the cry: "The world must be made safe for democracy. We make this war to secure the liberty and independence of nations against the doctrine that 'might makes right.'" This is all that Article X proposes. It is an answer to Germany's assertion of her right of conquest. It organizes the powers of the world to maintain the international commandment, "Thou shalt not steal by force."

FACES WITHERING ISOLATION

How much will it involve us in war? Little, if any. In the first place, the universal boycott, first to be applied, will impose upon most nations such a withering isolation and starvation that in most cases it will be effective. In the second place, we'll not be drawn into any war in which it will not be reasonable and convenient for us to render efficient aid, because the plan of the council must be approved by our representative, as already explained.

In the third place, the threat of the universal boycott and the union of overwhelming forces of the members of the league, if need be, will hold every nation from violating Article X and Articles XII, XIII and XV, unless there is a world conspiracy, as in this war, in which case the earlier we get into the war the better.

The warning effect of such a threat from a combination of nations, like those in the league, is shown conclusively in the maintenance of our Monroe Doctrine. The doctrine was announced in 1823. Its declaration was deprecated by American statesmen because it would involve us in a continual friction and war. It was directed against most powerful European nations. Yet we have maintained it inviolate without firing a shot or losing a soldier for now near a century. Article X merely extends the same protection to the weaker nations of the world which we gave to the weaker nations of this hemisphere against the greed of non-American nations. If our declaration accomplished this much, how much more can we count upon the effectiveness of the declaration of a powerful league of world nations as a restraint upon a would-be bully and robber of a small nation?

Labor and the Golden Rule

(Extracts from an Address before Carnegie Institute, Pittsburgh, April 24, 1919)

By OTTO H. KAHN

THE principle on which we should deal with the labor question is very simple. It is the principle of the Golden Rule. I think the formula should be that, first of all, labor is entitled to a living wage. After that, capital is entitled to a living wage. What is left over belongs to both capital and labor, in such proportion as fairness and equity and reason shall determine in all cases.

The application of that formula is, of course, complex and difficult, because there are so many different kinds of labor, there are so many different kinds of capital. Not infrequently the laborer and capitalist overlap and merge into one. You have skilled labor and unskilled labor and casual labor; you have the small employer, the large individual employer, the corporate employer, the inventor, the prospector, etc. And then, circumstances and conditions vary greatly, of course, in different parts of the country and in different industries. It is impossible to measure by the same yardstick everywhere, but the principle of fairness can be stated, the desire can be stated to do everything possible to bring about good feeling and good understanding between labor and capital, and willingly and freely to cooperate so that labor shall receive its fair share in the fruits of industry, not only by way of a wage return, but of a larger return in comfort, in joy, in the happiness of life.

It seems to me that, in the main, right-thinking men of capital and of labor would concur in the following points:

(1.) The workman is neither a machine nor a commodity. He is a partner with capital. He must be given a full voice in determining the conditions under which he works either through organization in each factory or other unit, or through labor unions, or through both. Everything practicable must be done to infuse interest and conscious purpose into his work, and to diminish the sense of drudgery and monotony of his daily task.

The closest possible contact must be maintained between employer and employee. Machinery for the adjustment of grievances must be provided which will work smoothly and instantaneously. Every feasible opportunity must be given to the workman to be informed as to the conduct of the business of which he forms a part. He must not be deprived of his employment without valid cause. Wherever it is practicable and really desired by the workmen themselves to have representation on the Board of Direction, I think that, too, should be conceded. It would give them a better notion of the problems, complexities and cares which the employer has to face. It would tend to allay the suspicions and to remove the misconceptions which, so frequently, are the primary cause of trouble. The workman would come to realize that capitalists are not, perhaps, quite as wise and deep as they are given credit for, but on the other hand, a good deal less grasping and selfish than they are frequently believed to be, a good deal more decent and well meaning, and made of the same human stuff as the worker, without the addition of either horns or claws or hoofs.

(2.) The worker's living conditions must be made dignified and attractive to himself and his family. Nothing is of greater importance. To provide proper homes for the workers is one of the most urgent and elementary duties of the employer, or, if he has not the necessary means, then of the State.

OTTO H. KAHN

(3.) The worker must be relieved of the dread of sickness, unemployment and old age. It is utterly inadmissable that because industry slackens, or illness or old age befalls a worker, he and his family should therefore be condemned to suffering or to the dread of suffering. The community must find ways and means of seeing to it, by public works or otherwise, that any man honestly desirous to do an honest day's work shall have an opportunity to earn a living. Those unable to work must be honorably protected. The only ones on whom a civilized community has a right to turn its back are those unwilling to work.

(4.) The worker must receive a wage which not only permits him to keep body and soul together, but to lay something by for a rainy day to take care of his wife and children, and to have his due share of the comforts, joys and recreations of life.

(5.) Labor, on the other hand, must realize that high wages can only be maintained if high production is maintained.

The restriction of production is a sinister and harmful fallacy, most of all in its effect on labor. The primary cause of poverty is under-production. Furthermore, lessened production naturally makes for high costs. High wages accompanied by proportionately high cost of the essentials of living don't do the worker any good. And they do the rest of the community a great deal of harm. The welfare of the so-called middle-classes, i. e., the men and women living on moderate incomes, the small shopkeeper, the professional man, the farmer, is just as important to the community as the welfare of the wage-earner. If through undue exactions, through unfair use of his power, through inadequate output, the workman brings about a condition in which the pressure of high prices becomes intolerable to the middle classes, he will create a class animosity against himself which is bound to be of infinite harm to his legitimate aspirations.

It must be admitted, unfortunately, that for a long period in the past, society failed to give labor a square deal or to do anything like its duty by labor. But in their rightful resentment against exploitation and in their determination for the redress of just grievances, labor should not permit itself to be misled by plausible fallacies or self-seeking agitators. It must not give credence, for instance, to the absurd preachment that practically all wealth other than that produced by the farmer, is the product of the exertions of the working men. There are, of course, many other factors that enter into the creation of wealth. Thus, the "directive faculty," the quality of leadership in thought and action is not only one absolutely needful in all organized undertakings, great or small, but it becomes increasingly rare and, consequently, increasingly more valuable as the object to which it addresses itself increases in size, complexity and difficulty.

Let us take as an example the case of Mr. Henry Ford. Through the organizing genius and enterprise of a self-made man, Mr. Henry Ford (not by monopoly, but in keen competition with other manufacturers), the automobile, instead of being a luxury of the few, has been brought within the reach of those of modest means.

The cost of the product has been vastly cheapened. The margin of profit on each automobile sold has been greatly diminished. Wages have been very largely increased, the living conditions of employees greatly improved. Work has been found for a great many more men than were employed before.

In other words, every single human factor concerned in either production or consumption has been advantaged. New wealth has been created at the expense of no one. It cannot be said that it was created by the workingman, except in the physical sense. It was not created by either monopoly or privilege. It was created mainly out of Mr. Ford's brain and at his risk.

By far the largest percentage of this new wealth goes to pay the wages of workingmen and other expenses of the business, but out of what is left, Mr. Ford's share is, by common report, in excess of $1,000,000 a year.

1. Did Mr. Ford *earn* $1,000,000 in one year? If not, how much did he *earn?* By what scale would you measure the proportion due to him of the new wealth created mainly by his faculties?

2. If he had not been allowed to earn the large sums which he did earn, how and where could he have found the means to enlarge and improve his factory, so as to make possible an enterprise which immensely cheapened the product to the consumer and largely increased the wages to the workingman and the opportunity for employment? Is there any instance where communistic or even merely cooperative undertakings have produced similar results? Is there any instance where governmental management has produced similar results?

In a recently published, very able, pamphlet on "Reconstruction," Miss Christabel Pankhurst, the well-known English leader in the fight for woman suffrage, says:

> Certain people, who ought to know better, have falsely taught that the poverty or semi-poverty of the many is due to the luxurious living of the prosperous sections of the community. This is not the truth, and if through all the years of preachings of agitators the result of each year's industrial effort had been divided equally among the members of the community, there would have been no appreciable increase of prosperity for any, and there would have been one dead level of poverty for all.

The way to progress is not to pull everybody down to a common level of mediocrity, which means ultimately a common level of wretchedness, but to help everybody up.

It is not material success which should be

abolished. it is poverty and justified discontent which should be abolished.

We cannot abolish poverty by division, but only by multiplication.

It is not by the spoliation of some, but by creating larger assets and broader opportunity for all that national well-being can and must be enhanced.

I wonder how many people realize that, if all incomes above $10,000 were taken and distributed among those earning less than $10,000, the result, as near as it is possible to figure out, would be that the income of those receiving that distribution would be increased barely ten per cent.

And the result of any such division would be an immense loss in national productivity by turning a powerful and fructifying stream into a mass of rivulets many of which would simply lose themselves in the sand.

I wonder how many people know that the frequent and loud assertion that the great bulk of the wealth of the nation is held by a small number of rich men, is wholly false; and that the fact is, on the contrary, that seven-eighths of our national income goes to those with incomes of $5,000 or less, and but one-eighth to those with incomes above $5,000.

We have heard it said frequently recently—it has become rather the fashion to say it—that the rulership of the world will henceforth belong to labor. I yield to no one in my respect and sympathy for labor, or in my cordial and sincere support of its just claims. The structure of our institutions cannot stand unless the masses of workmen, farmers, indeed all large strata of society, feel that under and by these institutions they are being given a square deal within the limits, not of Utopia, but of what is sane, right and practicable.

But I venture to say that this prediction that the world will belong to labor will not and ought not to come true, for the rulership of the world will and ought to belong to no one class. It will and ought to belong neither to labor nor to capital, nor to any other class. It will, of right and in fact, belong to those of all classes who acquire title to it by talent, hard work, self-discipline, character and service.

He is no genuine friend or sound counselor of the people nor a true patriot who recklessly, calculatingly or ignorantly raises or encourages expectations which cannot or which ought not to be fulfilled.

We must deal with all these things with common sense, mutual trust, with respect for all, and with the aim of guiding our conduct by the standard of liberty, justice and human sympathy. But we must rightly understand liberty. We must resolutely oppose those who in their impatient grasping for unattainable perfection would make of liberty a raging and destructive torrent instead of a majestic and fertilizing stream.

Liberty is not fool-proof. For its beneficent working it demands self-restraint, a sane and clear recognition of the reality of things, of the practical and attainable, and a realization of the fact that there are laws of nature and of economics which are immutable and beyond our power to change.

Nothing in history is more pathetic than the record of the instances when one or the other of the peoples of the world rejoicingly followed a new lead which it was promised and fondly believed would bring it to freedom and happiness, and then suddenly found itself, instead, on the old and only too well-trodden lane which goes through suffering and turmoil to disillusionment and [illegible] of us when we were twenty [illegible] cut to the millennium and were [illegible] resentful and rather contemptuous of [illegible] whose fossilized prejudices or selfishness, [illegible] we regarded them, prevented that short-cut from becoming the high road of humanity.

Now that we are older, though we know that our eyes will not behold the millennium, we should still like the nearest possible approach to it, but we have learned that no short-cut leads there and that anybody who claims to have found one is either an impostor or self-deceived.

Among those wandering sign-posts to Utopia we find and recognize certain recurrent types:

There are those who in the fervor of their world-improving mission discover and proclaim certain cure-alls for the ills of humanity, which they fondly and honestly believe to be newly discovered and unfailing remedies but which, as a matter of fact, are hoary with age, having been tried on this old globe of ours at one time or another, in one of its parts or another, long ago—tried and found wanting and discarded after sad disillusionment.

There are the spokesmen of sophomorism rampant, strutting about in the cloak of superior knowledge, mischievously and noisily, to the disturbance of quiet and orderly mental processes and sane progress.

There are the sentimental, unseasoned, intolerant and cocksure "advance thinkers" claiming leave to set the world by the ears and with their strident and ceaseless voices to drown the views of those who are too busy doing to indulge in much talking.

There are the self-seeking demagogues and various related types, and finally there are the preachers and devotees of liberty run amuck who in fanatical obsession would place a visionary and narrow class interest and a sloppy internationalism above patriotism, and with whom class hatred and envy have become a ruling passion. They are perniciously, ceaselessly and vociferously active, though constituting but a small minority of the people, and though every election and other test has proved, fortunately, that they are not representative of labor, either organized or unorganized.

Among these agitators and disturbers who dare clamorously to assail the majestic and beneficent structure of American traditions, doctrines and institutions there are some, far too many indeed—I say it with deep regret, being myself of foreign birth—who are of foreign parentage or descent. With many hundreds of thousands they or their parents came to our free shores from lands of oppression and persecution. The great republic generously gave them asylum and opened wide to them the portals of her freedom and her opportunities.

The great bulk of these newcomers have become loyal and enthusiastic Americans. Most of them have proved themselves useful and valuable elements in our manyrooted population. Some of them have accomplished eminent achievements in science, industry and the arts.

When the great test of the war came, the overwhelming majority of them rang wholly and finely true. The casualty lists are eloquent testimony to the patriotic devotion of "the children of the crucible," doubly eloquent because many of them fought against their own kith and kin.

But some there are who have been blinded by the glare of liberty as a man is blinded who after long confinement in darkness, comes suddenly into the strong sunlight. Blinded, they dare to aspire to force their guidance upon Americans who for generations have walked in the light of liberty.

They have become drunk with the strong wine of freedom, these men who until they landed on America's coasts had tasted little but the bitter water of tyranny. Drunk, they presume to impose their reeling gait upon Americans to whom freedom has been a pure and refreshing fountain for a century and a half.

Brooding in the gloom of age-long oppression, they have evolved a fantastic and distorted image of free government. In fatuous effrontery they seek to graft the growth of their stunted vision upon the splendid and ancient tree of American institutions.

Admitted in generous trust to the hospitality of America, they grossly violate not only the dictates of common gratitude, but of those elementary rules of respect and consideration which immemorial custom imposes upon the newcomer or guest. They seek, indeed, to uproot the foundations of the very house which gave them shelter.

We will not have it so, we who are Americans by birth or by adoption. We reject these impudent pretentions. By all means, let us move forward and upward, but let us proceed by the chart of reason, experience and tested American principles and doctrines, and let us not entrust our ship to demagogues, visionaries or shallow sentimentalists who most assuredly would steer it on the rocks.

The strident voices of the fomentors of unrest do not cause me any serious apprehension, but we must not sit silently by, we must not look on inactively. Where there are grievances to redress, where there are wrongs existing, we must all aid in trying to right them to the best of our ability.

To the extent that social and economic institutions, however deep and ancient their roots, may be found to stand in the way of the highest achievable level of social justice and the widest attainable extension of opportunity, welfare and contentment, they will have to submit to change. And the less obstructive and stubborn, the more broadminded, cooperative and disinterested those who pre-eminently prospered under the old conditions will prove themselves in meeting the spirit of the new day and the reforms which it may justly call for, the better it will be both for them and for the community at large.

But to the false teaching and the various pernicious "isms" with which un-Americans, 50 percent Americans or anti-Americans are flooding the country, we must give battle through an organized campaign of education, of information, of sane and sound doctrine, both spoken and written. The masses of the American people want what is right and fair and just, but they also want progress. They do not mean to stand still. They have no use for the stand-patter and reactionary. They want to be shown. They will not simply take our word for it that because a thing is so and has always been so, therefore it should remain so.

Even before the war, a great stirring and ferment was going on in the land. The people were groping, seeking for a new and better condition of things. The war has intensified that movement. It has torn great fissures in the ancient structure of our civilization. To restore it will require the cooperation of all patriotic men of sane and temperate views, whatever may be their occupation or calling or political affiliations.

It cannot be restored just as it was before. The building must be rendered more habitable and attractive to those whose claim for adequate houseroom cannot be left unheeded, either justly or safely. Some changes, essential changes, must be made. I have no fear of the outcome and of the readjustment which must come. I have no fear of the forces of freedom unless they be ignored, repressed or falsely and selfishly led.

Changes the American people will make as their needs become apparent, improvements they welcome, the greatest attainable wellbeing for all those under our national rooftree is their aim; they will strive to realize what formerly were considered unattainable ideals, but they will do all that in the American way of sane and orderly progress—and in no other. Whatever betide in European countries, this nation will not be torn from its ancient moorings. Against foes within, no less than against enemies without, the American people will ever know how to preserve and protect the splendid structure of light and order, which is the treasured inheritance of all those who rightfully bear the name Americans, whatever their race and origin.

Is America Worth Saving?

A PROGRESSIVE REPUBLIC—OR FALSE INTERNATIONALISM AND A SOCIALIST AUTOCRACY?

By NICHOLAS MURRAY BUTLER

(Address Delivered Before the Commercial Club of Cincinnati, Ohio, April 19, 1919)

THOSE whose eyes are turned toward a state built not upon the civil liberty of the individual but upon the plenary power of organized government, are designated in a general way as Socialists. The words Socialism and Socialist, though less than a century old, have lately become very common among us and are so loosely and so variously used as to make it difficult to think clearly regarding the ideas for which they stand. Socialism, in the large, general and vague sense of the word, means simply social reform. In that sense, every intelligent and forward-stepping man or woman is a socialist.

All of us who are in our right minds are anxious to improve social conditions, to better the public health, to decrease the hours and the severity of labor, to increase the rewards and to add to the satisfactions of those who do the hard manual work of the world, to increase and make secure provision against illness, unemployment and indigent old age, to use the power of public taxation to build roads, to multiply schoolhouses, to aid with information and guidance those who farm and those who mine, to bring together collections of books, of objects of beauty and of art for the information and the pleasure of the great body of the people, to improve the conditions of housing in large cities, and to see to it that such essentials of life as water, light, and transportation are furnished of the best quality and at the lowest practicable cost.

If by Socialism be meant that the individual must not live for himself alone, but must use his powers, his capacities, and his gains for the benefit of his community and his fellows, then every American and every Christian is a socialist, for these are fundamental to American life and to Christian teaching. All this, however, is social reform, not Socialism.

THE FALSE ASSUMPTIONS OF SOCIALISM

Socialism, in the strict and scientific sense of the word, is, however, something quite different from this. Socialism involves not social reform but political and social revolution. It is the name for a definite public policy which rests upon certain historical and economic assumptions, all of which have been proved to be false, and it proceeds to very drastic and far-reaching conclusions, all of which are in flat contradiction to American policy and American faith. The assumptions of socialism are these:

First, that all of man's efforts, both past and present, are to be interpreted and explained in terms of his desire for wealth and of the processes which lead to the satisfaction of that desire. This assumption excludes at once all moral, religious, and unselfish considerations from history and from life, and makes of man nothing but a gain-seeking animal preying upon his kind wherever he can lay hands upon him. There have been, and there doubtless are, many individuals of this type; but to suppose that the whole human race can be brought under such a description is an outrageous travesty on history, on morals, and on religion. This assumption would reduce all human history to the product of blind gain-seeking forces and would exclude from it both moral effort and moral purpose. Under such a theory, no man would make any sacrifice for liberty or for love, but only for gain. All human experience contradicts so cruel and so heartless an assumption.

DR. NICHOLAS MURRAY BUTLER

Second, that in the struggle for wealth men are divided into permanent classes—those who employ and those who labor—and that between these classes there is and should be a class struggle or class war to be carried on to the bitter end until those who labor not only conquer those who employ, but exclude them from any place in the community.

This doctrine of class struggle is the savage teaching of Karl Marx, a man whose consuming passion was hate. It has been well said of Marx that

> He was without religion, having been conveyed from Judaism to Protestantism by his father at the age of six, and having abandoned Protestantism for aggressive Atheism when he grew to manhood. He was a man embittered by persecution, enraged by antagonism, soured by adversity, exasperated by suffering. . . . His inspiring and dominant passion was the passion of hate—hate in its virulent and peculiarly Germanic form. . . . It was hate that goaded him to his enormous literary labors; it was hate that determined his selection and rejection of historical facts for his distorted description of industrial England; it was hate that fixed his economic principles, that twisted all his arguments, that vitiated all his conclusions. . . . . *Das Kapital* (1867) is the enduring testament of Marxian animosity. . . . It is a work of dogmatic mythology, the formula of a new religion of repulsion, the Koran of the class war.*

It is the extreme form of the doctrines of Karl Marx which Lenine and Trotzky have been applying in Russia for a year and a half past with such terrible results. In consequence, that once great country of boundless possibilities is now as helpless as a child, and it lies, for the moment, in social, economic, and moral ruin, and is relapsing into barbarism. Its reorganized schools now devote part of each day to instruction in atheism and to removing any lingering traces of what used to be proudly called civilization. Russia has lost, happily, the cruel and tyrannous Tsar who ruled over it, but unhappily it has gained in his stead a small group of violent and equally cruel autocrats whose operations make those of the Tsar seem like child's play. For the first time in history, on a stage which the whole world can witness, and on an immense scale, the doctrines and theories of Karl Marx are being put to the test of practical application. No one not himself blinded by hate or by ignorance can be in any doubt as to the lesson which the world has quickly learned from the untold sufferings of Russia.

This doctrine of permanent economic classes and of a class struggle is the absolute contradiction of democracy . It denies a common citizenship and an equality of rights and privileges in order to set up a privileged and an exploiting class by sheer force and terrorism. Here in America we know full well that there are no permanent and conflicting economic classes, for the wage-worker of today is the employer of a few years hence. With us the son of the farmer may be the leader of a learned profession in a distant city, and he who begins self-support as signalman or telegraph operator may easily find himself in a few short years the directing head of a great railway system. Not long ago public attention was called to the fact that no fewer than nineteen of the men who then directed the great transportation systems of the United States had in every case begun their careers as wage-workers in the service of one or another of the railway companies.

We know, too, that the fundamental doctrine of American citizenship absolutely excludes the notion that men gain or lose anything by reason of their occupation. Here every man and woman stands on a level of political equality, and the vote of the man of wealth is no more potent than the vote of the man who at the moment may be seeking employment. In the socialistic state, permanent economic classes with differing and opposing rights and privileges are fundamental. From the democratic state, on the other hand, they are excluded. Robert Burns was a true poet of democracy when he sang "A man's a man for a' that."

Third, that in the course of economic development, the rich are getting steadily richer and steadily fewer, while the poor are getting steadily poorer and steadily more numerous. This assumption is easily disposed of by the facts, which show that as applied to America, these two statements are absolutely false.

Ours is a land in which more than twenty millions of men, women, and children have just now subscribed to Liberty Bonds.

It is a land with more than 18,000,000 dwellings occupied by about 21,000,000 families.

It is a land in which fully 6,000,000 families own their own homes without incumbrance, while 3,000,000 own their homes subject to mortgage.

It is a land in which more than 12,000,000 persons are depositors in mutual, stock, or postal-savings banks, with total deposits amounting to more than $6,500,000,000.

It is a land in which there are nearly 6,500,000 farms having a value, including their buildings and equipment, of more than $41,000,000,000, and yielding an annual product of a value of more than $8,500,000,000.

It is a land with more than 266,000 miles of railway in operation, carrying in a year more than 1,000,000,000 individual passengers and more than 2,225,000,000 tons of freight.

It is a land in which schools for the people are maintained at a total expenditure of nearly $650,000,000, with an attendance of more than 20,000,000 children.

It is a land in which there are more than 3,000 public libraries, having on their shelves more

*Hearnshaw, *Democracy at the Crossways* (London, 1918), pp. 209-210.

than 75,000,000 volumes for the instruction and inspiration of the people.

It is a land whose total wealth is now not less than $225,000,000,000 and in which the distribution of that wealth is steady becoming more equitable and more satisfactory under the operation of the forces and principles that have guided American life so long and so well.

Who is it that has the temerity to wish to undermine the foundations of so noble and so inviting a political and social structure as this!

Forty years ago and more, when the doctrine of Socialism was systematically put forward by Karl Marx, it was quickly seized upon by those in Germany and in every other European land who were discontented with existing forms of government and of social organization, and was converted by them into a political program. That program, which was to all intents and purposes made in Germany, although written in London, contradicts Americanism and democracy at every point. It calls, not for any program of social reform in accordance with American principles and American ideals, but for a program of collective control over the individual life, the individual occupation, and the individual reward that would destroy America absolutely. It would erect upon the ruins of our democracy an autocratic state in which the tyranny of a temporary or class majority would take the place once held by the tyranny of an hereditary monarch or an hereditary ruling class. Its most extreme exponents have not hesitated to announce themselves, as did Bakunin fifty years ago, as apostles of universal destruction.

THE SOCIALIST PROGRAM IN AMERICA

As yet the number of formal adherents of the Socialist Party in the United States is not large, but the theories and teachings of socialism are being eagerly and systematically spread among us. Many schools and colleges and many pulpits are either unconscious or willing agents in this work. In the election of 1916 the Socialist Party of the United States obtained almost exactly 3.3 per cent. of the total vote. It is probable that by formally adopting the international policy of the Russian Bolshevists, the Socialist Party has alienated enough of its former supporters to reduce its probable vote today to less than 2 per cent. of the total. Small as this number is, it represents organization and activity out of all proportion to its size.

There should be no mistake about its program. It openly calls our Constitution dishonest. It denounces the fathers of our country as grafters, as crooks, as men of mediocre intelligence, and as attorneys of the capitalist class. In the making and building of America the socialist can see nothing of idealism, nothing of sacrifice, nothing of high principle, nothing of love of liberty, nothing of aspiration for a finer and a freer manhood. The Socialist Party Platform of 1912 explicitly demanded not only the usual collectivist and communist policies, but also the abolition of the United States Senate and of the veto power of the President; the abolition of all federal courts, except the United States Supreme Court and the election of all judges for short terms; the abolition of the power of the Supreme Court of the United States to pass upon the constitutionality of legislative acts; and a revision of the Constitution of the United States.

The Socialist Party is in particular antagonism to the courts, and the reason is easy to state. Under our American system the courts are established to protect civil liberty from passion, from mob control, and from improper assumption of power by [illegible] authorities and public agents. All [illegible] hateful to the orthodox socialist [illegible] lay the hand of force upon [illegible] to destroy it for a despotism of [illegible] making. The courts of justice are an [illegible] in his way.

The sinister fact, never to be forgotten, about his party and its program is that they are in essence and of necessity unpatriotic and un-American. Republicans and Democrats differ sharply as to public policy, but they both accept the principles of the Constitution and endeavor to apply and improve them each in their own way. Neither Republicans nor Democrats would change the form of government under which we live. The Socialist Party, on the other hand, openly declares its purpose to wreck the present form of government, to undo all the work that has been accomplished for a hundred and fifty years, and to bring to an end the greatest experiment in republicanism and the greatest achievement in social and political organization that the world has ever seen. Let there be no mistake about the definiteness of this issue. America's existence is challenged.

SOCIALISM AND INTERNATIONALISM

Orthodox socialists are internationalists of a special kind. They are really not internationalists at all, but rather anti-nationalists. They are not in favor of closer, more kindly, and more constructive international relations as a means toward justice and the security of the world, but they desire that sort of internationalism which shall extend class consciousness, class cooperation, and the class struggle beyond the boundaries of existing nations, and so assist in breaking down those boundaries. This is why the logical orthodox socialist is of necessity unpatriotic. He does not believe in patriotism, because he regards it as an obstacle to the farther extension of the successful class struggle and of class rule. Happily, we have seen in our recent experience that men may be sincere believers in many of the tenets of Socialism and yet remain patriotic and loyal Americans. Such men as Russell, Walling, Spargo, and Montague have illustrated this fact. Unfortunately, these men have been but a small minority in the Socialist party or group, and they have seceded from it. Orthodox Socialists as a body cannot be loyal and devoted Americans, for the simple reason that American institutions and American ideals lie straight across the path which they would like to pursue.

This distinction between a true and a false internationalism is to be taken into account and clearly reckoned with in shaping the policies of the world. Just as the family relation enriches and strengthens the individual, and just as the community relation enriches and strengthens the family, and just as the State relation enriches and strengthens the community, and just as the national relation enriches and strengthens the State, so will a true international relationship enrich and strengthen every nation that enters into it. Any plan for a Society of Nations that would destroy national initiative, national responsibility and national pride, would be merely a strait-jacket upon human progress. The true and wise Society of Nations will be one built out of nations that are stronger, more resourceful, and more patriotic because of their new association and their new opportunities for world service.

Signs are not wanting that the advocates of Socialism think it will be easier and quicker to gain ground in the United States by the indirect method of involving us in a false international policy than by the direct method of attempting to secure control of the machinery of government through the suffrage. This explains why Socialists and those who at heart sympathize with them without openly assuming their name, are so anxious that Lenine and Trotzky shall be formally recognized as heads of a government with which civilized and honorable men may have relations, and that the German people should, so far as possible, be saved from the consequences of their public crime and their military defeat. If Americans could only be led to give up their historic patriotism for a sentimental humanitarianism the battle of the Socialists would be half won. This is why it behooves us to watch with anxious care each step that our government proposes to take in relation to international policy. If it is proposed to build a world of strong, independent, self-conscious nations with close and friendly international relations for the preservation of the world's peace, well and good. But if it is proposed to weaken or destroy nations in order to build a world in which historic nations shall play but an insignificant part, and in which patriotism and love of country shall disappear, then Americans should oppose such a policy at every step and with the utmost vigor.

AMERICA WORTH SAVING

That which the American of today opposes to socialist autocracy is not the crude competitive individualism of the old-fashioned economist, but cooperative individualism with a moral purpose. It must not be forgotten that on the existence of private capital, which is only another name for private savings, depends the virtues of thrift, of liberality, and of sacrifice. The observation that liberality consists in the use which is made of property is as old as Aristotle.

Under modern conditions private capital is much more highly and more freely cooperative than any system of socialist organization could possibly be. The corporation, with its provision for the limited liability of the individual participant, is only a means of bringing about the cooperation of many individuals for a common cause, and is one of the greatest and most beneficent developments of the past century. It links together in a common enterprise the joint labors or joint savings of hundreds, thousands, even tens of thousands, of men and women, who to that extent are organized as a single economic unit interested in promoting efficient production and entitled to divide among themselves the common product. Under the system of private capital all this individual cooperation is free. Under any socialist system, whatever cooperation existed would be imposed by rule and enforced by the power of the majority or ruling group. Under the system of private capital the individual cooperating, whether investor or workman, comes and goes as he chooses. He is free to make what disposition he will of his own savings or of his own labor. Under any socialist system all this would be regulated for him and directed by public authority. His freedom would be wholly gone.

America is worth saving, not only as a land in which men and women may be free and increasingly prosperous, but as a land and a government under which character can be built, individual capacity given opportunity for free exercise, and cooperation on the widest scale promoted not only for private advantage but for the public good. As men become increasingly moral and increasingly intelligent, their personal activities will be increasingly impressed with a public interest. Their citizenship will not exhaust itself in the formal exercise of political rights or in merely political activity. It will show itself in ways that are economic, social, and ethical. Throughout this land there are thousands, hundreds of thousands, of men and women who illustrate this fact. Neither America nor mankind in general is likely to attain absolute perfection; but under the influence and guidance of those principles and ideals which are historically and truly American, there is every reason to believe that each succeeding generation will see new and increasing progress toward the goal of greater human happiness and greater human satisfaction.

The sure mark of the reactionary is unwilling-

"Intellectuals" Invading Labor Field

ATTACK IN "THE NATION" ON SAMUEL GOMPERS, WHEN ANALYZED, SHOWS EFFORT OF OUTSIDERS TO SET AMERICAN FEDERATION'S POLICY

By CHESTER M. WRIGHT

(Of the American Alliance for Labor and Democracy.)

IT is a well known practice of stagedom to let go with a great blare of trumpets while the proud hero is brought down stage for the inspection of the assembled multitude. Stagedom probably got the idea from such old timers as Nero and the Ptolemies. Where Bill Hohenzollern got the idea isn't quite clear, but he used it regularly.

George P. West has just been brought to the footlights to a similar accompaniment in order that proper attention may be focused upon him while he hurls his javelin against Samuel Gompers.

The Nation, which is a weekly publication having its home in New York and which is published by Oswald Garrison Villard, is the agency which selected Mr. West to undo Mr. Gompers. A fanfare of advertising preceded publication of Mr. West's article. In this advertising *The Nation* asked in large type whether the "Gompers rule" in the American Federation of Labor could survive the Atlantic City convention, after which it proclaimed that George P. West would supply the answer in the issue then forthcoming. The issue is before us. We read what Mr. West has written. And we marvel—or we do not—according to our frame of mind.

George P. West, I concede at the outset, is sincere in his own mind. He believes he is setting the story down accurately and he believes he is doing a service in letting the great public in on the hidden truth.

MATTER OF SALESMANSHIP

Somehow or other the story that Mr. West tells is always set forth by the uplift writers as a hidden truth about a grave menace, but this is mostly salesmanship on their part, for there is nothing new in the whole story.

This year, however, there seems to be a somewhat concerted attack of similar nature, delivered from a number of sources at the American Federation of Labor. This concert of attack seems to come from allied or semi-allied sources and to have a common object. It is not quite as it has been in other years, though no year has passed out of the last dozen or more, without its attack on Samuel Gompers and what is called the "Gompers machine."

Let us see something about what Mr. West has to say and then let us indulge ourselves in a bit of study of Mr. West himself and his fellow uplifters and regenerators of the human race.

Mr. West asks in the title of his article, "Will Labor Lead?" The title is not a good one. It doesn't express what Mr. West has in mind. What he means, if he would but say it in plain English is, "Will they defeat Samuel Gompers for re-election?" As a matter of fact, that is what most of the labor movement destroyers mean, but they refrain from saying it directly, preferring the more scholarly method of indirection.

Setting down in their order the points Mr. West makes in his article we find these:

1. The Atlantic City convention ought to approve a policy of independent labor political action. If it doesn't "these movements for the time being . . . sporadic and unrelated . . . . . must eventually form in the national field an orientation that will be the end of Gompersism."

2. The labor program, which it has been announced President Wilson would lay before Congress upon his return, will have the effect only of "strengthening Mr. Gompers' position and the weakening of the demand for a national labor party," the insinuation being that this is a political trick probably framed up by Mr. Gompers and President Wilson with the double object of keeping Mr. Gompers and Mr. Wilson in their present offices.

3. ". . . it may well be that the labor party movement is chiefly an unconscious and instinctive expedient for circumventing the control of Mr. Gompers and establishing a new agency of expression."

4. Today "the most important industrial movements" are "entirely out of the hands of Mr. Gompers and his lieutenants," and are "in the hands, significantly enough, of the very men whose excursion into politics Mr. Gompers denounces on the ground that it will divert the movement from 'economic' action," and this largely, we are instructed, because of the alleged fact that Mr. Gompers and his associates have been negligent of the industrial interests of the workers and have had to be "dragooned" into such activities as the organization of the steel workers.

5. Mr. Gompers opposes secession movements and stands against allowing the labor movement to be wrecked by that insidious process.

6. If this be a point, Mr. West concludes that "it is not too much to say that already the leadership of the American labor movement, so far as it has any leadership, has passed from Mr. Gompers and his little group of ultra-conservatives at Washington."

It has not been easy to isolate these points. They are so shrouded in a haze of what may be termed Mr. West's constitutional and mental attitude that they are brought into outline by themselves only after a painstaking process of dissection.

However, now that the points—we will call them points for want of a more accurate term—have been isolated, as the medical men say when speaking of germs, let us go behind the points and see what may be there to be seen.

TILTED AT MR. GOMPERS OFTEN

George P. West has been tilting at Samuel Gompers, as was his right, ever since the demise of the United States Commission on Industrial Relations, of which Frank P. Walsh was chairman and of which Mr. West was a publicity representative. Coming down the trail since that time, Mr. West has left among a great many of those who have followed him an impression that he belongs to what W. J. Ghent so well describes as "an indescribable assortment of the fitful and fretful worshippers of the Cult of Something Else."

I do not know from whence the inspiration came, or whether there was an inspiration, or whether it is coincidence, but it is an interesting fact that a number of young men whose recent arc of travel has been almost identical have come to engage in the same present pursuit—that same being the "fitful, fretful" business of attacking Samuel Gompers and his monstrous "bossism." It is a highly important sidelight that none of this "little group of serious thinkers" has any real connection with the labor movement or has had the benefit of any of its training. Neither have they borne any of the strain of its hard labor nor the suffering of its times of trial. They stand on hill tops and throw rocks into the valley where work is done.

In Russia this type is known as the "intelligentsia," which means the little over-educated group that tells the great mass where to get off at. Recently the Russia "intelligentsia" has come into power in such a manner as to cause the balance of the world to stand aghast in contemplation of what high-power brains can do in the way of complete and thorough going destruction.

In France and England this type is grouped under the general heading of "intellectuals", which means that small group which comes from the outside in effervescent enthusiasm and holy devotion to tell the working people how to be saved. They always tell the working people how to *be* saved—not how to save themselves. Of course if working people understand how to save themselves, then the "intellectual" becomes a by-product of little value.

In Germany this type belongs to the professorial group, of which the German labor movement has had such a load to carry that at the real crisis of its career it broke under the strain. However, the Herr Professor was a man who had to be listened to. Didn't the Herr Professor say so himself? He did, and the German mind understood that to be enough, sufficient, and plenty. The Herr Professor was listened to.

Down in Mexico they used to have a class called "scientificos", because they always pretended that they were scientific. They told the people that since they were scientific they were right and that in them resided all truth and in them alone. They had a monopoly of the supply of truth in Mexico. And thus glorified by science they scientifically robbed the Mexican workers, fooled them, led them to the slaughter and played a sort of Jack-at-all-trades Judas game with them for several generations under the kindly and doubtless scientific and scholarly patronage of the well known Porfirio Diaz.

STRANGE LIBELS ON EDUCATION

Strange are the libels perpetrated upon the good name of education. Wondrous are the slanders of which true intellect is made the innocent victim.

I have not just come from "seventeen weeks in Russia", but I have just come from France and England and I have for some years kept somewhat of a close check on what is being done in those countries. Mexico and the story of Mexican workers has been something like a hobby. I do not know of any labor movement in the world that has been able to demonstrate the success of "intellectual", "intelligentsia", "professorial" or "scientifico" leadership. That, however, is what Mr. West desires to wish on the American labor movement and regardless of words and their infinite shading of meaning and their infinite capacity for getting away from the naked facts, that is what his whole complaint is about and with which his whole philippic is concerned.

Let us look for a moment at an interesting phase of the European labor situation, where Mr. West's idea prevails largely.

Russia has no labor movement—no industrial movement of workers joined in unions; only an "intelligentsia" dominating a helpless mass.

France presents the spectacle of a labor movement that is next to voiceless. If you want to know about labor in France you don't go to Jouhaux, secretary of the Confederation Generale du Travail; you go to some one of the various Socialist party spokesmen, selecting that one which comes nearest to holding the views that you wish to hear expressed. You may go to Renaudel, to Thomas, to Longuet, to Compere-Morel—but seldom would you go to Jouhaux, because you would understand thoroughly that while his views might be sound they would not be the views of the highest authority. The movement is one of politics and the game of politics is largely one of personal ambition. This

is so in the Socialist party, as it is elsewhere. That accounts for the large number of newspapers, which are not news papers, but opinion papers. If you are an "intellectual" and wish to be a leader you start a newspaper.

In England there is much the same situation. When I wanted to find out about the plans of labor in connection with the Berne conference I was directed to Labor party headquarters. From the temple of politics came the voice of authority. The executive council of the British Trade Union Congress is not so called; it is called the Parliamentary Committee, in clear acknowledgment of the idea that politics is supreme. Mere industrial activity runs second.

In Italy the condition is the same, only hopelessly more so. Labor opinion is not expressed by a movement having to do with work. It is expressed by a movement having to do with politics.

And the "intellectual" domination of the European labor movement, to which Mr. West and his fellow delvers into deep stuff point with so much pride and satisfaction—what about that?

First, the name is in a way a misnomer. The name has been given to that class which comes from without the labor movement with a ready-cut plan of salvation which it seeks to foist upon the labor movement. The uplifters, the quick-service salvation people, the "follow me" persons, the enthusiastic young students who have seen a great light about which they must rush to tell the populace—these are the "intellectuals". They come with the fruit of their bursting brains and upon this fruit they seek to diet the labor movement in order that it may crawl through the eye of the needle into a promised land beyond—a promised land all a-glitter and a-glow with good things and fun! They are called "intellectuals", though not by way of indicating that they have real intellectual strength and poise.

Second, it must be said in connection with the "intellectuals" that labor does not spurn intellect, does not get frightened and run away from scholarly ability, does not shy at a learned man and roughly tell him to go to blazes. What labor balks at is the attempt of persons outside of the labor movement to dominate the movement. Labor resents the claim that outsiders, "intellectuals" though they be, can know more about what ought to be the policy and tactics of labor than labor itself knows. That is what American labor resents. If European labor finds it more to its liking, or even to its benefit because of possible local conditions, to submit to this extraneous domination and to the parliamentary tactics that are so largely followed in Europe, that is the affair of European labor. European labor may do as it sees fit, but American labor reserves unto itself the unqualified right to do the same. And in pursuance of doing what it has seen fit and right and wise to do, American labor has built a policy and a tactical program to suit what American labor conceives to be the needs of American labor.

ENTHRALLED BY OVERSEAS IDEA

Certain critics of the American labor movement look across the sea and they behold there something different—what Ghent calls "Something Else"—and they are enthralled. Formulae that fit into resounding sentences, programs that look nice in print, tactics that offer niches for various persons to fit themselves into, these have a strange attraction for the "intelligentsia" of America. And furthermore, it is quite the probability that the American "intelligentsia", looking across the sea and beholding its European counterpart in a position of authority and power in the world of labor, contemplates the situation with seriousness and concludes that the "intelligentsia" has put something [illegible] American brethren which is neither the profit nor the profit of the American contingent of the International Brotherhood of Superior Brains.

This survey of the situation almost constitutes in itself an answer to all that Mr. West has written, for every point that he makes is rooted in the old, old plaint that American labor will not submit to the outside dictation of the "intellectuals" and that it does not go in for the great game of partisan politics. There is in America a considerable class that has a constitutional grouch against the trade union movement of our country on just that account. The socialists have always baited the trade unionists because of it. Latterly they have been joined by the comparatively recent growth of non-socialist "radicals" of "intellectual" type who understand it to be their mission in life to drag labor up out of its sluggish course into the more spectacular, if shallower, stream that makes up for depth by voluminous splashing over the rocks.

However, it is well that we give some attention to the detailed propositions that we have been able to extract from the depths of Mr. West's scolding as it appears in Mr. Villard's publication, *The Nation.* Let us take them as they come!

First, the Atlantic City convention ought to approve a program of independent political action; if it doesn't "Gompersism" is going to be ended.

To begin with, Mr. West implies that the present non-partisan political policy of the Federation is "Gompersism". The fact is that this policy is the policy of the American Federation of Labor, made so by the Federation and repeatedly sustained in convention after convention. If this policy should be changed it would mean nothing more than the simple fact that the Federation has changed its policy. If the tried policy is continued, it will mean that the American Federation of Labor has deliberated and decided to continue a policy that it has tested and found good.

If the movements, "for the time being sporadic and unrelated" actually are movements of the membership of the American Federation of Labor and as such do eventually "form in the national field an orientation" they may, by action in the Federation change the policy to suit the new conviction—and that will end nothing but a policy.

The mistake made by a great many critics is in thinking that the Federation is something bossed from above, by Samuel Gompers "and his little group". The fact is that there is no more democratic institution in American life than the organized trade union movement. Nothing that we know about functions more nearly in accord with the desires of the component parts. Of course, what most of the critics want is something that *is* bossed from above—from up where they themselves wish to be.

At a meeting of the Executive Council of the Federation in New York City on Dec. 28, 1918, the question of political policy was opened for consideration and it was there determined that the council found the old policy wise and once more declared against independent partisan labor politics. The council also made it plain that local central labor bodies may engage in partisan politics if they deem it wise, and in so doing violate none of the rules of the Federation, but that to enter the national field would constitute a violation.

WISDOM PLAINLY APPARENT

This policy of American labor has grown up with the Federation through years of experience and observation. I take it that the world labor situation today is to any fair critic an ample justification of the wisdom of that policy. Not in any nation anywhere is labor so favorably positioned as in these United States. There are no exceptions. American labor claims the right to continue master of its own policy in order that it may bring to the workers of America the greatest progress.

Second in Mr. West's list is a question scarcely worth discussing further. President Wilson has announced that he is coming home with a number of proposals to lay before Congress in relation to labor. If the President does offer suggestions for legislation of benefit to labor Mr. West ought to be pleased. Arguing for politics, he yet sees intrigue and scheming in politics the moment the President proposes to suggest labor legislation. I am confident that American labor does not yet know what the President has in mind and I know it will be less precipitate than Mr. West. It will reserve its judgment until it does know. Labor, being bound by no partisan ties, has not hesitated when need arose to oppose President Wilson with its full strength and if there should be need of such a course again that course will be adopted. But labor waits until it knows before it enters the lists for or against. Therein it functions as a responsible entity, a restraint and balance which offers but little resistance to the fitful plunging of a number of its hill-top critics.

Third, we find that perhaps the labor party movement "is chiefly an unconscious and instinctive expedient for circumventing the control of Mr. Gompers and establishing a new agency of expression." This looks like a handful grabbed right out of the red hot cosmic nebula. First, the assumption that there is such a thing as a Gompers "control" is a false assumption. Usually when an argument is built upon a false premise destruction of the premise lets the whole thing fall. There is no Gompers control. Mr. Gompers is president of the Federation. He is a leader and he is the foremost leader. He leads by virtue of a mandate—a command made known by votes freely cast from year to year. He wields no magic autocratic influence. He cannot maintain himself in the presidency any longer than the voters wish to have him there. The "Gompers machine" is one of the great myths of the Cult of Something Else. I tried to find it myself once—and I found democracy.

Neither is there any "unconscious and instinctive" groping for some new kind of expression. That is the sheerest tommyrot. The New York labor party venture has not revealed any great urge, conscious or unconscious. The contrary is true. The lack of it will be apparent at once to any person who will trouble himself to inquire about the membership figures. The Chicago election showed no great urge, the total labor party and socialist vote having been about what the socialists would have been expected to poll alone had there been no labor party. This idea does not urge nearly as much from within as it is urged from without.

"CONTROL" MYTH IS TIRESOME

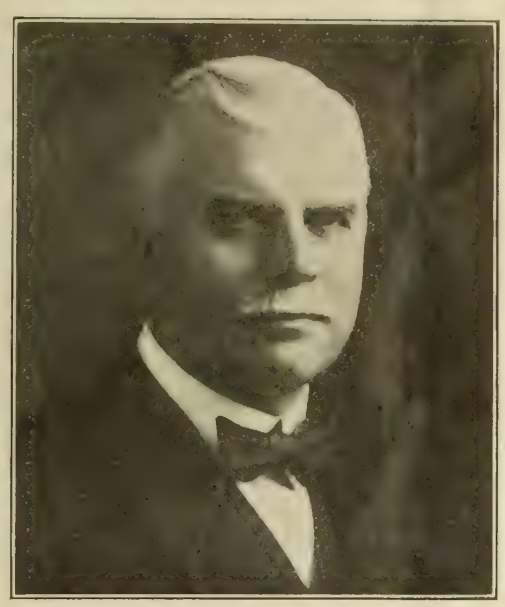
Four in the category brings us to a repetition of that "Gompers control" myth. It is a tiresome thing. The most important industrial movements are "entirely out of the hands of Mr. Gompers and his lieutenants." That Mr. Gompers ever had these movements "in his hands" would doubtless be surprising news to him.

But there is a meaner charge than this concealed in specification No. 4. It is that Mr. Gompers is losing this control because he has been negligent of the economic interests of these great organizations. Mr. Gompers had to be "dragooned" into the work of organizing the steel workers. He didn't organize the packing house workers.

True history relates that Mr. Gompers, as president of the American Federation of Labor, has been not only energetically in the forefront of every organization movement, but that he has been a very real leader in this sense. Far from having had to be "dragooned" into the

(*Continued on page* 17)

Compulsory Health Legislation Opposed by Labor



(From the Christian Science Monitor of April 22, 1919.)

THE Brotherhood of Locomotive Engineers, representing about 82,000 railroad engineers of the United States and Canada, are vigorously combating various legislative measures for compulsory health insurance now pending before the legislatures of Ohio, New York and other states.

Warren S. Stone, Grand Chief of this Organization and Chairman of the Social Insurance Department of The National Civic Federation, going over the subject with a representative of the Western News Office very recently, set forth some of the many reasons why this organization of locomotive engineers is opposing all forms of compulsory medical examinations and medical insurance under State or Federal authorization. "We do not want any such form of insurance," Mr. Stone declared. "There are many objections to these widespread efforts to secure legislative power for compulsory service by them for when the public must pay."

"Our organization has for years been fighting this form of medical autocracy," added Mr. Stone. "I do not want any man sent to my house with power to enter and examine me or any of my friends. Under some of these proposed laws, and all of them I think, the individual cannot in any way choose his physician, even if he wants one. Some doctor is selected to look over promiscuously some five hundred individuals who must submit to this encroachment on their personal rights without question. The whole thing is un-American to my sense of things, autocratic and useless.

"We are sending out just now to our members large numbers of the address delivered in New York last December before the International Association of Casualty and Surety Under-

WARREN S. STONE

writers by Dr. George E. Tucker, formerly associated with the National Industrial Conference Board as its chief medical investigator. Dr. Tucker declared that 'social insurance is an integral part of Germanism, an adjunct of that militarism that leads directly to social slavery along the well-trodden paths of paternalism, registration, inspectorships, and the whole mechanism of docketing and discipline.' Furthermore, he said that 'the professional social reformer and the "for revenue only" human uplifter groping blindly for some new panacea upon which to focus public attention gladly accept and enthusiastically welcome any proposal which, for the time being, offers opportunity for publicity and incidentally for replenishment of an always too uncertain financial income.'

"Dr. Tucker has stated, and we agree with him, that 'compulsory health insurance, as revealed by the evidence, has already been a signal failure in Great Britain because of the lack of fundamental knowledge of the public health problem, and because the principle upon which it is established lacks the element essential to a scheme seeking to be considered an insurance proposal; and that the essential difficulties requiring solution in connection with the public welfare from a health standpoint would not be met and in the main their prevention would be entirely ignored. Also, facts show that the cost is always out of all proportion to the benefits to be derived, and finally that neither we nor any of the allied countries would be justified in copying any German plan which is known to have been conceived in iniquity, enforced through militarism and aimed to destroy individualism and democracy.'

"Again, the California Research Society of Social Economics has declared that the bill will destroy medical freedom, compel the workman to buy and pay for sickness insurance whether he wants it or not and make his home subject to invasion by inquisitive political 'inspectors' and 'investigators'. Finally, it says that sixty per cent of illness is preventable. Why, then, should those workmen be called upon to pay out millions for misfortunes that may be prevented by other means? These are some of the reasons why the International Brotherhood of Locomotive Engineers is opposed to all forms of compulsory health insurance."

Matthew Woll on the "One-Big-Union" Idea

(From the Christian Science Monitor of April 26, 1919.)

VIEWING the broad field of organized Labor in the United States from the vantage point of a national leader at Washington, Matthew Woll told a representative of *The Christian Science Monitor* recently that two big and serious problems had arisen within the American Federation of Labor and were being pressed from various points. The One-Big-Union propaganda was the first; second, Labor's going into politics. The One-Big-Union scheme would fail, because in actual operation it had been found impracticable, Mr. Woll testified from his own experience. The formation of a national Labor party he could not regard as anything but disastrous to the economic ends for which Labor organized.

Mr. Woll's home is in Chicago, but for the last 18 months he has been in Washington, serving since last June as assistant to Mr. Gompers as chairman of the committee on labor of the Council of National Defense, and editing the *American Federationist*, official organ of the American Federation of Labor, in Mr. Gompers' absence in Europe. Mr. Woll is president of the International Allied Printing Trades Association and also of the International Photo-Engravers Union.

Mr. Woll noted that a determined attempt is being made to tear down the international form of organization of the trades unions. He said the American Federation of Labor did not favor the Mooney strike.

The federation has not taken any action on the "no beer, no work" movement, but it does not countenance strikes of any kind which have not first met with the approval of the international unions, Mr. Woll said. To his knowledge no international union has taken action on this proposition.

MATTHEW WOLL

On One-Big-Unionism, Mr. Woll said he spoke from experience. He had belonged to just that form of organization. It had existed in the printing trades. They were all in the one Labor union together—compositors, pressmen, stereotypers, photo-engravers, and the others. Compositors outnumbered everybody else. When anything affecting the compositors came up, it got attention; but when an important question affecting, for instance, the photo-engravers arose, the compositors were likely to regard it as a minor difference. As a consequence, the photo-engravers of the country were poorly organized and their wages low. Finally they got tired, as Mr. Woll said, of being used chiefly to pull chestnuts out of the fire for the bigger groups of the union, and they organized their own union. This was characterized by Mr. Woll, its president, as the strongest in the printing trades, and the photo-engraver, he said, got the highest wages of any man in these trades.

Now the various trades in the printing industry have come together in a common organization, called the International Allied Printing Trades Association, Mr. Woll pointed out, each preserving therein its individual craft identity. This is unification within the industry which the American Federation of Labor encourages.

Mr. Woll declared that the A. F. of L. has consistently and for some years been developing this getting together within the industry along craft lines, but that the proponents of the One-Big-Union idea have ignored this tendency. Mr. Woll called attention to the building trades department of the A. F. of L., which purposes to remove jurisdictional disputes between the organizations and to deal collectively for the conditions which should prevail in the building industry of the country without destroying the identity of the individual trade organizations.

"Thus," concluded the trade union leader, "there is evidence that the American Federation of Labor has been fully responsive to the need of coordinating the activities of trade organizations within the same industry and has been doing it in a way which would not destroy that form of organization which experience has demonstrated as absolutely essential to deal with economic questions in a fair and efficient manner."

ENEMIES OF THE TERMS OF PEACE

Germany, through her representatives, came to Versailles seeking peace, yet in that same hour there began the renewal of hostilities held in check since the signing of the armistice and which in America had abated since our entry into the war—hostilities now directed against the terms of the settlement for peace which Germany had presumably come to seek. There began, with the delivery of the terms, a war not of guns, but of propaganda—a campaign whose aim and purpose is to neutralize or render inert the very conditions of the treaty. What she failed to achieve through victory in the field, Germany now seeks to achieve through world propaganda and international intrigue. And the forces which of old aided Germany, which directly and indirectly abetted the imperial establishment, which for a time were driven to cover, have now come forth assailing and seeking to undo the terms of the treaty.

Unrepentant, unregenerate, defiant, Germany speaks for herself. "We are not a defeated people," declares Matthias Erzberger. "We agreed to the armistice because President Wilson laid down fourteen points upon which the Allies would base peace. If the peace submitted to us now is not a Wilson peace, but an imperialistic peace aiming at annexations, indemnities and the total annihilation of the German future, it will not be signed."

Philip Scheidemann, Chancellor of the new German Government, referred to the treaty as "this document of hatred and madness." Frederich Stampfer, editor of the Majority Socialist organ *Vorwaerts,* spoke of it as "the undefinable instrument of pressure which * * * is no instrument of peace." Declaring that Germany will not sign, he said: "The enemy will attempt to occupy parts of Germany and to force the rest to surrender by hunger." And he added, with sinister significance, "we shall then see how long his inner and outer unity prevails."

While Germany, with wailing and gnashing of teeth, raises her voice against paying, if only in part, what is the just penalty of her crimes, there rises also throughout the world, in America and the Allied countries, a singular and significant echo of protest against the terms of the treaty. And from whom come these protests that Germany pay for the wrongs committed?

Meeting to consider the terms imposed upon Germany, the National Executive Committee of the British Labor Party issued a manifesto declaring that the treaty in some essential particulars was "opposed to the declarations of President Wilson, of the Inter-Allied Labor Conference and the Berne Conference, and very defective from the standpoint of world peace." It went on to say:

"It bears evidence of a compromise by capitalism and imperialism, which still dominate European states." It criticised the failure to give Germany representation on the reparations commission and the omission of provisions for a progressive limitation of armaments. It protested against the separation of the Saar Basin

[illegible] this same British Labor Party which campaigned for a peace discussion, between representatives of radical labor from the Allied countries and Central Powers, and which also promoted the Stockholm conference.

The Independent Labor Party, of England, in a manifesto, declared:

"We strongly denounce the document as a misnamed treaty. The terms violate the conditions of the armistice and are opposed to every public statement of Allied aims * * * The treaty does not end militarism."

The International Socialists, meeting in Paris on May 12, issued a statement declaring that the covenant seems to be the instrument of a victorious coalition dominated by five great powers rather than an organ of international justice and attacked the disposition of the German colonies as "imperialism satisfying itself with the spoils of war." The statement was signed by the following Socialists, who were appointed by the Berne Labor Socialist Conference to make a study of the covenant and the treaty: Hjalmar Branting, Sweden; Camille Huysmans, Belgium; Arthur Henderson, J. Ramsay Macdonald and G. H. Stuart Bunning of Great Britain, and Pierre Renaudel and Jean Longuet of France.

The statement concluded:

"This peace is not our peace. The nations are still menaced by the policy of the victors in sharing the spoils without thought of the inevitable consequences."

In France, the only voice of protest against the treaty came from the Socialist press. One Socialist paper, under the headline, "A Peace of Oppression and Injustice," said: "The capitalist and imperialist world as it exists could only produce a capitalist and imperialist peace, which prepares the way for another war. Between President Wilson's 'fourteen points' and certain stipulations communicated to Count von Brockdorff-Rantzau there are hiatuses and contrasts which are too striking."

Mr. J. L. Garvin, the editor of the radical *Sunday Observer,* of London, declared:

"These terms give no fundamental solution to any European problem. They revolve in the vicious virulence of the old diplomacy, they repeat the fatal precedents which have always led back to war."

The *Herald,* the British Labor organ, complained:

"There is no honor left for any of us * * * It is a patched-up peace and simply makes the world safe for plutocracy."

The *New York Daily Call* comments:

"Germany now knows, from the point of view of the underdog, the feel of a Brest-Litovsk peace . . . 'It is a good peace,' said Clemenceau. For the victorious diplomats, we suppose every peace has been a good peace . . . To the victorious diplomat that peace is good which gives him his day of glory."

The Non-Partisan League, through its official newspaper, the *Fargo Courier News,* the editorial policy of which is directed by A. C. Townley, president of the League, attacks the treaty thus:

"The peace treaty they have drawn is a ghastly mockery of democracy . . . It is written with the primary purpose of safeguarding capitalism in France . . . The European governments, flushed with victory, were greedy with lust for revenge and plunder."

The Russian Soviet Bureau, of which Ludwig C. A. K. Martens is the head, and which constitutes the Bolshevist headquarters in America, issued a propaganda sheet denouncing the treaty terms.

"The peace treaty as published has all the characteristics of old-fashioned diplomacy," declared the sheet. "It cannot bring peace to the world."

George Sylvester Viereck, one of the most sordid and notorious Hun propagandists and editor of the former "Fatherland," said:

"Judging from a cursory study of peace conditions, I should say they are in flat contradiction to Mr. Wilson's fourteen points. In fact, they turn our fourteen pledges into fourteen scraps of paper."

The *New Republic,* which propagandized for a peace of compromise with Germany, says editorially:

"A peace will be signed. It will not be in all the essentials the kind of peace which was promised to the world while the exaltation of the war was at its height. There is small evidence at Paris of any profound conviction that a new order of international affairs has been inaugurated."

To create public sentiment against and to undo the treaty, the German propaganda machine, in Germany and without, has unleashed its forces with frenzy and fury unsurpassed since the early days of the Great War. And all the forces which in America opposed our going to war with Germany, which fostered pacifism, which defended resisters of the draft, which campaigned for a premature peace of compromise with Germany, the same forces which abetted the propaganda of the British Labor Party for a Stockholm conference, which defended the Bolsheviki and preached Bolshevism, as well as all the pro-Germans, pacifists, anti-English Irish, Socialists, "internationalists" and motley radicals are now enlisted in assailing the terms of the treaty offered to Germany.

In the consideration of the treaty, the League of Nations covenant, and the proposal of President Wilson to ask the United States Senate to guarantee protection to France should she be again assailed by Germany, the character of those forces making the attacks will doubtless have due weight.

POISONING THE FONTS OF LEARNING

It is, of course, quite natural that the propaganda methods of both the Socialists and the Germans should be in many respects strikingly identical. Marxian Socialism—the application of which finds an object lesson in present-day Russia—was "made in Germany." Like the German propaganda, its methods of dissemination and fertility in hypocrisy and deception, are strikingly Teutonic. The German propaganda, as has been shown in articles published in this magazine, sought to undermine American national integrity and moral resistance by an invasion, years before the war began, of our schools and colleges. Socialism, likewise, has sought to poison the fonts of American learning.

A wholesome movement to safeguard pupils in our public schools from camouflaged Socialist teachings was announced recently by Dr. John L. Tildsley, associate superintendent of schools of New York. Dr. Tildsley will recommend to the New York Board of Education that the economic views of all prospective teachers be examined to the end that no teachers shall be licensed who are revolutionary Socialists. "We all believe in freedom of speech," said Dr. Tildsley, "but we are not talking about freedom of speech—we're talking about teachers. I don't want to keep these Marxian Socialists from talking—no one has to listen to them unless he desires to—but I object to their impressing revolutionary views upon a girl or boy of fourteen to eighteen years who is forced by law to attend school."

What Dr. Tildsley has proposed to do in New York might well be followed by the directors of public education in other cities. The promulgation of Socialist teachings in American schools is seldom carried on through outright open Socialist propaganda. It has been all the more dangerous and insidiously effective because its

ethods have been extraordinarily sly and iladroit. According to the scheme worked t by Ferrer, Socialist teachers in schools were, thout the mention of the name Socialism, to terpret history, civics and economics according the Marxian doctrines. Thus, receptive and fenseless children were to be inoculated with e point of view of economic determinism and regard all historical and present day social ils as being due to a fallacious economic sys-m.

Like Bret Harte's "heathen Chinee," your olshevist propagandist is adept in "tricks that e cunning and ways that are vain." Of late, e promulgation of Bolshevism has been given new twist. It is illustrative of the trickiness id machiaevellian ingenuity of these profes-onal trouble-makers and malcontents. Various iblic speakers have succeeded in getting into e lecture rooms of public school buildings on e pretext of talking about "psycho-analysis." n impartial and dispassioned analysis of the rious involved harangues reveals that psycho-analysis" merely provides a means of opagating poisonous teachings whose aim and irpose is to promote intellectual Bolshevism id moral anarchy. One speaker, for instance, io has since been barred from New York pub-school premises, undertook at evening lec-res to impress groups of young people, ranging age from fourteen to twenty, that mankind is otived in his actions by three urges—the urge hunger, the urge of sex, and the urge of self pression or self realization. He cynically de-ored the "inhibitions" which keep people back om a full realization of those "urges." He timated that Neitsche was right in his teach-gs—that there was no such thing as good and il, and that human beings, to attain their full velopment, should "go the limit" in the grati-ation of their "urges" or desires. Such teach-g is identically in line with the propaganda oken of by Mr. Harré, in his articles in this EVIEW, and whose purpose is the destruction all moral standards, all ethical and religious liefs, all patriotism and national ideals. It is tellectual and moral anarchy run amuck.

Civilization, through a long and laborious ocess, has built up moral standards and ethical eals—what the intellectual Bolshevists sneer-gly call "inhibitions—" for the general wel-re and safeguarding of society against the generate, depraved, criminal and lawless. That achings whose actual carrying out in practice ould be indescribably hideous, should be car-ed on in public school buildings under the ise of "psycho-analysis" calls for prompt and astic action. Intelligent mature individuals e not readily deceived. It is the young of the nd, the coming generation whose minds the volutionary propagandists seek chiefly to ison, whom it is our urgent duty to protect. he intensive promotion of Socialist Sunday chools in the big cities for the young is one ase of this inimical propaganda. First and remost, however, as Dr. Tildsley proposes in ew York, Socialist teachers must be rooted out our public schools, and all Socialistic lecturers ould be banned also from discoursing in school rums.

EFFORT TO MAKE MARTYR OF DEBS REACHES MAUDLIN STAGE.

Efforts of the Socialists, Bolshevists and narchists to make a martyr of Eugene V. Debs, w in prison for utterances against the govern-ent while we were at war, continue to be filled ith maudlin sentimentalism. Threats of a eneral strike to compel the release of Debs hav-g proved to be mere threats, the radical press as adopted a tone of sickly complaint about his t. Characteristic of this type of propaganda esigned to stir sympathy for one who would have sacrificed this country to the Hun is a letter addressed to Debs by Owen R. Lovejoy, General Secretary of the National Child Labor Committee.

This letter was seized upon by *The New York Call* as being so much in line with its campaign of personal appeal that it was displayed in double column measure and large, black type on the *Call's* editorial page. In full, the Lovejoy letter reads:

"Good Night, Comrade—and Good Morning". (This letter was sent by Owen R. Lovejoy, one of the world's greatest fighters against the iniquity of child labor, to Eugene Victor Debs. We are proud of the privilege of printing it). From *The New York Call.*

My Dear 'Gene:—You are the first of my own personal friends to be put behind the bars of a penitentiary. Your going fills me with a new, strange emotion, and I cannot see how you can be so calm about it. To think of you who love so to roam the fields and woods and look across broad plains—confined to a prison cell; to think that the faces and handclasps of the little children who have flocked around you on the streets of your own city—henceforth shut out from your view; to realize that those eager multitudes who have thronged to hear your cheering message of human freedom and just government are to hear your voice no more; that while we whose natures are less ardent, whose sense of duty is less keen, whose vision is less clear, whose hearts are not so warm and tender, and whose love of God is less intense—to think that we are to be at liberty while you are confined, that we may speak while you are silent, that we may enjoy sunshine and flowers and the contact of friends, while you are confined within the narrow dungeon walls:—what outrage cloaked in technicalities could so clearly prove the bankruptcy of the present social order?

You are convicted of hating war. I think you are guilty. I recall how your voice has always been against any violence, even when you saw your own beloved fellow workers crushed under the oppressor's heel. I remember how you used to denounce Prussian militarism in the old days before the war, while presidents and congressmen and judges and diplomats were consorting with the Kaiser, and our accredited ambassadors were kissing his mailed fist. They say you are a pacifist; that you have long protested against war. Of this I believe you are also guilty. You are sent to prison for saying last year what all the representatives of all the governments at the Paris Peace Table are saying today—that WAR MUST CEASE. You have looked forward as Victor Hugo looked toward a day "when a cannon will be exhibited in public museums, just as an instrument of torture is now, and people will be astonished to think such a thing could have been." You looked for the day when the seas would no longer be crowded with battleships or infested with mines and submarines, but when nations would extend the hand of fellowship across the ocean. You were not afraid to give voice to your belief—and for this confession we cage you as a wild beast and a menace to society. You have openly defied the law of the jungle and brazenly conducted a vendetta of universal brotherhood.

I will tell you the trouble with you, 'Gene—you came on earth too soon. We aren't ready for you yet. You are as premature as Lincoln was, or Huss, or Wycliffe, or Jesus. Well might you say as you pass us in the shadows of your Gethsemane—"Sleep on now and take your rest; behold, the hour is at hand."

We shall awaken by and by. Henceforth liberty will seem less precious to us, now that you may not share it. Prison walls will partake of the glow of the walls of the Holy City, now that we know your radiant soul is within. Thousands of little children who today shrink from a "convict" as an unclean thing will begin to look deeper into his face to discover whether, after all, he may not be a saviour wearing the robes of derision and crowned with thorns. I am pouring out only the poor tribute of my personal love in this letter, yet I believe I voice the thought of many thousands to whom you have been a help and inspiration in turning your own beautiful words back upon yourself—that while you are of the lower class, we also are of it; while you are branded a criminal, we also are criminals; while you are in prison we are not free.

Good Night, Comrade—and Good Morning.

Distinct relief from the nauseating bathos of Lovejoy's "letter", and telling just what crimes Debs committed to cause the prison sentence, is the plain statement of fact made by A. Mitchell Palmer, Attorney General of the United States, when he refused to ask executive clemency for Debs. Said Mr. Palmer:

"Debs was convicted, not because of his political or economic views, but because he plainly violated the laws of the land. On June 18, 1918, during the most critical period of the war, Debs made a public speech at Canton, Ohio, in which he urged that wage-earners refrain from giving any aid to the American Nation in the war, asserting that the war was brought on and conducted solely in the interest of capitalists; told his audience that they needed to know that 'they were fit for something better than slavery and cannon fodder,' held up to admiration as martyrs to the cause of labor a number of persons who had been convicted for violating the Draft Act, and urged wage-earners to stand together as a class to prevent the success of our country in the war.

"In his address to the jury Debs said: 'I have been accused of obstructing the war. I admit it. Gentlemen, I abhor war. I would oppose the war if I stood alone.'

"He was given a fair trial by jury. The charge of the trial judge was eminently fair, and, on appeal to the Supreme Court of the United States, that court, by a unanimous decision, affirmed the judgment of conviction.

"Both prior and subsequent to the delivery of the speech mentioned Debs had on numerous occasions publicly urged wage-earners to adhere to the so-called St. Louis program of the Socialist Party adopted in April, 1917. This document asserted that participation of the United States in the war against Germany could not be justified, branded the declaration of war by the American Government as a crime against the people of the United States, declared that in all modern history there has been no war more unjustifiable, and urged 'continuous, active, and public opposition to the war.'

"Following the action of the Supreme Court the defendant has indulged in violent public criticism of the American courts of justice and practically defied the power of Government to administer the law against him. In a public speech made at Cleveland, March 12, he said: 'With every drop in my veins I despise their law and I defy them.' A few days ago he declared that if an attempt is made to imprison him he will have a general strike called in support of his attitude.

"In this situation my duty is clear. Respect for the law and our institutions is the basis upon which every application for executive clemency must rest. Open defiance of the law and threat of force to obstruct its orderly administration call for only one answer. The law must be respected and obeyed. To make sure of that, it must be enforced. I would be doing a grievous wrong to the country and striking a blow at law enforcement if I adopted any course which would interfere with the normal administration of justice in this case."

Efforts to Revive German Music

INSIDIOUS PROPAGANDA UNDER GUISE OF ART RESUMED WITH ALL ITS PRE-WAR ACTIVITY

By AN AMERICAN OF GERMAN BIRTH

GERMAN music, which for so many years has been synonymous with German propaganda, is in our midst again, not that there has been a cessation, but there was a perceptible lull which has now disappeared, and we find German artists, singing societies, quartettes, etc., again rampant. It seems of little importance to many that peace negotiations have not been concluded, unless perhaps, the musicians, as well as the general public, have accepted the armistice as a final peace, or an excuse upon which to re-establish German music and its insidious propaganda. We are having entire programs of German music jammed down our throats, a notable example being the first concert of the Society of Friends of Music given at the Ritz-Carlton a short time ago.

German agents who have striven to build here a stronghold of Teuton music are more active than ever, and their propaganda is not only greater in volume, but it appears in a more subtle and enticing form. The idea of saying that music is either international or supernational in order to camouflage attempts to bring German music and its powerful propaganda back again is a trick—a bandying of words. Music is not international—it is eclectic, selective, and those who attempt to revive German music are simply helping one of the greatest sources of German propaganda.

Music as propaganda originated with the now fallen (but still unpunished) Wilhelm Hohenzollern, whose spirit imbued the German people not only with militarism, but with war, hatred, rape, murder. He recognized the value of musical propaganda as one of the most powerful and advantageous means of bringing the German people, the educated ones especially, into the hearts and homes of the American people. Did he not arrange farsightedly to place a German at the head of nearly every great orchestra in the United States? Many were especially released by royal order to go to America for the sole purpose of furthering German Kultur.

Because of our German population, which numbers over 22,000,000, America has always been a fertile ground for propaganda, and although the people only hear of the well-known cases—such as the dastardly work of Dr. Carl Muck, erstwhile conductor of the Boston Symphony Orchestra—there are many others who were associates and coworkers of the famous orchestra leader, who were untiring and successful in their work. The Kaiser figured that if the beauty of much of the German music was made to create a deep and lasting impression that some of the people of the United States, especially those far from the battlefield and the scenes of wanton destruction, would doubt the enormity of the German crimes, saying that minds capable of producing such beauty could not be capable of the debasing outrages recorded.

This theory has been propounded even by patriotic Americans through sheer ignorance. Now is the time for enlightenment! The people must be told about the subtle, cunning ways used by the Monster Mind of Germany, the thing upon which it thrived and flourished for many years. One of the things we in this country must insist upon is the utter abolition of all things German—music as well! At least until we have destroyed the propaganda system which was the foundation of that which made it possible for Germany to bring on this dreadful catastrophe, for which she alone is responsible.

The restoration of German opera must not come to our stage until mental and physical conditions have so changed that the works of the German composers can no longer be regarded as reflecting the deceit, conceit, pretence and arrogance of Germany of today. To quote our esteemed critic, Mr. W. J. Henderson of the *New York Sun,* April 13th, 1919: "When they do come back (referring to grand operas) to our stage, they should be sung in English. The language of the damned is not fit for decent ears."

What has Germany ever done toward the upbuilding of music of other nationalities that we should put ourselves in a position to say: "Well, it is art for art's sake?" The hideous fact remains that in the name of Kultur she put the torch to, or destroyed, the finest historical monuments, the most precious treasures of science and art. She has not only destroyed humble homes, but the noblest edifices within the power of man to construct. For years, yes for half a century, she prepared the greatest inventions for human debasement the world has ever known—all under the guise of a supremacy of "intellectuality and Kultur."

The Hun was not only content to wage warfare in a material way, with cannon, ships and explosives, but he waged war through the mind, the heart, the soul, the spirit, the senses, sparing neither the flesh of his people nor the science of his doctors or theologians. Anything and everything was a justified means to an end, and his propaganda was most deadly, from the spreading of disease germs to the application of music.

Even the music plates from the great Russian publishing houses, stored in Germany, were melted and turned into shells, bullets, and other instruments of torture. All of which means, that little, if any, of the new and beautiful Russian music will be available, and it is the Russian school that has been the most flourishing in the last generation.

There is a strong nationalism in music, and as the world war created both a social and political catastrophe, it could not help affecting the cause of music and other artistic expression. If we have been warring against Germany socially, politically and commercially, why not artistically, and through music, the particular branch of art which helped her most in establishing her spies and in spreading propaganda?

Within her own boundaries, as well as without, she used music as a medium to incite her people to crime and atrocities, and yet despite this, there are some who would permit it in America. Here are one or two examples. The "German Song-book" voices the hellish spirit that led Germany to start her long-cherished, well-prepared war, in the concluding verse of the "Christmas Hymn of Hate":

> Sons of Germany in arms,
> Hurl down, strike with thunder, break in pieces!
> Rush forth, overthrow, transfix, devastate,
> Burn, kill, kill, kill!
> Such is the life of Glory.

A verse of the infamous, favorite German soldier-song, a song of murder, fire and rape, "Deutschland Uber Alles," goes:

> Make roar whatever is able to roar, in towering light and flames!
> Germans, everyone of you, stand fast together for the Fatherland!
> We, all of us, will today redden the sword with blood,—
> With the blood of hangmen and Frenchmen.
> Sweet day of vengeance! That sounds fine to all Germans.
> That is a glorious cause!

Despite these quotations, the music optimis the musical idealist, the "art for art's sake person, will tell us that there is no such thi as "enemy music." But it does exist, just t same as the national anthem, war songs ar patriotic songs are enemy music when the cou try from which they spring makes war upon u "Die Wacht Am Rhine," "Deutschland Ub Alles," and all the traditional German songs a of the German people and are just as much a enemy in the field of music as the sword is i the hands of the German soldier on the field battle.

It was very pleasant to note that Rudo Christians was foiled in his attempt, for reaso of German propaganda, to force German oper on the New York public early in March, and y think how far Christians was able to go with h plans. He had the cooperation necessary t bring the performance up to the very minu of its proposed presentation. He, the tolerate citizen of an enemy country, such as German is and will be in our hearts and minds for yea to come, dared to bring not only something whic savored of the German language, but a complet production representing the language, musi art, and artists of his people!

And of such a people! A people not onl whose government but whose ideals are the mos barbaric, uncultured, and degenerate the worl has ever known. Think of the presumption o Christians in attempting to force German oper down our throats while we are still in a state o war, if not actually engaged in spilling blood He proposed German opera, German singers German conductors! The armistice has no been fully complied with, and no peace treat has been signed, to say nothing of the fact tha our casualty lists are still a noticeable featur of the daily news—lists of names of the flower o our country, our brave and gallant youths wh gave of their life's blood so that right an righteousness should live and triumph over th criminal Germany of today. And yet Christian proposed that our music critics write resumé of opera given in the language of, and by th very men who sent our boys to their death. I is incredible!

Every musician and everyone who has an power in directing musical activities should rall against Christians and his ilk, and fight Germa music, for the present at least, while the wound of the flesh are still fresh and the heart stil bleeding for the dear ones lost in battle.

The way German music has crept back o many of our programs since the armistice wa signed is typical of the German propagandis who was so powerful before and during the wa in this country. This must be stopped and im mediately! The people over here do not realize the use to which German music has been put— only seeing its musical value. German music is one of the greatest known forms of propaganda to Germanize the United States. Back in 1880 Bismarck is quoted as saying, in answer to the question as to what he considered the greatest disaster in the world—that he considered the fact that the North American continent was an English-speaking country! His idea and all who followed in his footsteps was to Germanize America—not only through emigration, but later when their colonists got here, through the most successful of all sources—education.

The German language, and we can say the same of German music, was, prior to the war, the chief modern foreign language studied in our schools and universities. This was due to

psychological fallacy established by Germany
ıt everything German in the educational world
s superlatively superior, and also to the pow-
ul, unceasing propaganda.

Probably one of the most successful examples
ard the establishing of a German educational
stem was made through the notorious National
rman-American Alliance, subsidized by Ber-
, the charter of which was revoked by Con-
ss. Utterances of leaders of that organiza-
n form the best platform upon which we
uld fight German education. These Germans,
ars ago, answered the present day questions
those who have asked: "Is not art, music and
ıguage international?" Here is a pertinent
otation from one of those leaders:

> Racial individuality and speech are inseparably related. If we are to preserve the former for ourselves and our descendants, then we must cultivate and guard the latter as a priceless possession.

They advised a wholesale sweep of Germaniz-
the country by attacking the flower of our
uth, by saying:

> We must assure ourselves of the youth of the land, *not only the German-Americans, but the entire youth.*

The aim of the National German-American
liance was the preservation and encourage-
nt of Germanism to the *n*th degree in the
ited States, which is shown by the following
ded citation:

> For the preservation of Germanism in the United States, nothing is more necessary than the preservation and creation of German schools. The aim of the German schoolmaster in America is not fulfilled by far—it is only begun. Strict control of the public schools is necessary.

Why should we, and why did we, ever tolerate
ısic sung in German, when in Germany no
e is permitted to give a performance in any
nguage but German, except special guest per-
rmances by such artists as Caruso? No mat-
r what the original language, and no matter
at the nationality of the artist, he or she must
arn their repertoire in German.

Here it is interesting to note an article by
eginald De Koven in the *New York Herald*
short time ago. He tells of a conversation with
arry Rowe Shelley, the American musician
d composer, who said: "Why are we obliged
submit to German musical propaganda in this
wn at the present? I would like you to at-
mpt to give 'Robin Hood' in Unter den Linden
Berlin, in English, and just see what
ppens."

Madame Cahier was an artist who attempted
give programs of French and English in the
iginal and she was sneered at. There is no
idience so insolent and intolerant as a German
idience, and it does not hesitate to show an
titude of derision toward anything that is not
erman. And yet for years we in America have
ot only permitted, but have accepted the Ger-
an artist singing in German. A fair exchange
ould be little enough to ask.

There is an article in the April 10th issue of
e *Musical Courier* entitled "Still at It."
omebody sent a marked copy of Viereck's
merican Monthly, directed to the editor, en-
tled "Machine Guns vs. The Muses." This
as undoubtedly done because the *Musical*
ourier was instrumental in starting the cam-
aign to prevent the performance of German
pera at the Lexington Avenue Theatre. The
arked paragraph read:

> As a result of this guerrilla warfare, our German-speaking citizens and many music-lovers, irrespective of race, are confronted by an intellectual famine. German actors and musicians in the United States face actual starvation, unless the Government rallies to their support and enables them to return to their native land.

In answer to this, the *Courier* says:

> The sentimental bit about German singers and actors facing actual starvation in America today leaves us cold. American artists took pains to learn how to perform in German before they sought employment in that country, and the German artist can learn English if he wants work in America. How many of them would like to be enabled to return to their native land at tne present moment? They may be "facing" starvation here—although we doubt it in the case of most of them—but with their native land behaving as it is today, they would be apt to have a nearer acquaintance with starvation than a face-to-face one.
>
> The whole Viereck article is rank German propaganda of the sort which we hoped and believed had been effectually stamped out here—but evidently that is not the case. We Americans are too lenient, as we have found and will continue to find to our cost. What a misnomer is that title "The *American Monthly!*"

In addition to what the *Musical Courier* has already commented upon in referring to Viereck's statement that "German actors and musicians are facing starvation in the United States," it might be well to say they all seem well supplied with money. Lectures, recitals, concerts, and other entertainments are being given to raise money for them, and this they appear to be doing successfully.

Dr. Glogau, president of the Social Scientific Society of New York, as the so-called German intellectual clique has seen fit to call itself, is active in his endeavors to raise money. A concert scheduled by him was to have taken place at the Hotel McAlpin Wednesday, March 19, but the manager of the hotel objected to the concert, and it was cancelled. Margaret Ober, Johannes Sembach, Hermann Weil, Carl Braun, and Otto Goritz, former Metropolitan Opera stars released on account of their nationality in November, 1917, were to have been the artists; Arthur Arndt, husband of Margaret Ober, was scheduled as pianist and accompanist. The concert was to have been a testimonial in honor of Margaret Ober and the Madrigal Quartet, as the others were known. Dr. Glogau says that there are about 170 members in his society and asserts that all are American citizens, but only 10 per cent. were born in this country.

Although the concert did not take place, the Social Scientific Society is giving private concerts, such as the Reicher lecture recitals, and is raising money from German sympathizers and German-Americans, of which New York City alone harbors more than eight hundred and fifty thousand.

The following letter tells of the Reicher lecture cycle:

> The undersigned invite you and your friend to take part at the second Emanuel Reicher Lecture-Cycle. The short presentation of the first meeting was a dazzling artistic and also social success. There are six evening lectures at intervals of two weeks; the first will take place February 8th, 1919, at 8:45 P. M. in the house of Dr. Otto Glogau. The price of the cycle will be $5.00. The names of new people will be taken by the secretary of the Society, Mr. S. R. Bursch, 416 Broadway.
>
> The Reicher evenings are always, above all, interesting. After the pre-eminent literary treat given by the prime movers of the modern Ger man stage and their sensitive interpreters, a very spirited tea will take place, and the superlative men and women artists will lend their musical talents. We expect, therefore, a very great attendance.
>
> FRIEDRICH MICHEL.
>
> Dr. Otto Glogau,
> 64 East 91st Street.

Letters, editorials, and articles have appeared recommending Wagnerian productions for the coming season. Among others, Henry T. Finck recommends giving this music at the Metropolitan Opera House, and some time ago W. H. Humiston wrote a detailed letter to one of the dailies, telling of excellent translations which would make "Tristan and Isolde" ready for immediate production.

The many reasons offered for giving the Wagner operas are all excellent and no attempt is made to criticise anything said FOR these productions. But what may be said is AGAINST them. The arguments advanced have not been errors of commission, but of omission.

It is all very true that Wagner was not on German soil when he wrote the famous "Tristan and Isolde," being an exile due to some truthful and unpleasant criticisms which he permitted himself to utter against the Prussian government. It is also true that the plot of "Tristan" does not have its action on German territory, which applies also to "Parsifal," "Rienzi," and "The Flying Dutchman." And it is also true, as several of the Wagnerian enthusiasts have told us, that we have many English translations at hand, namely, by Corder, Jamieson, Forman, Le Gallienne, and last, but not least, the late Henry Chapman.

Again it is true, as Mr. Finck said in the *Evening Post* of July 27th, that American artists are now easily available to make up excellent casts. In speaking of the Wagner performances given in England, he said: "How much better we could do in New York, with such singers as Geraldine Farrar (whose greatest role is *Elizabeth* in 'Tannhauser'), Olive Fremstad, Frieda Hempel, Louise Homer, Riccardo Martin, Clarence Whitehill, Florence Easton?" But what guarantee have we that Americans will be put in the casts and that any one of our excellent American conductors will be awarded the baton?

If the German or Austrian-born artists were to be put in the casts under direction of one of our enemy or "friendly enemy" conductors, we would be reinstating one of the greatest German propaganda movements in this country. Even if we had a guarantee that the operas would be cast entirely with Americans, we would still be encouraging German influence and would be catering to the German population still in this country. They would be attending the performances in droves and would not only be satisfying their desires in hearing their native music, but, what is infinitely worse, they would be provided with added places in which to meet.

Under present conditions most people will agree that it is hardly wise to make it possible for our enemies (which they are still) to congregate, even in places of amusement or education. The military authorities would take this attitude, at least until the peace treaty is signed, and Germany herself has forced us to consider military authority first.

Here is another phase: Wouldn't it be absurd to follow our usual custom at the Metropolitan by opening a Wagnerian performance with "The Star Spangled Banner?" The idea of playing our national anthem at an opera written by a composer belonging to an enemy race would not only be ridiculous but sacrilegious!

Some people have called attention to the fact that England is giving Wagnerian performances. But England has not the huge German or hyphenated population that we have, nor has she German conductors or German-born singers. It would be decidedly unpleasant to hear these German singers with a pronounced German accent endeavor to give us an American version in English of what Wagner meant to convey in German, a la Hohenzollern.

Recent interviews with various American artists indicate that they are not only willing, but anxious, to express their opinions against German music, and they should be heard, for after all, it is the artist who in expressing public opinion and public demand, is most potent. If our American musicians and musical audiences cannot see that music is not international, let

Problem of the Finns in America

By HERMAN MONTAGU DONNER

TIME was, say twenty or even fifteen years ago, when the Finn was universally regarded in America as the type of immigrant the country had every reason to welcome with open arms. He was generally acknowledged to possess the personal attributes which go toward making the most desirable class of citizenship, particularly in a land largely in the formative stage. Unlimited capacity for work, thrift, veneration for law and order, frugality, temperance, a deep sense of religion, and, what singled him out from all other immigrants, a singleness of mind and an indomitable perseverance that enabled him to triumph over difficulties that appeared insuperable to men of other nationalities—these were the qualities that won for the Finn the admiration and esteem of the people of the United States.

Unfortunately this high regard for the Finnish immigrant has not remained unimpaired. It has, in fact, suffered a considerable decline, within the last decade especially. A lecture tour in northern Michigan in 1911 first brought within my personal ken the extent to which the Finn in America has declined in the estimation of his New World neighbors and revealed something of the causes that had contributed to bring about the comparative disfavor into which he had fallen. American business men and employers with whom I then conversed, deplored the socialistic tendencies developed by the Finn and many expressed a positive antipathy to the latest comers from Finland as, if not downright Anarchists, at any rate belonging to the class of demagogues and agitators that contributed so greatly to labor unrest and disturbances more or less grave.

I am free to admit that in the eight years that have elapsed, American opinion so far as it has interested itself in the Finn at all, instead from veering from this viewpoint, has tended rather to become even more antagonistic. To be sure, this attitude does not show itself justified when we come to examine the facts closely, but we have to deal with facts as they are and not as we would wish them to be, meanwhile endeavoring first to explain this misconception about the Finn, and then to correct it.

In the first place, it is not to be denied that a great number, perhaps a majority, of the Finns who have emigrated to the United States during the last decade, either have belonged to the Social-Democrat party in the home land or have been induced to join the Socialist party—and that means, unfortunately, the extreme wing of it dominated by Morris Hillquit and men of his stripe—after their arrival here. And like the immigrants of other nationalities in similar case, these men are not brought into contact with the right influences that would bring them into touch with the real spirit of Americanism; indeed, they are from the start weaned away from such. Unhappily, this is brought about not merely through coming into contact with the more undesirable elements of our over-vaunted civilization, in the way of petty tyranny and graft, municipal corruption, and exploitation by sharpers of foreign as well as native extraction, always on the look-out for new and easy victims among the unsophisticated freshly landed. No, it is a deliberate procedure shrewdly engineered by the Socialists of New York and other seaboard cities to draw the newcomers into their ranks while yet mentally unformed and ignorant of true conditions in the land of their pilgrimage.

Not only is this done through propaganda directed toward them even before they leave their native shores, and increasingly pressed upon their minds after arrival, but through a practical organization which offers the immigrant certain associations, comforts and recreation. No other agency, least of all the U. S. Government which should be the first in the larger and saner view of its own interests to endeavor to attract the foreign visitor, so far has shown itself to possess the studied inclination or the means to provide for its prospective citizens.

Right here we strike the fundamental weakness of the whole American government policy towards its polyglot wards. Instead of actively interesting itself in their welfare from the moment of landing and seeing to it that every possible legitimate inducement shall be held out to them to familiarize themselves with the country of their adoption and the customs of its inhabitants, our government acts on the assumption that it has done its full duty in affording the immigrant a safe haven from the poverty or oppression from which he has fled. It forthwith washes its hands of him and leaves him to his own devices and the machinations of those who are eager to prey upon him in his mental confusion and helplessness in a strange land. Such a policy of aloofness is especially prejudicial to America as well as to the immigrant, in the case of a national as reserved in temperament and retiring in disposition as the Finn.

In the case of the Finn, the resultant loss is the more serious because of the many excellent qualities which he has to bring to the upbuilding of any State of which he becomes an inherent part. For of no nationality can it be said with greater truth that he has the defects of his virtues. The very steadfastness and perseverance of the Finn which enable him to triumph as a land settler and a farmer over obstacles which dismay the native American as well as other foreigners as evidenced in the abandoned farms of the Eastern states and the swampy and rocky terrain of Wyoming, degenerate into a stubbornness and obstinacy which make the Finn an element far more formidable and difficult to deal with in the ranks of the I. W. W. than any other nationality from which the Reds gain recruits. He will hold out to the bitter end against every threat and every manifestation of what he has been led to believe is tyranny or exploitation in any form.

This characteristic of tenacity so predominant in the Finn has its roots in centuries of conflict with the elements and a none too generous soil in his native land, intensified by the unmerited, but unremitting, oppression which he has had to undergo for the last quarter of a century at the hands of the Czar and the Russian bureaucracy. This oppression the Bolsheviki under Lenine and Trotzky have endeavored to intensify, a blind and suicidal policy which has also had the effect of increasing the Finn's native suspiciousness and distrust, with the natural result of making his lot as an immigrant still harder among an optimistic and easy-going people like ours.

On the other hand, this marked quality of the Finn makes strongly for the good of any community among which his lot may cast him, not alone in the reclamation of waste areas, but in the domain of citizenship where it blossoms naturally into loyalty to a cause or an ideal, to a government or an employer, once the immigrant has become convinced that fair dealing is to be expected from those holding relationship with him in an administrative or commercial or social capacity.

Such being the case, it can easily be seen that a grave responsibility rests upon us of the New World to see that the legitimate expectations of the Finn are promptly realized, especially in these days when Americanization is a topic co tinuously upon one's lips, if not, as yet, as u mistakably in our hearts, and the whole subje of racial relations rises to the dignity almost a creed. Indeed, is it right even to admit th "almost"? Gone are the days when it is poss ble, let alone considered commendable, for t American to tilt himself back in his metaphor cal arm-chair, fold his arms complacently, an say to the immigrant, be he Finn or Syria Gentile or Jew, with an air of condescension affronting as it is gratuitous: "I offer you broad land of boundless opportunities. If yo don't show your gratitude and make the best them, that is your concern. I wash my hands you!"

For that was pronouncedly the attitude Americans within my own sphere of observatio on the aforementioned lecture tour in 1911, an it is still largely the attitude of much of th American newspaper press, both in Ohio an in New York, to take two examples of which have taken personal cognizance in 1919, when comes to giving space to accounts of the doing of our Finnish brethren in patriotic purpos assembled.

The average native American has not ye awakened to his full responsibility in the ne order of racial relations, but the great exampl of such men of vision and broad sympathies a President Wilson and Secretary Lane and th departmental activities they have called int being in connection with the whole moveme for Americanization is already acting as powerful corrective to lethargy and conten indifference.

After all, the type of Finn against whom th American's face is set, is still in a decide minority among his countrymen in this la despite the increased influx in recent years Socialists from the former Grand Duchy. H will, as I have indicated, be in a still more de cided minority as soon as the means and ma chinery are at hand wherewith to acquaint hi with the true America instead of the perverte picture which the propagandists present to hi to enroll him among the malcontents. That al that is needed by a great many of the Finns ove here classed as Reds, is the opportunity to hav the truth borne in upon them, was evidenced t me by my own experience at the annual meetin of the Lincoln Loyalty League at Ashtabula Ohio, on Lincoln's Birthday. Then a crowde audience which included many Finnish extrem ists, listened respectfully to an address of min in which I spoke plainly along the lines of my written articles of the wrong they were doing both their adopted country and themselves by every act of agitation and violence.

The Finns proper in the United States num ber in the neighborhood of 300,000, and the favorite habitats are the three M's: Michigan, Minnesota and Massachusetts. The northern and northwestern States rank next, with New York and New Jersey claiming a fair percentage on account of the large number of Finns engaged in shipbuilding and in the building trade in New York City and immediate vicinity.

The iron and copper mining regions attract the poorer Finnish immigrant mainly as a means toward amassing sufficient money to enable him to start on the life for which he is most fitted and for which he instinctively longs—that of the open air, of the lumber camp and, above all, of the farm and the dairy. In his own home, the Finn is essentially an agriculturist, in whose breast the charm of the forest, the stream, the

An American View of the Industrial Unrest

By J. W. SULLIVAN

(Published in "The Organizer", Organ of The National Alliance of Employers and Employees, March, 1919)

'N the United States there is at present no general profound social unrest. There is indeed more surface clamor for radical ange than usual. There is continual news- per comment on the uncertainties of employ- nt on demobilization. There are strikes, ne of the largest being demonstrations of idarity in view of post-war adjustments. ere is alarm in the finance columns of the ess, especially over railroad problems. There e the customary wild outcries from the W. W., from the unorganized migratory orers, from the Socialist soap-boxers. There e the pessimistic views for the present and e bright prophecies for the future, through eir pet schemes of legislation, coming, as regu- ly, from the parlor and college panacea work- s. There are projects by politicians for new or parties. There are groups of farmers call- g for long lists of good things, for themselves to be got through law, combination, and what ey call cooperation. But to infer from these t unusual phenomena that the hundred mil- ns are worked up to painful anxiety over a obable social crisis would be misleading.

True it certainly is that more than ever the untry is considering the welfare of the wage- rkers, the rights of the plain people, and the mands of the farmer, who, it is to be kept in ind, is in general a land owner having in me respects his own particular interests.

How the highest welfare of the wage-worker to be reached is the point on which counsels e, of course, divided. The lesser anti-conserva- ve groups—I. W. W.'s, syndicalists, anarchists, t socialists—being picturesque and offering at mes thrill news stuff, obtain space in the press sproportionate to the possible outcome of their gitation. Their principal common character- tic is profitless disturbance. But the socialists n point to no permanent economic or civic hievements as results of their occasional suc- sses in gaining control of municipal govern- ents. Their maximum membership in legisla- res runs from next to none at all in most of the tates to an uninfluential half-dozen in two or ree of the Industrial States amid a hundred more of the two old party representatives. In e Federal House, one lone Socialist has for e last decade been present to testify to his arty's stagnation. The split of the Socialists n the war has deprived them of the best of their merican leadership. The loyal wing, while alling itself Socialist, would in France be lassified as Socialist-Reformist and not Social- t-Revolutionist. The fact that the voter in the nited States may exercise democratic rights nder the laws as they stand deprives the Ameri- an Socialist party of much of the reason for he existence of social democracy in backward uropean countries. Face to face with economic roblems, the American Socialist is baffled. He as no immediate practical project peculiar to is party. He has no ideal at once realizable. Ie has no revolutionary scheme workable. Hence the great public cannot be moved by his ppeals.

One cause for the comparative abatement of nreasoning or violent social unrest in America s that during the last four years immigration as been at a standstill. The riotous mobs of ndustrial centres, the supporters of the red ress, the orators and audiences of the type of ublic meetings which pass resolutions protest- ng at the wrongs of members of the interna- ional brotherhood suffering under far-distant espotisms—these in America are largely com- osed of non-English-speaking foreigners. At the Socialist national headquarters in Chicago most of the literary staff are translators of the proceedings and finance-books of numerous branches in which business is conducted in the languages of continental Europe.

In the last four years the mass of un-Americanized foreigners has diminished sensibly. It has not been fed annually, as had been the case, by more than half a million newcomers. It has learned English words and American ideas. Moreover, it has become possessed of that blight on revolution—lucre.

One vexatious vice, from the viewpoint of the revolutionist, is characteristic of the poor immigrants to America. They work. They have saved. A chapter of the war-times has been that the savings banks of New York and New England, indices for the entire country, have touched the highest level of deposits in their history, that small property holders have shown no evidences of panic by selling out, and that the sales of war bonds have with each issue surprised the Treasury officials by the unexpected multitude of buyers in small amounts. In these respects the new immigrants, in many cases the majority in munition works, have come up to the mark with the Americans. Before the war, that is, before the cessation of immigration, the stories of desperate poverty in America applied for the most part to the immigrants, ignorant of the country's language, friendless, and in the ranks of unskilled and ill-requited labor. In those circumstances were seen causes for a fierce social unrest, not entirely non-existent now, but much diminished.

The Americanization of the foreigner transforms him as a citizen. He may be none the less a social idealist, but he learns to await opportunity and to labor for his ends by orderly means. First of all he becomes a real American. An egregious error of Germany's rulers was the assumption that the children of German emigrants to America must be Germans in spirit, thought, hopes, intentions or kultur. But, if one looks over the list of casualties in the American army in the great war, he will note the numerous German names of unhyphened Americans, bravely performing their duty for a land and a government they love to call their own. The American fights for his country in war, and he pursues legitimate methods for its betterment in peace. As the foreigner is assimilated, he follows American example.

Remedies for unrest? They are suggested in the foregoing lines. Let America remain American, or let it welcome only people prepared for its citizenship. That's the first desideratum. Improvements in the wage-workers' lot are now freely and continuously operative, especially through the American Federation of Labor. The Federation has gained whatever good has been possible to the masses through either economic or political means. No other reform agency has equaled it in these respects. It decides, by democratic processes, what legislative measures are helpful to the working people, as well as practicable, and persistently advocates them. It has seen the rise and fall of many other organizations while in every decade for nearly forty years it has doubled or even quadrupled in strength. It holds back where necessary, and is derided as conservative; it pushes forward where possible, and is charged with reckless radicalism. But, on the whole, it has assisted in giving to the workers higher wages, shorter hours, better working conditions, a needed mass discipline, a clearly defined field of economic operation, and an honorable record in citizenship. It has gradually gained the respect of the general public and the confidence of a great body of the employers. It has justified its members and supporters in replying, when asked for social remedies, that industrial peace is promoted, on behalf of the wage-workers, by its methods more than by any other yet tried.

Significant, indeed, is the fact that throughout the war, and since, the American Federation of Labor has been unswervingly loyal to our country and the Allies.

Granted, the purposes of American trade-unionism do not immediately look to the last word and the final measure in the field of economics. All the thoughtful world is contemplating less drudgery for the overworked, greater rewards to labor, a nearer approach to the profits problem, the projects of national efequality in opportunity for the sons of men. The land question is, in the minds of the just, ficiency and the highest production in every industry. But, in those respects, who, or what party, has all the sure, the positive, the directly effectual "remedies"?

Efforts to Revive German Music

(Continued from Page 13)

one example show what the Germans recognize in it.

Max Merz, who, with Reinhold Warlich is doing all in his power to bring German music in our midst again and who on April 8 had twenty-one German and Swiss German dialect out of twenty-one songs on his program at Cooper Union, tells us in concrete form in the foreword of the program dated January 21:

> In the folksong, the poetic and musical peculiarities of the various nations have found their fullest and richest expression. Race and origin, thoughts and feeling, the meaning and destiny of a people, its joys and sorrows and all that is involved in the process of national evolution, live forever in these songs. Not only the soul and the story of a people live in its songs, but these songs also reflect the entire physical character of a country—its climate, the wealth or poverty of its soil, its mountains and valleys, its winds and waters, and its manners and customs. Dethroned and forgotten gods and heroes live again under new guises, memories of the past and prophecies of the future are to be found here.

Could anything be more definite? Mr. Merz tells us openly, in print, what the Germans think and feel about music.

Every truly American musician feels a strong antipathy against German music, particularly Wagner. They feel that the sentiment "you-can't-make-war-on-music" is a thing of the past. German idols lie shattered in the mud. Even the very finest of Wagner's music serves only to remind us of the bloody atrocities committed, of Zeppelin raids and of the untimely deaths of the brave Americans and their Allied brothers who fought, bled, and died on the "Wotan" line, the "Brunhilde" line, and the "Siegfried" line.

Do not imply for a single minute that Wagner, had he been alive, would have sanctioned any such use of the characters from his operas, but Wagnerian music is part of the German people, yes, part of their very souls.

Those who have striven to establish German music in this country are now more active than ever, and true blue 100 per cent. American musicians (not those who prate about their Americanism, but who live it) should do everything in their power to beat down all propaganda, especially the branch they are most capable of handling, which in this instance is music.

Bolshevism in the United States

THREE VARIETIES EXIST, ALL OF THEM INTER-RELATED

By W. J. GHENT

Article I.

BOLSHEVISM in Russia, for all its tyranny, violence and enforced starvation, is at least understandable as a historical consequence—as an outgrowth of czarism. The American article has, of course, no such genesis and background. It is a compound of many diverse factors, and it appears in many guises with varying degrees of intensity. It has three main varieties, easily enough distinguishable in typical cases. But not all of the individuals of the species run true to type; and some of them—perhaps many—are a complex of all three varieties. The grouping is as follows:

I. The Bolshevism of the I. W. W.'s.
II. The Bolshevism of the Defeatists.
III. The Bolshevism of the Romanticists.

THE INDUSTRIAL WORKERS VARIETY

The Bolshevism of the I. W. W.'s, menacing as it is to order and welfare, has at least the merit of being real and sincere. It is no pale reflex of the Russian article, but a native growth, with a dozen years of history before Lenine came to power. It is plainly a program of overthrow and destruction. It cares nothing about democracy. It rejects political action. To the democratic counsel to achieve social gains by a strike at the ballot-box, it replies with the anarchistic slogan, "Strike at the ballot-box with an ax!" It aims at dictatorship, and this dictatorship is not even that of the proletariat as a class, but merely of a small group of extremists themselves.

Its leaders were quick to see a kinship in the Lenine-Trotzky movement, and hailed with acclaim its victory. Subsequent developments, it is true, have not been wholly to their liking. A member of the hated rival, I. W. W. (the Detroit faction), making his way from America to Russia, was received into the inner councils of the duumvirate and has remained there; moreover, the working out of the soviet rule has not proceeded strictly according to program, and a disillusioned intellectual of the I. W. W. leanings, for some time a sojourner in Russia, has recently returned to tell the story of Lenine's humiliating compromises with the despised bourgeoisie.

But Bolshevism in Russia may flame or fade with small consequence to the I. W. W.'s. They have their own system to impose upon the unwilling, and this they are confident they will, when occasion ripens, establish and enforce with an utter disdain for compromise.

BOLSHEVISM OF THE DEFEATISTS

The Bolshevism of the defeatists is more complex. It is, moreover, plentifully tinctured with insincerity. Of course, the I. W. W. were and are themselves defeatists; but the defeatist variety of American Bolshevism flows through a wide range of individuals wholly apart from the I. W. W. The thing which is primarily defeatist (and not primarily I. W. W.) is a development of the war, and in its present state is a "hang-over" from that tremendous conflict. All the persons who were once active in attempting to obstruct the war against German aggression are now equally active in chanting the praises of Lenine and Trotzky. This particular variety of Bolshevism began in pro-Germanism, or ultra pacifism, or anti-nationalism, or any one of a number of other aberrations, or in some cases all of them together, and it shaped itself, more or less consciously, according to the progress of events.

When Bolshevism first appeared in Russia it seemed to promise a crushing defeat for the Allies and a victory for the Central Powers. Naturally enough, defeatism in the allied countries, and especially in America, associated itself with Bolshevism, and persons who a few years before would have looked with horror upon the practices of the Bolsheviki now professed to find in these extremists the hope and promise of a regenerated world.

Had there been no European war—had the Russian revolution broken out in time of world peace and yet followed exactly the course which it has taken—there would have been very little of this particular type of Bolshevism in America.

Take, for instance, the party Socialists. Leninism is an utter negation of almost everything for which the American Socialist party stood up to the time of the war. What we now know as Bolshevism was in effect condemned by a two-thirds vote in the national convention of 1912. This verdict was confirmed, also by a two-thirds vote, in the referendum which followed; and it was again confirmed, by an even larger majority, in the early part of the next year, in the referendum which unseated William D. Haywood from the national executive committee.

Yet the party Socialists, out of their insincere pacifism and their more or less sincere pro-Germanism, have now become the most violent partisans of the Bolsheviki. The testimony regarding Russia which before the war would have been accepted by Socialists as conclusive—the testimony of the Plechanoffs, the Axelrods, the Tschaikowskys, the Bourtzevs—that testimony they now reject and suppress, and instead they accept and disseminate that only which unqualifiedly supports the Lenine-Trotzky regime. They cannot be wholly blind to what in normal times they declared Socialism to be; they cannot be blind to the complete reversal of attitude they have taken, nor to the factors that led them to this reversal. Since August, 1914, they have been playing an insincere part, and every shift in the course of events has forced upon them some fresh insincerity.

By the same process all the other heterogeneous elements in the army of defeatism have been led to a more or less rapturous support of Bolshevism. In nine out of ten cases the change is, as in the case of the Socialists, a reversal of the pre-war attitude. The "radical democrat" of a certain kind finds now no difficulty in identifying democracy with a regime which dissolves a constituent assembly at the point of the bayonet, which excludes large elements from a share in government and which punishes with a firing squad the expression of a heterodox opinion.

The "conscientious objector" and the ultra pacifist apparently find nothing inconsistent with their views in compulsory service in the Red army. Presumably, if the thing is called "conscription" and is practiced in America, it is a very bad thing; but if it is called "revolutionary discipline" and is practiced in Russia, it is a thing most praiseworthy. The "humanitarian" of a certain sort is none the less a Lenine though he knows that infinite cruelties have been practiced upon Russians not favorable to the regime; and every furtive opponent of America and the Allies finds easy adjustment of his social principles with the violation of those principles in Russia.

The Bolshevism of the defeatists is a malevolent thing; and it is also, in considerable degree, an insincere thing.

THE ROMANTIC VARIETY

More menacing, because more infectious, an less amenable to any sort of treatment, is th Bolshevism of romance—of imaginative adve ture. It is the Bolshevism of restless souls wh are forever trying to escape the actual and th obvious by winged journeys into the realm of th remote and the wonderful. Its disciples ar utopians, Greenwich Villagers, wealthy person with idle hands and still more idle brains dilettante of various sorts, young persons freshl out of college, editorial writers on our so-calle liberal journals of "ideas and opinions"—an in describable assortment of the fitful and fretfu worshippers of the "Cult of Something Else."

That it is Bolshevism which now enthrall their souls is a mere accident of time and cir cumstance. It might be Babism or any othe thing. But Russian Bolshevism is big and wil and woolly and incomprehensible, and as a gen erator of thrills quite without a peer. And the it is remote. "Half the convex world intrude between," and the fascination of the unusual i in direct ratio to distance. What home-grow lady can be so beautiful, as Coleridge showed, a a lady from a far countree? and what circum stance or episode near at hand can compare i its wonder-working magic with the thing whic happens on the world's frontiers?

If Bolshevism were established in New Yor City, where so many of its romantic disciple dwell, it would at once and unanimously be voted "not a bit nice." Or if, not too far from the metropolis, there could be established a small scale model of the system to which from time to time its devotees could be committed for a "month's mind" of realization and reflection, its imagined glories would soon fade. The great Lincoln had a remedy for this kind of thing which might be employed with vast benefit. Of the advocates of slavery he once said (speech to an Indiana regiment, March 17, 1865): "When ever I hear any one arguing for slavery I feel a strong impulse to see it tried on him personally." So, too, for the advocation of Bolshevism; we need some provision for trying it out upon its romantic American devotees.

From the disciples of each of these varieties of American Bolshevism proceeds a steady stream of propaganda. Each variety has its medium. Despite observable differences among the sects, there is close cooperation in the use of material and argument. The Socialist and I. W. W. press make free use of the columns of the *Nation,* the *New Republic,* the *Dial* and the *Survey;* and the same falsehood or distortion does duty a score of times in its travels to the ultimate consumer.

It is a propaganda which, for unscrupulosity of methods, probably cannot be paralleled in American history. A person who conscientiously seeks out every word of dependable testimony relating to Russia from whatever source, cannot but be amazed at the editorial practices of these journals. There is deliberate suppression and distortion of the truth. The testimony of those who best know Russia and who have most right to speak for Russia is ignored, and only that testimony which accords with the editorial policy is printed or considered. For all who differ in their interpretation of Russian conditions, there are showers of denunciation, and there is especial and sweeping denunciation of the "capitalist press" for its alleged "lying" and "suppression."

(In the following articles I shall deal in some detail with this propaganda and its effects.)

(To be continued)

Intellectuals" Invading Labor Eield

(*Continued from Page* 8)

npaign for organization of steel workers, he s one of the prime movers in the inaugura- ı of that movement. Mr. West might get some portant facts about this matter if he would rn what part Mr. Gompers had in laying the ns for this work.

That Mr. Gompers, busy as no man ever has n in the ranks of labor with great interna- nal affairs that have taken him twice during year half way across the world to fight for nocracy, did not find the time himself to go into the steel cities to do personal work is bably the basis of Mr. West's complaint. is accusation is as unjust and unprovoked as that has been made against the veteran der in many a long day. Proof, if it is need- of the great burden of work Mr. Gompers borne during the war period was found in a nner striking but not pleasant when his re- t accident in New York compelled him to mit to a thorough examination at the hands a physician. He had driven the physical chinery to the last ounce of endurance! Ne- ct of labor's interests is a childish, puerile rge that if made in honesty is made out of h ignorance as can command the attention y of a publication and a public that cares re for stage thunder than for facts and that es lightning more than safety.

Fifth, we find that Mr. Gompers opposes secession from the American Federation of Labor. is is true. And what is more important and re to the point, the American Federation of bor opposes secession from its ranks. More- er, so does the United States of America. It y be well to point out once more for the benefit Mr. West and a half dozen others that the nerican Federation of Labor is a voluntary or- nization. Those enter it that wish to enter it, on vote of the Federation acknowledging mu- ality of desire. There must be complete agree- nt about the matter. Any organization may op out when it wishes and for whatever reason may have. The Federation possesses no power punish, except to withhold the fellowship and pport of its membership from those who re- unce the Federation.

ALWAYS FOR REAL UNITY

Mr. Gompers and the Federation oppose the ea of secession, but they cannot prevent secession. They understand that without unity there n be no strength and so they are for unity. full support were to be given secessionists the centive to unity would disappear and with it ity itself. This is one of the poorest of Mr. est's contributions to the uplift indictment of e American labor movement.

However, let us remember that it pleases cer- in persons to have secession talked about and encouraged, for among these persons there are held a variety of reasons for wishing to have the Federation disrupted and made powerless as a factor for bettering the lives of the American working people. Identities doubtless will occur readily to those who know the industrial situation.

Sixth, we have a regular blanket charge, typical of the blanket variety—a straight out assertion that the whole thing is wrong and hopelessly on the toboggan and due for the grand smash. Mr. Gompers has lost his leadership and that is all there is to it. This is truly a ponderous package. Thus, by fiat, does Mr. West settle the whole question of whether Mr. Gompers is the leader of the American labor movement. Argument is useless, fact futile. He who has to be "dragooned" into action for labor doubtless is no longer a leader. The only trouble with this is that Mr. Gompers was not dragooned, nor is his position of leadership different than it has been.

This alleged loss of leadership, we are told, is more true in the political field than in the industrial field. It is in the political realm, we are further instructed, "where labor's broader aspirations must be fulfilled." Not only has Mr. Gompers failed in this "broader" field, but Mr. Wilson has failed also, the implication being that these two men have failed *together*. Thus we see what marvelous information may be had by reading the writings of the truly studious in the great journals of "light and leading".

Of course Mr. West believes that something must be done about it. The workers have a great doubt—a regular capital D doubt—about President Wilson and Mr. Gompers. "It will take more than the pardoning of Eugene Debs or the urging of a liberal programme on a hostile Congress to remove this doubt." So. Look what we have in the house! It must be here, because Mr. West says it is here. And everything is going to crash in a grand smash. Mr. West has it on his schedule for Atlantic City, June 9. It is nice to be able to schedule things that way. It makes for a reputation for order and scholarly precision.

Mr. West, however, is careful enough to leave a back door open, and this he does at the opening of his article, possibly because of a notion that it may be forgotten by the time the conclusion is reached. "It is not a question of the sentiment of the rank and file", we are informed. "It is a question of organizing that sentiment and then breaking through the obstacles that prevent its free expression." Since the convention "is always boss ridden" Mr. West foresees difficulties.

FREE FORUM OFFERED

It may be rude to say to this that the American Federation of Labor in convention offers a forum than which there is no freer in America. It is this very freedom that has shattered the dream of so many disruptionists and placed the tombstone carefully over so many chimerical notions. Ideas go into that convention to get hammered all around the ring. If they come out sound and proven they get a place. If they break under the strain, then the Federation knows that it has avoided something that ought to be avoided. This is fact and not opinion. Proof is written all through the record and may be had by any one who cares to attend a convention and watch with both eyes.

Atlantic City will be like other conventions. Ideas will go into the ring and they will get hammered around. Ideas that stand the test will be sifted from ideas that do not. Beyond that there is nothing to be said. There is no dark secret, no deep and ugly plot.

Just one more fact remains to be chronicled. Among those who seek the destruction of the American Federation of Labor by means of attacks on President Gompers, such as the one Mr. West has made, there is a strange mixture of pacifism, Bolshevism and I. W. W.ism.

When *The Nation* wished to report the Pan-American labor conference at Laredo, Texas, Nov. 13, 1918, it sent a writer who at once proclaimed his pacifist views and who left the constructive gathering there in progress after having spent but one restless day in the vicinity. *The Nation,* in common with some other publications of that type, and in common with Mr. West, has long been possessed of a desire to worship at the shrine of Something Else whenever the American Federation of Labor was concerned. The I. W. W., Bolshevism, pacificism—anything except an ordered, constructive progress toward greater things for mankind —so it goes with the fitful, fretful ones.

But the American Federation of Labor IS a constructive organization. It DOES know where it is going. And it is not going the destructive, fruitless route, even though that route may be urged by the most "intellectual" and scientific critics. American labor prefers getting somewhere to vague experimenting along doctrinaire lines. It prefers arrival to derailment. It is likely to continue firm in the conviction that arrival is the thing to be desired, the "intelligentsia" to the contrary notwithstanding.

Problem of the Finns in America

(*Continued from Page* 14)

n, and even of the boulder-strewn moor and eadowland sings in an everlasting undertone, id draws him to those regions in America which rrespond most closely to his native climate id soil.

Let our native Americans then seek to approach the Finlander from this poetical and lealistic side of his nature, realizing that the rocess of Americanization is a twofold one in hich he has as much to receive as to give, and iat while he can point with pride to the almost boundless opportunities and broad tolernce this land has to offer the newcomer, he imself has much wherefrom to draw profit from he deeper nature of the immigrant whom it is is privilege soon to be able to call "brother" the spiritual sense no less than in name.

So shall the true racial relationship be established in the United States, even as the League f Nations passes in Europe from an iridescent ream into glorious reality!

Is America Worth Saving?

(*Continued from page* 6)

ness to make use of the teachings of past experience, or to read the lessons of history and apply them to the problems of today. The real reactionary, who is always an egoist, insists that his own feelings, his own desires, his own ambitions, take precedence over anything that all the rest of mankind may have said or done or recorded. He wishes to start life all over again in a Garden of Eden of his own, with a private serpent and a private apple. The true progressive, on the other hand, is he who carefully reads history and carefully examines the experience of mankind in order to see what lessons have already been learned, what mistakes need no be repeated, and what principles of organization and conduct have established themselves as sound and beneficent. Upon all this the progressive builds a new and consistent structure to meet the needs of today in the light of the experience of yesterday. He does not find it necessary to burn his own fingers in order to ascertain whether fire is hot.

America will be saved, not by those who have only contempt and despite for her founders and her history, but by those who look with respect and reverence upon the great series of happenings extending from the voyage of the Mayflower to the achievements of the American armies on the soil of France, and upon that long succession of statesmen, orators, men of letters, and men of affairs who have themselves been both the product and the highest promise of American life and American opportunity. The Declaration of Independence rings as true today as it did in 1776. The Constitution remains the surest and safest foundation for a free government that the wit of man has yet devised. Faithful adherence to these strong and enduring foundations and a high purpose to apply the fundamental principles of American life with sympathy and open-mindedness to each new problem that presents itself, will give us a people increasingly prosperous, increasingly happy, and increasingly secure.

Just so soon as the American people, with their quick intelligence and alert apprehension, understand the difference between social reform and political Socialism, and the distinction between an internationalism that is false and destructive of patriotism, and an internationalism that is true and full of appeal to every patriot, they will stamp political Socialism, together with all its subtle and half-conscious approximations and imitations, under foot as something abhorrent to our free American life. They will prefer to save America.

The Failure of Public Ownership

SOCIALIZED INDUSTRY THROUGHOUT THE WORLD A FAILURE—WORST OF ALL IN DEMOCRACIES

By F. G. R. GORDON

MR. HARRY W. LAIDLER, a state socialist, is the author of a booklet of forty-eight pages entitled "Public Ownership Throughout The World." It would be difficult to pack more misinformation in forty-eight pages. Mr. Laidler says that governments have urged public ownership as a means of raising revenue and to increase economic and military efficiency. Governments may have attempted this, but they have always failed miserably. Governments everywhere require from two to three men and from two to three dollars to accomplish the same result that private ownership accomplishes with one man and one dollar. And this I propose to prove absolutely.

In the first place Government ownership—or to be more correct, State and Municipal Socialism—is characterized everywhere by poor service, low wages, high rates and large annual deficits. This is true because what is everybody's business is nobody's business and, therefore, the only business of any government official in the conduct of industry is to draw as much pay and perform as little work as possible. Thus we find that in a democracy like New Zealand, or the Australian states, it requires three men to perform one man's labor, and this has resulted in the highest debts and the highest cost for government in all the world. Let us take a few items that Dr. Laidler makes prominent:

MAIL SERVICE

Socialists generally point to the United States mail service as a fine illustration of the "success" of socialized industry. Our Post Office is the worst managed big business in this nation. It has a billion complaints a year, and not the slightest attention is paid to most of them. The "know-it-all" clerk you will find in the post office and not in the private-owned railway, telegraph or telephone companies. From 1865 to 1915 our socialistic post office lost more than $700,000,000 directly and indirectly, or an average of $14,000,000 a year. But from 1900 to 1915 the losses averaged more than $18,000,000 a year.

Recent government reports from Australia show that the post office, telephone and telegraph are all going from bad to worse and that the deficits are increasing while the service is degenerating.

In connection with our own post office, it may be well to mention the fact that it pays nothing for the space it occupies in the public buildings, nor does it pay the salary of the Postmaster General and his staff, or the auditor and his staff, hundreds of highly paid officials who draw their salaries from the Treasury Department. Thus we see that the Post Office Department *grafts* upon the Treasury Department more THAN A MILLION DOLLARS A MONTH. By ignoring these facts and the other overhead costs, the state socialists make it appear that the post office pays. *It never paid and it never will pay under government operation.*

TELEPHONES

Every one who uses the telephone or the telegraph in Europe, Australia, or elsewhere, complains of the "wretched service." And yet there is not a great government telephone system in all the world that is able to make both ends meet. Under normal conditions the British telephone system has from $3,000,000 to $4,000,000 annual deficits. For many years Germany has owned and operated the telephone. She invested $700,000,000 in the system. Wages there have averaged only one-third of what they are in America. The service has always been very poor. Germany, before the war, had an operating income of $28,000,000. But she had to pay $24,000,000 annual interest charges; she lost $12,000,000 a year from displacement of taxes and other overhead charges made an annual loss of $5,000,000 and more.

France is not much better off. She loses several millions each year, gives execrable service and the rates are actually higher than in this country. Wages on the socialized telephones of Europe average from $2.60 per week in Belgium to $5.20 in Switzerland, and every socialized telephone in Europe is losing money. Before the war the Paris rate was $77.20 a year. More than 90 per cent. of the telephone users in the United States pay less than the average Paris rate, yet wages in this country, in 1914, averaged a little more than 400 per cent. higher than the rate in France.

This nation has three-fourths of all the telephones in the world. Chicago has more telephones than all of France. Even in Japan, where wages average $76 a year, the cost for telephone service under the blight of public ownership is higher than in Massachusetts. Great Britain and Ireland have only 650,000 telephones, but we are increasing the number of telephones in this country by 700,000 a year!

TELEGRAPH

The United Kingdom socialized its telegraph system in 1870 and from that date to the beginning of the Great War, lost more than $200,000,000. It is not the masses in any nation that use the telegraph, for we find that 96 per cent. of all the messages that go over the wires of Great Britain are sent by only four per cent. of the people.

While the wages of the telegraphers in Europe average only one-third that of American operators, the telegraph rates are practically the same. In America we have excellent service. In Europe it takes on the average four times as long to send a telegraph or a telephone message as in this country, and if time is worth anything, our rates are less than half the rates in Europe. New Zealand lost before the war an average of $313,000 a year on its wire system and Australia lost almost $800,000 annually. Since the war the losses have increased enormously.

RAILROADS

Mr. Laidler makes a general statement as to the railways, and it is most unfortunate for him that he picks the Italian railways as an illustration of "going over" to socialism. In 1905 the Italian government socialized 8,386 miles of railroads. Under private ownership these lines paid small dividends; paid millions in taxes to help support the government and gave good service. Under public ownership the government, up to the breaking out of the war, had added 50,188 hands to the pay-roll without adding a single mile of new line. The railways have become politicalized from end to end.

While the wages average about one dollar a day, the freight rate is twice as high as in this country, and the annual average losses from 1905 to 1914 were from $35,000,000 to $42,000,000, to say nothing of the $10,000,000 or $12,000,000 lost in taxes. Since the war the losses have increased tremendously and the government had to vote $360,000,000 recently to rehabilitate the whole system. The Italian railways under government ownership are capitalized at more than $198,000 a mile, as compared with only $66,000 in this country, yet our socialists are yelli about "watered stocks"!!

The Austrian railroads are even worse th those of Italy and the losses are greater. T freight rates on the socialized railroads of E rope average from 90 to 300 per cent. high than in this country, though the wages are le than half those paid here.

PRIVATE OWNERSHIP

Under private ownership we enjoyed t cheapest freight rates in the world, and the be service. We obtain nearly $160,000,000 a ye in railroad taxes. In 1914 our privately-own railways carried a ton of freight one mile f .72 cents. The rate in Germany was 1.37 cent in France, 1.33 cents; in Denmark, 2.33 cents, more than three times as high as our rate, ye on 1,216 miles of state-owned railways, Denma lost, in 1914, about $1,300,000. In Austria t socialistic rate is 1.50, or more than twice high as here and those socialized railways lo more than $50,000,000 a year before the wa Today they are bankrupt.

AUSTRALIAN SOCIALISM

Australia and New Zealand have plunged int state socialism more extensively than any othe nations, and as a result they have become th champion debt-ridden states of the world. O January 1, 1914, the public state and feder debts of those countries amounted to $1,936,000 000. On that date the combined debt of our 4 states and of the Federal Government amounte to $1,313,000,000, round numbers. This was a average debt of $65 for every family in Americ but in New Zealand and Australia it was a average debt of $1,555 or *twenty-four time greater than in this nation.*

For the year ending June 30, 1914, New Zea land, with 1,152,000 population, actually raise and expended for the year $57,550,000. A New York State has nine times the populatio of New Zealand she would have expende $517,000,000 for one year's expenses had sh plunged into state socialism to the same exten that New Zealand has! Like that prospect?

Australia, with less than half the populatio of New York, taxes the farmers' land $19,000,00 a year. Imagine the farmers of New York pay ing $36,000,000 a year just for a land tax. Th entire expenses of Australia in a year for stat government averages more than £43,000,000, o over $200,000,000, with one-half the populatio of New York.

And this is what state socialism has done i the most democratic countries on earth.

MUNICIPAL OWNERSHIP

Mr. Laidler brags about the fact that there are 1,562 socialized electric lighting plants in the United States. The privately-owned plants numbered 3,659, and they had an output of kilowatt hours according to the United States census of 1912 of 10,995,436,276; while the socialized plants had only 537,526,730. The census also shows that the gross revenue per kilowatt hour was: Private plants, 2.54 cents; socialistic plants, 4.32 cents.

This shows that the municipal-owned plants charged *70 per cent.* higher rates than the private plants. And the private plants *pay taxes,* while the municipal plants escape all taxation.

Mr. Laidler refers to Germany as a nation that has "gone over" to socialistic things. She sure has. In 1914 we find that the municipal debts of the great German cities were the highest in the world based upon wages and general income. For instance: Dusseldorf had a debt of

50 per family as against one of $140 per mily in Chicago, and the true measure would $1,500 in that German city as against only 40 in Chicago and $90 in Detroit. In Munich e debt on the same basis was $1,250, and in rankfort $1,400 per family, against $140 in th Chicago and Milwaukee.

And yet, in spite of the vast socialistic hemes of the German cities we find that the lief for the poor was increasing at the rate of 0 per cent. for each ten-year period since 97! So, with all of their boasted municipal cialism the cost for paupers in every nation in urope increases twice as rapidly as in this ation with little socialism compared with urope.

U. S. RAILWAYS

Mr. Laidler seems to glorify the government anagement of our railways, and he boasts of e discharge of the $5,000 to $20,000 managers. *rue, and because of this the cost of operating e railways has increased enormously.* Under overnment operation we had our passenger rvice reduced by 30 per cent. and were forced put up with vastly inferior service. Passener rates also were increased 50 per cent. and eight rates 25 per cent. (25% in addition to e 15% allowed the roads before they were ken over).

Then Congress created a revolving fund of 500,000,000. They rightly called this a revolvg fund for it quickly revolved itself out of ght! Now Congress will have to vote another evolving fund of $750,000,000 and it will take bout six months for that to disappear. Our ransportation bill for 1918 was *$1,500,000,000 ore than it was for 1917 under private ownerhip and management.* And on top of this we ill have to pay $212,000,000 in direct losses. his should be an object lesson to every sane merican to steer clear of socialistic ownership nd operation of anything.

WHY WE SHOULD FIGHT SOCIALIZATION OF INDUSTRY

If we socialized the American railways within ive years we would add 500,000 men to the payoll without adding a mile of extension. We vould also add 80,000 to 100,000 officials who vould politicalize the lines. Within ten years ve would double the cost of operation. Who out the wealth producers of the nation would ay for this added burden? A bureaucracy is ever efficient, never economical, never progresive. It is always wasteful, always extravagant, nd always becomes politicalized.

It is the high cost of government that makes he high cost of living. Every family in Amerca this year will pay $1.66 a day just for the un of being governed. How would you like to ay two or three times as much? You will pay wo or three times as much if you begin socializng industry.

This nation and its people are not much different from any other people, especially those of Canada and Australia, and in the two latter countries, through socialization of railways, telegraphs, telephones, meat industry in Australia to some extent, also coal mines, sugar industry, etc., etc., they have piled up national debts that are from ten to twenty-five times higher than they are in this country with corresponding cost for annual interest charges. Mr. Laidler and the rest of the state and municipal socialists want us to travel the road that leads straight to national and municipal bankruptcy; that burdens the people with enormous costs and if persisted in leads to industrial stagnation and decay.

The question is naturally asked why are the charges and the cost of operation so much higher under socialistic management as compared with private management and ownership?

Now take the simple matter of supplying water to the citizens of a great city. Most people naturally suppose that the business is so simple that a city ought and should supply water at a cost much less than a company that wishes to make a profit. Facts, however, show that the cost of administration has always increased after the municipality has taken over the plant.

The great Metropolitan Water Board of London actually exceeded the combined cost of the eight companies which it replaced. And it is a well known fact that the cost for pumping water in our American cities has increased 25 per cent after socialization.

When Switzerland acquired the five railway companies and consolidated the staff into one administration, the State Socialists shouted with glee at the supposed economy. But the official reports show that the staff now, under the blight of bureaucracy, is much larger and far more expensive than the five combined staffs under private ownership. And what I say of Switzerland is true of every railway, telegraph and telephone that has been socialized throughout Europe and the Australian states.

Under government ownership the effort always is being made to "pass the buck" to some other department. Socialization always reduces the ambitions of young men who enter the government service, for public ownership always discourages initiative and independent judgment, and the civil service of bureaucracy actually works for incompetency in any and every great business enterprise that government attempts to operate.

These very evils are reduced in an autocracy. Thus we find that on the socialized railways of Japan there is a large degree of efficiency because there is no democracy whatever. The railway workers of Japan are not permitted to join a union or any organization. However, the people of Japan paid .90 cents per ton per mile for the transportation of freight as against .72 cents in this nation in 1914, though the wages on those socialized railways are only $115 a year as against $810 in America (1914).

The blight of a socialized industry will arrest progress, and in time abolish it entirely. And the blight of a bureaucracy is always far worse in a democracy than in an autocracy; and it is far more dangerous too, because in the former it will lead straight to the *dictatorship of the proletariat.*

SOCIALIZED TROLLEY SYSTEMS

The proposition of the socialists and public ownership advocates to socialize the street railways, due to the fact that the War Labor Board has increased wages of street railway employees from 25 to 60 per cent, and other costs have increased from 50 to 125 per cent, and the corporations are asking for increased fares, calls for serious consideration.

The socialistic elements tell us that the interests of owners and public are diametrically opposed. If that statement be true, then it is none the less a "fact" that the interests of the owners of the shoe factories, are likewise opposed to the interests of those who wear shoes, simply because one party sells and the other buys.

It is claimed that private ownership seeks to congest the people in our cities. Just the opposite is the truth. Congested working people do not ride, they walk, whereas men and women who live in the suburban districts *do ride.*

In Europe however, with the zone system which prevails on all the socialized systems, congestion is a mighty evil, made so by the very zone socialistic system. I say socialistic system because it was brought about by municipal socialists.

EXTENT OF SOCIALIZATION IN EUROPE

One would think to read the publications of the Rand School or the National Public Ownership League, that all the street railways of Europe were already socialized. Here are the facts:

Out of 85 cities in Germany having a population of 50,000 or more, only 36 own and operate their street railways, and out of these 36 only *nine* have ever been able to make both ends meet. In other words, 75 per cent of the socialized street railways of Germany were a financial failure before the war; and to-day they are practically bankrupt. These German socialized street railways charged two and a half cents fare with no transfers and the two and a half cents in Germany before the war was equal to an *eight* cent fare in any city in America, yet, the wages on those socialized lines were barely one-third of the rate, here in 1914.

Very few street railways in Italy, Denmark, Sweden and Norway are socialized and those that are have proved a miserable failure.

British street railways seem to be the ideal of all the socialists and half-baked socialists everywhere. In the United Kingdom 136 street railway systems were socialized and operated before the war.

The municipalities had invested $226,000,000 in these lines. Twenty-seven of them were actually losing money, that is, they were unable to make both ends meet and had the overhead costs as a direct loss. In 1913, the socialized street railways of London lost $750,000 without reckoning displacement of taxes. Since the war, they have been losing more than a million dollars a year. They are in debt for more than $49,000,000 (1913). And it is reported that the present debt is nearly $60,000,000. The zone system prevails in all the cities and as a result you pay an average of twice the cost to ride in this country.

In 1913 the city of Glasgow received only $67,000 in taxes while the city of Boston, serving about the same number of people received $1,394,611. And in addition to this they expended nearly $300,000 in paving, cleaning snow from the streets, etc., and paid $677,900 for rentals for subways.

Labor receives out of each fare in the United Kingdom less than one cent, while in this country, in 1914, labor received 2.05 cents. (It is not far from two and a half cents at present in this country and a little less than one cent in the United Kingdom.)

SOCIALISM IN AMERICA

Seattle has for some years owned and operated thirteen miles of street railway and she has lost $75,000 a year. The service is poor, compared with the private lines and the fare is the same.

In San Francisco there is a socialized street railway but no one knows what the actual losses are, for municipal book-keeping never keeps books. But by ignoring $5,000,000 of capital and other costs, the municipal socialists try to make out a success for this socialistic line.

The failure of state and municipal socialism throughout France has placed a damper on any further socialization of industry and so we find that Paris and other large cities are dealing with private corporations for their transportation problems.

The socialization of a street railway anywhere in this country will transform a great industry from the domain of business to that of politicalization and this will mean here, as it has meant everywhere, poor service and large annual deficits.

Four years ago President William Mahon and the great street railways union in the city of Detroit successfully fought municipal ownership of the Detroit Street Railway lines and I may mention the fact that President Samuel Gompers told me in Portland, Maine, in 1916, that he was absolutely opposed to the socialization of industry whether it be street railways or anything else.

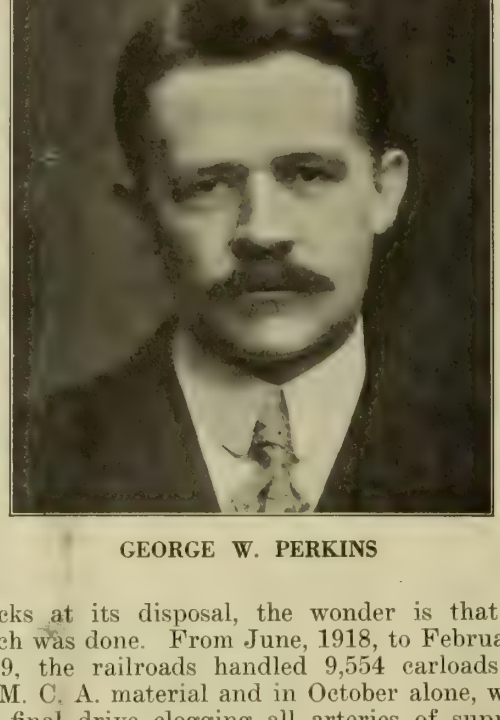
Vast War Work of the Y. M. C. A.

GEORGE W. PERKINS REPORTS ON ITS ACTIVITIES WITH THE AMERICAN EXPE[illegible]NARY FORCE AN[illegible] TELLS OF THE IMMENSE PROBLEMS SOLVED

By EUGENE DOANE

NO more striking epitome of the Young Men's Christian Association's war work with the American Expeditionary Force could be had than George W. Perkins's pregnant words: "The Y. sought service, not fame." Those six words aptly summarize the report of a special committee of the War Work Council sent to Europe in December, 1918, to study the work "and do everything possible to further its efficiency." Mr. Perkins was aided in this task by Mortimer L. Schiff, F. S. Brockman and John R. Hall.

Only the Y. M. C. A. work in France, England, Germany and Italy was considered. No account was taken of the problems tackled at the camps in this country; for the Navy; for the prisoners of war, nor the accomplishments among our men with the Allied forces in other parts of Europe. The report should be a source of gratification to every one who contributed to the Y. M. C. A. war chest and it indicates, though in not so many words, that much was done toward winning the war by sustaining the morale of our fighting men.



No great business—except that of making war itself—ever met and solved so many perplexing problems as did the Y. M. C. A. From more than 150,000 candidates, 11,229 were selected for service overseas and last month 8,350 of these (5,693 men and 2,657 women) still were in Europe caring for our boys on duty there, lightening their leisure hours and conducting athletic and educational campaigns of unparalleled magnitude.

"That the workers as a whole were brave and unselfish is shown by the fact that 14 Y. M. C. A. secretaries were killed and 126 others were wounded while engaged in their work," says one part of the report.

Analyzing the greatest problem of all, that of obtaining supplies, Mr. Perkins says:

> There was a time when the war was at its height, that it cost the Y. M. C. A. almost as much to get an automobile from the United States to France as the automobile itself cost in the United States. The same was true of canteen supplies. One day the Y. M. C. A. could get supplies sent on a Government boat without freight charges. The next day the only way to send them was to pay almost as much in freight as the goods cost. It will be readily seen that it was almost impossible to arrive at anything like an average cost price at which to sell these goods.
>
> The Y. M. C. A. never solicited money for the purpose of giving away its canteen supplies. The constant policy of the Y. M. C. A. was to sell canteen supplies as nearly as possible at cost, and to bend every effort, when fighting was in progress, to furnish the men at the front with supplies free of charge where it was at all possible to get the goods to them.
>
> Some have criticized the Y. M. C. A. for not giving away more articles, such as cigarettes, chocolate, etc. Its policy has been not to give away generally but only in special and needy cases.
>
> From June, 1918, to April, 1919, the Y. M. C. A. handled in France alone upwards of 2,000,000,000 cigarettes, 32,000,000 bars of chocolate, 18,000,000 cans of smoking tobacco, 50,000,000 cigars, 60,000,000 cans of jam, 29,000,000 packages of chewing-gum, and 10,000,000 packages of candy. These are only a few of the items handled, but the size of these figures should convince anyone that it would be financially impossible for the Y. M. C. A. to give its supplies away generally.
>
> Furthermore, the army does not favor any such policy. It thinks that it is far better for the men to spend their money on such articles as these, than to spend it in other ways. For the most part the men hold the same view.

Transportation of supplies, entertainers, workers from the base depots was another tremendous problem and with only 700 motor

GEORGE W. PERKINS

trucks at its disposal, the wonder is that so much was done. From June, 1918, to February, 1919, the railroads handled 9,554 carloads of Y. M. C. A. material and in October alone, with the final drive clogging all arteries of supply, there were sent forward 765 carloads of general supplies, 86 cars of flour, 148 cars of sugar, 150 cars of tobacco, 59 cars of chocolate, 63 cars of raw material for the Y. M. C. A. factories and 144 cars of lumber and hut materials.

Speaking of the Y. M. C. A. factories, the report says:

> Early in the war, because of its inability to get certain supplies from the United States or elsewhere, the Y. M. C. A., through the courtesy and with the assistance of the French Government, succeeded in reopening a number of factories, the Y. M. C. A. supplying the raw materials, supervising its manufacture, and taking the entire product. The 20 biscuit factories, 13 chocolate factories, 3 candy factories and 8 jam factories operated in this fashion, when working at their maximum, produced monthly:
>
> 10,160,000 packages of biscuits.
> 7,400,000 tablets of drinking-chocolate.
> 3,500,000 bars of sweet chocolate.
> 1,000,000 bars of milk chocolate.
> 3,800,000 bars of chocolate cream.
> 1,500,000 nut-covered chocolate rolls.
> 3,100,000 cartons of caramels.
> 2,000,000 tins of jam.
>
> For the manufacture of chocolate, the Y. M. C. A. had to transport cocoa beans and wooden material for the cases, as well as the paper in which it was wrapped. For the manufacture of biscuits, it had to transport flour, sugar, bicarbonate of soda, almonds, peanuts, figs, etc., as well as material for cases.
>
> For the manufacture of paper and envelopes, it was necessary at times to transport the pulp of which the paper was made, the machinery for its manufacture, lampblack for the printing-ink, gum arabic for the mucilage on the envelopes, and talc with which to surface the paper.
>
> For example, it employed the paper factories in Tolosa, Spain, to manufacture paper. One hundred million sheets were made there. This employed practically the entire town, men, women and children. And yet the output was only one-third of the total amount of writing paper manufactured in France by the Y. M. C. A., while large additional supplies were sent from New York. In all, over 400,000,000 sheets of writing paper, with the necessary envelopes, and 16,000,000 postal cards were distributed to the soldiers.

Still another tremendous business problem was the supply of buildings, yet in France alone on

[illegible] last, the Y. M. C. A. had in operation 587 buildings it had erected itself; 596 others it had leased and 782 centers in tents and army buildings. And all of them wide open to every man in uniform without question as to creed and every welfare organization welcome to utilize the facilities. Athletic activities present almost as staggering figures as the factories when it is considered that the Y. M. C. A. provided 575,000 baseballs; 140,000 bats; 65,000 gloves; 85,000 indoor baseballs and 75,000 footballs.

Another gigantic enterprise was the theatrical branch, with 702 American entertainers and 22 French entertainers playing to 800,000 men in vaudeville shows alone and 95 American troupes giving as many as 4,350 performances in one month. All this was outside of the soldiers' own shows, for which the Y. M. C. A. play factory furnished in March last alone 4,535 costumes, 18,734 songbooks, librettos and texts for plays and 2,636 musical instruments.

Of course motion pictures are a mainstay of amusement and since August, 1917, the report says, more than 90,000 such exhibitions have been given in France alone and the attendance is estimated at 50,000,000 men. More than 4,000,000 feet of film have been sent to France, and there are 965 operators giving all their time to this work, as well as part of the time of more than 500 secretaries.

"These entertainments have dispelled the dreary evenings of homesick boys," says the report, "and done much to maintain their normal mental condition. The movies are given in every sort of building and in the open; abandoned chateaux, underground chambers of forts, hospital wards, village theatres, airplane hangars, leave area casinos, transports and Y. M. C. A. huts."

Other important activities of the Y. M. C. A. detailed in Mr. Perkins's report are those in the leave areas where 401 men and 472 Y. M. C. A. women are busy and the sightseeing department at other places for the men with only short leaves.

Distribution of reading matter, too, assumes tremendous proportions when considered in the aggregate. Some items are: 5,000,000 bound volumes; 2,000,000 magazines; 10,000,000 newspapers; 4,000,000 pieces of religious literature and 1,000,000 copies of a 96-page song book. All this, not counting the work done for the American Library Association.

Up to April 1 last, the Y. M. C. A., without charge of any kind, handled 323,432 remittances home for the men totalling $19,542,396.46.

Concluding his report, Mr. Perkins says:

"The Y. M. C. A. never hesitated to tackle any job it was asked to undertake; it did not sidestep any task it was asked to perform. It took the position that it was in Europe to do all it could, as best it could; that when it was called on to render service of any kind, its duty was to respond in the same spirit that the soldiers did and not hold back because adverse circumstances might make it impossible to meet with maximum success. The Y. sought service, not fame. Surely every contributor of money will approve the Y. M. C. A.'s course in this respect.

"The vast work it has accomplished and is accomplishing in Europe can never be gauged at its true worth except by those who have seen it in its entirety. Whatever imperfections may have existed, the results achieved are unquestionably so beneficial as to be a source of deep satisfaction to those who so unselfishly served the cause and those who so generously contributed the funds that made the work possible."

Tyrrel Print, New York. 336

The National Civic Federation Review

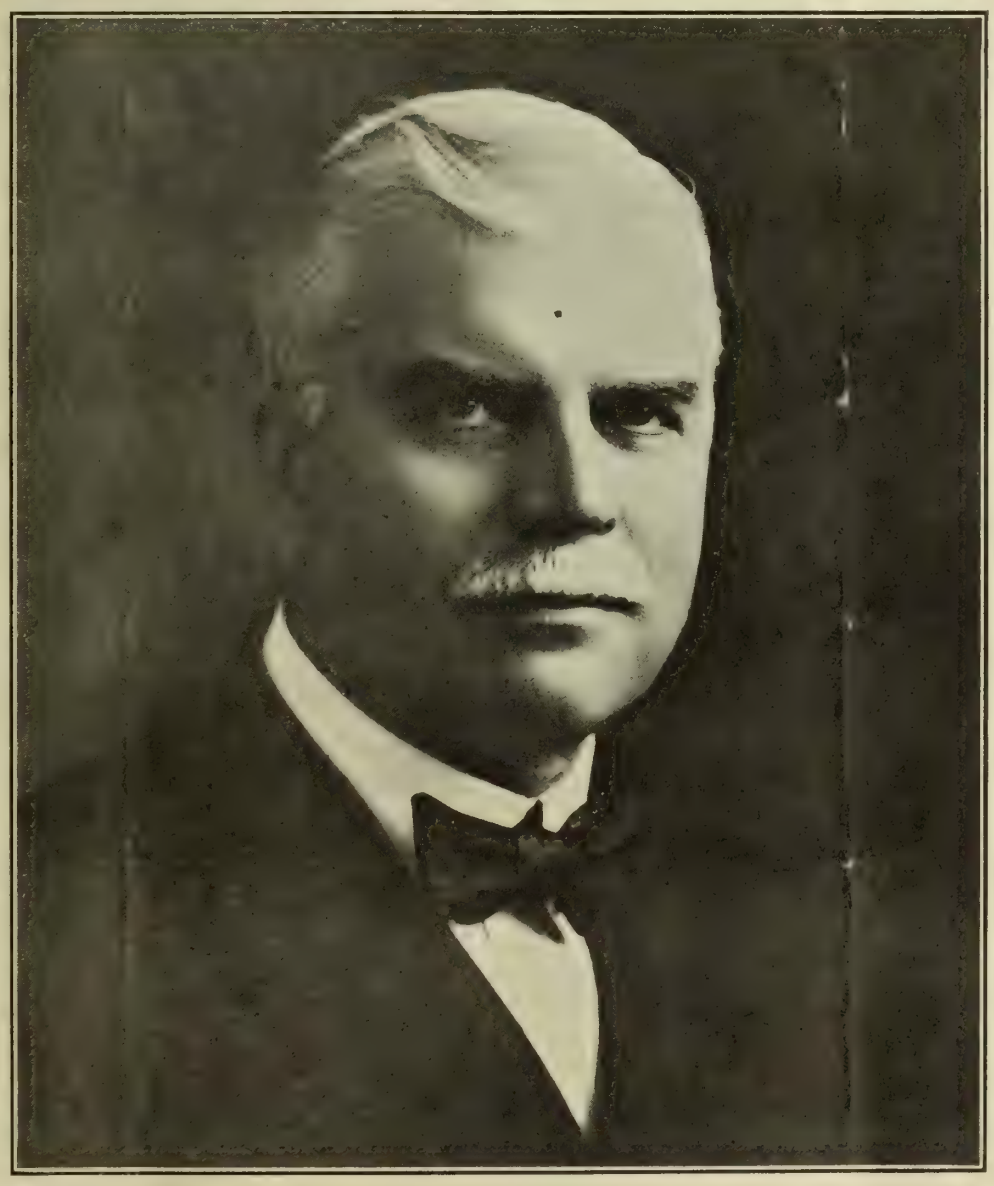
ol. IV. NEW YORK, JUNE 5, 1919 No. 15

[F NOT COMPULSORY INSURANCE-WHAT

VOLUNTARY SOCIAL INSURANCE AND HEALTH CONSERVATION EFFORTS URGED—COMMITTEE REPRESENTING ALL INTERESTS APPOINTED TO PREPARE CONSTRUCTIVE PLAN

IF not compulsory sickness insurance through legislative enactment, then what in the way of a conructive program should be adcated?'' was the question conlered at a meeting of the Soal Insurance Department of ne National Civic Federation, ld Monday, May 19, at headarters, 33rd floor Metropoli-n Tower, New York. The conrence was presided over by the airman of that Department, arren S. Stone, Grand Chief the International Brotherhood Locomotive Engineers, who entioned the vehement opposion on the part of the working ople to compulsory health inrance with the espionage that companies it, compulsory edical examination and lack of eedom in choosing physicians. e expressed the belief that it uld destroy the initiative of e industrial worker necessary our development as a nation. gitation for compulsory sickss insurance legislation in the nited States has to date failed achievement.

Among the various suggestions r consideration made at the nference were:



(1) The prevention of unnecessary illness through education of the public concerning health matters, at present inadequate, the vast majority of the working people being uninformed in regard to means of prevention of disease. It was urged that ministers should spread facts from authoritative sources; that employers, government agencies and public health nurses should be utilized and that there should be resort to moving pictures;

(2) The necessity of securing an actual record of absenteeism due to sickness, at present unknown, to permit correct estimates upon cost of health insurance and to indicate requisite health conservation work;

(3) Some means of providing the fundamental necessity, payment of wages when ill or financial benefits during the period of illness; better medical care; and greater efficiency in state health departments;

(4) The importance of improving, regulating, and developing all voluntary methods of insurance, including trade union funds, fraternals, employers' establishment funds and those of industrial insurance companies; and

(5) The creation of health schools throughout the Union whereby health officers and others might receive instruction upon public health matters.

WARREN S. STONE

Attention was called to the failure of the systems of compulsory insurance in England and Germany. The Federation was urged to send a second commission to England, representative of all American elements concerned, to bring back facts for the information of legislators, employers and wage earners now confused by misleading propaganda disseminated by that group of social reformers which has undertaken to promote compulsory health legislation.

Exception was taken to the statement, widely circulated, that sickness is the cause of poverty. It was urged that the problem is economic and that the workman should be put upon his own feet and permitted to purchase his medical attendance in his own American way. In support of this contention, while agreeing with the idea that the period of illness is the one when the worker needs the most and receives the least financially, the result of a first hand investigation in England was cited to show the utter fallacy of collective or group medical service, and the necessity of keeping in this country individual relations between the doctor and the patient.

It was pointed out that the campaign for health insurance in New York State, Ohio and elsewhere is built upon gross misstatements of fact and delusions; also that to put compulsory sickness insurance and practically pauper medical service upon the American working man would cause universal dissatisfaction and injure the public health. Labor men emphatically claimed that the only way is to have sickness insurance voluntary in every respect and that no workman should be forced into such an association.

CONSTRUCTIVE PROGRAM PLANNED

What may be a practical substitute for propositions now advocated to protect the worker in time of idleness through illness and to prevent unnecessary disease will be developed by a special committee charged with the duty of presenting a definite constructive program. The following committee, which was appointed by Chairman Stone to carry out this purpose, held

its first meeting on Monday, May 26, and will hold a second session June 19, its work already being well under way:

Dr. Alvah H. Doty, (Chairman), Medical Director, Western Union Telegraph Company, New York;
M. W. Alexander, Managing Director, National Industrial Conference Board, Boston, Mass.;
Mrs. F. Lothrop Ames, Chairman Industrial Committee, Women's Department, New England Section, The National Civic Federation, Boston, Mass.;
Mark A. Daly, General Secretary, Associated Manufacturers and Merchants of New York State, Buffalo, N. Y.;
Dr. Lee K. Frankel, President American Public Health Association, Third Vice President, Metropolitan Life Insurance Company, New York;
Hugh Frayne, General Organizer, American Federation of Labor;
Dr. Frederick L. Hoffman, Third Vice President and Chief Statistician, Prudential Insurance Co., Newark, N. J.;
A. C. McLean, President National Fraternal Congress of America, Sharon, Pa.;
John Roach, Chief Bureau of Hygiene and Sanitation, Department of Labor, State of New Jersey (Formerly Leather Workers' Union), Newark, N. J.;
P. Tecumseh Sherman, Attorney and Social Insurance Specialist, New York; and
Miss Margaret Loomis Stecker, National Industrial Conference Board, Boston, Mass.

In opening the meeting, the chairman, Warren S. Stone, Grand Chief, International Brotherhood of Locomotive Engineers, of Cleveland, Ohio, said:

"It seems to me that the whole plan of health insurance or social insurance, from the standpoint of the workers at least, is altogether wrong. If we have accomplished anything as a nation, it has been due to the fact that the men and women of the country have been allowed to work out some of these problems. I do not take much stock in paternalism; I do not believe in a government that tucks you in bed at night, and if some plan of health insurance is adopted, worked out and finally made a law, I fear its effect on our country; I fear it will be the beginning of the end. I do not believe any nation can prosper when the government does everything for the industrial worker. It destroys initiative and makes him a dependent upon the bounty of his government. I understand that a somewhat different plan is to be presented this afternoon and I think the meeting should bring out something valuable in the way of constructive suggestions.

"Senator Davenport, who introduced the Social Insurance bill in the New York State legislature, still insists that we must have social insurance of some kind and I gathered from our short talk today that he believes it must be compulsory. But I want to say to you frankly as a representative of labor that there is not going to be any compulsory health insurance if we can help it. When you say to the American working people that they must do this or that thing, every drop of red blood in them resents it. I think it is summed up in a homely phrase, 'You can push all you like but you mustn't shove'."

PUBLIC HEALTH MENACED

An abstract of the discussion and recommendations made during the meeting follows:

Dr. Alvah H. Doty, Medical Director, of the Western Union Telegraph Company, New York:

"The plan I have to suggest is rather an old one. The idea is simply to educate the public concerning health matters. There has been an attempt to do it but it has never reached the element we are after; that is, the laboring classes. I think there is a belief that they do not care to get this education, that they do not respond. That is not so. Two years ago we had an investigation made by sixty nurses, covering about a thousand families. The nurses went to the homes and asked what their idea was in regard to the means by which disease was transmitted, whether they were willing to help and why. The replies were about the same as those which would have been received in the Middle Ages; they showed that these people knew absolutely nothing about the subject; they held all sorts of theories. Almost all of them spoke vehemently about doing their part; when asked why, they said they desired to help preserve the life and health of their children. So there was a motive.

"Then the rather important question was asked: Have you ever received any education of any kind along these lines and in what way—any bulletins or anything of that sort? Not one stated that any real, first-class information had been received. Some had received bulletins which were thrown down at their doors, but many of them could not read; some of them were foreigners. So we found the situation to be the same as it is today; we have absolutely no concerted means by which the public in general is receiving information concerning public health or the prevention of disease. It is true, the municipal and state health departments have ordinances but they do not fill the bill.

"The result has been that we are surfeited with health ordinances but there is no co-ordination between the states, and that is the feature, I believe, that calls for present action on the part of practical sanitarians. How can we educate the people of every class? That has not been done and we find constant indications of the need of it. I believe the critical point is how to educate the public and there is no question but that it can be done.

"We have not utilized all existing means. For instance, the ministers of the country have a strong influence with their people; they deal with public matters and they could devote a certain portion of a Sunday or even a few minutes to studying certain facts, not their own theories, but things given to them by authoritative sources; work could also be done by presidents of associations and nurses; through moving pictures, etc., but I do not believe the government could do it. It must be undertaken by some national association and there is small cost attached to it. There should be cooperation throughout the country. It could be done the moment such an organization was effected."

ABSENTEEISM AND COST

Mark A. Daly, General Secretary of the Associated Manufacturers and Merchants of New York State, whose headquarters are at Buffalo, stated that:

"The Davenport compulsory health insurance bill, introduced in the New York legislature, which passed in the senate, was defeated through the efforts of Speaker Sweet and the Republican Assemblymen. He said that at the least calculation it would have cost each employer $20 per employee every year and that as originally drawn, had the bill become law, the cost would have been $40 per employee.

"Our Association, at a meeting of its board of directors last week, decided that it would go to work on an educational campaign and also a campaign of investigation. What we ran up against at the last session of the legislature was the intolerable ignorance of the employer members as to what health insurance meant and that ignorance extended down the line to the employee. As a matter of fact, in New York state we found, upon investigation, that possibly 5 per cent of the people, who would be directly affected by it, knew the terms of the bill that they were discussing and, when it came to the fundamental principles, the remaining 95 per cent knew nothing at all about the subject.

"Our association, for instance, is going to take up the matter of cost. There are several estimates as to cost in New York State. The superintendent of insurance made one, our actuaries made another and someone else another and, I think, there was a little matter of $25,000,000 or $30,000,000 difference between them. In order to get accurate data, which I do not believe even the insurance companies have, as to the number of cases of illness, the duration of illness on the basis of the Davenport bill after a period of three days, etc., we have prepared a plan through which it is hoped that accurate and practical facts, concerning absenteeism and illness of workers in factories, may be obtained which will enable the association and individual members to deal intelligently with the problem.

"The outline of the plan contemplates its installation in plants employing 2,000 or more persons. To get an experience that will be worth anything we must have, as a minimum, 200,000 employees covered. If we could get 300,000 employees it would, of course, increase the worth of the experience. The record must be accurate enough so that it can be sworn to. This will mean that a clerk or investigator of intelligence must be employed to devote his entire time to the work in the larger plants. The general principle is good for all plants and may be put into operation where the number of employees is too small to warrant the employment of individual investigators by several joining together. The experience to be developed will cover six months beginning the first of July."

Percy S. Straus, of R. H. Macy & Company, New York, described the establishment fund of that firm, stating that:

"Possibly our method which has been in existence some years and which is somewhat on the basis of the Davenport law might be of interest. Under this plan, the employees engage doctors and nurses; the contributions are made by the employees and the firm. Any employee who is sick reports by postal card (which is supplied) that he is sick and the cause of his absence. He is then visited by a doctor or nurse and I think that would serve to check up. If an employee chooses to stay away for fishing, etc., his freedom is in no way affected. That does not come in under a health insurance system he is not insured against lack of work or baseball or fishing. But, on the whole, the plan has worked out successfully. One thing accomplished is that the employee knows that the doctor will give him the sort of treatment to which he is entitled and that the nurse will come and report on the illness. It guarantees the employee who is actually sick, from suspicion, and if an employee is sick, it insures his position being kept open. The only compulsion is that they shall have medical attendance when necessary. The cost per employee is comparatively small. The service to the employee is distinctly helpful because it largely serves to keep him out of the hands of doctors, of whom the city is filled, who are absolutely incompetent."

Mr. Stone: In your company, all the employees are required to belong, whether they want to or not?

Mr. Straus: Yes, they are told about it when they are employed. Of course, they do not have to work for us.

Mr. Stone: We have the same thing in our railroads. Your remark that they can work elsewhere is applicable when work is plenty but when it is scarce as it is at present—for example, in Cleveland where we now have 49,000 unemployed, 28,000 being skilled workmen—the employee has to get what he can. You say the majority of the employees select the doctors. How can they pass on the qualifications of a doctor in a great plant like Macy & Co.? Is it not largely a matter of guesswork?

(*Continued on Page* 16)

Do the Co-Operatives Offer A Solution?

HIGH COST OF LIVING ALLEGED TO BE LARGELY DUE TO UNSCIENTIFIC DISTRIBUTION DESPITE VARIED EXPEDIENTS DESIGNED TO REDUCE CHARGES

By WILLIAM H. INGERSOLL

WE are all dissatisfied with the cost of things, especially with that part of the cost ıown as middleman's profits, ıe part absorbed in the distriıtion of merchandise as disnguished from its cost of hysical production.

There is reason aplenty for ıe deep unrest over the wasteıl, inefficient system of distribting goods from farm and ıctory to user. And yet there no other important phase of ır economic life in which such ose and footless reasoning is ıdulged in or such baseless hope f relief held out.

An English laboring man, a orker in a shoe factory, put the roposition effectively to me on recent tour of investigation in urope, when he asked why his amily and the workers in other ıctories should have to pay wenty shillings per pair for hoes on which he worked and hich he knew cost only seven hillings to make. It is approxiıately the same on the bulk f all we buy in this counry. The farmer gets hardly third of what we pay for our otatoes. Two-thirds of what e pay for our clothing and urnishings goes for distribution nd only one-third for the goods. And we can't eat or wear the listribution!

There is no doubt that the aborer is exploited far worse as consumer when he comes to exhange the proceeds of his work or the products of the work of thers than he is as a producer n receiving the short end of vhat he makes.

So much for the indictment? There has been argument both y academicians and practitionrs and attempted demonstraions for years, during which he cost of living has gone teadily higher.

MUST REACH THE CAUSE

Now, it sounds unreasonable, hat it should cost twice as much o sell a thing as to make it, if t is a useful thing and the price air. It *is* unreasonable, but it won't be remelied by abusing the middlemen or by attempting mprovements which don't reach the *cause* of he waste. The familiar hope is to "eliminate he middleman" either in part or in whole. Various devices have been used to accomplish his. Briefly, we may set them down as:

(1) The department store which aims and claims to eliminate the wholesaler or jobber by buying in quantities from the manufacturer;

(2) The multiple system of chain stores which have the same hope of economy as the department store;

WILLIAM H. INGERSOLL

Eighteen years' experience in operating a large mail order business, running a chain of retail stores, doing jobbing and manufacturing on a large scale, and personal investigation here and abroad, fit William H. Ingersoll, writer of the following article, to an unusual degree as an expert on distribution costs. Incidentally, his training as an electrical engineer gives him an angle on the subject from the scientific point of view, while as an officer of sales and advertising organizations he has solved many cost problems from the practical side. Finding customers for 20,000 watches daily is another task that fitted Mr. Ingersoll especially for his work as a commission member studying cooperative sales and producing systems in Great Britain.

(3) The mail order house which has the same objective economies as the department store and also goes more extensively into manufacturing its own goods in some lines;

(4) The manufacturer of specialty merchandise such as branded shoes or candy, who sets up his own retail stores and "eliminates" the independent wholesaler and retailer;

(5) The cooperative factory which is owned by the workers in the enterprise, eliminating the monopolistic capitalist owner;

(6) The cooperative store, factory, and plantation in which the consumers own the local retail distributing stores, the wholesale distributing warehouses which supply the retail stores and the factories and sources of raw materials and have as their paid employees the producers in the factory and on the farms. This system "eliminates" all middlemen and the manufacturer and theoretically makes the consumer his own producer and middleman.

Various combinations of these devices are found in actual practice in numerous lines of trade. Some department stores own manufacturing shops where they make for themselves the goods for some of their most important departments. The chain store and mail order concerns often do some of their own manufacturing. Specialty manufacturers frequently eliminate the wholesaler by selling direct to the retailers throughout the country or partially do so by selling in the larger towns, leaving jobbers to cover the country villages. Retail stores sometimes join in subscribing funds to operate their own factories to make some of their more important merchandise requirements.

Cooperative enterprises exist in all stages of development. Other economies are claimed by all of the institutions described above besides that of eliminating one or more links in the chain, but elimination of the middleman and his "unnecessary" profit or tax is quite generally the starting point in the attempt to reduce the cost of things, especially in the reasoning of the non-commercial consumer and the economist.

Only three avenues of hope lie before us in effecting a lower cost in the things we buy, if we except as outside of our present study, the cost of production. These three avenues may be described as:

(a) Eliminating unncessary *labor* in the customary method of distribution;
(b) Eliminating unreasonable or unearned *profit* customarily exacted in the processes of distribution;
(c) Increasing the *efficiency* of the distributors.

We may apply these tests to these various forms of modified distribution under trial and we may examine their workings and the actual values they deliver, compared to the values contemporaneously delivered by the ordinary methods to see if the supposed economies are realized.

As to the first of our tests we can't fairly judge of the successful elimination of middlemen, held to be superfluous or parasitic, unless we are familiar with the net minimum of work to be done in distribution and the functions and organization necessary to discharge it.

To distribute goods produced in quantities in

a factory or on a farm at one point so that they may be accessible to multitudes of individual consumers scattered over a continent, involves several inevitable steps or stages as will be shown, and all efforts to reduce the number result merely in a change of form without intrinsic gain or in the substitution of less direct and more expensive means.

Let the sketch represent a large, typical area of the United States. A simple and direct statement of the problem is, *what are the steps or processes by which the factory represented in the lower left-hand corner, can most economically distribute its goods to the consumers represented by the smallest dots and scattered all over the territory?*

THE CONDITIONS TO BE MET AND EXISTING TRADE ROUTES

Each of the lettered squares may be considered a large commercial point—called a jobbing center in trade parlance,—the hub of a zone, at which supplies are collected and from which they are disseminated to the tributary territory surrounding it. Such centers are typified by such cities as Boston, Baltimore, Atlanta, Buffalo, Pittsburg, Cleveland, Cincinnati, Toledo, Chicago, St. Louis, Minneapolis, Duluth, Denver, Seattle, San Francisco, Los Angeles, Dallas and also by smaller points like Portland, Me., Trenton, Binghampton, Erie, Akron and Des Moines.

The circles represent all other communities not great enough commercially to be business junction points, trade marts or wholesale centers, but composed of few or many households of consumers. Everything from suburban towns to rural villages and including the bulk of the towns of less than 50,000 population and many larger, are represented by these circles. No hard and fast lines separate jobbing centers from tributary towns. Relatively small points do a jobbing trade in groceries and other necessities, while only large points in wholesale jewelry, so that one town may easily be a jobbing point in one line and not in another. But here in the places represented by these circles we have groups or bunches of consumer population to be served as indicated by the dots around the circles.

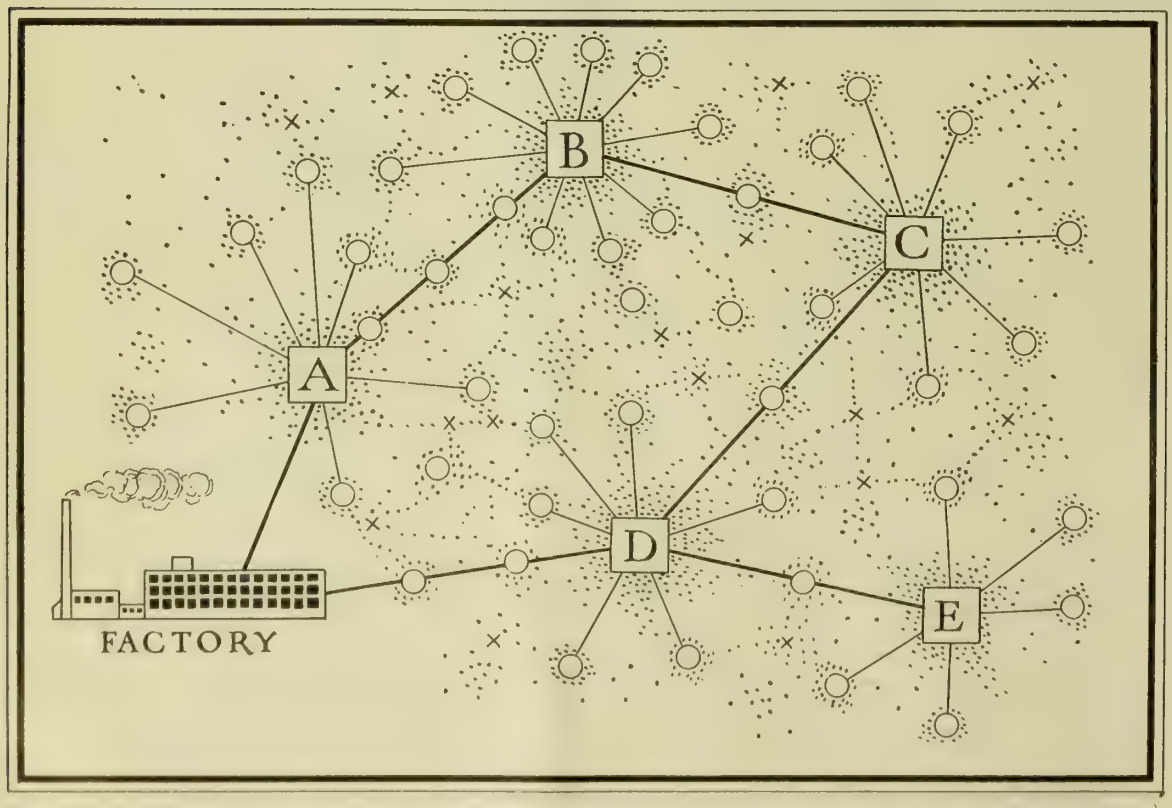
But about half the people of the United States do not live in communities at all. They are rural dwellers—people on farms. This is crudely reflected by the dots scattered between the towns.

To serve these rural residents there are over a hundred thousand cross-roads stores, ordinarily called general stores but dealing largely in "convenience supplies" which the country people buy at frequent intervals and in volume not worth waiting to go or send to town for,—tobacco, soda crackers, tea and coffee and sugar, etc., as well as needles, sox and collars.

The "X" marks will serve to remind us of these country stores.

STUDY OF NECESSARY MOTIONS

Now for a study of the minimum number of motions by which the product of the factory can be made readily available to all the people in the area shown by the sketch.



Let us assume that the factory makes shoes of a popular grade and of general utility, both for men and for women.

We will view the problem first from the standpoint of the consumers and then from that of the producer—the factory.

Suppose that a school teacher in one of the small towns up north of the jobbing center "B" wants a pair of shoes. She wants a good looking, well made, durable pair, soft, black and high cut. They must fit her and be comfortable. And she wants the best value in the market for her money.

She does not know shoes or the best leather for her purpose; nor can she tell an oak tanned sole when she sees it. She is uninformed as to what constitutes good sewing and good workmanship. She does not know all the factories there are making shoes nor their location—nor which makes women's shoes or which makes the best or what different styles each makes. She knows nothing as to which is the most efficient, economical manufacturer and marketer of shoes, or which is most reliable.

In short, she is a specialist in one vocation, giving her expert services for the benefit of others and consequently she cannot be informed on shoes, and clothes and jewelry and drugs and hardware and household furnishings and groceries and all the other branches of trade and industry.

The squares show population zones comprising towns and villages of secondary importance. The circles indicate local communities in the trading zones. The crosses show general, or cross roads stores for rural dwellers, and the dots designate the individual households of consumers comprising the local communities.

So she needs the reciprocal services of a shoe expert to help her choose wisely to fill her present want. The factories are far away. She is in a remote little town. She wants to compare products and values. Styles change. Prices change. Factories and their characteristics change. Most of all she wishes to try on her prospective shoes and see that they fit and look well, under the guidance of someone competent to advise.

She needs the services of someone who knows shoes, who knows the community and its needs, who searches in the great market for the most suitable goods that his neighborhood will require, and anticipates the quantity of each style and each size that the community or a part of it will want for the season, and by ordering months in advance has on hand several appropriate offerings to meet her needs even before she herself is aware that she wants them.

This representative to serve her and others in the capacity of shoe expert is the local shoe dealer and his stocked store. The function of the local exhibiting and distributing depot under qualified supervision where goods may be had on a moment's notice, may be seen, tested, compared and selected with expert assistance, and perhaps secured on credit, is apparent. A local distributing store is indispensable in the scheme of things. It may be a privately owned store, of a local proprietor or a cooperative store, or a manufacturer's store, but a local stock is requisite.

PROBLEMS OF LOCAL SUPPLY

Then how is the local supply to be chosen? Can the shoe specialists of many thousand communities make tours of all the shoe factories of the country in advance of each season? Most of them do a small business, serving only a few hundred customers. Their business can afford only meagre assistance, and they cannot leave their little establishments much of the time. And it would add considerably to the price of shoes if an army of some 30,000 shoe dealers were to be put to the traveling and hotel expense of touring even a portion of the shoe factories of the country several times a year, and it would add to the expense of the factories to provide facilities and clerks to receive and look after them.

Yet the shoe dealers must keep abreast of the changes and developments of their trade,—the new styles, improved quality, changes in construction, new factories, changes of business policy and personnel, in order to serve their customers with the most suitable that the market affords.
